<p>1 THE VIDEOGRAPHER: We are now on the</p> <p>2 record. My name is Danny Ortega, and I am</p> <p>3 the legal videographer for Golkow</p> <p>4 Litigation Services.</p> <p>5 Today's date is March 25, 2022, and</p> <p>6 the time is 10:13 a.m.</p> <p>7 This video deposition is being held at</p> <p>8 1540 Broadway, New York, New York, in the</p> <p>9 matter of Valsartan, Losartan, and</p> <p>10 Irbesartan Products Liability Litigation,</p> <p>11 for the United States District Court,</p> <p>12 District of New Jersey.</p> <p>13 The deponent today is Dr. Lauren</p> <p>14 Stiroh.</p> <p>15 All counsel will be noted on the</p> <p>16 stenographic record.</p> <p>17 The court reporter today is Jeff Benz,</p> <p>18 who will now swear in the witness.</p> <p>19 LAUREN J. STIROH, Ph.D.,</p> <p>20 called as a witness, having been first</p> <p>21 duly sworn by Jeffrey Benz, a Notary</p> <p>22 Public within and for the State of New</p> <p>23 York, was examined and testified as</p> <p>24 follows:</p>	<p>1 many depositions before. I don't know how many</p> <p>2 you've done remotely since the pandemic. But</p> <p>3 there are a couple of housekeeping items that I</p> <p>4 think are worth mentioning so that we can end up</p> <p>5 with a good transcription and video of your</p> <p>6 testimony today.</p> <p>7 First, I'll be the principal</p> <p>8 questioner today on the plaintiffs' side, and as</p> <p>9 is always the case, it's my job to make myself</p> <p>10 clearly understood to you.</p> <p>11 If you don't understand a question or</p> <p>12 you haven't heard my question, if there's a</p> <p>13 technical problem, it's really important that</p> <p>14 you let me know so that I have an opportunity to</p> <p>15 restate it or clarify it for your benefit.</p> <p>16 Can we agree to that?</p> <p>17 A. Yes.</p> <p>18 Q. I'm sure you're aware that it's</p> <p>19 important that we not speak over one another,</p> <p>20 largely because the court reporter needs to be</p> <p>21 able to take down one speaker at a time.</p> <p>22 That's sometimes a challenge when it's</p> <p>23 conducted remote. I'll do my level best not to</p> <p>24 ask a new question as you're speaking, and if</p>
Page 7	Page 9
<p>1 EXAMINATION BY MR. HONIK:</p> <p>2 Q. Dr. Stiroh, good morning to you once</p> <p>3 again.</p> <p>4 A. Good morning.</p> <p>5 Q. As I introduced myself briefly to you</p> <p>6 earlier, my name is Ruben Honik. I am one of</p> <p>7 the plaintiffs' attorneys in this case. There</p> <p>8 are, as you might expect, a number of other</p> <p>9 plaintiffs' lawyers who are observing on Zoom,</p> <p>10 together with a great many defense attorneys.</p> <p>11 You're aware of all that?</p> <p>12 A. I am, yes.</p> <p>13 Q. And I know that you've given testimony</p> <p>14 under oath before, and I want to take a moment,</p> <p>15 in a moment, to highlight a couple things.</p> <p>16 But inasmuch as I'm in Philadelphia</p> <p>17 and you're in New York, who is in the room with</p> <p>18 you?</p> <p>19 A. The court reporter, the videography,</p> <p>20 and Seth Goldberg.</p> <p>21 Q. Okay. And I gather you're in the</p> <p>22 offices of Duane Morris in New York?</p> <p>23 A. I am.</p> <p>24 Q. I don't know -- I know you've given</p>	<p>1 you could, after you give your answer, maybe</p> <p>2 pause for a second in the event that</p> <p>3 Mr. Goldberg or one of the other defense lawyers</p> <p>4 needs to make an objection, that could be noted</p> <p>5 as well.</p> <p>6 Can you do that for me?</p> <p>7 A. Yes.</p> <p>8 Q. I'm going to be marking some exhibits,</p> <p>9 most if not all of which I hope are in paper</p> <p>10 form near you.</p> <p>11 Do you have, for example, your report</p> <p>12 with you?</p> <p>13 A. I do.</p> <p>14 Q. Well, for the benefit of the record,</p> <p>15 when the opportunity arises, we're going to mark</p> <p>16 that as Exhibit 1, Stiroh 1.</p> <p>17 (Expert report of Lauren J. Stiroh,</p> <p>18 Ph.D. was marked Stiroh Exhibit 1 for</p> <p>19 identification, as of this date.)</p> <p>20 Q. Is the copy that you have, does it</p> <p>21 contain the list of your reliance materials?</p> <p>22 A. It does.</p> <p>23 Q. And does it contain your CV as well?</p> <p>24 A. It does.</p>

<p>Page 10</p> <p>1 Q. And you're satisfied that the copy 2 that we're going to mark Exhibit 1 is your true 3 and correct report that you issued, or is dated 4 January 12th of this year?</p> <p>5 A. Let me just flip through it briefly.</p> <p>6 THE WITNESS: I think that's going to 7 be Conti.</p> <p>8 Can you pass me? 9 (Witness reviewing document.)</p> <p>10 A. It is.</p> <p>11 Q. Dr. Stiroh, I assume you've had an 12 opportunity to review your report or 13 refamiliarize yourself with it before today?</p> <p>14 A. Yes.</p> <p>15 Q. You've, doubtless, had time to prepare 16 with defense counsel who engaged you as well?</p> <p>17 A. I have.</p> <p>18 Q. And you feel ready this morning to 19 discuss the opinions that you express in that 20 report, to me?</p> <p>21 A. I do.</p> <p>22 Q. And in paragraph 5 of your report, 23 Exhibit 1, you describe your assignment. If you 24 could turn to that section.</p> <p>Page 11</p> <p>1 A. I have it in front of me.</p> <p>2 Q. And -- thank you.</p> <p>3 And specifically, as I read it, you 4 [indistinct], as well as the things that you did 5 not do; right?</p> <p>6 A. I'm sorry. I lost a little bit of 7 that question. If you don't mind saying it 8 again.</p> <p>9 Q. Not at all.</p> <p>10 As I read that paragraph entitled 11 Assignment, what I take it you did was to 12 enumerate the things --</p> <p>13 MR. GOLDBERG: Hang on a second, 14 Ruben.</p> <p>15 Q. -- that you didn't do; right?</p> <p>16 MR. GOLDBERG: Ruben, hang on one 17 second. We're getting a little bit of a 18 delay.</p> <p>19 MR. HONIK: Yes. I'm experiencing a 20 little bit of it here, but it's mostly the 21 image that Dr. Stiroh is a little bit 22 halting.</p> <p>23 Can we have the videographer address 24 that?</p>	<p>Page 12</p> <p>1 MR. GOLDBERG: Let's see if it goes 2 away, because it's a little bit -- 3 you're -- you're also sort of coming in and 4 out a little bit.</p> <p>5 So why don't you go ahead and let's 6 see if it goes away.</p> <p>7 MR. HONIK: Seth, I must tell you, 8 you're very crisp, but Dr. Stiroh is a 9 little fuzzy, and there's a bit of a delay.</p> <p>10 I guess all we can do is just go 11 forward and see how it goes. Okay?</p> <p>12 MR. GOLDBERG: Yeah.</p> <p>13 Q. So let me reload the question, 14 Dr. Stiroh.</p> <p>15 We're looking -- excuse me -- at your 16 paragraph 5 together, which you've headed, 17 Assignment.</p> <p>18 And I'm simply trying to establish if 19 it isn't so, that in that paragraph, you 20 describe the things -- pardon me -- that you did 21 in discharging the assignment, as well as the 22 things you did not do.</p> <p>23 Is that fair?</p> <p>24 MR. GOLDBERG: Objection to form.</p> <p>Page 13</p> <p>1 A. Generally, yes. Paragraph 5 of my 2 report describes the assignment, and then also 3 certain assumptions or areas of testimony where 4 I am not offering opinion.</p> <p>5 Q. And that's clear to me.</p> <p>6 If you turn to page 2 of your report, 7 we're still in paragraph 5, and if you were to 8 count down about six lines, do you see the 9 sentence that begins, I do not make an 10 assessment?</p> <p>11 A. I see that.</p> <p>12 Q. From that line forward, you enumerate 13 certain things that you did not do or assess; 14 correct?</p> <p>15 A. I'm not sure what you mean by I 16 enumerate them.</p> <p>17 I have a sentence that says, I do not 18 make an assessment regarding actual risk of 19 safety issues.</p> <p>20 And I have a sentence towards the end 21 that says, I also do not opine on the legal 22 issues, and goes on.</p> <p>23 Those are two areas where I am 24 clarifying that that is not an area for my</p>
--	--

<p style="text-align: right;">Page 14</p> <p>1 testimony.</p> <p>2 Q. That's right. And all I was really</p> <p>3 getting at is you attempt to list some things</p> <p>4 that you didn't do; correct?</p> <p>5 A. Yes.</p> <p>6 Q. I want to spend some time unpacking</p> <p>7 the language here so I understand the things</p> <p>8 that you didn't do before we talk about some of</p> <p>9 the things that you did do. Okay?</p> <p>10 A. Yes.</p> <p>11 Q. So the first sentence on page 2,</p> <p>12 within paragraph 5 that I would like to direct</p> <p>13 your attention to is the one that begins, I do</p> <p>14 not make an assessment regarding any actual risk</p> <p>15 of safety issues with regard to the subject</p> <p>16 VCDs.</p> <p>17 Do you see that clause?</p> <p>18 A. I do.</p> <p>19 Q. Can you tell me what that means?</p> <p>20 A. Yes. I am not a medical expert and I</p> <p>21 am not intending to offer opinions related to</p> <p>22 the safety risk, if any, of the products at</p> <p>23 issue on the patients who consumed them.</p> <p>24 Q. And in that regard, the sentence</p>	<p style="text-align: right;">Page 16</p> <p>1 or opinions.</p> <p>2 I take into account the possibility</p> <p>3 that the products were -- that the -- the</p> <p>4 impurities were included in the products at</p> <p>5 issue and have an understanding from materials</p> <p>6 that I have read in this case of the impact of</p> <p>7 that, but I am not offering testimony that the</p> <p>8 product -- the impurities were included in the</p> <p>9 products at issue or what implication that has</p> <p>10 for the risk profile.</p> <p>11 Q. Do you have an opinion whether NDMA or</p> <p>12 NDEA are, in fact, contaminants?</p> <p>13 A. I do not.</p> <p>14 Q. Do you have an opinion whether NDMA or</p> <p>15 NDEA are mutagenic?</p> <p>16 A. I do not.</p> <p>17 Q. Do you have an opinion whether NDMA or</p> <p>18 NDEA are carcinogenic?</p> <p>19 A. I do not.</p> <p>20 Q. Do you have an opinion whether NDMA or</p> <p>21 NDEA are genotoxic?</p> <p>22 A. I do not.</p> <p>23 Q. Can you explain to me why you read and</p> <p>24 cited as reliance material the expert report of</p>
<p style="text-align: right;">Page 15</p> <p>1 continues, And I offer no opinion on whether the</p> <p>2 presence of NDMA or NDEA impurities rendered any</p> <p>3 of the at-issue VCDs adulterated or misbranded</p> <p>4 during the relevant time period.</p> <p>5 Did I read that correctly?</p> <p>6 A. You did.</p> <p>7 Q. And does it mean that you have no</p> <p>8 opinion whether NDMA or NDEA rendered the VCDs</p> <p>9 in this case adulterated or misbranded?</p> <p>10 A. That is correct. I am not offering</p> <p>11 opinions on whether the presence, or if there</p> <p>12 is, of NDMA and NDEA rendered the products at</p> <p>13 issue misbranded or adulterated.</p> <p>14 I have reviewed Dr. Conti's report and</p> <p>15 have opinions with respect to her valuation of</p> <p>16 the products at issue where she does make those</p> <p>17 assumptions, and I take her assumptions that she</p> <p>18 has made and consider them in my opinions. I do</p> <p>19 not offer an opinion on adulteration or</p> <p>20 misbranding.</p> <p>21 Q. Let me unpack that a bit.</p> <p>22 Do you have an opinion whether these</p> <p>23 contaminants were present at all in these VCDs?</p> <p>24 A. That is not a subject of my testimony</p>	<p style="text-align: right;">Page 17</p> <p>1 Dr. Ron Najafi?</p> <p>2 A. I released certain expert reports of</p> <p>3 various individuals that offered reports in this</p> <p>4 case, to gain an understanding of some of the</p> <p>5 background issues and scope.</p> <p>6 Some of the materials that I have</p> <p>7 reviewed were to inform me on the broader</p> <p>8 background materials and information that is at</p> <p>9 issue in this case. It does not mean I am</p> <p>10 offering opinions on all of the materials that I</p> <p>11 read.</p> <p>12 I don't recall offhand if I have cited</p> <p>13 Dr. Najafi in my report other than in mentioning</p> <p>14 him in paragraph 6.</p> <p>15 But if and where I have cited him, it</p> <p>16 will indicate the reasons for why I have relied</p> <p>17 on that report.</p> <p>18 Q. Well, why don't you turn to Exhibit 2</p> <p>19 of your report, which we are marking in this</p> <p>20 deposition as Exhibit 1, which lists the expert</p> <p>21 reports that you relied upon.</p> <p>22 Do you see that list?</p> <p>23 A. Yes.</p> <p>24 Q. I take your point about obtaining some</p>

<p style="text-align: right;">Page 18</p> <p>1 background information even as to areas that you 2 don't specifically offer an opinion. 3 But as best as you can, what was it 4 about Dr. Najafi's report that caused you to 5 list it as a reliance material? 6 A. I don't recall if there is specific 7 information from that report that I cite in my 8 background materials or later in my report. I 9 could page through it and see. 10 But as I sit here, I don't have a 11 specific recollection what caused me to list 12 that one in my materials considered. 13 Q. Do you recall what kind of expert 14 Dr. Najafi is? 15 A. No, not by memory. 16 Q. Can you tell me why you listed as 17 reliance material the expert -- 18 MR. GOLDBERG: Ruben, that question 19 cut out. You're going to have to ask it 20 again. 21 Q. Doctor, I'm asking you if you can tell 22 me why you listed reliance upon the report of 23 Dr. Panigraby. 24 A. I would give you essentially the same</p>	<p style="text-align: right;">Page 20</p> <p>1 doing so; right? 2 A. For the most part, that is correct. 3 The materials that appear on Exhibit 2 4 are materials that are cited throughout my 5 report. 6 It may be that there are certain 7 expert reports that are cited only in paragraph 8 6 and nowhere else. 9 And the reason they would appear on my 10 Exhibit 2 is that they appear in a footnote, 11 even if the footnote is no more than to identify 12 that report. 13 Q. Do you know what the subject of 14 Dr. Panigraby's report was? 15 A. Not by memory, no. 16 Q. Can you tell me why you listed the 17 report of Dr. Etminan as reliance material for 18 you? 19 A. The same answer. I reviewed various 20 expert reports. 21 If they are cited in my footnotes, 22 they are included on Exhibit 2. 23 There are some that may be cited only 24 in connection with paragraph 6 where I have</p>
<p style="text-align: right;">Page 19</p> <p>1 answer. 2 I don't recall specifically any 3 information from the report of Dr. Panigraby 4 that I rely on for my opinions. 5 If I cite him in the footnotes, then 6 that would indicate the information that I am 7 citing for that report. 8 If I don't and it was simply a report 9 that I reviewed in the context of getting 10 broader information, I don't recall why that one 11 in particular I chose to cite. 12 Q. Did you prepare this list of reliance 13 material yourself? 14 A. I have a person on my team that 15 prepares it for me. 16 Q. Okay. You mean physically prepares 17 the document? Is that what you mean? 18 A. Yes. 19 Q. Are you the one that's collected the 20 expert reports that you listed as reliance 21 material? 22 A. Yes. 23 Q. And so, I take it, since you were the 24 one to list them, that you had a reason for</p>	<p style="text-align: right;">Page 21</p> <p>1 listed some of the expert reports. 2 But if it is not cited elsewhere in 3 the report, it is not the basis for any of the 4 information or opinions that I am offering. 5 Q. Would your answer be the same for 6 Dr. David Chan, who is also listed as a report 7 you relied upon? 8 A. Yes. 9 Q. That's a rebuttal report. 10 Do you know what the subject of his 11 report was? 12 A. Not as I sit here without it in front 13 of me, I don't. 14 Q. Do you offer any opinions on cGMP? 15 A. I do not. 16 Q. Well -- but, Dr. Stiroh, is -- there 17 you go. 18 Dr. Stiroh, can you hear me? 19 A. Okay. My computer has a message that 20 says that my Internet connection is unstable. 21 I can hear you now. I think that cut 22 out in some -- at some point if you were asking 23 a question, and so if you could ask it again. 24 Q. I will. Thank you.</p>

<p style="text-align: right;">Page 22</p> <p>1 I asked you whether you offered any 2 opinions in the area of cGMP and cGMP 3 compliance. 4 MR. GOLDBERG: Objection to form. 5 A. I do not. 6 Q. Can you tell me why you listed the 7 expert report of Dr. -- or Mr. Quick in your 8 reliance material, plaintiffs' cGMP expert? 9 A. I reviewed the Quick report at the 10 time that I received it, I think in part to see 11 if there were opinions that related to economic 12 losses. 13 I don't recall anything specific in 14 his report that I rely on, unless there might be 15 a definition that I cite to him for. 16 Q. Was it meaningful for your economic 17 analysis to have an understanding of the 18 allegations regarding the cGMP failures in this 19 case? 20 MR. GOLDBERG: Objection to form. 21 Vague. 22 A. I reviewed his report. I don't recall 23 that there is anything specific that was 24 meaningful for me and my analysis of economic</p>	<p style="text-align: right;">Page 24</p> <p>1 A. I don't think that is fair to say. 2 As a general matter, damages experts 3 will take certain allegations in the complaint 4 at face value and consider, if they are true, 5 what are the economic damages that arise from 6 those actions, and also to consider as 7 appropriate, if some of the allegations are true 8 and others are not, whether damages can be 9 assessed with information common to the class. 10 I have considered the scope of 11 allegations. 12 I have considered how Dr. Conti refers 13 to the alleged wrongdoing and taken that 14 information into account when I formed my 15 opinions. 16 Q. In what way have you taken into 17 account the allegations in this case as they 18 pertain to cGMP failures? 19 A. I am going to have to tell you from 20 memory without looking at specific information. 21 To the best of my recollection, 22 Dr. Conti has a section in her report where she 23 either opines or assumes that if there is a cGMP 24 failure, that a drug is then misbranded or</p>
<p style="text-align: right;">Page 23</p> <p>1 loss damages. 2 But I did at the time that I reviewed 3 his report have a -- the understanding from 4 reading it what the subject matter was that he 5 was opining on. 6 Q. Did you give any weight or 7 consideration whatsoever to any of the opinions 8 of either Mr. Quick or the defense experts in 9 cGMP to your economic analysis? 10 MR. GOLDBERG: Objection to form. 11 Vague. Overbroad. 12 A. I don't recall anything by memory 13 where I am relying on or use as a basis an 14 opinion of any cGMP experts in this case. 15 I reviewed some pieces of information 16 to understand the context of the case, but I 17 don't think there is any of my opinions with 18 respect to economic loss damages that rely on a 19 cGMP expert's opinion. 20 Q. So would it be fair to say that if 21 there was pervasive cGMP failures on the part of 22 one or more of the defendants in this case, that 23 that did not impact any of your economic 24 analysis?</p>	<p style="text-align: right;">Page 25</p> <p>1 adulterated, and in her framework, that means 2 that for her, that the drug is economically 3 worthless. 4 I consider that chain of reasoning and 5 respond to it in my report. 6 Q. What consideration do you give it -- 7 the fact in your framework? 8 MR. GOLDBERG: Can you ask that again, 9 Ruben? You broke up. 10 Q. Yeah. You described understanding 11 that Dr. Conti in her report discusses and gives 12 some specific weight and consideration to the 13 fact of cGMP failures. 14 That's what you've told me; right? 15 A. I don't think it is what I told you. 16 I am not opining that there is a fact 17 of cGMP failures, and I don't think that 18 Dr. Conti did, unless I have misread her report. 19 I understand that she has taken it as 20 an assumption that there were cGMP failures, and 21 I consider the implication of that assumption 22 for her assessment of economic loss damages and 23 how I think economic loss damages would be 24 properly calculated if there are any in this</p>

<p style="text-align: right;">Page 26</p> <p>1 matter.</p> <p>2 Q. Did you assume that there were cGMP</p> <p>3 failures for your analysis?</p> <p>4 A. I don't have a specific assumption</p> <p>5 that there were cGMP failures.</p> <p>6 I take under consideration the</p> <p>7 possibility that the drugs would be considered</p> <p>8 misbranded or adulterated and consider how that</p> <p>9 impacts Dr. Conti's opinions.</p> <p>10 I understand that chain of reasoning</p> <p>11 in her report starts from an assumption of cGMP</p> <p>12 failures.</p> <p>13 I can't think as I sit here whether</p> <p>14 there are specific aspects of my opinions that</p> <p>15 depend on me making that assumption.</p> <p>16 Q. Well, so, before we move on from this</p> <p>17 idea, I am understanding with some clarity that</p> <p>18 you understood how Dr. Conti treated that in her</p> <p>19 framework.</p> <p>20 I'm simply trying to understand what</p> <p>21 you did with either the compliance or</p> <p>22 noncompliance of cGMP.</p> <p>23 How does that fit into your framework</p> <p>24 or analysis?</p>	<p style="text-align: right;">Page 28</p> <p>1 economic damages that flow from the conduct that</p> <p>2 is ultimately deemed to be wrongful.</p> <p>3 Q. Do you have analysis anywhere in your</p> <p>4 report that assumes liability and then</p> <p>5 determines if damages are calculable?</p> <p>6 MR. GOLDBERG: You're going to have to</p> <p>7 ask that again, Ruben. You broke up again.</p> <p>8 MR. HONIK: Did the court reporter get</p> <p>9 it?</p> <p>10 THE COURT REPORTER: I did not.</p> <p>11 Q. Is there any part of your report that</p> <p>12 assumes liability, as you've just described to</p> <p>13 me that damages experts sometimes do, in order</p> <p>14 to address damages?</p> <p>15 Is that something that you did?</p> <p>16 A. Yes.</p> <p>17 Q. And we'll certainly get more deeply</p> <p>18 into it.</p> <p>19 But where would I find that in your</p> <p>20 report, that is, your assumption of liability as</p> <p>21 a foundation for discussing damages? Where is</p> <p>22 that?</p> <p>23 A. There is nowhere in my report where I</p> <p>24 assume no liability.</p>
<p style="text-align: right;">Page 27</p> <p>1 MR. GOLDBERG: Objection to form.</p> <p>2 Vague. Compound.</p> <p>3 A. I do not offer opinions on whether</p> <p>4 there was compliance or noncompliance with cGMP.</p> <p>5 I offer opinions with respect to</p> <p>6 whether damages can be calculated with</p> <p>7 information common to the class and whether</p> <p>8 Dr. Conti has put forward a valid economic model</p> <p>9 to assess damages, if any, with information</p> <p>10 common to the class.</p> <p>11 Q. Is the fact of compliance with cGMP</p> <p>12 relevant to an economic analysis of damages in</p> <p>13 this case?</p> <p>14 A. For the analysis itself, whether there</p> <p>15 is compliance or noncompliance, may not be</p> <p>16 relevant in the following sense: That if there</p> <p>17 is ultimately no finding of wrongdoing, my</p> <p>18 understanding is that there is no damage,</p> <p>19 regardless of assumptions made by economists.</p> <p>20 At the stage where I as a damages</p> <p>21 expert am typically involved in a matter, there</p> <p>22 has not been a finding of wrongdoing in many</p> <p>23 cases, and so we would then consider, if there</p> <p>24 is a finding of wrongdoing, what are the</p>	<p style="text-align: right;">Page 29</p> <p>1 So in that sense, the entirety of my</p> <p>2 report assumes that liability will be found for</p> <p>3 some conduct.</p> <p>4 If liability is found for no conduct,</p> <p>5 I think my report generally becomes irrelevant.</p> <p>6 Q. Right. But my question is -- is</p> <p>7 specific.</p> <p>8 Can you point to any language in your</p> <p>9 report that I or any reader could find that says</p> <p>10 you've assumed liability on any basis in order</p> <p>11 to discuss or analyze economic damages?</p> <p>12 MR. GOLDBERG: Objection to form.</p> <p>13 Asked and answered.</p> <p>14 A. I don't recall having written that</p> <p>15 into my report.</p> <p>16 It is typically a standard</p> <p>17 going-forward assumption for a damages economist</p> <p>18 to consider the impact of certain acts where</p> <p>19 liability for those acts may be determined at a</p> <p>20 later stage by a court.</p> <p>21 Q. Okay. And I'm familiar with that</p> <p>22 construct as well.</p> <p>23 Is there someplace in your report</p> <p>24 where I could see your discussion of the basis</p>

<p style="text-align: right;">Page 30</p> <p>1 for that liability; in other words, whether the 2 basis lies in warranty or statutory -- 3 the -- for economic analysis? 4 Where would I find it in your report? 5 MR. GOLDBERG: You're going to have to 6 ask that again, Ruben. 7 MR. HONIK: Jeff, did you hear it? 8 THE COURT REPORTER: No. Part of it 9 cut out. 10 MR. HONIK: Okay. 11 Q. The question I'm trying to get at, 12 Dr. Stiroh, is this: Having read the -- 13 MR. GOLDBERG: Ruben, hang on for one 14 second. 15 Q. -- complaint and other -- 16 MR. GOLDBERG: Can we go off the 17 record for one second? I do have an idea. 18 MR. HONIK: Yeah, let's do that. 19 THE VIDEOGRAPHER: The time right now 20 is 10:42 a.m. We are off the record. 21 (Discussion off the record.) 22 THE VIDEOGRAPHER: The time now is 23 11:08 a.m. We are back on the record. 24 Q. Dr. Stiroh, thank you for your</p>	<p style="text-align: right;">Page 32</p> <p>1 liability on the basis of a warranty claim, does 2 that impact your analysis differently than 3 assuming, for example, that liability is 4 predicated on negligence? 5 MR. GOLDBERG: Objection to form. 6 Ambiguous. Calls for a legal conclusion. 7 A. It does not affect my analysis in any 8 way as I sit here. 9 To the extent that the legal framework 10 has different ways of considering economic 11 damages, that I would look for guidance from 12 counsel as to whether there are different 13 measures of economic damages depending on the 14 bases for liability, if any, is found. 15 Q. We'll talk about the basis for 16 measuring or the formulas for measuring. 17 But you agree those are legal 18 determinants; correct? 19 MR. GOLDBERG: Objection to form. 20 Ambiguous. 21 A. It is my understanding that it -- 22 there would be a legal determination as to 23 whether there is a basis for damages, yes. 24 Q. And before moving on, in connection</p>
<p style="text-align: right;">Page 31</p> <p>1 considerable patience. I am sorry it's taking 2 so long. And let's see how it goes. Okay? 3 A. Yes. 4 Q. I want to try to pick up where I think 5 we left off, and that is, we were discussing -- 6 I was attempting to understand what assumptions 7 you made around the liability questions. 8 You -- you have already described 9 yourself as a damage expert; correct? 10 A. Yes. 11 Q. And do you agree generally that the 12 basis for liability impacts damage analysis? 13 MR. GOLDBERG: Objection to form. 14 Vague. 15 A. I don't agree generally. 16 As a matter of economics, it may be 17 that it is the fact of liability on a particular 18 claim that then generates damages flowing from 19 that claim. 20 But as a legal basis, the basis for 21 liability I don't think I can tell you matters 22 without some specificity as to what it is that 23 you mean. 24 Q. So, for example, if you assume</p>	<p style="text-align: right;">Page 33</p> <p>1 with your analysis in your report, did you make 2 one or more assumptions about the basis for 3 liability in order to arrive at your economic 4 damages opinions? 5 A. I don't recall having done so. 6 I have considered the possibility that 7 there would be a finding that the products at 8 issue contain impurities. 9 And I have considered the assumptions 10 that Dr. Conti made and followed with my 11 economic analyses of damages in her framework 12 and the framework I put forward in my report. 13 Q. In the many cases in which you've been 14 asked to serve as an expert consultant in 15 litigation matters, you frequently need to make 16 assumptions, do you not, in order to answer 17 certain economic questions; correct? 18 A. I agree. 19 Q. And so, for example, I know one of 20 your particular -- I'll refer to it as a 21 subspecialty area is evaluating damages in the 22 antitrust context; correct? 23 A. I'm sorry. What was the question? 24 Q. The question is: You have</p>

<p style="text-align: right;">Page 34</p> <p>1 considerable expertise in analyzing economic 2 damages in the antitrust area; correct? 3 A. Yes. 4 Q. And I gather one of the things, for 5 example, by way of illustration, that you do 6 there is that you either yourself or you 7 evaluate others' assessments of a but-for world 8 with an actual world in terms of economic 9 consequences; correct? 10 MR. GOLDBERG: Objection to form. 11 A. That is a damage model that I am 12 familiar with, yes. 13 Q. That's right. 14 And in order to actions such models, 15 you have to make certain assumptions in order to 16 arrive at a reasonable understanding of what the 17 models propose; correct? 18 A. Yes. 19 Q. So you use things, for example, like 20 regression modeling; correct? 21 MR. GOLDBERG: Objection to form. 22 Vague. 23 A. I have used regressions in analyzing 24 things like economic damages or relevant</p>	<p style="text-align: right;">Page 36</p> <p>1 Q. Understood. Did you assume any of the 2 facts in the master complaints here? Did you 3 assume those allegations to be true? 4 A. I believe where appropriate I have. 5 I have not assumed that facts are not 6 true, as far as I can recall. 7 I have considered the economic 8 implications if there are impurities in the 9 drugs at issue. 10 There may be certain scenarios that I 11 consider that are different from what plaintiff 12 put forward, but that, to my mind, is different 13 from assuming the facts away. 14 Q. What allegations of plaintiffs' 15 economic loss complaint did you assume to be 16 true? 17 A. I understand that there is an 18 allegation that NDMA and NDEA impurities were 19 added in the manufacturing process for certain 20 of the Valsartan-containing drugs at issue. 21 I take -- I understand that there is 22 the allegation that then the FDA would not have 23 approved drugs with those impurities in them. 24 I take as given the market facts as I</p>
<p style="text-align: right;">Page 35</p> <p>1 markets, as they are relevant to work that I 2 have done. 3 Q. Have you had occasion to do economic 4 or damage analysis based on assumptions or 5 representations about legal rulings, or based on 6 legal rulings? 7 A. Yes. 8 Q. And, in fact, for example, in the 9 antitrust area, have you had occasions where 10 you've been asked to assume or you've been told 11 that courts have determined that there's 12 antitrust culpability and antitrust impact, and 13 then the question becomes how to assess the 14 damages related thereto? Have you done that? 15 A. I have not in my experience in 16 antitrust matter. 17 Whether there's antitrust impact is a 18 question for economic testimony, and it's a 19 question on which I have opined. 20 In the antitrust scenario, it would be 21 common for a damage expert to assume the facts 22 in a complaint with respect to conduct are true, 23 but not to assume impact of that conduct without 24 analyzing it in a framework of economics.</p>	<p style="text-align: right;">Page 37</p> <p>1 understand them that the drugs at issue were 2 withdrawn in 2018 and '19. 3 I take as my understanding that there 4 is a dispute over whether the impurities at 5 issue enhanced any risk that a patient would 6 face, and I consider that aspect of the dispute, 7 taking into account both the possibility that 8 the impurities at issue would have increased 9 risks to patients and the possibility that the 10 impurities at issue would not have increased 11 risk to patients. 12 And I explain in my report how that 13 variation flows through into assessing economic 14 damages. 15 Q. What do you mean when you say that you 16 assumed the FDA would not have approved the 17 drugs, in your response? 18 A. I consider the framework that I 19 understand Dr. Conti to have put forward where 20 she says there would not have been a supply of 21 the products at issue. 22 To the best of my recollection, I 23 think that she is assuming that from 2012 24 forward, whereas the market facts as I</p>

<p style="text-align: right;">Page 38</p> <p>1 understand them is that the products at issue 2 were not available in 2018 and 2019. 3 Q. Where in your report would it reveal 4 to me or any reader that you assumed the fact 5 you just described? 6 A. There is a section in my report where 7 I discuss what consumers would have done in the 8 absence of the availability of the VCDs at 9 issue. 10 That is consistent with the framework 11 that Dr. Conti has put forward where she assumes 12 that there would not be supply of the products 13 at issue. 14 Q. Where is that analysis in your report? 15 A. It is included at various places in my 16 report as appropriate, and specifically in 17 section Roman Numeral IV of my report, the 18 discussion begins on paragraph 26. 19 I have discussed various aspects, I 20 think, that are aligned with that theory, what 21 if the drugs were not available at other places 22 as well. But at least Roman Section IV. 23 Q. So I want to make sure that you and I 24 are on the same page.</p>	<p style="text-align: right;">Page 40</p> <p>1 III where I also consider what patients would 2 have done in the absence of available supply for 3 VCDs at issue. 4 But the part that I recall discussing 5 it more explicitly is Roman IV. 6 Q. Would section Roman IV of your report, 7 in addition to the other sections to which 8 you've cited me, reflect your analysis of 9 potential damages in the absence of a supply 10 curve for VCDs? 11 A. My analysis in section IV reflects a 12 consideration of the financial losses in the 13 absence of supply for the VCDs at issue. 14 Q. Do you assume in your analysis found 15 in section IV that there is an absence of a 16 supply curve for VCDs? 17 A. I do not assume an absence of a supply 18 curve for VCDs. 19 I understand that one of the 20 alternatives available to consumers in the 21 absence of the at-issue VCDs would have been the 22 brand drug and I think some supply available 23 from other manufacturers that are not 24 defendants.</p>
<p style="text-align: right;">Page 39</p> <p>1 My Roman IV is headed, Plaintiffs' 2 payments for VCDs and VCD substitutes would 3 likely have been equal or higher. 4 Is that the section you're directing 5 me to? 6 Because that comports with paragraph 7 50, 5-0, in my report. 8 A. Yes. Did I say a different number? I 9 meant to say page 26, paragraph 50. 10 Q. Got it. 11 Are there any other discrete places in 12 your report that you believe discusses assuming 13 that the FDA would not have approved these 14 drugs, and, therefore, they wouldn't have been 15 in the marketplace? 16 Where else do you discuss it? 17 MR. GOLDBERG: Objection to form. 18 Mischaracterizes the testimony. 19 A. I think all of Roman IV, which goes 20 over to a chart that is on page 34. 21 But there may be other places, 22 certainly in the summary of opinions that's at 23 the beginning of my report. 24 And then there may be parts of Roman</p>	<p style="text-align: right;">Page 41</p> <p>1 Q. Is there any part of your analysis in 2 which you assume an absence of a supply curve 3 for contaminated VCDs? 4 A. In my section Roman IV, I consider 5 what the economic implications are if there had 6 not been supply of contaminated VCDs. 7 Q. And was your conclusion in that 8 section, generally speaking, that patients would 9 go to alternative drug therapy? 10 A. Did you ask me if that was my 11 conclusion? 12 Q. Yes. 13 A. It is not a conclusion that I have. 14 It is a consideration that I have. 15 My understanding is that patients that 16 are currently on VCDs or blood pressure 17 medication, if they could not take their current 18 medication, would for the most part be required 19 to switch to something else. 20 I have seen in the data that there are 21 some patients that appear to have switched to 22 things like Vitamin C. 23 So I don't assume that everybody needs 24 to switch, but it is my understanding that the</p>

<p style="text-align: right;">Page 42</p> <p>1 majority of consumers would need to take a 2 medication to manage their blood pressure. It 3 is not necessary to my conclusions that all of 4 them do. 5 Q. Are you aware that "adulterated" is a 6 term of art with a specific definition under the 7 Federal Food, Drug and Cosmetic Act? 8 A. My understanding is that it is. 9 Q. And did you list the relevant section 10 that defines "adulterated" among your reliance 11 materials? 12 A. I don't think that I did. I did not 13 rely on an FDA statement of adulteration. I 14 have considered what Dr. Conti considered in her 15 report, and my report responds to her opinions. 16 Q. Well, do you acknowledge that 17 Dr. Conti merely applied the definition of 18 "adulterated" as the FDA in the Federal Food, 19 Drug and Cosmetic Act sets it out? 20 A. As I recall from her report, I believe 21 that is what she sets out to do. 22 I did not go to check whether she had 23 cited it correctly or interpreted it correctly. 24 I take the words in her report as given and</p>	<p style="text-align: right;">Page 44</p> <p>1 mean? 2 A. As appreciated by that consumer and/or 3 their doctor. 4 Q. Okay. You listed in your reliance 5 material at Exhibit 2, which is now part of your 6 report at Exhibit 1, four court filings. 7 Do you see that? 8 A. Yes. 9 Q. There are roughly 2,000 court filings 10 in this MDL. 11 Why did you pick these four? 12 A. The four that are cited here are the 13 ones that I cited in my report for -- as the 14 basis for certain statements or quotes that I 15 have taken from those court filings. 16 Q. Yeah. That strikes me as a tautology. 17 They're there because you cite them in your 18 report. 19 My question is, Why did you select 20 these four? 21 How are they relevant to your analysis 22 and opinions? 23 A. We can see from where I have cited 24 them how they fit in.</p>
<p style="text-align: right;">Page 43</p> <p>1 consider the implications for economic loss 2 damages. 3 Q. What are the implications, in your 4 judgment, for economic loss damages that we may 5 be dealing with and, in fact, are dealing with 6 adulterated drugs? 7 MR. GOLDBERG: Objection to form. 8 Assumes facts not in evidence. Ambiguous. 9 A. As an economic matter, the economic 10 losses that relate to the difference between the 11 price paid and the value received depend on the 12 impact on the value received by consumers of 13 VCDs from having consumed a product that has an 14 impurity in it that caused it to be deemed 15 adulterated or misbranded. 16 As I explained in my report, as a 17 matter of economics, that diminution of value, 18 if any, depends on what I think I have called 19 the degree of adulteration. By that, I mean 20 depends on how the risk profile of the product 21 may change for any consumer consuming the 22 product. 23 Q. And would that be the risk profile as 24 appreciated by that consumer? Is that what you</p>	<p style="text-align: right;">Page 45</p> <p>1 The definition of the class -- of the 2 purported class, the identities of defendants, 3 the identities of the named plaintiffs all come 4 from the complaint. And so that is cited. 5 There are certain background facts 6 where I understand there may be a dispute, but 7 from my -- for my purposes, I am using a 8 particular definition, and frequently I will 9 cite a definition that comes from the complaint 10 or the opposing party, if -- if relevant, so 11 that there is not dispute over that fact, and, 12 instead, I focus on the economic analyses. 13 Q. Were these four court filings provided 14 to you by counsel and suggested as material you 15 should rely on, or did you have a larger pool of 16 documents from which you selected these four on 17 your basis? 18 A. I have a larger pool of documents and 19 selected these four as having information that I 20 wanted to put either in the background of my 21 report or to define what has been put forward as 22 the class, the dates of the class, the 23 identities of the parties, things like that. 24 Q. I note that you didn't rely on any</p>

<p style="text-align: right;">Page 46</p> <p>1 opinions or writings of the court to shed light 2 on either the theories or the appropriate 3 measure of damages. 4 Why didn't you do that? 5 A. I have been asked to assess from the 6 standpoint of an economist what -- whether 7 economic loss damages in the -- for the class 8 members as described in the motion for class 9 certification can be assessed with information 10 methods common to the class. 11 I did that based on my training as an 12 economist, and have explained at certain places 13 in my report where I understand there to be a 14 correspondence of legal theories and economic 15 theories. 16 But for the most part, my report is an 17 independent economic analysis of economic loss 18 damages. 19 Q. Yeah, I understand all that. 20 But my question was very specific, and 21 that was, why didn't you look at any of the 22 writings of the court in the form of opinions to 23 shed light on any issues that may impact that 24 economic analysis and the ability to certify a</p>	<p style="text-align: right;">Page 48</p> <p>1 Q. Were you told not to assume that the 2 court's opinions are reliable? 3 A. I was not. 4 MR. GOLDBERG: Objection. Note my 5 objection to that question as ambiguous. 6 Q. What opinions of the court did you 7 read that you failed to list in your reliance 8 materials list? 9 A. I did not fail to list any opinions in 10 my reliance list, because I did not rely on 11 opinions for the court. 12 I recall reviewing an opinion of the 13 court. I believe there are more than one. I 14 can't recall them for you with certainty as I 15 sit here without them in front of me. 16 I think Dr. Conti refers to them 17 either in her report or in her deposition, and 18 it would be those ones that are referenced that 19 I have reviewed. 20 Q. So these opinions that you did review, 21 it sounds like you reviewed them after you wrote 22 your report; correct? 23 A. I have reviewed them after I wrote my 24 report. To the best of my recollection, I have</p>
<p style="text-align: right;">Page 47</p> <p>1 class for damages? 2 MR. GOLDBERG: Objection to form. 3 Asked and answered. 4 A. In the course of my work on this case, 5 I have reviewed other legal documents, including 6 opinions of the court. For the purposes of my 7 opinions that relate to economic losses, and 8 whether there are economic losses that can be 9 calculated on a class-wide basis, I rely on my 10 training and experience as an economist and 11 review the types of information that are 12 available in this case that economists typically 13 rely upon. 14 Q. So you did review opinions in the 15 court, you just didn't list them as reliance 16 materials; right? 17 A. I reviewed opinions of the court. I 18 did not rely on an opinion of the court to reach 19 my independent conclusions as an economist. 20 Q. When you say "independent," what do 21 you mean by that? 22 A. I mean that I have not been asked to 23 assume somebody else's opinion is true. I have 24 been asked to reach my own opinions.</p>	<p style="text-align: right;">Page 49</p> <p>1 seen the opinions of the court prior to writing 2 my report as well. 3 Q. What opinions of the court did you 4 review prior to the preparation and tendering of 5 your report that would not be listed in your 6 reliance materials list? 7 A. I don't recall by title opinions of 8 the court that I reviewed prior to my report. 9 There are no opinions of the court 10 listed in my reliance materials because I did 11 not rely on opinions of the court in reaching my 12 economic opinions. 13 Q. Right. I understand that you didn't 14 rely on anything the court has said. 15 Now I'm trying to identity what you, 16 nonetheless, read that the court opined on prior 17 to January 12th of this year, which is the date 18 of your report. 19 If you don't remember the titles or 20 formal names of the opinions, tell me what the 21 subjects were. 22 A. To the best of my recollection, the 23 subjects are motions to dismiss documents where 24 the court has written a document that I think</p>

<p style="text-align: right;">Page 50</p> <p>1 the title has opinion in it.</p> <p>2 Q. Okay. And is it correct that when you</p> <p>3 read the motions to dismiss, there was nothing</p> <p>4 in there that the court shed light on which</p> <p>5 impacted your economic analysis or damage</p> <p>6 analysis?</p> <p>7 MR. GOLDBERG: Objection. Ambiguous.</p> <p>8 A. I don't recall if there was anything</p> <p>9 in them that shed light on my economic analysis.</p> <p>10 To the extent that there was something</p> <p>11 that is consistent with other documents that I</p> <p>12 have read that shed light on my economic</p> <p>13 analysis, I have relied on materials and</p> <p>14 information that are commonly relied upon by</p> <p>15 economists in reaching independent economic</p> <p>16 opinions, and I have not relied on an opinion of</p> <p>17 the court to reach my own opinion.</p> <p>18 Q. So if the court offered an opinion</p> <p>19 about the viability of a certain cause of action</p> <p>20 alleged in plaintiffs' complaint and the</p> <p>21 economic impact of that, you did not place any</p> <p>22 weight or reliance on such views; correct?</p> <p>23 A. I think it is not correct to phrase</p> <p>24 what I did in that way.</p>	<p style="text-align: right;">Page 52</p> <p>1 reviewed opinions of the court connected with</p> <p>2 motions to dismiss.</p> <p>3 To the best of my recollection, they</p> <p>4 are the same that I had reviewed earlier in the</p> <p>5 case. They are not things that I relied upon to</p> <p>6 reach my opinions.</p> <p>7 Q. Okay. And so if I've understood you,</p> <p>8 what you're saying is, you read opinions of the</p> <p>9 court on motions to dismiss both before and</p> <p>10 after you wrote your report, and in neither</p> <p>11 instance do you place reliance on the court's</p> <p>12 views; correct?</p> <p>13 MR. GOLDBERG: Objection.</p> <p>14 Mischaracterizes the testimony.</p> <p>15 A. For purposes of reaching my opinions</p> <p>16 with respect to the economic loss damages</p> <p>17 purportedly suffered by the class, I did not</p> <p>18 rely on a judge's legal opinion.</p> <p>19 I relied on my own training as an</p> <p>20 economist and the materials that an economist</p> <p>21 would typically consider in evaluating whether</p> <p>22 damages can be assessed with information and</p> <p>23 methods common to the class.</p> <p>24 Q. What do you mean by typically rely</p>
<p style="text-align: right;">Page 51</p> <p>1 I reviewed certain court documents.</p> <p>2 The opinion of the court that I have read does</p> <p>3 not -- is not something that I relied on in</p> <p>4 reaching my own opinions with respect to</p> <p>5 economic loss damages.</p> <p>6 Q. Did you read Dr. Conti's deposition</p> <p>7 testimony in preparation for today?</p> <p>8 A. I did.</p> <p>9 Q. What opinions were you shown or did</p> <p>10 you review after the preparation of your written</p> <p>11 report?</p> <p>12 You've only authored one written</p> <p>13 report; correct?</p> <p>14 A. In connection with this matter, that</p> <p>15 is correct.</p> <p>16 Q. When you say "in connection with this</p> <p>17 matter," have you authored any other writings in</p> <p>18 connection with this MDL which concerns</p> <p>19 Valsartan, Losartan and Irbesartan?</p> <p>20 A. I have not.</p> <p>21 Q. So the question is, What opinions of</p> <p>22 the court did you read and/or consider after the</p> <p>23 preparation of your one and only written report?</p> <p>24 A. To the best of my recollection, I have</p>	<p style="text-align: right;">Page 53</p> <p>1 upon?</p> <p>2 What do economists typically rely upon</p> <p>3 that you place reliance on to the exclusion of</p> <p>4 the court's views?</p> <p>5 A. I do not exclude the court's views. I</p> <p>6 did not rely on the court's views for purposes</p> <p>7 of my -- of reaching my opinions.</p> <p>8 The things that I rely upon, as I</p> <p>9 mentioned, my training and experience as an</p> <p>10 economist, that is, the economic -- the</p> <p>11 application of economic theory and models to</p> <p>12 business situations to assess whether there is</p> <p>13 economic loss to individuals in a given set of</p> <p>14 circumstances.</p> <p>15 Q. Does it matter to you to understand</p> <p>16 what the court's views about what the proper</p> <p>17 measure of damages is to do the work you were</p> <p>18 asked to do?</p> <p>19 MR. GOLDBERG: Objection to form.</p> <p>20 Ambiguous.</p> <p>21 A. To do the work that I was asked to do</p> <p>22 is what I have in my report.</p> <p>23 I was asked to assess whether damages</p> <p>24 could be determined on a class-wide basis with</p>

<p style="text-align: right;">Page 54</p> <p>1 information common to the class where those 2 damages were economic loss damages. 3 I have explained in my report the 4 framework that I am using for economic loss 5 damage. 6 To carry out my assignment in this 7 case, it was not necessary to take an 8 assumption -- sorry -- to take an opinion of the 9 court as an assumption in reaching my economic 10 opinions. 11 Q. You wrote, and I quote, I also do not 12 opine on the legal issues relating to the proper 13 measure of damages or on which measures should 14 be used. 15 Do you remember writing that? 16 A. Yes. 17 Q. Does it matter to you whether the 18 court has a view or opinion on what the proper 19 measure of damages is or which measure should be 20 used? Is that relevant to you? 21 A. I would anticipate, in the fullness of 22 time, the court will eventually reach an opinion 23 on the proper measure of damages to be used, and 24 my report is something that I have been asked to</p>	<p style="text-align: right;">Page 56</p> <p>1 being asked to give my opinions on economic loss 2 damages. 3 Q. If you were told to assume VCDs in 4 this case were adulterated under the meaning of 5 the Food, Drug and Cosmetic Act, would that have 6 changed any of your opinions in this case? 7 A. No. 8 Q. I'm sorry. Did you say no? 9 A. I did say no. 10 Q. Did you consider in any way in your 11 economic analysis whether if the VCDs in 12 question were adulterated as defined under that 13 act, what impact it would have on your economic 14 analysis and various conclusions? 15 A. The question was, did I consider that? 16 THE WITNESS: I'm sorry, Jeff. If you 17 don't mind reading that one back to me as 18 well. 19 Q. I'll restate it. 20 Did you consider in any way in your 21 economic analysis whether if the VCDs in 22 question were, in fact, adulterated as defined 23 under the Food, Drug and Cosmetic Act, if that 24 would influence or impact any of your economic</p>
<p style="text-align: right;">Page 55</p> <p>1 prepare that reflects my opinions on those 2 topics. 3 Q. If the fullness of time were to have 4 occurred already and it coincided with today, 5 and if you were told today what the court said 6 is the proper measure of damages, or which 7 measure should be used, would you accept that 8 and rely upon it in forming opinions? 9 A. I'm sorry. I need you to say the 10 beginning of that again. I missed at least one 11 of the words in your question. Not a technology 12 issue. I just didn't hear it. 13 MR. HONIK: Jeff, did you get my 14 question? 15 THE COURT REPORTER: Yes, I did. 16 MR. HONIK: Would you be kind enough 17 to read it to Dr. Stiroh. 18 THE COURT REPORTER: Sure. 19 (The record was read back.) 20 A. I would not, for the reason that if 21 the court has fully determined what the measure 22 of damages is and does not require, or the 23 parties do not believe, that there is any role 24 for opinion testimony, I would not anticipate</p>	<p style="text-align: right;">Page 57</p> <p>1 analysis or conclusions? 2 MR. GOLDBERG: Objection. Vague. 3 Overbroad. 4 A. I have considered that scenario. 5 It does have an impact on my damages 6 assessment. 7 If it is not -- if the products at 8 issue are not found to be adulterated or 9 misbranded, my understanding is there would then 10 be no damages arising from the conduct at issue. 11 If their products at issue are found 12 to be adulterated and misbranded, then, as I 13 explained in my report, to an economist 14 assessing diminution of value that comes from 15 adulteration or misbranding, it matters the 16 degree to which any product consumed by any 17 consumer was adulterated or misbranded, the 18 impact that that adulteration has for the 19 efficacy of the drug for that consumer, whether 20 it still has a therapeutic benefit to the 21 consumer, the amount of the product that they 22 consumed, the change in the risk profile for the 23 consumer, and I understand that some of those 24 factors depend on things individual to the</p>

<p style="text-align: right;">Page 58</p> <p>1 consumer, such at their weight and health 2 history. 3 Q. What is the proper measure of damages 4 for a contaminated drug in the U.S. supply 5 chain? 6 MR. GOLDBERG: Object to form. Calls 7 for a legal conclusion. 8 A. I'm not offering an opinion on what 9 the proper measure of damages is. I'm offering 10 opinions on how to properly use economics to 11 assess damages when those damages come from 12 diminution of loss or differences in financial 13 circumstances of patients. 14 Q. What is the difference between the 15 phrases you used, "proper measure of damages," 16 versus "which measure should be used"? 17 Are those terms synonymous or 18 different? 19 A. They are different. 20 Q. Can you tell me the difference. 21 A. Yes. In my report when I use "proper 22 measure of damages," I am speaking from the 23 standpoint of an economist how to use economics 24 properly in the measure of damages.</p>	<p style="text-align: right;">Page 60</p> <p>1 they synonymous as you've used them? 2 A. They're not synonymous as I have used 3 them. I think that the explanation that I gave 4 you a minute ago is correct. 5 I don't know with certainty, but it 6 would not surprise me if elsewhere in the report 7 I have used the phrase "to properly calculate 8 economic damages" or "a proper measure of 9 economic damages," or even just "a proper 10 measure of damage" with the word "economic" 11 elsewhere in the sentence. 12 When I use "proper measure of damages" 13 elsewhere in my report, I'm opining on 14 economics. 15 In this sentence that you have quoted 16 that is towards the end of paragraph 5, I am 17 clarifying that if there are legal issues that 18 relate to the proper measure of damages as I 19 would calculate them, I am not opining on the 20 legal issues and I am not opining on which 21 measure should be used. 22 Q. So do you accept that legal issues can 23 impact the proper measure of damages in a case 24 such as this?</p>
<p style="text-align: right;">Page 59</p> <p>1 I am not opining to the court on which 2 measure of damages, and in my report, I consider 3 alternative approaches to damage valuation. 4 Q. Okay. So what is -- what is "which 5 measure should be used," how is that different? 6 A. As I hear you say that, I -- I 7 understand that to mean am I telling the court 8 which measure should be used, and that is not 9 what I am intending to do. 10 Q. Okay. I think there's some confusion, 11 and I apologize. 12 I am directing your attention to 13 paragraph 5 of your own report, marked as 14 Exhibit 1, in which you write in the penultimate 15 sentence, quote, I also do not opine on the 16 legal issues relating to the proper measure of 17 damages or on which measure should be used. 18 Do you see that clause? 19 A. I do. 20 Q. And my question is, are those two 21 different things, the proper measure of damages 22 on the one hand, and which measures should be 23 used on the other? 24 Are they two different concepts or are</p>	<p style="text-align: right;">Page 61</p> <p>1 MR. GOLDBERG: Objection to form. 2 A. I don't have an opinion on that. 3 Q. Listen to my question. 4 Do you accept that legal issues may 5 have an impact on how and what the proper 6 measure of damages is in this case? 7 MR. GOLDBERG: Objection to form. 8 Vague. 9 A. I accept that there would be legal 10 issues that could determine which measure of 11 damages would be used. 12 As we've just had in our exchange, 13 when I use "proper measure of damages," I have 14 in that an expectation that it is properly using 15 economics, an economic theory. 16 When you asked the question, it sounds 17 like you maybe have a different measure or 18 definition that is the legal theory. 19 And what I've intended to do in the 20 sentence that you've quoted in paragraph 5 is 21 say specifically, that is not the subject I am 22 opining on. I am opining on economic damages, 23 and I do have an opinion on how economics would 24 properly be used in determining economic</p>

<p style="text-align: right;">Page 62</p> <p>1 damages.</p> <p>2 Q. Right. And I'm only trying to</p> <p>3 understand to what extent, if any, you accept or</p> <p>4 allow that legal principles and legal</p> <p>5 conclusions in a case like this impact your</p> <p>6 economic measure of damage analysis.</p> <p>7 A. I guess I am not following your</p> <p>8 question, then, or would need it explained.</p> <p>9 I have written a report that gives my</p> <p>10 opinions. I would expect the court would take</p> <p>11 into account economic opinions as well as legal</p> <p>12 information.</p> <p>13 I do not have an opinion with respect</p> <p>14 to the legal framework. I have opinions with</p> <p>15 respect to the economic framework.</p> <p>16 If the court takes into account</p> <p>17 different information, and particularly a legal</p> <p>18 framework, I think that affects what the court</p> <p>19 does with my opinion. It does not affect my</p> <p>20 opinions, unless you give me an example that</p> <p>21 then I can consider.</p> <p>22 Q. So is it your testimony that the legal</p> <p>23 framework, to borrow your phrase, doesn't impact</p> <p>24 your economic analysis?</p>	<p style="text-align: right;">Page 64</p> <p>1 statutory prejudgment interest rate, and I have</p> <p>2 taken those cases -- where appropriate, I have</p> <p>3 taken the statutory interest rate and used it in</p> <p>4 analyses.</p> <p>5 I don't know -- I can't think of an</p> <p>6 example like that that is relevant here.</p> <p>7 Q. Does it matter to you when the point</p> <p>8 of injury occurred in this case?</p> <p>9 MR. GOLDBERG: Objection to form.</p> <p>10 Vague.</p> <p>11 A. It does.</p> <p>12 Q. In what way?</p> <p>13 A. I understand that the allegations</p> <p>14 include an allegation that the VCDs at issue</p> <p>15 increase the risk profile of a potentially</p> <p>16 adverse health outcome for patients that consume</p> <p>17 them.</p> <p>18 I understand that the change in the</p> <p>19 risk profile depends on factors such as the</p> <p>20 amount of the -- of the products at issue that</p> <p>21 were consumed, the weight of the person</p> <p>22 consuming them, and other health factors. Those</p> <p>23 can change over time.</p> <p>24 I have an analysis in my report that</p>
<p style="text-align: right;">Page 63</p> <p>1 A. It is my understanding that a court</p> <p>2 may take into account things other than</p> <p>3 economics in assessing damages.</p> <p>4 The things that I take into account</p> <p>5 are economic variables.</p> <p>6 I have in my report explained why I</p> <p>7 have an understanding that some of the</p> <p>8 approaches that I describe may also be of</p> <p>9 relevance to the court. I am not telling the</p> <p>10 court which ones to consider.</p> <p>11 Q. Yeah. Dr. Stiroh, respectfully,</p> <p>12 you've turned the question on its head.</p> <p>13 I have a well-developed understanding</p> <p>14 of what courts consider.</p> <p>15 What I have asked you is whether, in</p> <p>16 your economic analysis and your opinions, you</p> <p>17 considered the legal framework, as you used that</p> <p>18 term.</p> <p>19 MR. GOLDBERG: Objection to form.</p> <p>20 Argumentative. Asked and answered.</p> <p>21 A. I don't have a basis to incorporate a</p> <p>22 legal framework into my analysis.</p> <p>23 I am not a lawyer. I have worked on</p> <p>24 matters where, for example, there is a -- a</p>	<p style="text-align: right;">Page 65</p> <p>1 considers the available information on how long</p> <p>2 and how many and of what concentrations of the</p> <p>3 products at issue certain class members took.</p> <p>4 That timeframe comes into account in</p> <p>5 assessing whether damages can be determined on a</p> <p>6 class-wide basis with information common to the</p> <p>7 class.</p> <p>8 Q. Did you give any consideration to when</p> <p>9 the drugs were purchased in time, to your</p> <p>10 economic analysis?</p> <p>11 A. I --</p> <p>12 MR. GOLDBERG: Objection.</p> <p>13 A. I think my answer just -- I think my</p> <p>14 answer answered that question.</p> <p>15 It -- my understanding is that the</p> <p>16 class period for the consumers and TPPs starts</p> <p>17 in 2012 and goes to the recalls.</p> <p>18 And I consider that patients are</p> <p>19 differently situated over that timeframe, that</p> <p>20 there are potentially class members who have</p> <p>21 taken the products at issue for longer periods</p> <p>22 than others. And I describe that in my report.</p> <p>23 Q. You listed the plaintiffs' economic</p> <p>24 loss complaint, as well as our memorandum of law</p>

<p style="text-align: right;">Page 66</p> <p>1 supporting class certification, as items that 2 you read and relied upon; correct? 3 A. Yes. 4 Q. Did you glean from any of that when 5 the plaintiffs allege that the economic harm 6 occurred? 7 And I don't mean the class period. I 8 mean, when was economic harm occurring for each 9 class member? Did you glean that? 10 A. Are you asking me about the economic 11 loss damages to the purported class of 12 consumers? 13 Q. Yes. 14 MR. GOLDBERG: Objection to form. 15 A. It is my understanding that the harm 16 to consumers is alleged to come from consumption 17 of the products at issue. 18 The products at issue were -- 19 Q. And when you -- I apologize. I spoke 20 over you. Go ahead. 21 A. The product at issue were consumed in 22 different amounts, in different quantities, and 23 over different frame -- timeframes by the class, 24 and I have considered that in my report.</p>	<p style="text-align: right;">Page 68</p> <p>1 the retailer? 2 A. It is not my understanding that those 3 are unrelated. 4 Q. Well, how is that related to your 5 analysis of the economic harm here? 6 A. My consideration of economic harm 7 includes a consideration of the difference 8 between the price paid, which would be the price 9 that was paid at retail, for example, for the 10 products at issue, and the value received. 11 And the value received would be the 12 value that a patient who consumed the product 13 received from consuming it. 14 Q. So the definition of value in that 15 sentence and in your analysis is the therapeutic 16 value that was given or provided to the patient; 17 correct? 18 A. It includes the therapeutic value that 19 was provided to the patient, yes. 20 Q. What else is included in your 21 definition of value in that construct? 22 A. The -- other factors that could be 23 considered in value to a patient that consumes 24 it are the either presence or lack of side</p>
<p style="text-align: right;">Page 67</p> <p>1 Q. When you say "consumption," do you 2 mean ingest? 3 A. I do. Sorry about that. I do. 4 Q. Did you in any way, shape or form 5 consider that the economic harm is unrelated to 6 consumption, but related to the purchase of the 7 drug? 8 A. I understand that the allegations of 9 harm to TPPs are not related to their 10 consumption of the drug. 11 I understand that the allegations of 12 harm to consumers comes from the fact that they 13 have consumed a drug that includes impurities. 14 If a consumer did not consume it or 15 purchased it on behalf of somebody else, a -- a 16 parent for a child, for example, I understand 17 that it is considering the harm for -- on the 18 consumers to the person that consumed the drug. 19 Q. Is it your understanding, therefore, 20 that the economic harm claimed in the economic 21 loss complaint on behalf of the consumer class 22 is unrelated to the purchase of the drug, that 23 is, the transaction at the retail level in which 24 some monies is exchanged between consumer and</p>	<p style="text-align: right;">Page 69</p> <p>1 effects from consuming the product at issue, the 2 effectiveness of the drug that they have 3 experienced relative to perhaps taking other 4 blood pressure medications, the ease with which 5 they can take it and remember to take it on a 6 particular daily, weekly, timeframe. 7 Whether they are obtaining it through 8 a mail order and it comes to their house versus 9 they have to drive to get it. 10 There may be other things, but those 11 are the ones that come to mind. 12 Q. Are you able to assign economic values 13 to the elements that you just laid out for me? 14 A. Can you say what you mean by "assign 15 economic value"? 16 Q. Yeah. Assign a cash value to it, a 17 dollar value to the elements you just described 18 as making up value. 19 MR. GOLDBERG: Objection to form. 20 Ambiguous. Overbroad. 21 A. From the standpoint of economic 22 theory, things that give value to a consumer can 23 be measured in dollar terms. 24 Q. Okay. Have you done that in your</p>

<p style="text-align: right;">Page 70</p> <p>1 analysis and report?</p> <p>2 A. I have not assessed the value of the</p> <p>3 products received on a</p> <p>4 class-member-by-class-member basis.</p> <p>5 My report and opinions of this class</p> <p>6 certification stage of the case includes the</p> <p>7 opinion that such an analysis requires</p> <p>8 individual information and cannot be performed</p> <p>9 on a class-wide basis.</p> <p>10 Q. Is there a reliable methodology of</p> <p>11 which you're aware that can place a dollar value</p> <p>12 on any of the elements of value that you've</p> <p>13 described to me?</p> <p>14 A. In a general sense, there are economic</p> <p>15 methods that have been used to assess changes in</p> <p>16 consumer welfare that to an economist means all</p> <p>17 of the aspects of value that a consumer would</p> <p>18 obtain.</p> <p>19 To assess damages or loss of consumer</p> <p>20 welfare in this matter, the diminution of value</p> <p>21 to a consumer depends on factors that are unique</p> <p>22 to a consumer and are not market-wide.</p> <p>23 So information in this matter would</p> <p>24 be, you would need individual-by-individual</p>	<p style="text-align: right;">Page 72</p> <p>1 hypothetical in your question.</p> <p>2 It had in it at the beginning, as I</p> <p>3 heard it --</p> <p>4 Q. I'll restate it for you. I'll restate</p> <p>5 it for you.</p> <p>6 I want you to assume that a court and</p> <p>7 a jury has concluded that the damages in this</p> <p>8 case total \$4 billion, which is the actual money</p> <p>9 paid by consumers and insurers for these</p> <p>10 contaminated drugs.</p> <p>11 You with me so far?</p> <p>12 A. Yes.</p> <p>13 Q. And I want you to further assume that</p> <p>14 the court will allow some evidence to diminish</p> <p>15 that number by value that the consumers or the</p> <p>16 TPPs received.</p> <p>17 Tell me how you would measure that and</p> <p>18 offer it as a -- what to deduct the \$4 billion</p> <p>19 number I asked you to assume.</p> <p>20 MR. GOLDBERG: Objection to form.</p> <p>21 Ambiguous.</p> <p>22 A. I don't understand your hypothetical.</p> <p>23 In my experience, if a jury has</p> <p>24 reached an opinion and conclusion that is after</p>
<p style="text-align: right;">Page 71</p> <p>1 information to assess the diminution of value,</p> <p>2 if any.</p> <p>3 Q. Yeah. And assuming all of that to be</p> <p>4 true, it's correct that you didn't attempt to</p> <p>5 provide a formula or describe a methodology at</p> <p>6 which any of those values could be quantified;</p> <p>7 correct?</p> <p>8 A. I do not describe how an economist</p> <p>9 would consider putting a dollar value on loss of</p> <p>10 consumer welfare. It is the concept that is</p> <p>11 underlying my report.</p> <p>12 I described the information that would</p> <p>13 be needed to do so and note that that</p> <p>14 information is individualized and not</p> <p>15 class-wide.</p> <p>16 Q. So, in other words, if a court and/or</p> <p>17 jury were to decide that the proper measure of</p> <p>18 damages in this case is the actual dollars paid</p> <p>19 by both consumers as well as TPPs, and that</p> <p>20 number is \$4.4 billion, you would have no way to</p> <p>21 reduce that by ascribing any value or diminution</p> <p>22 to the value elements that you described for me;</p> <p>23 correct?</p> <p>24 A. I don't think I'm following the</p>	<p style="text-align: right;">Page 73</p> <p>1 I have given my report and testimony, and I --</p> <p>2 my role has typically ended.</p> <p>3 Q. I want you to assume the following,</p> <p>4 and I want you to listen carefully to me.</p> <p>5 I want you to assume you haven't</p> <p>6 testified yet.</p> <p>7 I want you to assume that the result</p> <p>8 of a legal proceeding is that gross damages in</p> <p>9 the amount of \$4 billion have been arrived at</p> <p>10 through testimony other than your own and</p> <p>11 through legal conclusions that the court made,</p> <p>12 and that the gross damages in this hypothetical</p> <p>13 case is \$4 billion, which was derived at by</p> <p>14 simply adding the amount of that consumers paid</p> <p>15 and insurers paid, and the court is now inviting</p> <p>16 you as an expert to tell the court how to</p> <p>17 diminish that sum by the value which you believe</p> <p>18 the consumers or insurers in this case received.</p> <p>19 Tell me the method by which you will</p> <p>20 apprise the court how to diminish the 4 billion</p> <p>21 sum.</p> <p>22 A. In a scenario where the court has</p> <p>23 determined a sum of money, if -- to me, if they</p> <p>24 have determined what damages are, then I have</p>

<p style="text-align: right;">Page 74</p> <p>1 got to say this is outside of my experience to 2 understand what it is that I'm now being asked 3 to do. 4 If a judge were to tell me, I 5 understand, here is all of the spending on the 6 drugs. How do I get from this spending to what 7 are economic damages? 8 Depending on the information that I 9 have available to me, if it is the set of 10 information that I have in my report, I would 11 explain to the judge that individual information 12 is required from consumers to assess the 13 diminution of value in the product that they 14 actually experienced. 15 Q. And you would agree you didn't do that 16 in your report; correct? 17 A. I don't think that is correct. 18 I think exactly what I have done in my 19 report is to tell the court or the judge that 20 individual information is required to assess 21 diminution of value. 22 Q. Did you provide a methodology for 23 arriving at a dollar value assigned to the 24 intangible values you've described?</p>	<p style="text-align: right;">Page 76</p> <p>1 Can we take a minute off -- can we 2 take a minute off the record? We've been 3 going -- I know we had a break, but I would 4 like to take a -- a bio break, if we could. 5 MR. HONIK: Yeah. Okay. I'm in the 6 middle of something. There's one or two 7 questions that would be a more -- 8 MR. GOLDBERG: Okay. Why don't you go 9 ahead. That's fine. Go ahead, Ruben. 10 Q. Dr. Stiroh, did it matter to you in 11 your analysis and in arriving at your opinions 12 whether it is permissible under U.S. law to sell 13 adulterated or misbranded drugs to U.S. 14 consumers and end payers? 15 A. It matters to my opinions. 16 I have an opinion that that fact, if 17 or where true, does not mean that the drugs do 18 not have value to consumers. 19 I have opinions in my report that 20 relate to the fact that the drugs at issue were, 21 in fact, sold and consumed by consumers. 22 Q. If you were told to assume that 23 adulterated drug products cannot be placed into 24 the stream of commerce, would any of your</p>
<p style="text-align: right;">Page 75</p> <p>1 A. I have not laid out a framework in my 2 report for assessing the reduction in consumer 3 welfare, if any. 4 I have described that that cannot be 5 done without information that is individualized. 6 Q. Did you consider whether or not 7 adulterated drugs can be placed into and sold 8 within the U.S. drug supply market, that is, 9 placed into the interstate commerce in the 10 United States? 11 A. I have considered that -- in my 12 report, I have considered that in the context of 13 evaluating Dr. Conti's opinions. 14 I have an example in my report where 15 it is not reasonable from an economic standpoint 16 to assume that a product loses value because it 17 is not FDA approved in the U.S. where it may be 18 FDA approved elsewhere, and that it is not 19 reasonable to assume from an economic standpoint 20 that because it is not FDA approved, it would 21 have zero value to all potential consumers. 22 MR. GOLDBERG: Ruben, could we -- 23 Q. Did it matter to you -- 24 MR. GOLDBERG: Can you hear me?</p>	<p style="text-align: right;">Page 77</p> <p>1 opinions have changed? 2 A. On a going-backward basis for 3 considering the diminution of value, if any, for 4 products that were consumed, that factor does 5 not affect whether consumers obtained value for 6 the product that they consumed, I have 7 considered and described elsewhere in my report 8 a consideration of how to evaluate differences 9 in financial outcomes for consumers if the 10 products had not ever been available in the 11 United States. 12 MR. HONIK: This is a good time to 13 break. 14 Go off the record. 15 THE VIDEOGRAPHER: The time now is 16 12:07 p.m. We are off the record. 17 (A recess was taken from 12:07 to 18 12:15.) 19 THE VIDEOGRAPHER: The time right now 20 is 12:15 p.m. We are back on the record. 21 Q. Dr. Stiroh, are you ready to proceed? 22 A. I am. Thank you. 23 Q. I want to develop just a little kind 24 of -- call it almost a side understanding here</p>

<p style="text-align: right;">Page 78</p> <p>1 by way of a -- an illustration unrelated to this 2 case specifically, but just to understand how 3 you do certain things as an economist in 4 analyzing litigation issues. 5 If you're working on an antitrust 6 case, for example, involving a claim of generic 7 delay -- an antitrust claim of generic delay, 8 would an economist -- or doesn't an economist 9 typically try to assess what impact to the cost 10 of the drugs during the period of delay may or 11 may not have occurred? 12 A. In a generic delay case, an economist 13 may consider potentially whether there was a 14 difference in the cost of the drugs, but also 15 the price of the drugs to which they were sold 16 through various channels of distribution. 17 Q. Right. And I -- look, I don't want to 18 belabor this. I just -- I don't need to be 19 provocative. I just want to get certain 20 understanding about how you go about things as 21 an economist. 22 But the claim in that case is that 23 consumers and/or insurers pay more for the drug 24 than they should have because there was some</p>	<p style="text-align: right;">Page 80</p> <p>1 outcomes would have been had the point of 2 generic entry occurred earlier. 3 Q. Right. When you say "back-casting," 4 you mean creating a but-for world where there is 5 different points of generic entry; right? 6 A. Yes. 7 Q. And all I -- and here is, sort of, the 8 punch line. 9 I just want to understand, where do 10 you collect or get the historic data for 11 pricing? 12 A. In cases that I have worked on, there 13 have been -- has been available data both for 14 scenarios where there are few generic 15 manufacturers and cases where there then has 16 been later in the timeframe generic entry. 17 And from the actual data on actual 18 transactions for the products at issue, it is 19 possible to construct a model to say what if 20 the -- a generic had entered six months earlier? 21 And we see from the pricing pattern 22 what actually happened to prices when the 23 generic did enter, and we consider can that be 24 moved back six months? How did economic</p>
<p style="text-align: right;">Page 79</p> <p>1 collusion or antitrust behavior that caused the 2 delay for generic entry. 3 That's what those cases are about; 4 right? 5 MR. GOLDBERG: Objection to form. 6 Ambiguous. 7 A. There are generic delay cases that I 8 am aware of that have the economic component 9 that I would be familiar with is that the -- the 10 price of the product is higher than it otherwise 11 would be. 12 But for the delay, there could also be 13 a component that the cost is also different. 14 Q. Where do you turn to to understand 15 what the pricing is or was for the drugs in 16 question in that scenario? Where do you turn? 17 A. In cases where I have worked on a 18 generic delay matter, the data that I look at is 19 frequently historic data. 20 Cases that I have been involved in 21 have had a period where there is no generic 22 entry and a period when there is generic entry, 23 and the economic exercise is essentially 24 back-casting from that data to consider what</p>	<p style="text-align: right;">Page 81</p> <p>1 conditions vary in the six-month-earlier period? 2 Are there other factors, such as availability of 3 the active ingredient? Factors such as that. 4 But it's essentially in matters like 5 that that I have worked on. 6 There are cases where we do have 7 representative data to show what happens when 8 there is generic entry and how prices behaved 9 prior to generic entry. 10 Q. Yeah. I understand all that. 11 And do you get the pricing data from 12 IQVIA? 13 A. I have worked with pricing data from 14 IQVIA for matters like that, yes. 15 Q. And you find that reliable data? 16 MR. GOLDBERG: Objection to form. 17 Speculative. Ambiguous. 18 A. It matters as to what it is that I am 19 using it for. 20 The IQVIA data are generally used, in 21 my experience in pharmaceutical matters, because 22 they gather data from a variety of different 23 sources. 24 In matters that I have worked on, it</p>

<p style="text-align: right;">Page 82</p> <p>1 may be that that -- those data are supplemented 2 by information on sales and prices from the 3 manufacturers. 4 But I have used IQVIA data in other 5 matters. 6 Q. So if I heard you correctly, there are 7 two sources for what you described as historic 8 data -- or historical data: Sales and pricing 9 from the actual manufacturer, as well as pricing 10 information from IQVIA; correct? 11 A. I'm not sure what you're asking me. 12 Are you asking me specifically what I 13 have looked at, or you're asking me to tell you 14 what might be available in a generic delay case? 15 Q. I'm asking you if as an economist in 16 doing antitrust cases, you routinely rely on 17 both IQVIA sales data, pricing data, as well as, 18 when available, sales and pricing data from the 19 manufacturer of a particular pharmaceutical drug 20 product. Yes or no? 21 MR. GOLDBERG: Objection to form. 22 Ambiguous. 23 A. In matters that I have been involved 24 in that involved pharmaceutical markets, I have</p>	<p style="text-align: right;">Page 84</p> <p>1 A. I don't think that is correct. 2 I have read the complaint. I have 3 read the information in -- that is listed in my 4 Exhibit 2 to my report. 5 I have reviewed other information on 6 other court filings, but I did not set out to 7 understand all of the theories of harm or 8 liability from a legal standpoint. 9 I have looked at information that is 10 relevant to a consideration of economic loss 11 damages. 12 Q. Did you consider whether or if 13 warranties were breached in this case? 14 A. I did not make an assumption one way 15 or another whether or if warranties were 16 breached in this case. 17 Q. Did you consider what the proper 18 measure of damages would be for a breach of 19 warranty-based claim? 20 MR. GOLDBERG: Objection to form. 21 Calls for a legal opinion. 22 A. I'm not opining and not offering an 23 opinion to the court on what the appropriate 24 measure of damages would be for a breach of</p>
<p style="text-align: right;">Page 83</p> <p>1 relied on IQVIA data. 2 I don't know if I can say that I 3 relied on it in every instance, but I have 4 relied on IQVIA data, and I have relied on 5 information available from the manufacturers. 6 Q. Thank you. 7 Now, before we broke, we spoke a 8 little bit about the impact of the theories of 9 liability in this case to your economic 10 analysis. 11 Do you remember we talked a bit about 12 that? 13 A. I do. 14 Q. And I know you discussed and you 15 listed among your -- the reliance materials the 16 complaint in this case which formed the 17 plaintiffs' allegations. 18 You've looked at the briefing on class 19 certification. 20 You've certainly acquainted yourself 21 with the various theories of liability against 22 not only the manufacturers, but all of the 23 defendant entities in this supply chain; 24 correct?</p>	<p style="text-align: right;">Page 85</p> <p>1 warranty claim. 2 I have considered the economic 3 theories that underlie economic losses and 4 described how I approached that type of 5 analysis. 6 And to the extent that that is 7 relevant to various theories of liability that a 8 court might consider, the court can take my 9 opinion into account. 10 I have not set out to tell the court 11 what theory of damages applies to different 12 theories of harm. 13 Q. I'm a little confused. 14 What do you mean by "underlying 15 theories" in your answer? 16 A. I'm not sure how I used it. 17 Q. Okay. 18 MR. HONIK: Jeff, can I have the 19 answer read back to me, please. 20 (The record was read back.) 21 Q. Dr. Stiroh, what did you mean by 22 "considered economic theories" in that response 23 that the court reporter just read back? 24 A. I had in mind the discussion that is</p>

<p style="text-align: right;">Page 86</p> <p>1 in my report that considers diminution of value 2 being the difference between the price paid and 3 the value received. From an economic 4 standpoint, that is a change in consumer 5 surplus. 6 I have also considered a difference in 7 financial outcomes, and that is the difference 8 in prices paid in a scenario where the products 9 at issue were consumed compared to a scenario 10 where alternative products would have been 11 purchased. 12 Q. Well, is it fair to say that each of 13 the two models that you just described would be 14 measures of damage? 15 MR. GOLDBERG: Objection. Calls for a 16 legal opinion. 17 THE COURT REPORTER: Counsel, could 18 you repeat that question? I didn't hear it 19 clearly. This is Jeff. 20 Q. Did you hear it, Dr. Stiroh? 21 A. I believe that I did, yes. 22 Q. Okay. For the benefit of the court 23 reporter, let me try to restate or rephrase it. 24 You described, one -- I'll call it a</p>	<p style="text-align: right;">Page 88</p> <p>1 Q. Yes, ma'am. 2 A. I think you use "cost" differently 3 from how I use it, and I'm concerned there could 4 be some confusion. 5 I -- my model, where I would consider 6 differences in financial outcomes from the 7 standpoint of a consumer, I consider the 8 financial outlay, the difference in their 9 financial position purchasing the products at 10 issue and an alternative product. 11 For a -- somebody further upstream, 12 then it may be relevant to consider the 13 difference in both the prices paid and the costs 14 of the -- acquiring the product. 15 Q. Yeah. So I completely understand. 16 Let me give you an illustration of 17 what I understand you mean by the measure of 18 damages we're referring to as financial outcome. 19 If someone pays \$10 for a drug and you 20 now want to compare the cost of getting an 21 alternative drug, if that alternative drug is 22 \$12, there's no economic loss, because the 23 alternative cost exceeds the paid price; 24 correct, in that hypothetical? Right?</p>
<p style="text-align: right;">Page 87</p> <p>1 model or a measure that you referred to as 2 "diminution of value." 3 Do you remember that? 4 A. Yes. 5 Q. And then you described what I 6 understood, and I wrote down in shorthand, 7 another measure or formula that you referred to 8 as "financial outcome." 9 Do you remember that? 10 A. I do. 11 Q. The second of those two, the 12 financial -- could we refer to it, just for ease 13 of reference in our talk here, to the second 14 model or measure as financial outcome and the 15 first one diminution? 16 Would that be okay with you? 17 A. Yes. 18 Q. So if we focus on financial outcome, 19 if I listen carefully, the formula for 20 determining damages under that approach would be 21 prices paid and compare it to alternative 22 product cost; correct? 23 A. You are describing for me what I said 24 is a model comparing financial outcomes?</p>	<p style="text-align: right;">Page 89</p> <p>1 A. No. In that hypothetical, there is no 2 financial loss to the consumers. 3 I have defined economic loss in my 4 report as a difference between the price paid 5 and the value received. 6 Q. Okay. But I don't want to leave this 7 area until I've understood the two measures that 8 you've outlined for me. 9 And the one we're going to focus on 10 now is what we referred to -- I referred to, and 11 you agreed to accept -- as financial outcome. 12 Can you give me an example using 13 specific drugs and costs and tell me how 14 financial outcome is a measure? 15 A. If there were a consumer that was 16 taking Valsartan, and in the absence of supply 17 of the Valsartan that they consumed they would 18 have switched to Irbesartan, the difference in 19 financial outcomes for them depends on whether 20 they are a cash consumer and pay a retail price 21 for two products, because the retail prices are 22 different, or whether they are insured, and then 23 it depends on their insurance plan and what the 24 co-pay or co-insurance amount is for differences</p>

<p style="text-align: right;">Page 90</p> <p>1 for the -- the two products.</p> <p>2 The exercise is to consider what were</p> <p>3 the financial outlays for the Valsartan that</p> <p>4 they purchased and what the financial outlays</p> <p>5 would have been had they consumed a different</p> <p>6 blood pressure medication.</p> <p>7 Q. That's correct. So if the financial</p> <p>8 outlay would have been \$10 for the Valsartan and</p> <p>9 the replacement drug is \$12, there's no</p> <p>10 financial outlay or loss to that consumer,</p> <p>11 right; in the simplest terms; right?</p> <p>12 A. If the financial outlay would have</p> <p>13 been the same, that is correct, there is no</p> <p>14 difference in the financial outcomes for the</p> <p>15 consumer.</p> <p>16 Q. I actually completely misspoke. I</p> <p>17 misspoke.</p> <p>18 If the replacement drug was actually</p> <p>19 \$12, or \$2 more, their loss is \$2, in my</p> <p>20 hypothetical; correct?</p> <p>21 A. No. I think you have assumed that the</p> <p>22 financial outlay for the replacement drug is</p> <p>23 higher, which is a reasonable assumption,</p> <p>24 because I think the replacement drugs often did</p>	<p style="text-align: right;">Page 92</p> <p>1 they go for, pay for a month's supply of</p> <p>2 Valsartan and a month's supply of the</p> <p>3 replacement product, the financial loss is \$2 in</p> <p>4 your scenario.</p> <p>5 Q. And turning to the diminution model,</p> <p>6 which you said was price minus the value</p> <p>7 received, if the price of the drug was \$10 and</p> <p>8 the value you're ascribing is control of one's</p> <p>9 blood pressure, what would the deduction be?</p> <p>10 A. The -- sorry. The scenario here is to</p> <p>11 consider for a consumer the diminution of value</p> <p>12 from the Valsartan at issue?</p> <p>13 Q. That's right.</p> <p>14 A. Yes. Then the consideration for that</p> <p>15 consumer is how they value the -- or would price</p> <p>16 the increased risk of their consumption of</p> <p>17 Valsartan, if any, because of the presence of</p> <p>18 alternatives, and whether that has a change to</p> <p>19 their risk profile of eventually contracting a</p> <p>20 disease that they wouldn't, in the absence of</p> <p>21 the impurities at issue.</p> <p>22 And the diminution of value, their</p> <p>23 internal intrinsic valuation of the product</p> <p>24 would depend on things such as how much they had</p>
<p style="text-align: right;">Page 91</p> <p>1 have a higher price.</p> <p>2 But for that consumer, they did not</p> <p>3 suffer a financial loss from taking the</p> <p>4 Valsartan at issue, because their financial</p> <p>5 outlays would have been higher in the absence of</p> <p>6 the supply of the Valsartan product that they</p> <p>7 consumed.</p> <p>8 Q. What if the replacement drug was less</p> <p>9 expensive than the \$10 Valsartan cost?</p> <p>10 A. In instances for class members who</p> <p>11 would have switched to a replacement drug and</p> <p>12 had a lower financial outlay, their financial</p> <p>13 losses are calculated as the difference in the</p> <p>14 financial outlay consuming Valsartan and the</p> <p>15 financial outlay that they would have had with a</p> <p>16 different medication.</p> <p>17 Q. So if in my hypothetical it was \$10</p> <p>18 for the Valsartan and \$8 for the replacement or</p> <p>19 alternative, what's the loss for that consumer</p> <p>20 in your model?</p> <p>21 A. The financial loss to the consumer in</p> <p>22 that model would be \$2.</p> <p>23 If it is assuming equivalence of the</p> <p>24 product that they're purchasing, if that is what</p>	<p style="text-align: right;">Page 93</p> <p>1 to consume, over what timeframe, the degree of</p> <p>2 impurities, if any, in the product that they</p> <p>3 consumed, their ability to manage their blood</p> <p>4 pressure with Valsartan compared to what the</p> <p>5 alternative products might be, what side effects</p> <p>6 of alternatives might be that made Valsartan be</p> <p>7 the product of choice for that consumer, and, my</p> <p>8 understanding, things like their weight and</p> <p>9 health history.</p> <p>10 Q. Dr. Stiroh, I confess, I'm completely</p> <p>11 confused by your answer.</p> <p>12 What I want to understand before</p> <p>13 moving on is how your diminution model works.</p> <p>14 And I want you to assume that a</p> <p>15 particular consumer of a VCD has paid \$10 for</p> <p>16 his or her prescription.</p> <p>17 And the question in court and for you</p> <p>18 as an economist is, what, if any, financial loss</p> <p>19 did that individual suffer by accepting as true</p> <p>20 that there's some impurity or contamination to</p> <p>21 that product?</p> <p>22 What would you look at in the</p> <p>23 diminution model, assuming the consumer paid</p> <p>24 \$10?</p>

<p style="text-align: right;">Page 94</p> <p>1 Tell me what you would do step by</p> <p>2 step.</p> <p>3 MR. GOLDBERG: Objection. Asked and</p> <p>4 answered.</p> <p>5 A. I think in your question you added</p> <p>6 financial loss into how I would approach the</p> <p>7 diminution.</p> <p>8 I have described them in my report as</p> <p>9 two separate pieces.</p> <p>10 The financial loss is what comes out</p> <p>11 of your pocket.</p> <p>12 The diminution of value starts with an</p> <p>13 economic framework where the price that a person</p> <p>14 pays for a product, the fact that they have gone</p> <p>15 and paid that price indicates to an economist</p> <p>16 that they value the product at least as much as</p> <p>17 the price paid.</p> <p>18 If there is additional information</p> <p>19 that comes to light that changes their</p> <p>20 understanding of a product that they received,</p> <p>21 so that they understand that they received a</p> <p>22 different product than they believed they were</p> <p>23 purchasing, it is possible that their value for</p> <p>24 that product would have been diminished.</p>	<p style="text-align: right;">Page 96</p> <p>1 explain them, then I'll consider them.</p> <p>2 Q. Yes, I can tell you.</p> <p>3 I wrote down that you said one way to</p> <p>4 look at value is, quote, financial loss is what</p> <p>5 comes out of your pocket.</p> <p>6 Remember you told me that?</p> <p>7 A. I did tell you that.</p> <p>8 My recollection when I said that was</p> <p>9 because the question that you had asked me had</p> <p>10 diminution of value and financial loss.</p> <p>11 And in the prior questions, we had</p> <p>12 separated those two topics, and I was clarifying</p> <p>13 for you the financial loss discussion has to do</p> <p>14 with the money that comes out of your pocket.</p> <p>15 The diminution of value discussion has</p> <p>16 to do with the intrinsic value of a product to a</p> <p>17 consumer who purchases it.</p> <p>18 Q. That's right. Financial loss is</p> <p>19 defined by you as what comes out of your pocket,</p> <p>20 and diminution in value is what you paid less</p> <p>21 consumer welfare; right, loss of consumer</p> <p>22 welfare?</p> <p>23 Is that what you said?</p> <p>24 A. Yes.</p>
<p style="text-align: right;">Page 95</p> <p>1 As economists, we think of that as a</p> <p>2 loss of consumer surplus. I think I used the</p> <p>3 phrase "consumer welfare." I mean them</p> <p>4 equivalently.</p> <p>5 The measures of consumer welfare would</p> <p>6 depend on what the loss of intrinsic value to a</p> <p>7 customer is based on the new information about</p> <p>8 the product that they consumed.</p> <p>9 That diminution is going to depend on</p> <p>10 factors that are specific to an individual, such</p> <p>11 as the risk of consuming it, the information</p> <p>12 that they may receive from their doctor, their</p> <p>13 health histories, their own aversion to risk, or</p> <p>14 their willingness to accept risk because of the</p> <p>15 attributes of the product that they feel they</p> <p>16 cannot get elsewhere.</p> <p>17 Q. That is extremely helpful, because if</p> <p>18 I've understood you correctly, there are</p> <p>19 actually two definitions of "value," according</p> <p>20 to you in your last answer; correct?</p> <p>21 MR. GOLDBERG: Objection to form.</p> <p>22 Ambiguous. Mischaracterizes the testimony.</p> <p>23 A. I don't know what you have in mind as</p> <p>24 my two definitions of "value." If you could</p>	<p style="text-align: right;">Page 97</p> <p>1 Q. And so if we focus only on what you've</p> <p>2 now defined for all of us as financial loss,</p> <p>3 namely, what comes out of your pocket, that --</p> <p>4 that's one measure of damage; right?</p> <p>5 MR. GOLDBERG: Objection to form.</p> <p>6 Calls for a legal opinion.</p> <p>7 A. Financial losses have been used as a</p> <p>8 measure of damages in economic matters in which</p> <p>9 I have been engaged.</p> <p>10 Diminution of value considers other</p> <p>11 factors, not just the market prices of products.</p> <p>12 Q. Tell me as succinctly as you can how</p> <p>13 you yourself have used and measured financial</p> <p>14 loss in matters in which you've been engaged as</p> <p>15 an expert economist.</p> <p>16 A. I have considered -- sorry. Just to</p> <p>17 make sure I'm answering it correctly, I'm just</p> <p>18 going to ask that the question be read back</p> <p>19 again.</p> <p>20 Q. Sure.</p> <p>21 (The record was read back.)</p> <p>22 A. All right. I have measured financial</p> <p>23 loss for a class of franchisees who were the --</p> <p>24 alleged wrongdoing was that they did not have</p>

<p style="text-align: right;">Page 98</p> <p>1 available to them multiple source of supply for 2 products that they needed to run their 3 franchises. 4 And I measured that using a regression 5 analysis where I compared the prices for the 6 necessary inputs where there were multiple 7 sources of supply, with necessary inputs where 8 there were few sources of supply to estimate 9 what happens to prices when there are available 10 additional sources of supply. 11 And I used that to estimate what the 12 difference in profits would have been for the 13 franchisees had there been additional sources of 14 supply for a number of necessary products. 15 I have performed -- 16 Q. Let me -- I'm sorry. I didn't mean to 17 cut you off. Please continue. 18 A. I understood that your question to ask 19 me how I have done this, but -- how I have 20 considered financial losses, and I can take you 21 through the ones that I remember. 22 Q. Let me clarify. 23 As a way of explaining to me and to 24 others listening to you, as an economist, what</p>	<p style="text-align: right;">Page 100</p> <p>1 certain inputs, in addition to, or in the 2 alternative, where the conduct at issue affects 3 the prices of products paid, I have worked on 4 matters where the conduct at issue affects the 5 availability of alternative products. 6 Basically, economics has to do with 7 the interaction of various economic variables, 8 and if something changes in the supply chain, 9 there may be other economic implications for 10 other variables. 11 And the economist's role would be to 12 consider those implications and arrive at a 13 comparison of the financial situation as is and 14 the financial situation as it would have been 15 under different circumstances. 16 Q. I totally understand that answer. 17 What you're conveying is that you 18 start by looking, as you put it, at economic 19 circumstances, which is often the price in 20 question that was paid; right? 21 That's where you started; correct? 22 A. That is often a starting place, 23 correct. 24 Q. That's right. It's often the starting</p>
<p style="text-align: right;">Page 99</p> <p>1 the formula or model is for financial loss. I 2 understand you've given a very concrete example. 3 Can you give me a somewhat more 4 generic -- generic or general description of how 5 financial loss as an economist is arrived at, 6 that is, how you figure out someone or some 7 entity's loss coming out of their pocket? 8 How do you determine that? 9 A. I consider -- 10 MR. GOLDBERG: Objection. Ambiguous. 11 A. -- the economic circumstances of the 12 entity in the world as it is, and that may 13 include the prices paid, or for an entity 14 further up the distribution chain, the prices 15 paid in the costs -- or the prices received and 16 the costs paid, and I consider what the economic 17 variables would be in the absence of some 18 conduct that is challenged as being wrongful. 19 And that analysis depends on what 20 conduct is challenged to be wrongful and the way 21 that that conduct would interact with economic 22 variables. 23 I have worked on matters where the 24 conduct at issue would affect the cost of</p>	<p style="text-align: right;">Page 101</p> <p>1 place. 2 And then if I've understood you, what 3 you look at is the alleged conduct that alters 4 that construct, the liability, and you look at 5 and consider a but-for world of sorts in which 6 that conduct did not occur, and then you try to 7 figure out that economic variable in its absence 8 what impact to price occurs; right? 9 A. I don't -- 10 MR. GOLDBERG: Objection. Ambiguous. 11 THE WITNESS: Sorry. 12 A. I don't think so precisely. 13 You put the word "liability," when -- 14 in your restatement, and that's not something 15 that I considered. 16 I consider the economic implications 17 of conduct and not liability because -- as I 18 understand it as a legal matter. 19 Q. I take your point. And you're right, 20 I speak as a lawyer. 21 And, really, what I meant to say and 22 should have said is "conduct." That's the word 23 you used to describe the shift or the point of 24 comparison, economically speaking, between the</p>

<p style="text-align: right;">Page 102</p> <p>1 starting point, which is the price paid, and 2 this sort of but-for economic scenario that was 3 caused by some conduct; correct? 4 MR. GOLDBERG: Objection. 5 Mischaracterizes. 6 A. I think at a high level, that is 7 correct. 8 I consider the economic scenario that 9 would have unfolded absent some type of conduct 10 in a consideration of financial loss damages 11 where the financial losses are differences in 12 economic outcomes. 13 Q. And reasonable economic minds can 14 disagree about the components of that model or 15 measure; isn't that true? 16 MR. GOLDBERG: Objection to form. 17 Ambiguous. 18 A. I don't know what you have in mind 19 about what the reasonable minds would disagree 20 on with respect to the components of that 21 measure. 22 I have been involved in matters where 23 there was disagreement over the appropriate 24 interest rate, what the cost implications of</p>	<p style="text-align: right;">Page 104</p> <p>1 these VCDs during the class period; correct? 2 A. Did you say there's no ambiguity in my 3 mind? 4 Q. That's right. 5 A. I'm not aware of a dispute on those 6 market facts. If there is one, it's something 7 that I'm not aware of. 8 I understand that to be in the class, 9 a consumer had to have paid some amount for a -- 10 for the Valsartan that they consumed. 11 Q. That's right. I mean, the 12 prescription records are so abundantly detailed, 13 that we know exactly what consumers contributed 14 and we know how much insurers paid. 15 That's not in dispute in this case; 16 right? 17 A. I disagree with that. 18 MR. GOLDBERG: Objection to form. 19 A. One of the issues that matters at the 20 class certification stage is whether you can 21 tell whether a class member has -- what amount 22 they have paid. And I think you need to do -- 23 you need individual information from class 24 members on that.</p>
<p style="text-align: right;">Page 103</p> <p>1 certain conduct was, what available alternatives 2 might have been. 3 I don't know if I'm agreeing with you 4 or disagreeing with you at this point. 5 Q. No. I -- I kind of get what you're 6 doing. 7 So reasonable economic minds could 8 disagree about the starting pricing, right, that 9 you're starting with the -- as you put it, 10 economic circumstances, you -- one could 11 disagree about what the starting price is; 12 right? 13 A. I would have to think of a situation, 14 and I don't -- only because when I said starting 15 price and agreement with you, I had in mind 16 actual prices as they are. Those would be 17 market facts. Those -- that would be 18 information in the record, and I don't see a 19 dispute over that. 20 Q. Okay. So let's start with that. 21 That's a good starting place. 22 There's no dispute in your mind that 23 the market fact, the market reality, is that 24 consumers and insurers paid what they paid for</p>	<p style="text-align: right;">Page 105</p> <p>1 I think that what you are saying is 2 some amount in aggregate. And even there, there 3 could be dispute over whether that is the amount 4 paid or whether it fails to include things like 5 discounts or rebates that were given at a time 6 and collected in a different database and cannot 7 be accurately tied back to the initial purchase. 8 Q. Do you -- do you dispute anywhere in 9 your report what the economic circumstances or 10 prices paid were by the two economic classes? 11 A. I do not dispute that there were 12 prices paid by the two purported classes. 13 It is my opinion that to assess on a 14 class-member-by-class-member basis what the 15 damages incurred by any individual class member, 16 you would need information on the price that 17 that actual class member paid. And that 18 information is not widely available. It is -- 19 to my mind, we only -- 20 Q. Weren't you -- 21 MR. GOLDBERG: Hang on. Wait. Let 22 the witness answer the question. 23 A. I understand that there has been some 24 data provided only by three plaintiffs, and one</p>

<p style="text-align: right;">Page 106</p> <p>1 plaintiff had, I think, some aggregated data, 2 but I don't think that there exists in this case 3 class-member-by-class-member expenditures on the 4 products at issue. 5 Q. Class-member-by-class-member 6 expenditures? Is that what you said? 7 A. It is. 8 Q. Is it your opinion that 9 class-member-by-class-member expenditure needs 10 to be demonstrated in order to certify a class? 11 Is that your opinion? 12 MR. GOLDBERG: Objection to form. 13 Calls for a legal opinion. 14 A. My understanding as an economist is 15 that one of the things that a court would 16 consider in determining to certify a class is 17 whether the class members have been harmed. 18 And when I use "harm," I use it in an 19 economic sense, by the conduct at issue, where 20 the measure of harm being considered is 21 diminution of value. 22 And that is the difference between the 23 price paid and the value received, you need to 24 have information on the price paid, and then you</p>	<p style="text-align: right;">Page 108</p> <p>1 measure of damages that you described to me, 2 that you and I have been referring to as 3 "financial loss," which begins by looking at 4 actual prices. 5 Isn't that what you told me? 6 MR. GOLDBERG: Objection to form. 7 Mischaracterizes the record. 8 A. I'm not sure what you're asking me. 9 I think you're -- 10 Q. I'm asking you if it is true that you 11 told me under oath that in looking at the 12 financial loss model, which is the loss that 13 comes out of your pocket, one begins by looking 14 at, as you put it, economic circumstances, which 15 is usually the actual price paid for something. 16 Isn't that the starting point? 17 MR. GOLDBERG: Objection to form. 18 Mischaracterizes the testimony. 19 A. For financial losses, you compare the 20 actual economic circumstances of a class member 21 with the economic circumstances -- the financial 22 economic circumstances they would have 23 experienced under some alternative. 24 And so an input, whether it is the</p>
<p style="text-align: right;">Page 107</p> <p>1 also need information that would allow you to 2 assess the value received. 3 Both of those require individual 4 information that has not been provided, or I'm 5 not aware of, on a class-member-by-class-member 6 basis. 7 Q. Dr. Stiroh, we're not talking about 8 your diminution model; we're talking about your 9 financial outcome or financial loss model. 10 Do you remember that? 11 MR. GOLDBERG: Objection -- 12 Q. That's what I want to stick with. 13 Can we do that? 14 MR. GOLDBERG: Objection to form. 15 Mischaracterizes the record. 16 A. Within the financial model, the 17 information that is not currently available on a 18 class-member-by-class-member basis is still the 19 amount that they actually paid for both models. 20 One of the inputs is the actual 21 expenditures, and we don't have that information 22 on a class-member-by-class-member basis. 23 Q. Ma'am, I want to direct your attention 24 to one thing and one thing only, and that is the</p>	<p style="text-align: right;">Page 109</p> <p>1 first one or a different -- or something 2 considered later on is what they actually paid 3 for the product at issue. 4 Q. That's right. What they actually paid 5 for the product. Let's just stop there. 6 The question I next have is: In 7 calculating the actual price paid, isn't it true 8 that as an economist, you can take an aggregate 9 of the prices paid for the products in question? 10 Yes or no? 11 MR. GOLDBERG: Objection to form. 12 Ambiguous. 13 A. It depends on what your purpose is. 14 If your purpose is to assess the 15 aggregate expenditures, you can use an 16 aggregate. 17 If your purpose is to assess whether 18 you can -- whether class members have been 19 financially affected by the conduct under 20 consideration, you need to evaluate the 21 expenditures on a class-member-by-class-member 22 basis. 23 Q. And then the next step would be, as 24 you described it, to look at the alternative</p>

<p style="text-align: right;">Page 110</p> <p>1 circumstance and assign a value to that; 2 correct? 3 A. What do you mean by "assign a value to 4 that"? 5 Q. Well, you tell me. We're looking at 6 your financial loss model. We've now 7 established the pricing and the way that you've 8 described. 9 How would you then arrive at a dollar 10 value for this alternative circumstance in order 11 to determine the loss? 12 A. In a situation such as this one where 13 class members can choose to take different 14 actions -- 15 Q. I'm not asking you about this one, 16 Doctor, respectfully. I'm not asking you about 17 VCDs. 18 I'm asking you about this measure, 19 this model that we're talking about generally in 20 economics. 21 You've established there's a financial 22 loss model, which is defined as what comes out 23 of your pocket. The starting place is actual 24 economic circumstances, typically prices paid.</p>	<p style="text-align: right;">Page 112</p> <p>1 alternative course of conduct. 2 Q. So the two terms that I wrote down 3 that you employed was "the actual world," and 4 then you compare it to the "alternative course 5 of conduct world." 6 Did I get that right? 7 A. Yes. 8 Q. And you used the -- the expression 9 "range of alternative circumstances," I think to 10 imply that there are sometimes multiple ways to 11 look at the alternative course of conduct world; 12 correct? 13 MR. GOLDBERG: Objection to form. 14 Mischaracterizes testimony. 15 A. There may be multiple ways to look at 16 the alternative course of conduct world. 17 There may also be alternatives 18 available to purported class members for any 19 particular characterization of the alternative 20 course of conduct world. 21 And in my answer, I may have used the 22 same words to talk about two different things, 23 but there are two points of variation: 24 One, what does the overall alternative</p>
<p style="text-align: right;">Page 111</p> <p>1 You've established that. 2 You've now told me that you -- the 3 next step in this formula that you apply, 4 economically speaking, is to determine the 5 alternative; in other words, the economic 6 variable in the absence of whatever conduct is 7 that changed the world. 8 And I'm asking you, how do you arrive 9 at a dollar value for that to deduct it from the 10 actual price paid? 11 MR. GOLDBERG: Objection to form. 12 Mischaracterizes the testimony. Asked and 13 answered. 14 A. In a general sense, you would consider 15 what the range of alternatives are that are 16 available in the absence of certain conduct, 17 whether there is information that guides which 18 of the alternatives class member might take up, 19 what the costs are of those alternatives, 20 whether there are any relevant market factors to 21 be taken into account, and assess the 22 differences between the financial situation of 23 the -- call it the actual world and the 24 financial situation of a class member under some</p>	<p style="text-align: right;">Page 113</p> <p>1 course of conduct world look like, and then 2 within any one of those, what do consumers do? 3 Q. What do you mean, "what do consumers 4 do," in that sentence? 5 A. With respect to this case, one of the 6 things that consumers might do is choose a 7 different medication in consultation with their 8 doctor to manage their blood pressure. 9 And so the economic circumstances, 10 choosing a different medication, depend on the 11 medication that they choose. 12 Q. And so you would ascribe a cost to 13 that alternative medicine in that scenario and 14 deduct that from the actual cost that you start 15 with; is that right, in that measure? 16 A. From the standpoint of a consumer, I 17 would consider the price that they paid for the 18 medication that they are on and the price that 19 they would have paid for an alternative 20 medication, and the alternative medication can 21 vary class member by class member. 22 Q. And to go back to an example that you 23 and I spoke about and you confirmed, if the 24 actual price was 10 and the alternative price</p>

<p style="text-align: right;">Page 114</p> <p>1 was 8, you told me the loss is 2; right?</p> <p>2 That would be an example of what we</p> <p>3 just described; right?</p> <p>4 MR. GOLDBERG: Objection to form.</p> <p>5 A. The financial loss for a class member</p> <p>6 who paid 8 -- \$10 and would have paid a co-pay</p> <p>7 of \$8 would be 2.</p> <p>8 Q. And if we had an alternative course</p> <p>9 of --</p> <p>10 A. I'm sorry. I said that back -- I</p> <p>11 apologize. I said that backwards. And so the</p> <p>12 answer will not make sense.</p> <p>13 The other way around. If they would</p> <p>14 have paid 8 and would have paid 10 -- no. I</p> <p>15 forget now which way you asked me.</p> <p>16 The difference in financial outlays</p> <p>17 between what they did pay and what they would</p> <p>18 have paid is the measure of financial losses.</p> <p>19 Q. Dr. Stiroh, here's where I end up.</p> <p>20 If the alternate course of conduct is</p> <p>21 subject to various alternative circumstances,</p> <p>22 aren't you telling me that economically, there</p> <p>23 are multiple ways in certain circumstances to</p> <p>24 look at what you're comparing between the actual</p>	<p style="text-align: right;">Page 116</p> <p>1 A. I'm not sure what you mean by that,</p> <p>2 and it may be that I am focused more on this</p> <p>3 case and this framework than in a general sense.</p> <p>4 In this case, the frame -- the</p> <p>5 circumstances that we are considering changing</p> <p>6 is that a consumer chooses a different product.</p> <p>7 The -- depending on the product chosen</p> <p>8 and the insurance plan, if any, for the</p> <p>9 consumer, the amount they pay may differ. A</p> <p>10 different consumer for the same product may pay</p> <p>11 a different price, and a different consumer may</p> <p>12 choose a different product and also pay a</p> <p>13 different price, and all of that would have to</p> <p>14 be considered.</p> <p>15 Q. Dr. Stiroh, from an economic</p> <p>16 standpoint, you acknowledge and understand that</p> <p>17 what Dr. Conti did was a financial loss</p> <p>18 analysis; correct?</p> <p>19 A. In my view, she has done neither a</p> <p>20 diminution of value or a financial loss analysis</p> <p>21 that is consistent with economic principles.</p> <p>22 Q. Yeah. I know that's your conclusion,</p> <p>23 and I know you disagree with her in every</p> <p>24 respect.</p>
<p style="text-align: right;">Page 115</p> <p>1 and this alternate circumstance world?</p> <p>2 It can vary; correct?</p> <p>3 MR. GOLDBERG: Objection. Ambiguous.</p> <p>4 A. The choices that consumers make can</p> <p>5 vary consumer by consumer.</p> <p>6 For an individual --</p> <p>7 Q. I haven't asked you that --</p> <p>8 MR. GOLDBERG: Counsel, don't</p> <p>9 interrupt -- Counsel, don't interrupt the</p> <p>10 witness.</p> <p>11 A. My answer was that the choices that</p> <p>12 consumers make can vary consumer to consumer.</p> <p>13 Q. Yeah. I'm asking a question about</p> <p>14 economics and about economists and models that</p> <p>15 they use.</p> <p>16 And the question I'm posing to you is,</p> <p>17 when you look at the range of alternative</p> <p>18 circumstances, figuring out if it's \$8 or \$9 or</p> <p>19 \$15 to compare to the starting place, which you</p> <p>20 said is the actual price, I'm just asking, that</p> <p>21 can vary depending upon how you look at it;</p> <p>22 correct?</p> <p>23 MR. GOLDBERG: Objection. Ambiguous.</p> <p>24 Asked and answered.</p>	<p style="text-align: right;">Page 117</p> <p>1 But based on what you've now told us</p> <p>2 under oath, she took the actual prices paid by</p> <p>3 consumers and insurers and compared it or</p> <p>4 deducted it from the alternative circumstance.</p> <p>5 And the alternative circumstance in</p> <p>6 Dr. Conti's economic model is that those drugs</p> <p>7 should have never been in the supply chain,</p> <p>8 which means they have a zero value.</p> <p>9 At the minimum, disagreeing as I know</p> <p>10 you do, you understand that that's what she did;</p> <p>11 correct?</p> <p>12 A. I understand that she assumed that all</p> <p>13 of the drugs at issue were worthless, and I</p> <p>14 disagree with her on that.</p> <p>15 She did not do a financial loss model</p> <p>16 because she did not consider in any</p> <p>17 circumstances the financial circumstances of</p> <p>18 consumers if they had consumed a different</p> <p>19 product.</p> <p>20 Q. That's right. Your complaint here is</p> <p>21 that there isn't an offset for a replacement or</p> <p>22 an alternative drug; correct?</p> <p>23 A. For the financial loss model, there</p> <p>24 needs to be a consideration of what consumers</p>

<p style="text-align: right;">Page 118</p> <p>1 would have done in the absence of supply for the 2 Valsartan at issue. 3 Without that consideration there -- it 4 is an incomplete model. It is not consistent 5 with economic theory. 6 Q. Understood. So if we take Dr. Conti's 7 model and fix it in the way you say it needs to 8 be fixed, we'll use this example. 9 The actual price for the drug is \$10. 10 She believes the comparative price in the 11 alternative circle is zero. That means you have 12 net 10. And you have now told us that you now 13 have to take an alternative cost and factor that 14 in. 15 And so if the alternative cost is 8, 16 the person has a \$2 loss; right? 17 A. I'm not sure what you're asking me to 18 agree with in that sentence. 19 You had statements about what 20 Dr. Conti has done or hasn't done, and then 21 something else that needs to be added. 22 In my view, her approach to financial 23 losses is incomplete, because she does not 24 consider what consumers would have purchased in</p>	<p style="text-align: right;">Page 120</p> <p>1 Valsartan-containing drugs. 2 Q. If you were instructed by the court as 3 a matter of law that these contaminated drugs 4 were legally worthless, would you accept that? 5 A. I don't know what that means. 6 I have training and experience as an 7 economist. And as an economist, my opinion is 8 that it is not appropriate to say that they are 9 worthless. 10 If there is a legal opinion and that 11 has legal meaning, then I'm not sure the court 12 needs me. 13 My opinions and my -- the report that 14 I have written give an economic opinion and an 15 economic assessment of the issues involved in 16 assessing class-wide damages from the conduct at 17 issue in this case. 18 Q. Dr. Stiroh, I'm at a loss to 19 understand why you say the court wouldn't need 20 you if the court determined as a matter of law 21 that these contaminated drugs were worthless. 22 The court would still need an 23 economist like you or Dr. Conti to count up the 24 losses.</p>
<p style="text-align: right;">Page 119</p> <p>1 the absence of supply of the 2 Valsartan-containing drugs at issue. 3 Q. You really have two principal 4 objections to what Dr. Conti has done. 5 Objection Number 1 is that she has 6 ascribed zero value or worthlessness to the 7 contaminated drug, and in the model you and I 8 have now been speaking about for the last 9 half-hour she has failed to factor in the actual 10 cost of an alternative drug; right? 11 MR. GOLDBERG: What is the question? 12 A. Those are among the points that I 13 disagree with Dr. Conti's opinion. 14 I disagree that it is appropriate from 15 an economic standpoint to assume the products 16 consumed are worthless. 17 And I disagree that she has put 18 forward a valid damage model because she neither 19 considers the diminution of value to the 20 products -- to the consumers based on the 21 products that they consumed, nor does she 22 consider a financial differences model, which 23 would require considering what patients would 24 have done in the alternative to consuming</p>	<p style="text-align: right;">Page 121</p> <p>1 Don't you agree? 2 MR. GOLDBERG: Objection to form. 3 A. I guess I don't know what the court 4 needs and don't mean to be opining on what the 5 court needs. 6 I have been asked to give my opinions 7 as an economist on certain topics related to 8 economic loss damages and other models of 9 economic damage assessment, and I have done 10 that, and I don't have an opinion on what the 11 court requires. 12 Q. I haven't asked you that. 13 What I have done is what I'm permitted 14 to do, and that is to direct you to accept the 15 hypothetical. 16 And the hypothetical I'm asking you to 17 accept for our -- purposes of discussion is that 18 the drugs are economically worthless as a matter 19 of law, and, in turn, economics, law imposing 20 its will on economics. 21 Under that circumstance, could you, 22 number 1, accept that, and then calculate 23 damages? 24 MR. GOLDBERG: Objection to form.</p>

Page 122

1 Calls for a legal opinion. Ambiguous.

 3 A. It is outside my experience for how I
 4 as an economist have a role in various cases
 5 where there are allegations of wrongdoing and an
 6 assessment of harm.
 7 Where I have participated in cases and
 8 assessed damages, I have done my own damage
 9 calculation by applying economic principles.
 10 There is frequently an economist or an

 12 may do an alternative or different measure of
 13 damages.
 14 The -- in my experience, those models
 15 are presented to the court and the court reaches
 16 opinions.
 17 Q. Well, you're confirming that you would
 18 be incapable of accepting as a matter of fact in
 19 your analysis that the comparative in the
 20 alternative circumstance is zero?
 21 You would be unable to accept that and
 22 work with that value; correct?
 23 MR. GOLDBERG: Objection to form.
 24 Mischaracterize the testimony.

Page 123

1 A. In my opinion, that is not a measure
 2 of value, and my opinions would be based, as
 3 they are in this case, on what an economist
 4 considers in assessing value.
 5 Q. Doctor, take the next exhibit in your

 7 MR. GOLDBERG: Ruben --
 8 Q. I believe it's --
 9 MR. GOLDBERG: -- if this is -- you
 10 know --
 11 MR. HONIK: Yes.
 12 MR. GOLDBERG: We said we were going
 13 to take a lunch break. We have been back
 14 on for about an hour.
 15 Is this a good time, or are you still
 16 in this line of questioning?
 17 MR. HONIK: No. I'm still in this
 18 line of questioning.
 19 Q. I would like you to take out, at Tab
 20 Number 6, that document, please.
 21 THE COURT REPORTER: Counsel, this is
 22 the court reporter. I take it you want me
 23 to put exhibit stickers on these as they're
 24 produced?

Page 124

1 MR. HONIK: That would be great.
 2 We're going to call this one Stiroh 2,
 3 Exhibit 2.
 4 MR. GOLDBERG: Ruben, do you have a
 5 tile for this document? I just want to
 6 make sure I've got the right one.
 7 MR. HONIK: It's Judge Kugler's Motion
 8 to Dismiss Opinion 3: Warranty Claims.
 9 MR. GOLDBERG: Then I don't have the
 10 right thing.
 11 MR. HONIK: Should be attached.
 12 (MTD Opinion 3: Warranty Claims was
 13 marked Stiroh Exhibit 2 for identification,
 14 as of this date.)
 15 Q. Do you have it?
 16 A. I have this.
 17 Q. Okay. I'm not able to see that.
 18 Can you verify that you're holding the
 19 caption of this case, Judge Kugler's Motion to
 20 Dismiss Opinion 3: Warranty Claims?
 21 A. I do. I have it.
 22 Q. Okay. Have you ever seen Exhibit 2
 23 before?
 24 A. I believe that I have.

Page 125

1 Q. Is it true that you've never seen it
 2 before January 12, 2022?
 3 MR. GOLDBERG: Objection to form.
 4 Mischaracterizes the testimony.
 5 A. It is not true to the best of my
 6 recollection.
 7 Q. Is it true that you didn't list this
 8 document in your reliance materials?
 9 A. That is correct.
 10 Q. And you have a specific list of
 11 reliance materials called Court Filings;
 12 correct?
 13 A. Correct.
 14 Q. And this is not on that list, nor is
 15 any other pronouncement of the court; correct?
 16 A. Correct.
 17 Q. I want you to turn with me to page 14
 18 of Exhibit 2.
 19 Are you there, Dr. Stiroh?
 20 A. Not yet. If you just give me a
 21 minute.
 22 I have page 14 in front of me.
 23 Q. If you look at the second line --
 24 sentence of that page, of Exhibit 2, the court's

<p style="text-align: right;">Page 126</p> <p>1 opinion, it says, and I quote, The court finds 2 that for prescription drugs, the mere 3 identifying and marketing a drug as the generic 4 equivalent to a branded pharmaceutical listed in 5 the Orange Book, and then selling that generic 6 equivalent when it contains a contaminant not 7 included in the Orange Book listing, constitutes 8 a breach of express warranty. 9 Did I read that correctly? 10 A. I believe so, yes. 11 Q. Did you consider that finding in your 12 analysis and the opinions in your report? 13 A. To the best of my recollection, I had 14 reviewed this document. 15 It does not have a specific role for 16 my opinions with respect to my economic 17 conclusions regarding economic losses. 18 Q. So whether or not there's a breach of 19 express warranty for the reasons set out by the 20 court did not influence or impact your opinions 21 at all; correct? 22 MR. GOLDBERG: Objection to form. 23 Asked and answered. 24 A. In my opinions evaluating the economic</p>	<p style="text-align: right;">Page 128</p> <p>1 economic loss damages, if any. 2 I don't know the basis for what the 3 court takes into account. I know the basis for 4 what I take into account in reaching that 5 opinion. 6 Q. Can you explain to me why you read and 7 then ignored the court's finding that these 8 drugs are, as it puts it, economically 9 worthless? 10 Why did you ignore that? 11 MR. GOLDBERG: Objection to form. 12 Mischaracterizes the testimony, and 13 argumentative. 14 A. I don't think it is right to say that 15 I ignored it. I reviewed this document. 16 I was asked to offer my opinion as an 17 economist about whether economic loss damages 18 can be determined with information and methods 19 common to the class. 20 I approached that in an independent 21 manner, considering what I as an economist would 22 review to reach an opinion about economic loss 23 damages, and I have done that. 24 Q. By "independent," do you mean at odds</p>
<p style="text-align: right;">Page 127</p> <p>1 loss to consumers, that is correct. 2 Q. Turn to page 20 of Exhibit 2, please. 3 Let me know when you're there. 4 A. I have page 20. 5 Q. You see the second full paragraph that 6 begins with the words, This court finds...? 7 A. I see that. 8 Q. The court wrote as follows, and I 9 quote, This court finds that contaminated drugs 10 are economically worthless at the point of sale 11 by virtue of the dangerousness caused by their 12 contamination, regardless whether the sold VCDs 13 actually achieved the medical purpose of 14 lowering blood pressure. 15 Did I read that correctly? 16 A. I believe so. 17 Q. Did you consider that finding by the 18 court anywhere in your analysis or opinions? 19 A. I reviewed this document. I did not 20 rely on it for reaching my opinions. 21 My opinions are based on my training 22 and experience as an economist, and I have 23 reached independent opinions about the economic 24 value of the products at issue and how to assess</p>	<p style="text-align: right;">Page 129</p> <p>1 with the court? 2 A. I do not mean at odds with the court. 3 MR. GOLDBERG: Note my objection. 4 Q. Do you see the sentence that follows, 5 which reads, Put differently, contaminated 6 drugs, even if medically efficacious for their 7 purpose, cannot create a benefit of the bargain 8 because the contaminants in their dangerous 9 effects were never bargained for? 10 Did I read that correctly? 11 A. I believe that you did. 12 Q. Did you consider that finding by the 13 court in your report or any part of your 14 analysis? 15 A. I reviewed this document for the 16 purposes of my report and my opinions. 17 I consider the -- independently, the 18 economic information that is available and reach 19 an opinion based on my training and experience 20 as an economist. 21 Q. So you disagree when the court writes 22 that the -- that the consumer didn't receive a 23 benefit of his or her bargain? 24 You fundamentally agree with that and</p>

<p style="text-align: right;">Page 130</p> <p>1 believe that there was some benefit; correct?</p> <p>2 MR. GOLDBERG: Objection to form.</p> <p>3 Ambiguous.</p> <p>4 A. I don't know what the framework is</p> <p>5 that the judge takes into account in reaching a</p> <p>6 legal opinion.</p> <p>7 I do know what the framework is that I</p> <p>8 take into account, and my economic framework</p> <p>9 leads me to the opinion that it is not correct</p> <p>10 to assume that the drugs were uniformly</p> <p>11 worthless to all purported class members.</p> <p>12 Q. But you understood that, unlike you,</p> <p>13 Dr. Conti took this for what it says, that the</p> <p>14 drugs are economically worthless?</p> <p>15 You understand that she accepted what</p> <p>16 the court found; correct?</p> <p>17 A. I understand that she has assumed the</p> <p>18 drugs are economically worthless, and I have</p> <p>19 explained in my report why as a matter of</p> <p>20 economics that is not a valid assumption to</p> <p>21 make.</p> <p>22 Q. But if the court hired you,</p> <p>23 Dr. Stiroh, to be the court's expert and</p> <p>24 directed you that the drugs were worthless, you</p>	<p style="text-align: right;">Page 132</p> <p>1 MR. GOLDBERG: Objection to form.</p> <p>2 Speculation.</p> <p>3 A. I will say again that is just so far</p> <p>4 outside my experience, that I cannot imagine</p> <p>5 that scenario happening.</p> <p>6 In my experience, economists are</p> <p>7 brought into legal proceedings to give an</p> <p>8 economist's point of view, and where I have been</p> <p>9 retained, that is what I have done, including in</p> <p>10 this matter.</p> <p>11 I have never been asked to assume a</p> <p>12 value and then asked to opine on that value.</p> <p>13 I have been asked to consider whether</p> <p>14 economic loss damages can be determined with</p> <p>15 information common to the class, and it is my</p> <p>16 opinion that economic loss damages, being the</p> <p>17 difference between the price paid and the value</p> <p>18 received, vary class member by class member and</p> <p>19 cannot be determined with information common to</p> <p>20 the class.</p> <p>21 Q. Doctor, didn't you tell me earlier</p> <p>22 today and write in your report that you offer no</p> <p>23 legal opinions and don't venture into the legal</p> <p>24 framework of what the proper measure of damages</p>
<p style="text-align: right;">Page 131</p> <p>1 would then ascribe the value of zero to them in</p> <p>2 your financial loss model that you and I went</p> <p>3 through earlier, wouldn't you?</p> <p>4 MR. GOLDBERG: Objection to form.</p> <p>5 Mischaracterize the testimony.</p> <p>6 A. That is wholly outside my experience</p> <p>7 or any work that I have ever undertaken.</p> <p>8 If I were retained by the court, and I</p> <p>9 have been retained by antitrust authorities, I</p> <p>10 still offer an independent economic analysis</p> <p>11 that may or may not comport with the legal</p> <p>12 framework because the legal framework is outside</p> <p>13 of my experience.</p> <p>14 What the court does with that would</p> <p>15 be, I think, up to the court to decide.</p> <p>16 I have never in my experience been</p> <p>17 told what opinion to reach and then offered that</p> <p>18 opinion.</p> <p>19 Q. Dr. Stiroh, respectfully, if the court</p> <p>20 instructed you that the drugs in question here,</p> <p>21 the VCDs in this MDL, are economically worthless</p> <p>22 because of a legal principle, could you not then</p> <p>23 ascribe a zero value and compute the loss</p> <p>24 exactly as Dr. Conti did?</p>	<p style="text-align: right;">Page 133</p> <p>1 is? Didn't you tell me that?</p> <p>2 MR. GOLDBERG: Objection to form.</p> <p>3 Mischaracterizes the testimony.</p> <p>4 A. I believe that I told you that. I</p> <p>5 don't think my answer in any way differed from</p> <p>6 that.</p> <p>7 To the extent that there was</p> <p>8 confusion, my opinions are economic opinions,</p> <p>9 and I offer them in the context of economics.</p> <p>10 I am not opining for the court on what</p> <p>11 the appropriate legal context is.</p> <p>12 Q. Dr. Stiroh, I'm not confused. I'm</p> <p>13 reading your language.</p> <p>14 And it says the following: I also do</p> <p>15 not opine on the legal issues relating to the</p> <p>16 proper measure of damages or on which measure</p> <p>17 should be used.</p> <p>18 Those are your words in paragraph 5 of</p> <p>19 your report.</p> <p>20 And so what I'm positing before we</p> <p>21 break for lunch is, if the court tells you that</p> <p>22 the proper measure to be used is to take the</p> <p>23 actual price paid for the drug, reduce it by its</p> <p>24 economic worth, which in this case is zero, and</p>

<p>Page 134</p> <p>1 then calculate the loss, is that something you 2 could do? 3 MR. GOLDBERG: Objection to form. 4 Asked and answered. 5 A. If I were asked to perform a 6 calculation and told what numbers to sum up, I 7 could do that. 8 If I were told to call that result 9 economic losses, I would not be comfortable 10 offering that opinion because, in my opinion, 11 that summation of numbers is not economic 12 losses. 13 MR. HONIK: All right. Good time to 14 break. Let's go off the record. 15 THE VIDEOGRAPHER: The time right now 16 is 1:25 p.m. We are off the record. 17 (Luncheon recess at 1:25) 18 19 20 21 22 23 24</p>	<p>Page 136</p> <p>1 consider specifically what the proper measure of 2 damages might be, for example, for a warranty 3 base claim, correct? Do you remember telling me 4 that? 5 MR. GOLDBERG: Objection to form. 6 Mischaracterizes the testimony. 7 A. I did not opine on what the 8 appropriate measure of damages would be for a 9 warranty claim. 10 To the extent that the Court finds 11 that the work and the measures of damages that I 12 have considered are relevant, then the work that 13 I have done is relevant to those claims. 14 Q. I'm sorry, I -- I thought you started 15 out by saying that you didn't offer an opinion 16 about what the measure of damages would be for a 17 warranty claim. Is that -- that part right? 18 A. That's not what I said. I said I 19 didn't offer an opinion on what the correct 20 measure of damages would be for a warranty 21 claim. 22 I do have opinions on the economic 23 considerations and economic loss damages, or 24 damages measured as differences in financial</p>
<p>Page 135</p> <p>1 AFTERNOON SESSION 2 (2:04) 3 LAUREN J. STIROH, Ph.D., 4 resumed, having been previously duly 5 sworn by a Notary Public, was 6 examined and testified further 7 as follows: 8 THE VIDEOGRAPHER: Time now is 9 2:04 p.m. We are back on the record. 10 CONTINUED EXAMINATION BY MR. HONIK: 11 Q. Dr. Stiroh, a while before we broke 12 for lunch and we spent some time talking about 13 the two different models that you described for 14 me, namely financial loss and diminution of 15 value, I was actually asking you some questions 16 that pertain to some of the specific theories of 17 liability in this case. 18 Do you remember we talked a bit about 19 that? 20 A. Probably not with sufficient clarity. 21 To continue on that conversation, I would need 22 to hear questions again. 23 Q. Of course. And one of the things you 24 told me, or confirmed, is that you didn't</p>	<p>Page 137</p> <p>1 outcomes. 2 And to the extent that my opinions and 3 work related to those measures of damages are 4 relevant to what a Court would consider for a 5 warranty claim, then that work would apply. But 6 I have not been the person that says, This is 7 the damages for a warranty claim. 8 MR. HONIK: Jeff, can I trouble you to 9 read just the very beginning part of that 10 response? I tried to get it, but I -- I -- 11 I was exasperated and didn't get it down. 12 (The record was read back.) 13 MR. HONIK: Stop there for a minute. 14 Q. I don't think that's what you said, 15 Dr. Stiroh, is it? 16 A. It is not. 17 Q. You said you did not, that's right. 18 Jeff, she said, I did not. 19 MR. GOLDBERG: Hang on. 20 MR. HONIK: Can you read it again 21 slowly starting with, I did not offer. 22 (The record was read back.) 23 Q. Okay. Next question, you ready, 24 Dr. Stiroh?</p>

<p style="text-align: right;">Page 138</p> <p>1 Did you offer an opinion on what the 2 correct measure of damages are for an unjust 3 enrichment claim in this case? 4 MR. GOLDBERG: Objection to form. 5 Calls for a legal opinion. 6 A. I have an understanding of what the 7 measure of damages for unjust enrichment are, 8 and it is expressed at least under romanette ix, 9 on page 8 in my report. 10 Q. What is that measure or calculation? 11 A. I understand unjust enrichment damages 12 to be the portion of a benefit conferred by a 13 plaintiff on a defendant which it would be 14 unjust for the defendant to retain. 15 Q. Did you actually perform a calculation 16 to determine whether or not unjust enrichment 17 damages exist in this case? 18 A. I have considered what Dr. Conti wrote 19 in her report about the methods that she says 20 she would apply to calculate unjust enrichment 21 damages, and I have considered what she said in 22 her deposition regarding how the variables that 23 she thinks would be relevant, and I have 24 opinions related to the -- what she purports to</p>	<p style="text-align: right;">Page 140</p> <p>1 your report? 2 A. In that answer, I was referring to 3 paragraphs 65 through 72. There is also a 4 discussion in my summary of opinions under 5 romanette ix, which is on page 8. 6 Q. Do you agree that if the unjust 7 enrichment formula or calculation used by 8 Dr. Conti reflected profits, that the formula 9 would then be complete according to you? 10 A. No. 11 The formula that Dr. Conti puts in her 12 report, in my view, is a superficial formula of 13 profits. She says little more than profits are 14 revenues minus costs. 15 Calculating unjust enrichment damages, 16 even if starting -- if starting with profits as 17 part of that measure, there needs to be a way of 18 assessing what the relevant revenues are, and 19 assessing what the relevant costs are, and in 20 the pharmaceutical industry, both of those 21 measures can be very complicated. 22 There is a complex supply chain. 23 There are differences in the business structures 24 wholesaler to wholesaler, or retailer to</p>
<p style="text-align: right;">Page 139</p> <p>1 do, that are expressed in my report. 2 Q. Do you have any opinions about the 3 correct measure of unjust enrichment damages, 4 separate and apart from whatever criticism you 5 may have of what Dr. Conti did on unjust 6 enrichment? 7 A. Are you asking me do I have opinions 8 about the quantum of unjust enrichment damages, 9 if any, or the methods? 10 Q. No. I'm asking you how you would 11 measure unjust enrichment. 12 MR. GOLDBERG: Objection to form. 13 Ambiguous. 14 A. In Section Roman V of my report, I 15 have a discussion of the retail pharmacy and 16 wholesaler damages related to plaintiff's theory 17 of liability and unjust enrichment, and in that 18 section, I describe my understanding of unjust 19 enrichment damages and the flaws that I see in 20 Dr. Conti's description of what she would do to 21 assess unjust enrichment damages, and I explain 22 the ways in which what she has set forward are 23 incomplete. 24 Q. What paragraph are you referring to in</p>	<p style="text-align: right;">Page 141</p> <p>1 retailer, such as the costs and the relevant 2 costs for each entity might differ depending on 3 the defendant, depending on the time period, 4 depending on the product that is being sold, and 5 the channel of distribution through which it 6 reached a wholesaler and then ultimately a 7 retailer. 8 Q. That's your complete answer? 9 A. Yes. 10 Q. Dr. Stiroh, did you arrive at an 11 opinion about the proper measure of damages for 12 Consumer Product Act damages? 13 MR. GOLDBERG: Objection to form. 14 Calls for legal opinion. 15 A. I do not offer an opinion on the 16 correct legal framework for damages for Consumer 17 Product Act damages. 18 Q. Dr. Stiroh, do you offer an opinion 19 anywhere in your report about the proper measure 20 of damages for common law fraud? 21 MR. GOLDBERG: Objection to form. 22 Calls for a legal opinion. 23 A. I do not offer an opinion on the 24 proper legal damages for common law fraud.</p>

<p style="text-align: right;">Page 142</p> <p>1 Q. Is therapeutic benefit synonymous with 2 economic worth, in your opinion? 3 A. For a pharmaceutical product, 4 therapeutic benefit is a significant component 5 of economic worth. 6 Q. And how do you go about measuring it? 7 MR. GOLDBERG: Objection. Ambiguous. 8 A. For purposes of an economic analysis 9 that takes therapeutic benefit into account, I 10 would consider the relative therapeutic benefits 11 of one product compared to an alternative, and 12 need information from a consumer, or the doctor 13 of the consumer, that describes the 14 alternatives. 15 A component of damages that considers 16 what a consumer would take in the alternative to 17 Valsartan would have to consider what the 18 therapeutic value of that alternative was and 19 whether it was equivalent to the Valsartan that 20 they took, and differences in the therapeutic 21 value would have to be accounted for. 22 Assessing what those differences are, 23 would require, I think, a medical opinion, not 24 just an economic opinion.</p>	<p style="text-align: right;">Page 144</p> <p>1 would need to be to get to the same level of 2 blood pressure management. 3 Q. Have you seen that input in this case 4 from any medical experts? 5 A. I have not seen any input in the 6 materials that I have reviewed. 7 Q. Have you ever had an engagement or 8 consultation in which you had such medical input 9 to arrive at a dollar value for therapeutic 10 value of a prescription drug? 11 MR. GOLDBERG: Objection. Vague. 12 A. I have not worked on a matter that had 13 a sufficiently similar fact profile where the 14 measure of harm includes a potential diminution 15 of value that comes from differences in health 16 outcomes where that would need to be valued, but 17 it is something that would need to be valued in 18 this matter. 19 Q. Have you ever so much as heard or read 20 about a reported case, in the economic or legal 21 literature, which done -- which has done what 22 you just described, namely, gotten medical input 23 in order to arrive at a dollar value for 24 therapeutic benefit in a prescription drug?</p>
<p style="text-align: right;">Page 143</p> <p>1 Q. And in what way would you be able to 2 translate that economic analysis into dollars 3 and cents? 4 How do you value that in dollars? 5 MR. GOLDBERG: Objection. Ambiguous. 6 A. For -- considering -- I'm sorry, I 7 guess I need you to say what the -- what it is 8 that you want me to value in dollars. 9 Q. You said that therapeutic benefit, 10 while not synonymous with economic worth, is a 11 significant component. 12 I'm asking you whether and how that 13 translates or could be translated into dollars 14 and cents. 15 A. We know, from expenditures on the 16 products at issue, that consumers valued the 17 therapeutic benefits of the products at least as 18 much as the price paid for them. 19 The -- if there is a difference in 20 therapeutic benefits measured, for example, by 21 differences in the ability to manage blood 22 pressure, then I could translate that into 23 dollars and cents, with input from a medical 24 expert, by considering what the expenditures</p>	<p style="text-align: right;">Page 145</p> <p>1 A. Yes. Generally, I am aware of various 2 economic papers that look at the costs of 3 treating certain indications and the costs of 4 managing health outcomes. It is not a field 5 that I specialize in. 6 I have encountered articles depending 7 on other cases that I have worked on that have 8 overlapped with health sciences, but that 9 economic concept of putting dollar values on 10 either -- certainly on mortality, as I mentioned 11 in my report, but the -- the costs of treating 12 different types of medical conditions, and the 13 costs of treating them under different 14 approaches to controlling that medical 15 condition, is something that I think is fairly 16 common in health economics. 17 Q. You don't hold yourself out to be a 18 health economist, do you? 19 A. I don't call myself a health 20 economist. I am an economist that has expertise 21 working in some industries that relate to health 22 sciences. 23 I would consider this case to be a 24 matter like that, where I bring my experience as</p>

<p style="text-align: right;">Page 146</p> <p>1 an economist to a case that involves health 2 outcomes. 3 Q. You know, of course, that that's all 4 Dr. Conti does, she's a health economist, don't 5 you? 6 A. I recall her testifying something 7 along the lines of that is all she does. 8 Q. And -- and you saw her bibliography in 9 which she authored literally hundreds of papers 10 and other contributions to the literature in 11 health economics. Right? 12 A. I have read her report. I have to say 13 I'm not sure I paged through her bibliography 14 ever, but I take your word for it. 15 Q. Do you agree that equilibrium price 16 from a classical economic standpoint is set by 17 the intersection of supply and demand? 18 A. I do. 19 Q. And do you agree that according to 20 economic theory, for a consumer product -- and 21 we're talking generally -- for a consumer 22 product to have economic value, demand for the 23 product must exist and supply must be allowed to 24 meet that demand?</p>	<p style="text-align: right;">Page 148</p> <p>1 involved in this case, and my expertise is in 2 economics and I have focused my analysis on 3 materials that are relevant to my economic 4 analyses. 5 Q. In listing your various reliance 6 materials, unless I missed it, I -- I do not 7 note your having relied on any of the U.S. Code 8 as it pertains to the introduction of drugs into 9 the supply chain. Have you? 10 A. I do not rely on any of the U.S. Code 11 as it pertains to the introduction of drugs into 12 the supply chain for the purposes of my opinions 13 that I'm offering in this report. 14 Q. Are you -- are you, nonetheless, 15 familiar with any aspects of federal law as it 16 concerns the ability for a drug manufacturer to 17 introduce into the legal class of trade a 18 prescription drug? 19 A. I have some familiarity with the 20 regulations concerning transactions in 21 pharmaceuticals, and entry of either new 22 pharmaceutical products or generic 23 pharmaceutical equivalents to existing 24 pharmaceutical products.</p>
<p style="text-align: right;">Page 147</p> <p>1 A. I disagree. 2 Q. I didn't see among your reliance 3 materials your having relied upon -- unless I 4 missed it -- with the exception, I think, of 5 Dr. Chan, you -- you didn't read any of the 6 defense class experts in this case. Have you? 7 A. My team and I have reviewed the expert 8 reports that are listed in paragraph 6. I don't 9 recall others and certainly not that I have 10 reviewed, if there are -- I just don't think 11 that I have, no. 12 Q. Did you review the defense class 13 expert report prepared by Dr. Lambert, who is 14 both a Ph.D. chemist, an expert in the 15 pharmaceutical supply chain, a cGMP, and CMC 16 expert? 17 A. I don't believe so. 18 Q. Do you understand that in this case, 19 there are any number of pharmacy industry 20 experts with a variety of expertise in how the 21 supply chain works, how cGMP compliance occurs, 22 how CMC occurs, how FDA regulations impact this 23 case? Are you aware of that generally? 24 A. I'm aware that there are more experts</p>	<p style="text-align: right;">Page 149</p> <p>1 I have familiarity based on my prior 2 work, but it is not something that I am 3 intending to put forward opinions related to. 4 Q. And certainly in this case, you didn't 5 rely upon any of those laws or regulations in 6 forming your opinions here, correct? 7 A. That is correct. 8 Q. Do you -- do you disagree that those 9 laws have an impact on determining whether 10 there's a legitimate supply curve for a 11 particular prescription drug? 12 MR. GOLDBERG: Objection to form. 13 Ambiguous. 14 A. Can you say how you are using the 15 phrase, "legitimate supply curve"? 16 Q. Sure. Do you think that there are any 17 laws that impact the ability of a manufacturer 18 to sell a drug in interstate commerce? 19 A. My understanding is that there are. 20 Q. And what impact, so far as you 21 understand, would those laws have on 22 determining, from an economic standpoint, the 23 legitimacy of producing a supply of a 24 prescription drug and, in turn, having a supply</p>

Page 150

1 curve?

2 MR. GOLDBERG: Objection to form.

3 Ambiguous.

4 A. With respect to this case, are you

5 asking me?

6 Q. No.

7 MR. GOLDBERG: Same objection.

8 A. I am aware that there are consumers in

9 the United States who seek to buy prescription

10 drugs outside of the United States for

11 consumption inside the United States.

12 That is a -- from an economic point of

13 view, that is supply of a product that could be

14 taken into account in doing an economic analysis

15 of supply and demand.

16 Q. Are you familiar with the drug now

17 long banned called fen-phen?

18 A. I am not.

19 Q. That was a prescription diet drug that

20 caused a certain type of heart damage, that's

21 been long banned in the United States.

22 Do you have an opinion, as an

23 economist, what the value of that drug is, if

24 I'm not able to get it lawfully here?

Page 151

1 A. I don't have a fully formed opinion

2 because I have never considered this scenario

3 before.

4 The components of value, though, if it

5 is something that you desire to get,

6 notwithstanding the fact that you can't get it

7 here, that tells me, as an economist, it has

8 value to you as a consumer.

9 Q. Your -- your economic opinion is that

10 if it's unlawful for me to obtain, and no doctor

11 will give me a prescription, that fen-phen still

12 has some dollar value. Is that your opinion?

13 A. My opinion is that if you want it, or

14 a consumer wants it, that product has value to

15 you.

16 Q. Let me ask the question differently.

17 In my hypothetical for fen-phen, is it lawful

18 for someone to sell it, a manufacturer, and

19 receive money for it?

20 A. I don't know. That -- you're asking

21 me now a legal opinion. And my opinions are

22 rooted in economics, and economic value comes

23 from somebody wanting a product.

24 Q. Well, respectfully, Dr. Stiroh, you

Page 152

1 don't limit your views in this case to purely

2 economic principles. Your essential thesis here

3 is that class certification isn't available.

4 That's a legal question, isn't it?

5 MR. GOLDBERG: Objection to form.

6 A. Can you say again what my fundamental

7 opinion is?

8 Q. Sure. You're familiar with Rule 23 of

9 the Federal Rules of Civil Procedure, aren't

10 you?

11 A. I am.

12 Q. You -- you've written on that, haven't

13 you?

14 A. I have written on the economics of it.

15 Q. Well, you've written specifically

16 about case law, haven't you?

17 A. I have written specifically about

18 various cases, but it is -- my writings are

19 related to the economics that were used in the

20 cases and considered by the court.

21 Q. Dr. Stiroh, your writings relate to

22 the interplay between the class certification

23 rule, Rule 23, and economics, extensively,

24 haven't you?

Page 153

1 A. I have written on the economics of

2 class certification, and I agree with you that

3 class certification is something that takes

4 place in a legal context.

5 Q. That's a -- that's a very curious way

6 to put it, because, you know, as I read your

7 opinions, you write for -- just for example,

8 Economic loss damages to members of the consumer

9 or third-party payor classes, if any, cannot be

10 assessed on a class-wide basis using information

11 and methods common to the proposed class.

12 Is that your language?

13 A. It is.

14 Q. And I gather you've probably written

15 that sentence numerous times before, right?

16 MR. GOLDBERG: Objection to form.

17 Ambiguous.

18 A. I have not.

19 Q. "Methods common to the proposed

20 class," is that an economic phrase or a legal

21 phrase?

22 A. It may be a legal phrase. In my

23 sentence when I said that the class-wide

24 damages, from my perspective, that aspect, is

<p style="text-align: right;">Page 154</p> <p>1 the economic part of it, whether the same words 2 would be used in a legal context or not. 3 Q. "Cannot be assessed on a class-wide 4 basis," is that a legal phrase or an economics 5 phrase? 6 A. It is the same answer I just gave you. 7 My assignment, as described in my report, was to 8 consider whether economic damages where I 9 have -- or economic harm, where it is -- I have 10 defined what I understand that to mean, can be 11 assessed on a class-wide basis, and that has 12 meaning to me as an economist, but my answer, 13 then, to the question is rooted in economics, 14 and it is an economic finding, not a legal one. 15 Q. What does class-wide basis mean? 16 A. As I use it, it means for the class as 17 a whole. 18 Q. And how is that different in your 19 mind, as you use it, from individual basis? 20 A. An individual basis would be to an 21 individual class member, and class-wide basis is 22 to the class as a whole. 23 Q. Is that the extent of your 24 understanding?</p>	<p style="text-align: right;">Page 156</p> <p>1 context of responding to a commonality argument. 2 The work that I do is based on 3 economics and then is used by a legal team in 4 the legal context in whatever way they feel is 5 most appropriate based on their experience and 6 understanding. 7 Q. Yeah, that's not really what I'm 8 asking you. I'm simply asking if we can agree 9 that the shorthand way to refer to your 10 application of economic principles to this 11 aspect of class certification that you've been 12 speaking at length about is referred to as 13 commonality. That's all I'm asking. 14 MR. GOLDBERG: Objection -- 15 Q. Do you agree with that? 16 MR. GOLDBERG: Objection to form, 17 asked and answered. Calls for a legal 18 opinion. 19 A. I guess I don't know that to be true 20 in all cases. Or even in this one. 21 I have an understanding that if the 22 lawyers or the court is considering whether 23 there is a predominance of common issues, that 24 an economist's report and opinions may factor</p>
<p style="text-align: right;">Page 155</p> <p>1 A. Sufficient to answer your question, 2 yes. To the extent that you will expand the 3 context, I may have a different answer, but in 4 the context in which I understood you to ask it, 5 that is the -- 6 Q. Do you understand -- 7 A. If I could just finish the answer so 8 it makes sense. 9 MR. GOLDBERG: Hang on, Ruben. She's 10 not finished the answer. 11 Q. Let me know when you're done. 12 THE WITNESS: I'm sorry. If you could 13 just mark that my answer was incomplete, 14 there, that would be good. I don't -- I've 15 lost my train of thought for it. 16 Q. Are you addressing what's commonly 17 referred to as the commonality requirement, in 18 the sentence we just went over? 19 MR. GOLDBERG: Objection to form. 20 Calls for a legal opinion. 21 A. I have an understanding that when 22 doing work related to the class certification 23 phase of a litigation, that the work that I do 24 is most frequently used by the legal team in the</p>	<p style="text-align: right;">Page 157</p> <p>1 into the legal opinions on that subject. 2 Q. Now you've introduced another legal 3 term, "predominance." Do you know what that 4 means? 5 MR. GOLDBERG: Objection to form. 6 Calls for a legal opinion. 7 A. I understand it is a term that is 8 included in class certification findings, and I 9 have an understanding, from a layperson, of what 10 that means. I don't -- wouldn't say I have a 11 legal understanding, because I'm not a lawyer. 12 Q. Well, you do understand, though, don't 13 you, that this issue, or business of 14 commonality, needs to apply, on the one hand, to 15 liability issues, and on the other hand, to 16 damage issues. Do you understand that much? 17 MR. GOLDBERG: Objection to form. 18 Calls for a legal opinion. 19 A. I have an understanding that a court 20 may consider whether the liability theories and 21 defenses are common to the class, and a court 22 may consider whether there are individual issues 23 and potentially weigh the common issues against 24 the individual issues to assess from a legal</p>

<p style="text-align: right;">Page 158</p> <p>1 perspective which ones dominate.</p> <p>2 Q. You do understand that they fall into</p> <p>3 two buckets, right? That you have to</p> <p>4 demonstrate this commonality concept on</p> <p>5 liability, and separately for damages. Do you</p> <p>6 get that?</p> <p>7 MR. GOLDBERG: Objection. Calls for a</p> <p>8 legal opinion.</p> <p>9 A. I don't -- I don't get that from an</p> <p>10 economic perspective. I work on class</p> <p>11 certification matters where I have an assignment</p> <p>12 that I carry out, and then whether that is used</p> <p>13 by the legal term to assess common issues on</p> <p>14 liability or common issues with respect to</p> <p>15 damages, that is up to the legal team.</p> <p>16 Q. Do you agree that whether the</p> <p>17 manufacturers in this case who have produced the</p> <p>18 VCDs adhere to cGMP in making them is a --</p> <p>19 presents a common question of fact or law?</p> <p>20 MR. GOLDBERG: Objection to form.</p> <p>21 Calls for a legal opinion.</p> <p>22 A. I don't have an opinion on that.</p> <p>23 Q. Do you have an opinion whether</p> <p>24 nitrosamines, a probable human carcinogen, can</p>	<p style="text-align: right;">Page 160</p> <p>1 to form. Calls for a legal opinion.</p> <p>2 A. I don't have an opinion on that.</p> <p>3 Q. Do you -- do you know whether it's a</p> <p>4 common question of fact or law whether the VCDs</p> <p>5 were adulterated within the meaning of the</p> <p>6 Federal Food, Drug, and Cosmetic Act?</p> <p>7 MR. GOLDBERG: Objection to form.</p> <p>8 Calls for a legal opinion.</p> <p>9 A. I don't have an opinion on that. I</p> <p>10 have an understanding that not all of the drugs</p> <p>11 at issue or all of the lots of the drugs at</p> <p>12 issue may have contained any of the impurities</p> <p>13 at issue, and I have a discussion of what that</p> <p>14 means for Dr. Conti's opinions. I don't have an</p> <p>15 opinion as to the facts surrounding that issue.</p> <p>16 Q. Do you disagree that it's a common</p> <p>17 question of fact or law to determine whether the</p> <p>18 VCDs in question were misbranded?</p> <p>19 MR. GOLDBERG: Objection to form.</p> <p>20 Calls for a legal opinion.</p> <p>21 THE WITNESS: Did he ask me do I have</p> <p>22 an opinion or understanding? Can you</p> <p>23 repeat. Or sorry.</p> <p>24 Q. I asked you if you agree --</p>
<p style="text-align: right;">Page 159</p> <p>1 present a common question of fact or law?</p> <p>2 MR. GOLDBERG: Objection to form.</p> <p>3 Calls for a legal opinion.</p> <p>4 A. I don't have an opinion on that.</p> <p>5 Q. Do you have an opinion whether it's a</p> <p>6 common question of fact or law whether the VCDs</p> <p>7 in this case were contaminated with NDMA or</p> <p>8 NDEA?</p> <p>9 MR. GOLDBERG: Objection to form.</p> <p>10 Calls for a legal opinion.</p> <p>11 A. I don't have an opinion on that. I</p> <p>12 consider in my report the possibility that not</p> <p>13 all products included the impurities NDMA and</p> <p>14 NDEA in quantities that have been alleged to</p> <p>15 cause an increase in the risk of cancer, and I</p> <p>16 have opinions that stem from the -- or that --</p> <p>17 that talk about how that interplays with the</p> <p>18 economic outcomes.</p> <p>19 Q. Do you agree that it's a common</p> <p>20 question of fact or law whether the defendant</p> <p>21 manufacturers in this case were aware, or should</p> <p>22 have been aware, of the potential for</p> <p>23 nitrosamine formation prior to 2018?</p> <p>24 MR. GOLDBERG: Objection. Objection</p>	<p style="text-align: right;">Page 161</p> <p>1 A. Oh.</p> <p>2 Q. -- that whether or not the VCDs in</p> <p>3 question here are misbranded is a common</p> <p>4 question of law or fact.</p> <p>5 MR. GOLDBERG: Again, object to form.</p> <p>6 Calls for a legal opinion.</p> <p>7 A. I don't think I even understand how</p> <p>8 your question is constructed. Whether --</p> <p>9 whether I'm being asked to agree with the</p> <p>10 statement, or being asked to agree that the</p> <p>11 issue is a common issue.</p> <p>12 I don't have an opinion, I think, on</p> <p>13 either. But I will say I don't think I</p> <p>14 understood the question.</p> <p>15 Q. Dr. Stiroh, the fact is, you don't</p> <p>16 question that there are common questions of fact</p> <p>17 and law that would support certifying a class on</p> <p>18 liability grounds. Correct?</p> <p>19 MR. GOLDBERG: Objection to form.</p> <p>20 Calls for a legal opinion.</p> <p>21 A. I don't offer opinions on that. I</p> <p>22 have opinions in my report related to the</p> <p>23 assignment I was asked to undertake.</p> <p>24 And the assignment was to consider</p>

<p style="text-align: right;">Page 162</p> <p>1 whether damages from economic losses or 2 differences in financial outcomes can be 3 determined with information common to the class, 4 and it is my opinion that they cannot be 5 determined with information common to the class, 6 and you would need individualized information 7 for -- from purported class members. 8 Q. Right. You said that multiple times. 9 And the reason for that is because according to 10 you, you'd have to value the therapeutic benefit 11 on the one hand, and the various risk factors 12 that can only be viewed through the individual 13 consumer. Right? 14 MR. GOLDBERG: Objection to form. 15 Mischaracterizes the testimony. 16 A. That is one of the reasons why you 17 need individual information. 18 Q. I'm sorry, you're saying I'm correct? 19 A. Your full statement was not correct, 20 but I do agree with you that you have stated 21 some of the reasons why you would need 22 individual information to properly assess 23 damages in this matter from an economic 24 standpoint.</p>	<p style="text-align: right;">Page 164</p> <p>1 the reasons you've written and we've talked 2 about, but if it turns out that the measure of 3 damages is financial loss, in the way you've 4 outlined to me, and you assume or accept that 5 the value of these drugs is zero, then one 6 could, quite readily, with common evidence, 7 proof, arrive at damages. Correct? 8 A. I disagree. If the measure of damages 9 is determined to be financial loss, and thus, as 10 we discussed this morning, you compare the 11 financial position of class members as they were 12 and the financial positions as they would have 13 been had they not consumed the at-issue VCDs, 14 you have to consider, Are there other variables 15 that change. 16 The other variable that would change 17 is what product would they consume instead of 18 the VCD to manage their blood pressure. That is 19 what is missing from what Dr. Conti did. 20 If you assume away or say that there 21 would not be any management of blood pressure, 22 then the comparison of situations at -- as they 23 are, and the situations as they would be, would 24 have to consider what happens to patients if</p>
<p style="text-align: right;">Page 163</p> <p>1 Q. Yeah. Before we broke for lunch, and 2 you and I looked together at what Judge Kugler 3 wrote about the economic worthlessness of the 4 drug and the concept that the drugs were worth 5 zero because of the failure of the benefit of 6 the bargain, you don't disagree that if that 7 ends up being the measure of damages, that that 8 subject is subject to common proof, do you? 9 MR. GOLDBERG: Objection to form. 10 Mischaracterizes the testimony. Calls for 11 a legal opinion. 12 A. Can you say it again, or may I ask the 13 court reporter to repeat that question. 14 Q. Sure. Judge Kugler is correct that 15 the drugs are economically worthless for the 16 reasons you and I looked at together and, 17 therefore, have a value of zero that, arising in 18 class damages, is a simple matter of common 19 proof. Correct? 20 A. I don't agree with you. 21 MR. GOLDBERG: And note my objection 22 as calling for a legal opinion. 23 Q. Well, I know that you don't agree with 24 the premise and the foundation for that, for all</p>	<p style="text-align: right;">Page 165</p> <p>1 they stop taking blood pressure medication, and 2 do they have adverse health outcomes that then 3 would also have different financial outlays than 4 they currently did when their blood pressure was 5 managed. 6 Q. Dr. Stiroh, are you aware that in the 7 marketplace when these contaminated drugs were 8 sold, and afterwards, that there were 9 uncontaminated generic forms of Valsartan 10 available? Are you aware of that? 11 A. I am aware that there are other forms 12 of Valsartan that are not alleged to have the 13 impurities, yes. 14 Q. And you are aware that in addition to 15 these uncontaminated generic forms of Valsartan, 16 there were a whole host of other ARBs, drugs of 17 this class, that control blood pressure, 18 correct -- 19 A. I'm aware of that -- 20 Q. -- available to consumers? 21 And you are aware that there were also 22 branded or innovator drug -- drugs available to 23 treat these conditions as well, correct? 24 A. I am aware of the presence of other</p>

<p style="text-align: right;">Page 166</p> <p>1 ARBs and the presence of a branded Valsartan 2 product. 3 Q. Do you agree with the statement that 4 when these drugs were sold between 2012 and 5 their removal from the market in 2018, the 6 contaminated forms of it, that no consumer was 7 aware if the drugs were contaminated? 8 A. Did you ask me if I am aware of that 9 or I agree with that? 10 Q. Is there a difference for you? 11 A. I think if you asked me if I'm aware, 12 you are stating a fact that I'm -- I don't know 13 to be true. 14 And if you're asking me if I am 15 aware -- if -- well, either way, I don't know 16 that it is true about what consumers understood 17 to be included in their Valsartan-containing 18 drugs as I sit here today. 19 Q. Do you have any facts or evidence to 20 share with us under oath that any consumer, 21 between 2012 and 2018, had any basis to 22 understand that their Valsartan contained 23 nitrosamines? 24 A. That is not a subject on which I am</p>	<p style="text-align: right;">Page 168</p> <p>1 purposes of my report. 2 Q. Well, I want you to assume in a 3 hypothetical that that is what they claim. 4 And I want to then ask you, on the 5 basis of that assumed fact, if it's conceivable 6 to you that the manufacturers didn't know there 7 were nitrosamines in their Valsartan pills, but 8 you believe that consumers might have known that 9 fact. Is that your statement? 10 MR. GOLDBERG: Objection to form. 11 Argumentative. 12 A. That is not my statement. 13 Q. Okay. Let me ask you a different 14 question. 15 Can you -- do you believe, as a matter 16 of economics, that if there's a binary choice 17 given to a consumer to buy, in this case, with 18 knowledge, a VCD that's contaminated with a 19 carcinogen and the exact same VCD that is 20 uncontaminated with any carcinogen, that there's 21 any consumer who would rationally select the 22 contaminated one? 23 A. I could envision a scenario in which 24 that happens, yes.</p>
<p style="text-align: right;">Page 167</p> <p>1 offering testimony. I don't have information to 2 share with you as I sit here today on that 3 subject. 4 Q. Do you think for a split second that a 5 single consumer knew about it and none of the 6 manufacturers did? Because that's what they 7 claim, you know. 8 MR. GOLDBERG: Object- -- 9 Q. You know that, right? 10 MR. GOLDBERG: Objection to form. 11 Foundation. Argumentative. 12 A. Are you asking do I know what is 13 claimed by manufacturers? 14 Q. Are you aware that the manufacturers, 15 uniformly in this case, claim that they didn't 16 know and couldn't know of the presence of 17 nitrosamines in their own products during the 18 relevant class period? Are you aware of that? 19 A. I don't think -- 20 MR. GOLDBERG: Objection to form. 21 A. -- I have reviewed information that -- 22 or at least that I recall as I sit here, on what 23 the defendant manufacturers are stating. It is 24 not something that I recall reviewing for</p>	<p style="text-align: right;">Page 169</p> <p>1 Q. Okay. Can you tell us, under oath, in 2 what scenario would a rational person pick the 3 contaminated VCD. 4 A. A scenario in which that may happen is 5 if the VCD that contains impurities is priced 6 lower than the VCD with -- without impurities, 7 and a consumer, in consultation with their 8 doctor, is informed that the level of impurities 9 is not likely to change their health comes -- 10 health outcomes in any meaningful way, that a 11 consumer may decide to save money by choosing a 12 product that has impurities in it. 13 Q. Do you know facts that support that 14 having occurred here ever? 15 A. I have examples in my report where I 16 talk about similar types of comparisons where 17 consumers choose between organic products and 18 products that contain pesticides, where 19 pesticides may include elements that could have 20 risks for human health outcomes. 21 And consumers make different choices 22 in different scenarios, but we can observe 23 market differences in prices. We observe 24 organic vegetables being sold, and we observe</p>

<p>Page 170</p> <p>1 vegetables that have been exposed to pesticides 2 being sold. 3 I have an example where economists 4 have measured differences in housing prices, 5 where houses are located in an area where there 6 is a higher incidence of leukemia than other 7 areas, and economists can observe and measure 8 the differences in prices that would be 9 attributable to the added risk in one geographic 10 area to another geographic area. 11 The section in my report that 12 describes other examples of where economists 13 have measured and priced risk I have in my 14 report as an indication that economists do look 15 at these types of things. 16 The presence of risk doesn't render a 17 product worthless. The presence of risk has 18 been measured by economists in other factors. 19 It's not appropriate to make the assumption that 20 Dr. Conti did. It's not appropriate to assume 21 worthlessness because of the presence of a risk. 22 Q. In order to price the presence of a 23 risk, doesn't a consumer need to know that the 24 risk exists?</p> <p>Page 171</p> <p>1 A. In the examples that I gave you, I was 2 envisioning that the economist prices the risk. 3 The -- whether the consumer prices the 4 risks, there are examples where the consumer 5 could know about a risk, and in those scenarios, 6 we can see a divergence in price and consumption 7 patterns of products that are deemed more or 8 less risky. 9 Q. Dr. Stiroh, respectfully, you didn't 10 answer my question. In order for either a 11 consumer or an economist, on an assumption, to 12 price or place a value on risk, to exercise that 13 choice, you have to have knowledge of the risk, 14 do you not? 15 MR. GOLDBERG: Objection to form. 16 Ambiguous. 17 A. To price the risk, an economist would 18 have an understanding or an assumption regarding 19 the risk profile, yes. 20 Q. That's right. In order to 21 affirmatively choose to live in an area with 22 high leukemia because of environmental factors, 23 you'd have to know about that risk in order to 24 take it or assume it or exercise a choice around</p>	<p>Page 172</p> <p>1 it, correct? 2 A. To do an economic study and draw the 3 conclusion that a price differential is due to 4 risk, you would have built into that some 5 expectation regarding information that is known 6 about the risks. 7 Q. Have you seen a single shred of 8 evidence in this case that any consumer, during 9 the relevant class period, proposed class 10 period, was aware of the presence of 11 nitrosamines in these Valsartan-containing 12 drugs? 13 A. I am not aware of any information that 14 indicates that. 15 Q. Let's bring up -- go into your 16 document if you would, and pull up -- just find 17 it -- bear with me. It's a -- it should be a 18 Tab 3. And it's a section of the United States 19 Code. 20 MR. GOLDBERG: Is this 331 or 351? 21 MR. HONIK: 331. 22 MR. GOLDBERG: Okay. 23 (Prohibited Acts, 21 USCA, Section 24 331, was marked Stiroh Exhibit 3 for</p> <p>Page 173</p> <p>1 identification, as of this date.) 2 Q. Dr. Stiroh, do you have what's been 3 marked as Exhibit 3? 4 Dr. Stiroh, have you ever laid eyes on 5 21 United States Code Annotated Section 331? 6 A. I don't have a particular recollection 7 of it. I may have seen it before. 8 Q. Do you see at the top, it's part of 9 the Federal Food, Drug, and Cosmetic Act? 10 Do you see that? 11 A. I see a heading, Chapter 9, Federal 12 Food, Drug, and Cosmetic Act, is that what 13 you're referring me to? 14 Q. Yes, ma'am. And underneath it, it 15 should say Subchapter 3, Prohibited Acts and 16 Penalties. 17 Do you see that? 18 A. I do. 19 Q. And the construct for this, as a 20 prohibited act piece of litigation, is to set 21 out what's prohibited. 22 You see where it says, The following 23 acts and the causing thereof are prohibited, 24 colon?</p>
---	---

<p style="text-align: right;">Page 174</p> <p>1 You see that?</p> <p>2 A. I do.</p> <p>3 Q. And the very first prohibited act</p> <p>4 that's listed is as follows: The introduction</p> <p>5 or delivery for introduction into interstate</p> <p>6 commerce, of any food, drug, device, tobacco</p> <p>7 product or cosmetic that is adulterated or</p> <p>8 misbranded.</p> <p>9 Did I read that correctly?</p> <p>10 A. I believe you did.</p> <p>11 Q. Have you ever seen this statement</p> <p>12 in -- in the -- in federal law?</p> <p>13 A. I don't think I have set out to read</p> <p>14 federal law. The statement sounds familiar from</p> <p>15 Dr. Conti's materials. I may have seen it in</p> <p>16 this context as well, but I don't have a</p> <p>17 recollection of having reviewed this document.</p> <p>18 Q. Suffice to say you didn't give any</p> <p>19 weight or consideration to this prohibited act</p> <p>20 as set out in 21 USCA Section 331?</p> <p>21 A. I don't think that is accurate to say</p> <p>22 that I didn't give it weight. I didn't -- don't</p> <p>23 recall having reviewed this particular document.</p> <p>24 To the extent that it is something</p>	<p style="text-align: right;">Page 176</p> <p>1 adulterated drug can't be introduced into</p> <p>2 interstate commerce in the U.S., that that means</p> <p>3 such a drug, namely an adulterated drug, cannot</p> <p>4 have a legitimate supply curve in our market?</p> <p>5 MR. GOLDBERG: Objection to form,</p> <p>6 ambiguous.</p> <p>7 A. I have an understanding of what</p> <p>8 Dr. Conti was seeking to do when she removed the</p> <p>9 supply curve and called that legitimate supply.</p> <p>10 I have a discussion in my report about economic</p> <p>11 loss damages and that her analysis does not</p> <p>12 establish worthlessness.</p> <p>13 Whether there is a supply of product</p> <p>14 that the U.S. court allows, that is not the same</p> <p>15 as measuring the worth or value of drugs. The</p> <p>16 worth or value of drugs to consumers depends on</p> <p>17 their valuation of the products, not the supply</p> <p>18 of the products.</p> <p>19 I disagree with Dr. Conti on that</p> <p>20 point.</p> <p>21 Q. Did you hear me invoke Dr. Conti's</p> <p>22 name or any of her findings in my question,</p> <p>23 Dr. Stiroh?</p> <p>24 A. I don't recall if you said it. It is</p>
<p style="text-align: right;">Page 175</p> <p>1 that factors into Dr. Conti's opinions, I --</p> <p>2 that is something that I consider explicitly in</p> <p>3 my report.</p> <p>4 Q. This prohibits legally introducing,</p> <p>5 into the legal class of trade, an adulterated or</p> <p>6 misbranded product. Correct?</p> <p>7 MR. GOLDBERG: Objection. Calls for a</p> <p>8 legal opinion.</p> <p>9 A. I can see what the words are. I can't</p> <p>10 give you an opinion on what this prohibits or</p> <p>11 doesn't prohibit. I'm not a lawyer.</p> <p>12 Q. Doctor, you have a Ph.D. from Harvard</p> <p>13 in economics. Can you apply a plain meaning to</p> <p>14 what we read together sufficient to understand</p> <p>15 and agree that it prohibits introducing</p> <p>16 adulterated drugs in interstate commerce in the</p> <p>17 United States?</p> <p>18 MR. GOLDBERG: Same --</p> <p>19 Q. Can you draw that meaning from it?</p> <p>20 MR. GOLDBERG: Same objection.</p> <p>21 A. I can draw the plain English meaning</p> <p>22 from the words. I cannot give you a legal</p> <p>23 opinion related to it.</p> <p>24 Q. Would you agree that because an</p>	<p style="text-align: right;">Page 177</p> <p>1 relevant to my answer because my assignment in</p> <p>2 this case was to consider her opinions.</p> <p>3 Q. I'm not talking about your assignment</p> <p>4 now. I've asked you a profoundly simple</p> <p>5 question.</p> <p>6 And that is, as an economic principle,</p> <p>7 how can you have a legitimate supply curve of a</p> <p>8 product that is, by law, prohibited from</p> <p>9 entering interstate commerce?</p> <p>10 MR. GOLDBERG: Objection to form.</p> <p>11 Ambiguous.</p> <p>12 A. As a matter of economics, you could</p> <p>13 have a supply curve if there is supply of the</p> <p>14 product. What I take you to mean by "legitimate</p> <p>15 supply" is supply of a product that meets</p> <p>16 certain requirements.</p> <p>17 My understanding is that there was</p> <p>18 supply of VCDs that met those requirements, and</p> <p>19 the question is whether there -- the absence of</p> <p>20 supply from defendants causes products to be</p> <p>21 worthless.</p> <p>22 Q. You agree, if we were constructing,</p> <p>23 economically speaking, as you do all the time,</p> <p>24 and appropriately so, a but-for world in which</p>

<p style="text-align: right;">Page 178</p> <p>1 there's compliance with the law, and 2 specifically this prohibition of introducing 3 into interstate commerce adulterated drugs, that 4 in that but-for world, there is no legitimate 5 supply curve, correct? 6 A. I don't think that's correct. I think 7 you -- if you assume that the drugs that are 8 alleged to have impurities are not part of the 9 market, if you assume them away, there is still 10 supply of other Valsartan-containing drugs. 11 Q. You agree that if all of VHP's drug 12 products were adulterated, that none of them 13 could lawfully be in the U.S. legal class of 14 trade. Correct? 15 MR. GOLDBERG: Objection to form. 16 Calls for a legal opinion. 17 A. I don't know if I agree with that or 18 not. The facts that I take into account for my 19 report is that there were supply of drugs, there 20 were purchases of drugs, and I consider the 21 value of those drugs and how the value might be 22 diminished if consumers knew that there were 23 impurities in them. 24 It's a framework that I have worked</p>	<p style="text-align: right;">Page 180</p> <p>1 the totality of these two statements means that 2 you can't introduce adulterated drugs into the 3 U.S. interstate commerce and you can't get paid 4 for it? You don't understand that construct? 5 MR. GOLDBERG: Objection to form. 6 Calls for a legal opinion. 7 A. I guess as the plain English, if I 8 look at C, it seems to be illegal or prohibited 9 to receive it. Does that mean to you that it is 10 prohibited for a consumer to receive a drug? 11 I don't think that's what would be 12 intended. But if I, as an economist and not a 13 lawyer read it, that's what the words say. 14 Q. Suffice to say you didn't consider 15 21 USCA 331 A or C in your own analysis, right? 16 MR. GOLDBERG: Objection to form. 17 Asked and answered. 18 A. I did not rely on this document to 19 reach my opinions. My recollection is that 20 these statements are included in the materials 21 used by Dr. Conti, and so I consider her 22 materials and the opinions that she draws, in my 23 report, responding to those opinions. 24 Q. Can you show me or tell me where in</p>
<p style="text-align: right;">Page 179</p> <p>1 with in my report. The concept of legitimate 2 supply being necessary for value is something I 3 reject. 4 Q. Do you see, in Exhibit 3, that the 5 third prohibited act under C reads, The receipt 6 in interstate commerce of any food, drug, 7 device, tobacco product or cosmetic that is 8 adulterated or misbranded, and the delivery or 9 proper delivery thereof, for pay or otherwise, 10 is yet another prohibited act. 11 Do you see that? 12 A. I see where you are reading from the 13 document. 14 Q. And where it says, And the delivery or 15 proffered delivery thereof for pay, do you 16 understand that the prohibition against, in this 17 case, a drug manufacturer being paid for an 18 adulterated drug? 19 MR. GOLDBERG: Objection to form. 20 Calls for a legal opinion. 21 A. I guess I don't have an opinion on 22 what this means or a clear understanding of what 23 number C means. 24 Q. You don't have an understanding that</p>	<p style="text-align: right;">Page 181</p> <p>1 your report you discuss these prohibited acts 2 and their impact on your economic analysis? 3 MR. GOLDBERG: Ruben, while Dr. Stiroh 4 is looking at that, when you get a chance, 5 could we take a break for a minute or two? 6 MR. HONIK: At a -- at an appropriate 7 place to stop, which is soon, I think. 8 MR. GOLDBERG: Thanks. 9 A. In my report, I have a section 10 Roman II, "Background," that starts on page 9, 11 with paragraph 9. 12 Paragraph 10 has my understanding of 13 some of the facts at issue in this case, 14 including whether there are amounts of NDMA in 15 the VCDs at issue. 16 Q. Dr. Stiroh, I'm looking at 17 paragraphs 9 and 10, and this entire 18 "Background" section. I don't see a blessed 19 thing about the law prohibiting the introduction 20 of adulterated drugs in interstate commerce. 21 Where is -- where is it that you say it's in 22 there? 23 MR. GOLDBERG: Objection. 24 Argumentative.</p>

<p style="text-align: right;">Page 182</p> <p>1 A. I don't believe I used that phrase 2 anywhere in my report. 3 Q. Do you -- are you aware that 4 defendants' own expert on the pharmaceutical 5 supply chain, cGMP chemistry, agrees that this 6 construct in Exhibit 3 that we've been looking 7 at means that there could be no legitimate 8 supply curve? Are you aware of that? 9 A. I am not. 10 Q. Have you read or been informed 11 about -- by the defense, about the testimony of 12 Dr. Lambert in this case? 13 A. I'm not familiar with the testimony of 14 Dr. Lambert. 15 Q. And I don't -- I don't think you so 16 much as refer to him in your reliance materials, 17 correct? 18 A. I don't believe I refer to him in my 19 reliance materials. I don't recall having 20 relied on anything that he wrote. 21 Q. Would it surprise you, then, that he 22 agrees that if the FDA considers a drug to be 23 adulterated or misbranded, as set out here, and 24 the fact that it can't be lawfully introduced</p>	<p style="text-align: right;">Page 184</p> <p>1 you'd like, I can put it up on a share screen or 2 direct your attention to a paper exhibit, but 3 let me first begin by reading it. 4 And for the record, this is the 5 deposition -- sworn deposition testimony of 6 Dr. Lambert. It appears at page 104, beginning 7 at line 21, and the question was as follows: 8 And so does that not mean, 9 Dr. Lambert, that there can be no legitimate 10 supply curve, that is, an adulterated drug 11 cannot be legally introduced into the legal 12 class of trade in the United States? 13 And the witness, Dr. Lambert, for the 14 defense, said, So if it's determined by the FDA 15 that it is indeed adulterated, then I would 16 agree. 17 And so my question to you is, are you 18 in disagreement with Dr. Lambert that there can 19 be no legitimate supply curve by the application 20 of this law, and if so, if you do disagree, can 21 you tell us under oath why? 22 MR. GOLDBERG: Objection. Calls for a 23 legal opinion. 24 A. In my opinion as an economist, there</p>
<p style="text-align: right;">Page 183</p> <p>1 into interstate commerce, and the manufacturer 2 or supplier of that lawfully receives money, 3 that that means under that construct, it can't 4 be a legitimate supply curve? 5 MR. GOLDBERG: Objection -- 6 Q. Do you deny that? 7 MR. GOLDBERG: Objection to form. 8 Foundation. 9 A. Are you asking me if I deny what 10 somebody else said in testimony I haven't read? 11 Q. Yes. Do you have any basis to 12 disagree with what Dr. Lambert, on behalf of 13 defendants, told us under oath? 14 MR. GOLDBERG: Objection to form. 15 Assumes facts not in evidence. 16 A. I have a basis to disagree with 17 certain statements that you have made on the 18 grounds of them not being economic principles. 19 Whether they are legal principles, I 20 don't have a basis to agree with you or disagree 21 about whether somebody else in this case said 22 something or agreed to something when I have not 23 read their testimony. 24 Q. Well, let me read it to you, and if</p>	<p style="text-align: right;">Page 185</p> <p>1 is a supply curve if there is supply of 2 products, and -- or willingness to supply 3 products at different price points. That's what 4 a representation of a supply curve would be. 5 My understanding is that not all of 6 the VCDs at issue contained the NDMA and NDEA 7 impurities, and it is also my opinion, as an 8 economist, that whether there is supply of the 9 Valsartan-containing drugs at issue or not, 10 there is value that was received for the 11 products that were purchased and consumed. 12 Q. Dr. Stiroh, if Dr. Lambert is right 13 and you're wrong, that there is an illegitimate 14 supply curve, you'd agree that no equilibrium 15 price could be set, because you've already 16 confirmed that it requires the intersection of a 17 supply-and-demand curve. Right? 18 A. I would agree that an equilibrium 19 price is the intersection of a supply-and-demand 20 curve. I have disagreed with you about whether 21 there is still a supply curve for 22 Valsartan-containing drugs, and I disagree with 23 Dr. Conti that the absence of supply of certain 24 Valsartan-containing drugs implies that the</p>

<p style="text-align: right;">Page 186</p> <p>1 value of those products that were consumed by 2 consumers is zero. 3 Q. Dr. Stiroh, inasmuch as you're not a 4 cGMP expert, would you disagree with the idea, 5 in good manufacturing practices and by the 6 application of FDA regulations, that if you 7 can't guarantee the integrity, purity, safety 8 and efficacy of one lot or batch of drugs that 9 fail to meet cGMP, that that implicates and 10 causes all of the pills to be adulterated? 11 MR. GOLDBERG: Objection to form. 12 Ambiguous. Calls for a legal opinion. 13 A. The part of that that I agree with is 14 that I am not a cGMP expert. 15 I don't think I even followed the rest 16 of the question. 17 And -- I guess not sure why you would 18 ask my opinion with -- starting it out by saying 19 that you agree that I am not a cGMP expert. I 20 don't have opinions on that topic. 21 Actually, if we could take a break. 22 MR. GOLDBERG: Okay. The witness has 23 just asked to take a break, and I had asked 24 about ten minutes ago.</p>	<p style="text-align: right;">Page 188</p> <p>1 now -- 2 MR. HONIK: Thank you. 3 THE VIDEOGRAPHER: The time right now 4 is 3:11 p.m. We are off the record. 5 (A recess was taken from 3:11 to 6 3:28.) 7 THE VIDEOGRAPHER: Time right now is 8 3:28 p.m. We are back on the record. 9 MR. HONIK: Jeff, for the benefit of 10 the record, I've had Dr. Stiroh pull a 11 transcription about which I questioned her 12 earlier, and we're going to be marking this 13 Exhibit 4. 14 (Transcript of deposition of William 15 J. Lambert was marked Stiroh Exhibit 4 for 16 identification, as of this date.) 17 THE COURT REPORTER: It's now marked. 18 Q. Dr. Stiroh, we had been talking a bit 19 about this idea of equally -- equilibrium 20 pricing and the intersection of 21 supply-and-demand curves. 22 As an economist -- I don't want to 23 oversimplify it, but the way one would graph a 24 supply curve or put that on the graph, you'd be</p>
<p style="text-align: right;">Page 187</p> <p>1 MR. HONIK: I just have some quick 2 follow-up to that, and then we can break. 3 Q. The reason I've asked you, Doctor, is 4 that you keep repeating that some but not all of 5 the drugs, as to some of the manufacturers, was 6 contaminated, and I'm merely asking if you have 7 any awareness of the rules and regulations of 8 current manufacturing practices which renders 9 all drugs from a facility as adulterated if you 10 can't guarantee the safety of each and every 11 product coming out of that facility. 12 You either are or are not aware of 13 that. That's what I've asked. 14 MR. GOLDBERG: Objection to form. 15 Calls for a legal opinion. 16 Q. Are you? 17 A. I am not aware of that, and I am not 18 offering opinions on that. 19 Q. Thank you. 20 MR. HONIK: How much time of a break 21 would you like, Seth? 22 MR. GOLDBERG: Why don't we take 23 ten minutes. 24 THE VIDEOGRAPHER: The time right</p>	<p style="text-align: right;">Page 189</p> <p>1 able to see, in the case of a consumer product, 2 the actual movement of a line representing sales 3 in the marketplace. Correct? 4 A. No. I think you are -- either I am 5 confused from your question or you're confusing 6 concepts in your question. 7 A demand curve and a supply curve that 8 intersects at a point that we call the 9 equilibrium price does not show movement along a 10 line. 11 You can imagine it as the amounts that 12 would be consumed at different price points from 13 the standpoint of consumers, or would be 14 supplied at different price points from the 15 standpoint of suppliers. What we observe in 16 data is what happens at the intersection. 17 Q. That's right. And you got me on the 18 words. All I meant to ask you, in -- however 19 inartfully, and we can go around on this if 20 you'd like, but all I want to understand is, if 21 it isn't -- if you aren't able, as an economist, 22 to plot on a graph a supply curve. 23 A. I'm sorry. You're asking me if it is 24 possible to plot on a graph a supply curve?</p>

<p style="text-align: right;">Page 190</p> <p>1 Q. Yeah.</p> <p>2 A. Yes.</p> <p>3 Q. And when you do so, if the value of a</p> <p>4 particular point on that graph is zero, is at</p> <p>5 zero, is -- does that mean that there's no</p> <p>6 supply of that item or product?</p> <p>7 A. No. There may be a point where</p> <p>8 quantity demanded is zero and the price could be</p> <p>9 quite high. And you would expect that there</p> <p>10 would be many suppliers that would be willing to</p> <p>11 supply the product at that high price, but there</p> <p>12 would be no consumer demand for it.</p> <p>13 Q. Did you hear me ask you anything about</p> <p>14 pricing?</p> <p>15 MR. GOLDBERG: Objection to form.</p> <p>16 Argumentative.</p> <p>17 A. I -- then I should have asked for</p> <p>18 clarification, what are you envisioning on the</p> <p>19 axes for a supply curve or a demand curve that</p> <p>20 would intersect.</p> <p>21 I imagined that they were intersecting</p> <p>22 at a point that gives you coordinates for price</p> <p>23 and quantity.</p> <p>24 Q. Okay. So let's try it again. I'm not</p>	<p style="text-align: right;">Page 192</p> <p>1 is something that Dr. Conti has created for this</p> <p>2 report. I don't understand it outside of the</p> <p>3 context of her report. And I hear you use it,</p> <p>4 and before, you objected to me saying her name.</p> <p>5 I have seen IQVIA data, and after the</p> <p>6 dates of recalls, it is apparent in the IQVIA</p> <p>7 data that it looks like there are sales of the</p> <p>8 products at issue. Whether that's a flaw in the</p> <p>9 data source or an actual fact, I cannot tell you</p> <p>10 as I sit here.</p> <p>11 You asked me if I have seen the data.</p> <p>12 I have seen it, and that is what I have</p> <p>13 observed.</p> <p>14 Q. Let -- let me ask the question this</p> <p>15 way. What's your definition of no supply curve?</p> <p>16 A. I don't have a definition of no supply</p> <p>17 curve. I have a definition of no supply. Which</p> <p>18 I think that you asked me earlier, and I agreed,</p> <p>19 that if supply is zero, that is no supply. That</p> <p>20 is not the same as there being no supply curve.</p> <p>21 A supply curve is a construct of the</p> <p>22 consideration of how much would be supplied by</p> <p>23 suppliers at different price points.</p> <p>24 Would be willing to be supplied.</p>
<p style="text-align: right;">Page 191</p> <p>1 talking about a demand curve, and I'm not</p> <p>2 talking about equilibrium pricing. I'm merely</p> <p>3 asking you if, as an economist, when you plot a</p> <p>4 supply curve on a graph, if -- if it's at zero</p> <p>5 on the horizontal axis and zero at the vertical</p> <p>6 axis, if that means there's no supply.</p> <p>7 A. Yes.</p> <p>8 MR. GOLDBERG: Objection.</p> <p>9 Q. Okay.</p> <p>10 Have you seen the sales of any of the</p> <p>11 at-issue VCDs after recall?</p> <p>12 A. Yes.</p> <p>13 Q. And do you agree that those sales are</p> <p>14 at zero in the case of the recalled manufacturer</p> <p>15 products?</p> <p>16 A. I have seen, in the IQVIA data, that</p> <p>17 there continue to be records of sales of the</p> <p>18 recalled products after the dates of recalls.</p> <p>19 Q. You don't agree that there was no</p> <p>20 supply, legitimate supply curve for ZHP VCDs</p> <p>21 after the recall?</p> <p>22 MR. GOLDBERG: Objection to form.</p> <p>23 Ambiguous.</p> <p>24 A. I think the term, "legitimate supply,"</p>	<p style="text-align: right;">Page 193</p> <p>1 Q. Do you agree that one of the ways to</p> <p>2 think about this case is to create a but-for</p> <p>3 world prior to the recall starting in 2018,</p> <p>4 going back to the beginning of manufacturing in</p> <p>5 2012, in which there's zero supply?</p> <p>6 MR. GOLDBERG: Objection to form.</p> <p>7 Ambiguous.</p> <p>8 A. I have considered that if the but-for</p> <p>9 world has zero supply of certain Valsartan</p> <p>10 products between 2012 and 2018, what</p> <p>11 implications that has for consumer expenditures.</p> <p>12 Q. Yeah, that's not really what I asked</p> <p>13 you.</p> <p>14 Could you, at my direction, supply a</p> <p>15 but-for or develop a but-for model in which</p> <p>16 there's zero supply, between 2012 and 2018, of</p> <p>17 Valsartan-containing drugs, yes or no? And then</p> <p>18 I have a follow-up question.</p> <p>19 A. I could construct a model, considering</p> <p>20 the scenario where there is zero supply of</p> <p>21 certain Valsartan-containing drug products, and</p> <p>22 consider the economic implications of that model</p> <p>23 for financial outcomes for consumers.</p> <p>24 Q. I don't know what the second part of</p>

<p style="text-align: right;">Page 194</p> <p>1 it is, but I take it you can -- you can create a 2 but-for world with zero VCD supplies. That much 3 you said you could do. Right? 4 A. I can do that. 5 Q. In that but-for world, is not the -- 6 the cost of that drug zero? 7 Isn't the -- excuse me, I misspoke. 8 Isn't the price of that drug zero? 9 A. No. 10 As an economic matter, the price for a 11 product that has been taken out of the market no 12 longer exists. 13 For a but-for world to be complete and 14 meaningful in a damages context, then you would 15 need to consider what consumers would purchase 16 instead of the product that they did purchase. 17 I can construct a damages model where 18 this but-for scenario is that there is no supply 19 of the Valsartan-containing drugs at issue. 20 For that to be a complete damage 21 model, I need to consider what do patients do to 22 manage their blood pressure in the absence of 23 the products that they actually did consume. 24 Q. Dr. Stiroh, you didn't even come close</p>	<p style="text-align: right;">Page 196</p> <p>1 estimate damages under a scenario where we 2 imagine removing the supply of 3 Valsartan-containing drugs. 4 To make that an economically valid 5 damage assessment, I would need to consider what 6 do consumers who purchase those drugs do in the 7 alternative. I would consider the prices they 8 would pay for alternative drugs, whether they 9 alternative -- they are alternative ARBs or 10 different VCDs other than the contaminated ones. 11 It is not true to say the price is 12 zero if there is no supply. There is -- price 13 does not exist in that case. That is 14 meaningless, to say that the price is zero. 15 Price is zero is a free good; price nonexistent 16 is for a product that doesn't exist. 17 Q. I understand your -- your answer. And 18 I think anyone listening to this will understand 19 it as well. 20 Why don't you pull up from your pile 21 of exhibits there, both Tabs 18 and 19, which 22 would be your invoicing in this case. 23 We're going to mark your exhibits -- 24 excuse me, your invoices as Exhibit --</p>
<p style="text-align: right;">Page 195</p> <p>1 to answering my question. 2 What I asked you to assume is not all 3 the things you ingrafted upon my hypothetical. 4 It's true, because you've already told me there 5 could be no equilibrium price where there's no 6 intersection of supply and demand, and having 7 informed me that you can create a but-for world 8 with zero supply, which means it will never meet 9 a demand curve, there can be no equilibrium 10 price. Correct? 11 MR. GOLDBERG: Objection to form. 12 Argumentative. Asked and answered. 13 Ambiguous. 14 A. No. 15 Acknowledging it's getting a little 16 late in the afternoon, that question was 17 absolutely meaningless from a standpoint of 18 economics. 19 I can create a but-for world -- 20 Q. I guess -- 21 A. Let me finish my answer, please. 22 MR. GOLDBERG: Hang on, Ruben. Hang 23 on, Ruben. The witness is talking. 24 A. I can create a but-for world and</p>	<p style="text-align: right;">Page 197</p> <p>1 Exhibit 5, and the summary that we prepared as 2 Exhibit 6. 3 Would you give that to our reporter, 4 please. 5 (Invoice from NERA Economic Consulting 6 was marked Stiroh Exhibit 5 for 7 identification, as of this date.) 8 (Summary of invoices was marked Stiroh 9 Exhibit 6 for identification, as of this 10 date.) 11 Q. Do you have Exhibits 5 and 6 in front 12 of you? 13 MR. GOLDBERG: Not yet, not yet. Hang 14 on. Wait one second, please. 15 Okay, go ahead. 16 Q. Do you have Exhibit 5, the collection 17 of invoices that were turned over to us? 18 A. I do. 19 Q. You're familiar with your own 20 invoicing for the work that you and your 21 associates at your firm did in this case? 22 A. I am. 23 Q. You reviewed them before today's 24 deposition?</p>

<p style="text-align: right;">Page 198</p> <p>1 A. I did.</p> <p>2 Q. The earliest of the activity on</p> <p>3 invoicing that I have relates to October of</p> <p>4 2020. Is that correct?</p> <p>5 A. The -- the first page of the project</p> <p>6 diaries that I have has an entry from me from</p> <p>7 September 15, 2020.</p> <p>8 Q. Does that correspond to the earliest</p> <p>9 point at which you did work on this matter?</p> <p>10 A. I expect I would have read the</p> <p>11 complaint prior to that date, but it is the --</p> <p>12 the first date that I recall once I had</p> <p>13 received -- been retained and received an</p> <p>14 assignment.</p> <p>15 Q. And the work that you did in this</p> <p>16 matter, Dr. Stiroh, you did perhaps hired by one</p> <p>17 counsel but you did it on behalf of all the</p> <p>18 defendants. Didn't you?</p> <p>19 A. Yes, that is correct.</p> <p>20 Q. And that's specifically set out in</p> <p>21 your report, is it not?</p> <p>22 A. Yes. My report, under "Assignment,"</p> <p>23 says, I've been asked for counsel for all</p> <p>24 defendants, and goes on from there.</p>	<p style="text-align: right;">Page 200</p> <p>1 A. I do.</p> <p>2 Q. Do you have any reason to dispute the</p> <p>3 amounts that are indicated or enumerated in</p> <p>4 Exhibit 6?</p> <p>5 A. I haven't gone through it and matched</p> <p>6 them up, but I don't have a reason to dispute</p> <p>7 them.</p> <p>8 Q. So, if the total of the invoice</p> <p>9 amounts for your work and that of your firm was</p> <p>10 \$1,369,114 through the end of calendar year</p> <p>11 2021, you would agree with that. Right?</p> <p>12 A. Yes.</p> <p>13 Q. How -- with what frequency did your</p> <p>14 firm issue invoicing for work done by NERA, your</p> <p>15 firm in this case?</p> <p>16 MR. GOLDBERG: Ruben, are you able to</p> <p>17 put the summary document up on the screen.</p> <p>18 I'm getting that request from people who</p> <p>19 are watching in on Zoom.</p> <p>20 MR. HONIK: Yeah, I'd be delighted to.</p> <p>21 Dave, are you able to do that?</p> <p>22 MR. STANOCH: It's in the public</p> <p>23 exhibit folder at Exhibit 6, but --</p> <p>24 MR. HONIK: Do you know how to pull it</p>
<p style="text-align: right;">Page 199</p> <p>1 Q. Do you know of any other economist</p> <p>2 that was engaged to do any work similar to your</p> <p>3 own by the defendants in this case?</p> <p>4 A. I'm not sure what you mean by that.</p> <p>5 Q. Are you the sole economist engaged by</p> <p>6 the defendants to prepare a report on whether or</p> <p>7 not damages can be ascertained on a class-wide</p> <p>8 basis?</p> <p>9 A. I am the only -- I'm the only one that</p> <p>10 I'm aware of, but I -- I don't know if they've</p> <p>11 engaged others.</p> <p>12 Q. And from my review of your own</p> <p>13 invoicing, the last of the invoices covers the</p> <p>14 period December ending last year, 2021. Is that</p> <p>15 correct?</p> <p>16 A. Yes.</p> <p>17 Q. Would you put Exhibit 6 in front of</p> <p>18 you.</p> <p>19 A. I have it.</p> <p>20 Q. This is a summary that we put together</p> <p>21 that's a simple computation or addition of the</p> <p>22 various invoice amounts from October of 2020</p> <p>23 through the end of December 2021.</p> <p>24 Do you see that?</p>	<p style="text-align: right;">Page 201</p> <p>1 up as a screen share?</p> <p>2 MR. STANOCH: Stand by.</p> <p>3 Q. There we go. Is -- is what you see on</p> <p>4 the screen, Dr. Stiroh, the summary that we</p> <p>5 marked Exhibit 6?</p> <p>6 A. It is what you marked as Exhibit 6.</p> <p>7 Looking at it now, I -- I'm not sure -- I see</p> <p>8 for January dash 21, 301,262.50. And if I look</p> <p>9 at an invoice that I think is intended to cover</p> <p>10 that period, I see 30,162.50.</p> <p>11 Q. Okay. If there's a computational</p> <p>12 error, then we'll correct it.</p> <p>13 A. If I can, then I think I need to</p> <p>14 correct my last answer. I did not dispute that</p> <p>15 these were accurate, and now I do.</p> <p>16 Q. The -- the question that I -- that I</p> <p>17 posed to you, which I don't think you answered</p> <p>18 as yet, is, with what frequency has NERA, on</p> <p>19 your behalf and on behalf of your associates,</p> <p>20 billed the defendants for your time? Has it</p> <p>21 been on a monthly basis?</p> <p>22 A. Generally, the invoices reflect a</p> <p>23 month's work. The frequency with which we get</p> <p>24 them out the door is not quite monthly, but</p>

Page 202

1 the -- the -- the period of coverage is
2 typically a month.
3 Q. Have you seen any invoicing for the
4 work of yourself and your team for any part of
5 2022?
6 A. Yes.
7 Q. When did you see such invoicing?
8 A. We are in the process of reviewing
9 those currently. I have not yet completed my
10 review of them. I have seen that they're in the
11 process of being prepared.
12 Q. And is that true for January 2022,
13 that is, you haven't billed for January 2022?
14 A. That is correct.
15 Q. Are you able to -- since you've seen
16 the invoicing, and you're auditing it, can you
17 tell me the number of additional hours that
18 reflect work of yourself and others at NERA in
19 2022?
20 A. Not by memory. There would be hours
21 associated with completing my report. But I
22 don't recall specifically what the hours were.
23 Q. Right. And all I'm asking you is to
24 estimate for me, if you can, how many total

Page 203

1 hours NERA is likely to bill from January 1,
2 2022, to the present, which would include the
3 finalization of your report, subsequent review,
4 any testimony of experts in this case,
5 preparation for today, anything else that you
6 might have done in -- in connection with your
7 engagement.
8 MR. GOLDBERG: Objection.
9 Q. How many hours would that total?
10 MR. GOLDBERG: Objection.
11 Speculation.
12 A. I think the total would be around,
13 say, 3,500 hours for all of NERA's work in this
14 matter. And so whatever is totaled up in the
15 invoices through December 2021 would be
16 subtracted off of that with the understanding
17 that that is sort of a ballpark guess.
18 Q. Understood.
19 Turn with me, in Exhibit 5, which is
20 the -- which are the invoices themselves, and I
21 just want to go through some of them to get a
22 flavor for what I'm looking at here.
23 There's something called "Project
24 Diary," dated November 24, 2020, and there's an

Page 204

1 invoice number US 48601P005.
2 Do you see that page, for example?
3 A. I might need you to say it again a
4 little bit slower. What is the invoice date
5 that you want me to look at?
6 Q. Let's try to do it this way. I think
7 it's the second page of Exhibit 5.
8 A. I have the second page --
9 Q. Let's do that.
10 A. I have the second page of Exhibit 5 in
11 front of me.
12 Q. In the right-hand upper corner, does
13 it say November 24, 2020?
14 A. It does.
15 Q. And do you see under your own name as
16 managing director, there's an entry, it says
17 December 15, 2020?
18 A. Yes.
19 Q. And the description of services
20 rendered is redacted, with the exception of the
21 word "discussion," with S.LI.
22 Do you see that?
23 A. Yes.
24 Q. Did you cause that redaction?

Page 205

1 A. I did not.
2 Q. Do you know why it was redacted?
3 MR. GOLDBERG: Objection. I mean,
4 that -- that calls for a legal conclusion.
5 And this is information that has been
6 marked confidential by counsel.
7 MR. HONIK: Nothing's been marked
8 confidential. I just have black lines. Do
9 you want to convey why this has been
10 redacted?
11 MR. GOLDBERG: You can ask the witness
12 the questions. I'm not here to testify.
13 MR. HONIK: I have asked her.
14 A. All right. But I thought you were
15 asking Mr. Goldberg. Sorry.
16 Q. Well, he -- he interrupted.
17 The question I asked was, why was this
18 redacted and what's in there? What -- what
19 service did you render on September 15, 2020?
20 MR. GOLDBERG: Let me object to the
21 extent you are being asked to provide
22 information not in a testifying capacity.
23 THE WITNESS: Now I answer?
24 MR. GOLDBERG: Yes.

Page 206	Page 208
<p>1 A. My team and I spent time on this case 2 in a consulting capacity separate from the 3 assignment that I have described in my report. 4 It's my understanding that -- 5 Q. I don't -- I'm sorry, I don't 6 understand the distinction you're making. 7 MR. GOLDBERG: Well, counsel, that's 8 not really for Dr. Stiroh. We can talk 9 about this among lawyers. But -- but I'll 10 leave it at that. 11 If you'd like to go off the record, 12 I'm happy to do that, and we can talk about 13 it. 14 MR. HONIK: Well, I -- no, I'd like to 15 stay on the record. I think it's 16 permissible for me to ask about her work in 17 this case. 18 It's -- you've been billed for it. 19 It's in the invoice that's been produced to 20 us. I'd like to know what the work was 21 that relates to this case. 22 Q. Do you -- do you -- first of all, do 23 you know the answer to my question? 24 A. I have a general recollection of some</p>	<p>1 December 2021. 2 Q. Well, do you see, for example, the 3 time entries for an associate analyst by the 4 name of Nathan Evans? Do you see that? 5 MR. GOLDBERG: We're not on the same 6 page, Ruben. So -- are you talking about 7 the invoice dated December 8, 2021, or the 8 time -- 9 MR. HONIK: No, I'm talking about a 10 page called "Project Diaries." 11 A. I have a page called "Project Diaries" 12 that reflects time for Nathan Evans for 13 December 2021. 14 Q. Okay. But do you see the entries for 15 October 14 through October 20 are completely 16 redacted? 17 A. I'm sorry. I was looking at the wrong 18 one. I think -- let me catch up with you. If 19 you give me the dates for the entries, I think I 20 can find the page. The person and the dates for 21 the entries. 22 Q. October -- October 14 through 23 October 20, 2021. 24 A. I believe I have the correct page in</p>
Page 207	Page 209
<p>1 of the work that was done that is not connected 2 with my assignment with respect to class 3 certification issues. 4 Q. So, are you saying that you had 5 multiple assignments from these same defendants? 6 MR. GOLDBERG: Counsel, I don't want 7 to belabor the point here. Just as you 8 have done with your experts, to the extent 9 Dr. Stiroh provided services for defendants 10 that were not related to the opinions in 11 her report, that information is redacted. 12 MR. HONIK: Is that the reason they 13 were redacted? 14 MR. GOLDBERG: I just represented that 15 to you. 16 Q. Dr. Stiroh, can you turn deeper into 17 the pile of invoices -- let me try to shorthand 18 way to -- shorthand way. 19 Can you go to project diaries dated 20 December 8, 2021. It's in- -- Invoice 21 Number US 53163P005. And I would estimate it's 22 about eight or ten pages from the back. 23 A. I have in front me a page with project 24 diaries with my time that encompasses</p>	<p>1 front of me. 2 Q. Do you see how all of Mr. Evans' time 3 for those dates are redacted? 4 A. I do. 5 Q. What does this work relate to that 6 caused it to be redacted, if not support for 7 this report? 8 MR. GOLDBERG: Again, counsel, that 9 information has been redacted because it 10 is -- does not pertain to Dr. Stiroh's 11 opinions and work in developing her 12 opinions and the report, and therefore, 13 it's been redacted. And -- it -- 14 Q. Let me ask a different question. 15 Doctor -- Dr. Stiroh, are you able, 16 you yourself, able to go through all of these 17 invoices and project diaries and, on your own, 18 separate out what was supporting, allegedly, 19 your report in this case that you proffered to 20 this point, and other work? Can you discern the 21 difference? 22 A. I could potentially do that, yes. 23 Q. What -- what criteria would you use to 24 distinguish work done in support of this report,</p>

Page 210

1 dated January 12 of this year, and any other
2 assignments that you may have received?
3 A. Work that I asked to be done for
4 purposes -- from -- to my staff for reviewing
5 information or data, or doing data analyses
6 related to my report, would be things that I
7 would consider in support of my work.
8 If there are tasks that counsel asked
9 of any of my team that was not coming at my
10 direction and not for purposes of my report,
11 that would be -- not be something I would
12 consider to be work for my report.
13 Q. Are you -- are you preparing another
14 report in this case?
15 A. I am not preparing another report in
16 this case.
17 Q. Have you, nonetheless, been asked to
18 undertake a different assignment in this case as
19 it relates to VCDs in this MDL?
20 MR. GOLDBERG: Objection to form. To
21 the extent that there's information or
22 services that Dr. Stiroh is providing that
23 are not pertaining to her opinions as a
24 testifying expert, that information is off

Page 211

1 limits.
2 MR. HONIK: It's just a yes or no.
3 I'm not going to ask her what it is.
4 MR. GOLDBERG: And that's the answer.
5 I just gave you answer, which is the
6 question is not a proper question.
7 MR. HONIK: You don't get to decide
8 what's a proper question or not.
9 I'd like Jeff to read it -- excuse me,
10 I'd like Jeff to read it back, please.
11 (The record was read back.)
12 MR. HONIK: It's MDL.
13 MR. GOLDBERG: Same.
14 Q. Without revealing what the nature or
15 name of that assignment is, are you able to
16 answer the question simply yes or no?
17 A. I have not been given an additional
18 assignment in this case.
19 DIR Q. Is that true from the beginning of your
20 engagement to the present?
21 MR. GOLDBERG: I'm -- I'm going to
22 instruct the witness not to answer, because
23 you're taking her down a road that is
24 misleading.

Page 212

1 I've given you the explanation for why
2 the information has been redacted. And
3 that's because it doesn't pertain to the
4 services Dr. Stiroh is providing for us in
5 the capacity as a testifying expert.
6 I will instruct the witness not to
7 answer --
8 MR. HONIK: She just testified --
9 MR. GOLDBERG: -- because you're just
10 going to -- you're just going to create a
11 record that is confused and misleading.
12 MR. HONIK: She's just testified under
13 oath that she's had no other assignment.
14 MR. GOLDBERG: Then that's -- that's
15 my point. That's my point.
16 MR. HONIK: That she's had a single
17 assignment.
18 MR. GOLDBERG: That's my point.
19 So you could move on, because I've
20 instructed her not to answer.
21 MR. HONIK: I -- I take that.
22 Q. Doctor, you apparently, some years
23 ago, were involved in a case called LaPoint
24 versus AmerisourceBergen Corp.

Page 213

1 Do you remember that case?
2 A. I do.
3 Q. And apparently in that case you were
4 hired by the plaintiff. The legal dispute
5 concerned a would-be merger between
6 two companies, plaintiff having a product called
7 a bedside point-of-care, a bar code product of
8 some sort, that was supposed to have been merged
9 or acquired by AmerisourceBergen.
10 Did I get that about right?
11 A. I don't remember those details. I
12 remember that there was a point-of-care bar code
13 product that was involved. I don't recall
14 the -- the aspects of the merger.
15 Q. That's right. And your -- your job as
16 an economist was to determine and -- and provide
17 economic support for the contention that but for
18 the merger, that -- that the company who made
19 this product, which was called Bridge, was
20 destined to remain a dominant force in that
21 particular market, and you were going to do some
22 economic calculations based on that premise.
23 Correct?
24 A. I -- I can't agree with you, just

<p style="text-align: right;">Page 214</p> <p>1 the -- with respect to I don't have the memory 2 of that. It -- every word you're saying brings 3 back more memories of it, but I don't -- it's a 4 while ago and I don't remember the specifics of 5 the case. 6 Q. Uh-huh. Why don't we -- have you seen 7 the -- the decision by the Court of Chancery of 8 Delaware in this case? 9 Ever? 10 A. I have. Some time ago. But I have. 11 Q. Right. And do you remember what 12 happened to your testimony and your work in that 13 case? Your report? 14 A. I do. 15 Q. Can you tell me what you remember 16 happening to it? 17 A. Yes. I had written a report. I can't 18 recall if it -- I think it might have had 19 damages in it. But it had an economic analysis, 20 in which I relied on the report of another 21 expert to supply certain inputs from my report, 22 particularly market share. 23 In discussions with the other expert, 24 I had -- was given an understanding of the</p>	<p style="text-align: right;">Page 216</p> <p>1 that I was working with, decided not to put my 2 report into evidence, and I did not testify to 3 it. 4 Q. But was it clearly known that this 5 reliance upon data was not data collected or 6 compiled by you but, in fact, by some other 7 expert? Was that well known and clear? 8 A. I don't know what you mean by "well 9 known." But certainly in my report, it was 10 referenced to the other expert, and the other 11 expert, I think, also had a report or opinion or 12 materials that were not included -- 13 Q. And -- 14 A. -- in the court materials. 15 Q. -- did you say that that other 16 expert's report was likewise pulled? 17 MR. GOLDBERG: Objection to form. 18 Mischaracterizes the testimony. 19 A. I don't recall what happened with the 20 other expert and his report. To the best of my 21 recollection, the information and circumstances 22 became apparent during his deposition, which 23 suggests that maybe he did have a report, but I 24 don't recall with certainty.</p>
<p style="text-align: right;">Page 215</p> <p>1 methodologies that he used to assess market 2 shares. 3 On the eve of trial, it became 4 apparent that what I had been given to 5 understand about his methodologies was not, in 6 fact, true, and his report was withdrawn. 7 Because his report was withdrawn and I 8 did not have confidence in the method by which 9 the data were collected, I did not feel I could 10 testify to the numbers in my report, and 11 together with counsel, we withdrew my report 12 from the case. 13 Q. So according to you, there was some 14 unreliable data that was used in your report, 15 and you -- you were pulled as an expert; is that 16 what you're saying? 17 MR. GOLDBERG: Objection to form. 18 Mischaracterizes the testimony. 19 A. That's not what I'm saying. The -- in 20 the course of vetting the data that I used in my 21 report, I was given to understand a set of 22 circumstances that I later understood to be 23 incorrect. 24 I, with -- together with the counsel</p>	<p style="text-align: right;">Page 217</p> <p>1 Q. Well, I thought you had testified a 2 moment ago under oath that his report was pulled 3 just like yours. Is that incorrect 4 understanding? 5 MR. GOLDBERG: Objection. 6 Mischaracterizes the testimony. 7 A. That is an incorrect understanding. 8 What I have indicated to you with respect to 9 this case, it was some time ago and my memory 10 isn't perfect. 11 My recollection is that for my report, 12 I, in consultation with the counsel that I was 13 working with, elected not to testify to it, 14 because I did not have faith in the numbers that 15 were drawn from a different expert's report. 16 I'm not telling you for a point of 17 fact what happened to that other expert's 18 report. 19 Q. I see. Well, why don't you actually 20 pull the -- the decision of the court out of the 21 pile of records there. It's Tab 11. And the 22 name of the case, again, is LaPoint versus 23 AmerisourceBergen. 24 And we'll get go ahead and mark that</p>

<p style="text-align: right;">Page 218</p> <p>1 as Exhibit 7.</p> <p>2 Do you now have the exhibit,</p> <p>3 Dr. Stiroh?</p> <p>4 A. Not just yet.</p> <p>5 MR. GOLDBERG: Ruben, it looks like</p> <p>6 you did not provide that document to us.</p> <p>7 MR. HONIK: Okay. Then why don't we</p> <p>8 go ahead and screen share it.</p> <p>9 Dave, do you have it?</p> <p>10 MR. STANOCH: Stand by.</p> <p>11 MR. HONIK: Thank you.</p> <p>12 Okay. Here's the opinion. We'll</p> <p>13 separately send it to -- to Jeff, and he'll</p> <p>14 mark it as Exhibit 7. This is next in</p> <p>15 order.</p> <p>16 As I mentioned earlier, it's from the</p> <p>17 Court of Chancery of Delaware. It's called</p> <p>18 LaPoint versus AmerisourceBergen Corp.</p> <p>19 Q. Do you see that, Dr. Stiroh?</p> <p>20 (Opinion in LaPoint v.</p> <p>21 AmerisourceBergen Corp. was marked Stiroh</p> <p>22 Exhibit 7 for identification, as of this</p> <p>23 date.)</p> <p>24 A. Yes, I do.</p>	<p style="text-align: right;">Page 220</p> <p>1 page 1 and so I can refresh my recollection of</p> <p>2 the summary of details of the case perhaps.</p> <p>3 Q. We can do that if you'd like.</p> <p>4 (Witness reviewing document.)</p> <p>5 MR. GOLDBERG: You want to scroll down</p> <p>6 a little bit, to the -- the -- that</p> <p>7 paragraph under Statement of Facts?</p> <p>8 MR. HONIK: Well, respectfully, this</p> <p>9 isn't your deposition. If --</p> <p>10 MR. GOLDBERG: Yeah, but as counsel,</p> <p>11 I'm allowed to -- as counsel, I'm allowed</p> <p>12 to review the documents that you're going</p> <p>13 to ask questions about. And since you</p> <p>14 didn't provide the document, I also need to</p> <p>15 see it.</p> <p>16 MR. HONIK: Okay. Well, we can email</p> <p>17 it to you right now. I mean, it's only</p> <p>18 about six or seven pages, and, Seth, you</p> <p>19 can take as much time as you'd like to</p> <p>20 review it. Is that what you want?</p> <p>21 MR. GOLDBERG: You can do that. I</p> <p>22 don't want you to ask questions until I've</p> <p>23 been able to review it.</p> <p>24 MR. HONIK: I think it's a colossal</p>
<p style="text-align: right;">Page 219</p> <p>1 Q. And you see the opinions authored by</p> <p>2 Judge Chandler? Do you remember Judge Chandler</p> <p>3 in the case?</p> <p>4 A. I don't think I had occasion to meet</p> <p>5 him.</p> <p>6 Q. That's right. That makes sense.</p> <p>7 MR. HONIK: Turn to page 5, please,</p> <p>8 Dave.</p> <p>9 MR. GOLDBERG: You going to let the</p> <p>10 witness review the document?</p> <p>11 MR. HONIK: If she would like, sure.</p> <p>12 MR. GOLDBERG: Why don't you give her</p> <p>13 a second and let her take a look at page 1</p> <p>14 and page 2 so that she has a chance to look</p> <p>15 at it.</p> <p>16 Q. Is that what you'd like to do,</p> <p>17 Dr. Stiroh? Do you want to review this opinion?</p> <p>18 Or it sounds like you may have remembered it</p> <p>19 fairly well, based on what you told me thus far.</p> <p>20 A. I don't remember the details of the</p> <p>21 case very well. I'll have to say I do remember,</p> <p>22 obviously, the circumstances, because it was</p> <p>23 unique in my history.</p> <p>24 If -- if you could just go back to</p>	<p style="text-align: right;">Page 221</p> <p>1 waste of time and a stalling tactic, but if</p> <p>2 you want to read it, I really don't care</p> <p>3 very much. I'm trying to wrap up</p> <p>4 Dr. Stiroh's deposition and get her out of</p> <p>5 there. We're nearly done.</p> <p>6 MR. GOLDBERG: Ruben, all we're --</p> <p>7 MR. HONIK: She's demonstrated to</p> <p>8 me --</p> <p>9 MR. GOLDBERG: Ruben, all we're doing</p> <p>10 is --</p> <p>11 MR. HONIK: Excuse me. She's --</p> <p>12 excuse me. She's demonstrated to me a</p> <p>13 rather keen recollection of this case. I'm</p> <p>14 not going to quiz her on the case. I'm</p> <p>15 going to focus on what she did and what</p> <p>16 she's already told us happened, which is</p> <p>17 that there was some data problem and she</p> <p>18 got pulled.</p> <p>19 And all I'm going to do is direct her</p> <p>20 to that part of the opinion that addresses</p> <p>21 it. It's a very narrow section.</p> <p>22 But if you want to read the entire</p> <p>23 report -- or, excuse me, opinion, we'll</p> <p>24 send it to you.</p>

Page 222

1 MR. GOLDBERG: Yeah, I -- I --
2 MR. HONIK: You can take as much time
3 as you like.
4 MR. GOLDBERG: I think all we wanted
5 to do is just take a quick scan of the
6 first page to get familiar with what the
7 case is.
8 And Mr. Stanoch had not shown us that
9 first paragraph.
10 MR. HONIK: There's no "we"; she
11 remembers it, you don't. If you want to
12 read it, read it.
13 MR. GOLDBERG: Like I said, I just
14 wanted to get familiar with the first page
15 here. I wanted Dr. Stiroh to familiarize
16 herself with it.
17 A. I have looked at the paragraphs that
18 are before me on this screen. Until looking at
19 this, I had not actually recalled that the
20 entire dispute came from a -- an acquisition.
21 I remembered the details about my
22 report and decision not to testify. And if you
23 ask me the question related to what is in this
24 decision, I can see if it -- I feel like I need

Page 223

1 to have more information about the background of
2 the case itself.
3 Q. Let's go to page 5, and we'll see if
4 you need more review.
5 And if you do, you'll tell me.
6 All right.
7 So -- hold on.
8 Yeah, go up a little bit. Sorry.
9 See where it says, B, Questions of
10 material fact relating to causation and damages?
11 A. I do.
12 Q. That's yes?
13 A. Yes.
14 Q. So you were -- you were a damage
15 expert on -- as to causation; do you remember
16 that?
17 A. I don't have an independent memory of
18 it. I'll have to say I -- I -- if you ask the
19 next question or see if there's something -- I
20 don't actually remember my specific assignment
21 without looking back at what the assignment was
22 that I had been given.
23 Q. Yeah. So, it says in the -- in the
24 second full paragraph, in the right-hand column,

Page 224

1 you see it's highlighted, it says, Plaintiff's
2 causation arguments are not helped by the
3 withdrawal of their key expert witness,
4 Dr. Lauren J. Stiroh, whose report was meant to
5 provide support for the contention that but for
6 a merger with ABC, Bridge was destined to remain
7 the dominant force in the BPOC market.
8 Do you see that?
9 A. I see where you are reading.
10 Q. Does that refresh your recollection
11 about what you were doing in the case?
12 A. It doesn't. I don't -- I don't have
13 any reason to disagree with what's written
14 there, but I don't have a recollection of the
15 work that I did, other than the ultimate
16 outcome.
17 Q. Yeah. So, the ultimate outcome is
18 that, as the judge wrote, virtually on the eve
19 of trial and after this motion had -- had been
20 filed, had been fully briefed, Plaintiffs
21 discovered that the data on which Dr. Stiroh
22 relied may not have been credibly gathered.
23 Plaintiffs no longer rely upon the conclusions
24 in this report.

Page 225

1 Did I read that correctly?
2 A. You did.
3 Q. Is there any mention about your
4 reliance upon data or conclusions or anything
5 from another expert in that paragraph?
6 A. In that paragraph, it mentions the
7 data on which I had relied. The data on which I
8 relied came from another expert.
9 Q. Okay. But you agree that the court
10 doesn't note that it came from another expert.
11 It only notes that it came from your report.
12 Right?
13 A. I don't think it does note that it
14 came from my report. It notes the data on which
15 I relied, and I am telling you, and I believe
16 the court knew, that it came from another expert
17 who might be referenced somewhere else in this
18 document. I don't know that as I sit here. But
19 the data on which I relied came from another
20 expert.
21 Q. Okay. You see where it says,
22 Plaintiffs no longer rely upon the conclusions
23 in this report?
24 That refers to your report, right?

Page 226

1 A. It does.

2 Q. So the data that the judge is writing

3 about that -- that was not credibly gathered was

4 in your report. Correct?

5 A. I can tell you that the data upon

6 which I relied was gathered by another expert.

7 It was the method by -- by which he had gathered

8 data that I found to be unreliable, and so I did

9 not testify to my report.

10 Q. Well, I'm now confused. Was the

11 method for gathering it unreliable, or was the

12 data itself unreliable, or both?

13 A. To the best of my recollection, the

14 method for gathering it was unreliable, and that

15 led me to conclude that the data itself would

16 not be a reliable input into a damages estimate.

17 Q. And you only discovered that after you

18 employed the data using the methodology which

19 you knew to be unreliable. Right?

20 A. No.

21 I did not -- when I used the data, I

22 did not know them to be unreliable. I was -- I

23 had vetted the data and the process.

24 What I was told about the process of

Page 227

1 data gathering turned out not to be the process

2 that had been employed. When I learned that a

3 different process that I felt was unreliable had

4 been employed, it was my opinion that the --

5 because the data gathering process was not

6 reliable, I could not rely upon the data and was

7 not willing to testify as to the damages that

8 used those data as an input.

9 MR. HONIK: Those are all the

10 questions I have of this witness. We're

11 going to keep the deposition open, hope

12 never have -- to have to revisit it, but

13 inasmuch as you withheld invoicing

14 information which needs to be supplemented,

15 we'll keep the record open.

16 You want to take a break and determine

17 if you have any questions?

18 MR. GOLDBERG: Yeah. Why don't we do

19 that. Why don't we come back in

20 ten minutes.

21 THE VIDEOGRAPHER: Time right now is

22 4:16 p.m. We are off the record.

23 (A recess was taken from 4:16 to

24 4:31.)

Page 228

1 THE VIDEOGRAPHER: Time right now is

2 4:31 p.m. We are back on the record.

3 EXAMINATION BY MS. KAPKE:

4 Q. Good afternoon, Dr. Stiroh. My name's

5 Kara Kapke. I'm counsel for CVS and Rite Aid,

6 and I have a few questions for you about your

7 opinions regarding Dr. Conti's unjust enrichment

8 opinions with respect to retail pharmacies and

9 wholesalers.

10 Where does therapeutic value fit into

11 the unjust enrichment analysis?

12 A. My understanding of unjust enrichment

13 damages, as described in my report, are the

14 portion of a benefit conferred by a plaintiff on

15 a defendant which would be unjust for the

16 defendant to maintain.

17 The portion, then, that would be -- my

18 understanding of just for the plaintiff -- for

19 the defendant to retain would be the benefit

20 that the plaintiffs received from the

21 therapeutic benefits of the drugs.

22 Q. I want to ask you specifically now

23 about Dr. Conti's unjust enrichment calculations

24 with respect just to pharmacies.

Page 229

1 Do you recall having opinions about

2 those calculations?

3 A. I do.

4 Q. And after you wrote those opinions,

5 did you have a chance to read Dr. Conti's

6 deposition transcript where she was asked

7 questions about her unjust enrichment opinions

8 with respect to pharmacies?

9 A. I did.

10 Q. After reading her report and

11 deposition transcript, what's your understanding

12 of how Dr. Conti calculated unjust enrichment

13 damages with respect to pharmacies from a

14 mechanical perspective?

15 A. I understand that she summed up

16 certain revenues received by pharmacies, from

17 her report, which reads as if she had intended

18 then to subtract relevant costs.

19 From her deposition, it seems to me

20 from reading that she does not think there are

21 relevant costs, and so she -- my understanding

22 of her opinion is that it is simply revenues

23 received without subtracting costs and without

24 any apportionment with respect to what part

<p>Page 230</p> <p>1 might be just or any consideration of a 2 therapeutic benefit that patients received. 3 Q. From -- after reading her report and 4 deposition transcript, what's your primary 5 criticism for how Dr. Conti describes her 6 methodology for calculating profits for the 7 pharmacies? 8 A. I would say it is too simplistic and 9 incomplete. It was not apparent, from reading 10 her report, that her opinion was that it was 11 essentially revenues that she thought were 12 unjust enrichment. 13 From reading her deposition, it is 14 apparent that she thinks that there are certain 15 costs that she thinks are not relevant, that I 16 think would be relevant for calculating profits 17 even before any apportionment. 18 Q. Not asking you to give an exhaustive 19 list, but what are some of those costs that you, 20 as an economist, would consider in a profits 21 calculation? 22 A. I think often and first and foremost 23 it would be the cost of goods sold, is quite 24 often the biggest component of costs.</p> <p>Page 231</p> <p>1 There are typically other types of 2 costs that are associated with delivering a 3 product to consumers. They could be cost of 4 storing the product, delivering the product, 5 operating the facility, but I think there are a 6 wide variety of categories. None of the 7 categories are included in Dr. Conti's 8 calculation. 9 Q. For purposes about thinking about the 10 cost of goods sold, does it matter if a pharmacy 11 acquired and paid for the product the day it 12 sold it to the customer, a month before, or a 13 year before? 14 A. Not from a standpoint of economics, 15 no. 16 Q. Why not? 17 A. The profits that are received are the 18 part of the revenue that the retailer gets to 19 hold on to, putting aside the question of 20 apportionment. The retailer does not benefit 21 from the entirety of revenue. They have to then 22 use that revenue to pay out their costs, and 23 there would not be the entirety of revenue as a 24 profit calculation.</p>	<p>Page 232</p> <p>1 Q. As an economist, have you ever seen 2 profits calculated without including the cost of 3 ingredients? 4 A. Not profits for a pharmaceutical 5 product, no. 6 Q. Have you ever seen an economics 7 textbook or scholarly piece of literature, or 8 anything like that, where someone measures 9 profits from an economics perspective without 10 considering the cost of ingredients? 11 A. No. For the highest level with no 12 detail, to say that profits are revenue minus 13 cost, it still has cost. 14 As part of that definition, from an 15 accounting point of view, which when we are then 16 applying economic theory to an actual case, we 17 typically would look at accounting data, and 18 that would start with a cost of goods sold and 19 other costs of delivering the product to 20 consumers. 21 MS. KAPKE: Thank you so much, 22 Dr. Stiroh. I don't have any further 23 questions. 24 THE WITNESS: Thank you.</p> <p>Page 233</p> <p>1 MR. HONIK: Any questions from anyone 2 else? 3 MR. GOLDBERG: I may have a question 4 or two, but I do need to take just a 5 two-minute break. Sorry. If we can go off 6 the record for two minutes. 7 THE VIDEOGRAPHER: The time right now 8 is 4:35 p.m. We are off the record. 9 (A recess was taken from 4:35 to 10 4:39.) 11 THE VIDEOGRAPHER: Time right now is 12 4:39 p.m. We are back on the record. 13 MR. HONIK: So Ms. Kapke is done 14 questioning. Are there any other questions 15 from defense counsel? 16 Seth? 17 MR. GOLDBERG: No. There are no other 18 questions from defense counsel. 19 MR. HONIK: Was that Leslie in the 20 room? 21 MR. GOLDBERG: No one else is in the 22 room at this time. Just myself, Kara -- 23 MR. HONIK: When we were off the 24 record, was there someone else in the room?</p>
--	--

<p style="text-align: right;">Page 234</p> <p>1 MR. GOLDBERG: Leslie was in the room. 2 MS. KAPKE: She came in to talk to me. 3 MR. HONIK: Oh. 4 Okay. 5 EXAMINATION BY MR. HONIK: 6 Q. Dr. Stiroh, you were asked some 7 questions by Ms. Kapke, who represents CVS, 8 about the way in which profits were calculated 9 in an unjust enrichment model. 10 Are you aware that plaintiff sought 11 from the retailers the very costs that you 12 referred to, cost of goods, delivery cost, 13 storage, all the other items that you believe 14 might be incorporated in such a model, and -- 15 and we were not provided that? 16 In fact, the court, to this point in 17 the litigation, has not directed the retailers 18 to provide that. Were you aware of that? 19 MS. KAPKE: Object to form. I think 20 that misstates the record. 21 But go ahead and answer. 22 A. I'm not aware of what costs were 23 requested. I have considered what Dr. Conti 24 said, and it was my understanding from reading</p>	<p style="text-align: right;">Page 236</p> <p>1 benefits that come from specific plaintiffs. 2 But at a minimum, my understanding of 3 what she had set forward, the simplistic thing 4 that she put in her report, is not even what I 5 think she said in her deposition from what she 6 intended to do. 7 Q. Have you done an unjust enrichment 8 calculation for retailers? 9 A. I have not. 10 Q. So, you've done little more than 11 criticize what Dr. Conti did, but you've not 12 offered any other opinion about how to go about 13 it the right way, have you? 14 MS. KAPKE: Object to form. 15 Argumentative. 16 A. I have the critique in my report that 17 is summarized under Roman IX, and a section that 18 expands on that. I have not done a 19 quantification of unjust enrichment. 20 I have explained where I think there 21 are flaws in the overarching premise that 22 Dr. Conti puts forward, and the part that is 23 missing in my report is what she had said in her 24 deposition, where it seems that she thinks that</p>
<p style="text-align: right;">Page 235</p> <p>1 her deposition that she had opined that 2 additional costs would not be relevant to the 3 calculation, and in my opinion, additional costs 4 would be relevant to the calculation. 5 Q. And if -- if those costs were 6 identified and produced in -- in the model that 7 you're talking about, you could subtract those 8 and arrive at your own calculation for profits. 9 Couldn't you? 10 A. Not for the purposes of assessing 11 damages that accrue from individual plaintiffs 12 and any benefit that they im- -- brought to an 13 individual defendant, the portion of which would 14 be unjust for that defendant to keep. 15 I think tracing the costs through the 16 complex supply chain would be something that 17 could not be done with broad accounting level 18 data. 19 I have not seen what model Dr. Conti 20 purports to put forward to assess profits and 21 how to trace payments through from the -- 22 through the entire chain to assess what the 23 unjust portion of profits are for any part of 24 the chain or how they relate to specific</p>	<p style="text-align: right;">Page 237</p> <p>1 there are not relevant costs that would need to 2 be considered. 3 I think there are relevant costs that 4 would need to be considered, and it would be 5 very complex to be able to take them into 6 account appropriately to assess unjust 7 enrichment in the manner in which I understand 8 unjust enrichment damages need to be assessed. 9 Q. So you've assessed unjust enrichment 10 damages in the past. Have you not? 11 MS. KAPKE: Object to form. Vague. 12 Ambiguous. 13 A. I have worked on matters involving 14 unjust enrichment damages. I don't recall in a 15 class action setting having done so. 16 Q. Such models exist, don't they, in the 17 economic world? 18 A. Unjust enrichment damages models exist 19 in the economic world, yes. 20 MR. HONIK: Thank you. Those are all 21 the questions I have. 22 MS. KAPKE: I don't have redirect. 23 MR. HONIK: All right. That concludes 24 the deposition. Thank you, Dr. Stiroh.</p>

<div>Page 238</div> <div>1 THE WITNESS: Thank you. 2 THE VIDEOGRAPHER: The time right now 3 is 4:44 p.m. We are off the record. 4 (Time noted: 4:44 p.m.) 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24</div>	<div>Page 240</div> <div>1 C E R T I F I C A T E 2 3 S T A T E O F N E W Y O R K) 4) S s.: 5 C O U N T Y O F N E W Y O R K) 6 7 I JEFFREY BENZ, a Certified Realtime 8 Reporter, Registered Merit Reporter and Notary 9 Public within and for the State of New York, do 10 hereby certify: 11 That the witness whose examination is 12 hereinbefore set forth was duly sworn by me and 13 that this transcript of such examination is a true 14 record of the testimony given by such witness. 15 I further certify that I am not related to 16 any of the parties to this action by blood or 17 marriage and that I am in no way interested in the 18 outcome of this matter. 19 IN WITNESS WHEREOF, I have hereunto set my 20 hand this _____ of _____, 2022. 21 _____ 22 JEFFREY BENZ, CRR, RMR 23 24</div>

THE VIDEOGRAPHER: We are now on the record.
 My name is Chris Ritona.
 I'm the videographer with Golkow Litigation Services.
 Today's date is March 10th, 2022, and the time is approximately 9:18 a.m.
 This video deposition is being held in Philadelphia, PA at Duane Morris, 30 South 17th Street, in the matter of Valsartan, Losartan, and Irbesartan Products Liability Litigation, MDL No. 2875.
 The deponent today is Dr. Ursina Teitelbaum.
 All counsel will be noted upon the stenographic record.
 The court reporter today is Michelle Gray, and she will now please swear in the witness.

Page 10

1 ... URSINA R. TEITELBAUM, M.D.,
2 having been first duly sworn, was
3 examined and testified as follows:
4 - - -
5 EXAMINATION
6 - - -
7 BY MS. GEMAN:
8 Q. Good morning.
9 A. Good morning.
10 Q. We met briefly off the
11 record, but my name is Rachel Geman.
12 Would you like to be
13 addressed as Dr. Teitelbaum? Am I saying
14 that right?
15 A. Yes, please.
16 Q. Okay. Could you please tell
17 me your business address?
18 A. Hospital of the University
19 of Pennsylvania, 3400 Convention Center
20 Boulevard, South Tower 10, Philadelphia,
21 Pennsylvania 19104.
22 Q. How many times have you
23 given testimony under oath?
24 A. I have given testimony under

Page 11

1 oath twice.
2 Q. And were they both
3 depositions?
4 A. Yes.
5 Q. Can you tell me when the
6 first one was?
7 A. It was 2007.
8 Q. And what was the nature of
9 that matter?
10 A. I was asked to speak about
11 the status of a patient's cancer, and it
12 was for the plaintiff.
13 Q. Was it a medical malpractice
14 suit?
15 A. Yes.
16 Q. Do you recall the name of
17 either the parties or the lawyers?
18 A. The lawyer's name was Rick
19 Levin. It was in Chicago.
20 Q. L-E-V-I-N?
21 A. Yes.
22 Q. And do you recall the name
23 of either party?
24 A. The defense was Northwestern

Page 12

1 Hospital.
2 Q. And do you recall what kind
3 of cancer the plaintiff had?
4 A. The patient had head and
5 neck cancer.
6 Q. And was the allegation that
7 the cancer was missed?
8 A. No.
9 Q. Can you tell me the
10 allegation?
11 A. The patient had locally
12 advanced head and neck cancer that was
13 being treated with curative intent. He
14 had undergone curative intent
15 chemoradiation and then had surgery.
16 He was in the hospital when
17 he had an airway event. And an
18 anesthesia code call was called overhead,
19 and it was called to the wrong building
20 in the hospital.
21 Q. Oh, dear. That sounds like
22 terrible facts.
23 And can you tell me about
24 the second time you were deposed?

Page 13

1 A. The second time was just
2 before the pandemic, so it was
3 January 2020.
4 Q. What was the nature of that
5 case?
6 A. I was testifying on behalf
7 of my patient.
8 Q. What is the name of your
9 patient?
10 A. I -- is that -- I think that
11 might be protected by HIPAA.
12 Q. Okay. Fair enough. Was
13 that a -- were you testifying in a
14 percipient or an expert capacity?
15 A. I was his physician. I'm
16 not sure what that legal definition is.
17 Q. Fair enough. Do you -- can
18 you tell me about the nature of the
19 lawsuit?
20 A. Yes. So the patient as a
21 young man in his 20s was working with
22 radioimmunoassays, so radioactive
23 elements. And I met him some years later
24 when he had a pancreatic cancer that I

<p style="text-align: right;">Page 14</p> <p>1 treated with curative intent.</p> <p>2 About two years after he was</p> <p>3 likely cured from the first cancer, he</p> <p>4 developed a cancer in his remnant</p> <p>5 pancreas, which is very unusual. And we</p> <p>6 looked back in his history to see, you</p> <p>7 know, multiple cancers at a young age is</p> <p>8 unusual.</p> <p>9 And he also had a melanoma,</p> <p>10 a testicular cancer, and multiple basal</p> <p>11 cancers. And they were all -- I don't</p> <p>12 know if I can do this, but they were on</p> <p>13 in a very limited field. And it turned</p> <p>14 out that was exactly the -- where the</p> <p>15 hood was to protect him from the</p> <p>16 radiation.</p> <p>17 And there had been some</p> <p>18 concerns about how the radioactive</p> <p>19 elements were handled in that company and</p> <p>20 how the hood was working.</p> <p>21 Q. Was he claiming the hood was</p> <p>22 defective?</p> <p>23 A. I don't think it was that</p> <p>24 specific. I think it was broader</p>	<p style="text-align: right;">Page 16</p> <p>1 Q. So --</p> <p>2 MR. KUM: Just to be -- just</p> <p>3 to be clear, she was the treater</p> <p>4 in the case. She wasn't an -- she</p> <p>5 wasn't an expert.</p> <p>6 MS. GEMAN: I understand.</p> <p>7 BY MS. GEMAN:</p> <p>8 Q. You were the --</p> <p>9 A. He was my patient.</p> <p>10 Q. I understand. Thank you.</p> <p>11 And do you recall the name</p> <p>12 of the lawyer who was with you at the</p> <p>13 deposition?</p> <p>14 A. Yes. His name is Mark</p> <p>15 Davies. I think it's also on that</p> <p>16 transcript.</p> <p>17 Q. Do you know what firm he is</p> <p>18 with?</p> <p>19 A. I think it's his own firm.</p> <p>20 Q. D-A-V-I-E-S?</p> <p>21 A. Yes.</p> <p>22 Q. Is he in Pennsylvania?</p> <p>23 A. Yes.</p> <p>24 Q. Philadelphia?</p>
<p style="text-align: right;">Page 15</p> <p>1 concerns about the management of the</p> <p>2 radioactive elements.</p> <p>3 Q. Do you know how that lawsuit</p> <p>4 resolved, if it did?</p> <p>5 A. They settled it.</p> <p>6 Q. Okay. And can you tell me</p> <p>7 the name of the defendant in that case?</p> <p>8 MR. KUM: So, Counsel, just</p> <p>9 to let you know, we did actually</p> <p>10 provide in the list of her</p> <p>11 materials the name of the lawsuit.</p> <p>12 MS. GEMAN: Oh.</p> <p>13 BY MS. GEMAN:</p> <p>14 Q. So was that suit David</p> <p>15 Boscher et al., versus Johnson & Johnson?</p> <p>16 A. Yes.</p> <p>17 Q. I see. And was that a -- do</p> <p>18 you know if that was a class action?</p> <p>19 A. It was not.</p> <p>20 Q. Okay. And that suit was</p> <p>21 resolved. I understand. And so you were</p> <p>22 testifying for the plaintiff in that</p> <p>23 case?</p> <p>24 A. Indeed.</p>	<p style="text-align: right;">Page 17</p> <p>1 A. Yes.</p> <p>2 Q. Well, you're doing a great</p> <p>3 job with the rules, but I will do the</p> <p>4 tedious lawyer thing and reacquaint you</p> <p>5 with the deposition rules regardless.</p> <p>6 Do you realize you're</p> <p>7 testifying today under a penalty of</p> <p>8 perjury?</p> <p>9 A. Of course.</p> <p>10 Q. And do you understand that</p> <p>11 I'm entitled to your best recollection?</p> <p>12 A. Yes.</p> <p>13 Q. If you don't understand a</p> <p>14 question I ask, can I ask you to ask me</p> <p>15 to clarify?</p> <p>16 A. With pleasure.</p> <p>17 Q. Thank you.</p> <p>18 And again, you're doing a</p> <p>19 great job with this, but if you could</p> <p>20 verbalize your answers rather than</p> <p>21 gesticulating or mm-hmm, unh-unh.</p> <p>22 Will you do that?</p> <p>23 A. Yes.</p> <p>24 Q. And do you understand that</p>

<p style="text-align: right;">Page 18</p> <p>1 I'm allowed to ask you to speculate to 2 matters within your knowledge? 3 A. Yes. 4 Q. So for example, I could ask 5 you to speculate the size of this table, 6 but I couldn't ask you to speculate the 7 size of my table at home. 8 Does that make sense? 9 A. Can you explain, give me 10 another example? 11 Q. Sure. 12 I could -- I wouldn't, but I 13 could ask you to speculate the collective 14 ages of the people in this room. But I 15 couldn't ask you to speculate the 16 collective ages of all my family members, 17 because of course you don't know them. 18 Is that fair? 19 A. Okay. 20 Q. Is there any reason you 21 can't testify today? 22 A. No. 23 Q. And if you need a break at 24 any time, please ask for it. I would</p>	<p style="text-align: right;">Page 20</p> <p>1 Q. Okay. And -- 2 MR. KUM: Yeah, so Doctor, 3 just as an admonition, you are 4 allowed to sort of generally 5 discuss the fact that we've met. 6 But I would ask you not to 7 directly provide information about 8 the substance of any of our 9 conversations. Okay? 10 THE WITNESS: Yes. 11 MR. KUM: Thank you. 12 BY MS. GEMAN: 13 Q. Had you previously worked 14 with RX Pro? 15 A. No. 16 Q. Had you heard of them before 17 they reached out to you? 18 A. No. 19 Q. Do you recall the name of 20 the person at RX Pro who reached out to 21 you? 22 A. His name is Patrick 23 O'Rourke. 24 Q. Oh, Patrick O'Rourke. Okay.</p>
<p style="text-align: right;">Page 19</p> <p>1 just ask that if there is a question 2 pending, that you answer it before the 3 break starts. 4 A. Yes. 5 Q. Who retained you in this 6 case? 7 A. I think there's a lot of 8 firms, so I'm not really sure how to 9 answer that. 10 Q. Fair enough. With which -- 11 with whom did you first speak about this 12 potential retention? 13 A. I was contacted by RX Pro 14 which I think is sort of a connecting -- 15 like a connector person that helps find 16 experts. 17 Q. Mm-hmm. 18 A. And I'm not sure why I said 19 yes, because I haven't in a long time. 20 But I said okay. 21 I had a 30-minute 22 conversation with Bob Kum where he mostly 23 asked questions about me. I think it 24 was --</p>	<p style="text-align: right;">Page 21</p> <p>1 And had you ever previously 2 met Mr. Kum before that phone call? 3 A. Never. 4 Q. When did RX Pro reach out to 5 you? 6 A. I think it was early 7 December 2021. 8 Q. And when was your -- and I'm 9 sorry. Did you say it was a phone call 10 with Mr. Kum or a meeting? 11 A. It was a phone call. 12 Q. Okay. When was that phone 13 call? 14 A. Probably within a week of 15 the outreach from Patrick O'Rourke. 16 Q. Is anybody at RX Pro working 17 with you on your report and opinions? 18 A. No. 19 Q. Is anybody working with you 20 on your report and opinions, like your 21 own staff or anything like that? 22 A. No. 23 Q. For which parties are you 24 providing your expert report?</p>

Page 22

1 A. I don't know all the names
2 of the firms.
3 Q. So I'm sorry. My
4 question -- my question wasn't clear.
5 Which -- you understand the
6 law firms are representing parties in the
7 litigation, correct?
8 A. Yes.
9 Q. So my question is, for which
10 parties, for which defendants, are you
11 providing your expert report?
12 A. I mean, it's for the
13 defense, but I don't know beyond that.
14 MR. KUM: And just for
15 clarification, Dr. Teitelbaum was
16 designated as an expert on behalf
17 of -- on behalf of all defendants.
18 MS. GEMAN: All defendants.
19 Okay.
20 BY MS. GEMAN:
21 Q. Have you ever done any
22 previous work for any of the defendants
23 in this litigation?
24 A. Never.

Page 23

1 Q. And who are the defendants
2 in this litigation?
3 A. I don't really know. I just
4 know the Duane Morris. I don't know all
5 the company names.
6 Q. Okay. Fair enough. Do you
7 know any of the company names that are
8 defendants in this litigation?
9 A. I don't think so.
10 Q. So is it -- can I fairly
11 infer that the reason that you're certain
12 that you have not worked for them before
13 is that you have not done any consulting
14 for companies?
15 A. I have never done any
16 consulting for companies.
17 Q. Okay. And can you tell me
18 the names, not the content of any
19 conversations, but the names of any
20 lawyers with whom you have met in
21 connection with your expert report and/or
22 prep for this deposition?
23 A. Yes. I just met Glen. But
24 he was on a Zoom once. It's kind of a

Page 24

1 lot of blobs with names. So forgive me.
2 Someone named Nick. I don't do great
3 with remembering the blob names. Someone
4 named Nilda.
5 There were more. But I
6 don't remember.
7 There was a woman in a Zoom
8 in Israel. And that's kind of it.
9 Q. Fair enough. Do you know,
10 were those individuals all attorneys?
11 A. I don't know.
12 Q. Have you spoken with anyone
13 about this deposition other than counsel?
14 A. Absolutely not.
15 Q. Have you spoken with anyone
16 about your expert report other than
17 counsel?
18 A. No.
19 Q. And on the subject of
20 deposition prep, how much time did you
21 spend preparing for this deposition?
22 A. I'm not really sure. Some
23 hours.
24 Q. Could you give me an order

Page 25

1 of magnitude?
2 A. Less than ten.
3 Q. And were -- would you say it
4 was seven to nine?
5 A. Five to eight.
6 Q. Five to eight. And were
7 those five to eight hours all with
8 counsel?
9 A. Is counsel attorneys?
10 Q. Yes.
11 A. Yes.
12 Q. Did you do any preparation
13 on your own?
14 A. For what?
15 Q. For this deposition.
16 A. I don't know what that
17 means. Can you explain?
18 Q. Sure.
19 Did you do any reading or
20 research or revisit any materials?
21 A. I studied my expert letter,
22 I studied Dr. Kaplan's expert letter, and
23 I reviewed Dr. Kaplan's deposition.
24 Q. Have you reviewed any

<p>Page 26</p> <p>1 depositions in this matter other than 2 Dr. Kaplan's? 3 A. I haven't. 4 Q. Your list of materials 5 reviewed did not mention Dr. Kaplan, but 6 obviously you reviewed his materials, 7 correct? 8 A. Yes. I think that was the 9 premise of my mission. 10 Q. Fair enough. Did you review 11 Dr. Song's report? 12 A. I did not. 13 Q. Are you -- and so your 14 testimony is limited to responding to 15 Dr. Kaplan; is that correct? 16 A. That is what I was asked to 17 do. And that's what it's limited to. 18 Q. All right. And your 19 opinions are limited to responding to 20 Dr. Kaplan; is that correct? 21 A. I was specifically asked to 22 offer my opinion on Dr. Kaplan's medical 23 monitoring plan. 24 Q. And are you offering any</p> <p>Page 27</p> <p>1 opinions about whether NDMA or NDEA are 2 carcinogens? 3 A. I am not a causative expert. 4 Q. And regardless of that, 5 which I appreciate, are you offering any 6 opinions about whether those substances 7 are causation -- are carcinogens? 8 A. I am not. It's really not 9 pertinent to my opinion. 10 Q. Are you offering -- 11 MS. GEMAN: Oh, is this the 12 phone in here? 13 (Whereupon, a discussion was 14 held off the stenographic record.) 15 BY MS. GEMAN: 16 Q. Are you offering any 17 opinions, Doctor, about whether NDMA or 18 NDEA in the levels that were present in 19 the contaminated valsartan in this case 20 caused significantly increased risk of 21 cancer to any person? 22 A. I am not. 23 MR. KUM: I'm just going to 24 object. Outside the scope.</p>	<p>Page 28</p> <p>1 Dr. Teitelbaum, if you can 2 just pause for just a second and 3 let me interject an objection. 4 MS. GEMAN: Thank you. 5 BY MS. GEMAN: 6 Q. Are you offering any 7 opinions about the medical monitoring 8 class definition in this case? 9 MR. KUM: Objection. Vague 10 and ambiguous. Outside the scope. 11 THE WITNESS: I don't 12 understand your question. 13 BY MS. GEMAN: 14 Q. Sure. Are you offering -- 15 strike that. 16 You reviewed the amended 17 complaint brought by the medical 18 monitoring plaintiffs, correct? 19 A. I don't think I've seen 20 that. 21 Q. If it was listed in your 22 materials reviewed, would that have been 23 a mistake? 24 A. Is that -- I don't know what</p> <p>Page 29</p> <p>1 that means. Is that that request for -- 2 that deposition request? 3 MR. KUM: So I don't think 4 she understands what you mean by a 5 complaint. You might want to -- 6 BY MS. GEMAN: 7 Q. Did you review the document 8 that set forth the allegations that the 9 medical monitoring plaintiffs brought 10 against the defendants? 11 A. I think that's that form? 12 Can you show it to me, Bob? I know what 13 it looks like. I'm not that familiar 14 with the terminology. I apologize. 15 Q. Fair enough. So is it fair 16 to say that you're not offering any 17 opinion about how the plaintiffs have 18 defined who should be entitled to medical 19 monitoring in this case? 20 MR. KUM: Objection. Vague 21 and ambiguous. 22 THE WITNESS: Can you 23 explain again? 24 BY MS. GEMAN:</p>
---	---

<p style="text-align: right;">Page 30</p> <p>1 Q. Sure.</p> <p>2 A. I'm not a lawyer.</p> <p>3 Q. Fair. No, no, I understand.</p> <p>4 And I'm definitely not asking for legal</p> <p>5 opinions.</p> <p>6 I am asking, however, if you</p> <p>7 have an opinion about how the plaintiffs</p> <p>8 have defined the threshold eligibility to</p> <p>9 be entitled to monitoring.</p> <p>10 MR. KUM: Objection.</p> <p>11 Outside the scope.</p> <p>12 BY MS. GEMAN:</p> <p>13 Q. You can answer.</p> <p>14 A. Yeah, I just don't still --</p> <p>15 I still don't understand. I'm not -- I'm</p> <p>16 not trying to be dense. I just don't</p> <p>17 understand.</p> <p>18 Q. No, not at all. What is</p> <p>19 your understanding about, broadly</p> <p>20 speaking, who plaintiffs claim should be</p> <p>21 entitled to medical monitoring?</p> <p>22 A. I think it's patients that</p> <p>23 took VCDs with the impurity NDMA and NDEA</p> <p>24 within a certain time period.</p>	<p style="text-align: right;">Page 32</p> <p>1 opinions here about the economics of</p> <p>2 medical monitoring?</p> <p>3 A. No.</p> <p>4 Q. You're not a public health</p> <p>5 expert, correct?</p> <p>6 MR. KUM: Objection. Vague</p> <p>7 and ambiguous.</p> <p>8 THE WITNESS: I'm interested</p> <p>9 in public health. It's an</p> <p>10 important part of my practice.</p> <p>11 BY MS. GEMAN:</p> <p>12 Q. Do you consider yourself</p> <p>13 qualified to render expert opinions about</p> <p>14 public health topics?</p> <p>15 A. It depends on the topic.</p> <p>16 I'm happy to opine if I am asked the</p> <p>17 right question.</p> <p>18 Q. Do you consider your opinion</p> <p>19 here to be related to public health?</p> <p>20 A. I consider my opinion here</p> <p>21 to be related to the medical monitoring</p> <p>22 protocol put forward by Dr. Kaplan.</p> <p>23 Q. And do you consider that to</p> <p>24 be an aspect of public health?</p>
<p style="text-align: right;">Page 31</p> <p>1 Q. Also, sorry, what is</p> <p>2 curative intent?</p> <p>3 A. Oh, that's a great question.</p> <p>4 Oncologists are always delighted to have</p> <p>5 that opportunity.</p> <p>6 Broadly speaking, the only</p> <p>7 way to cure a solid a tumor is surgery.</p> <p>8 And so if a patient is eligible for</p> <p>9 surgery, we may add some chemotherapy or</p> <p>10 radiation. But if a patient is eligible</p> <p>11 for surgery, we are treating them with</p> <p>12 the goal of cure.</p> <p>13 Q. And do you define cure as</p> <p>14 being cancer free for five years?</p> <p>15 A. It depends on the cancer.</p> <p>16 Q. Is it always a temporal</p> <p>17 definition, as in cancer free for X time?</p> <p>18 A. Different cancers have</p> <p>19 different ranges of time. Some have a</p> <p>20 longer tail than others.</p> <p>21 Q. But it's always defined by a</p> <p>22 temporal period of being cancer free?</p> <p>23 A. Yes. Mm-hmm.</p> <p>24 Q. And are you offering any</p>	<p style="text-align: right;">Page 33</p> <p>1 A. Can you ask that again?</p> <p>2 MR. KUM: Objection. Vague</p> <p>3 and ambiguous.</p> <p>4 BY MS. GEMAN:</p> <p>5 Q. Do you consider that to be a</p> <p>6 public health opinion?</p> <p>7 MR. KUM: Same objections.</p> <p>8 THE WITNESS: Yeah, the</p> <p>9 opinion about his medical</p> <p>10 monitoring protocol. Let me think</p> <p>11 about that.</p> <p>12 I would say cancer screening</p> <p>13 is within the domain of public</p> <p>14 health, although it's also within</p> <p>15 the domain of other --</p> <p>16 biostatistics, health outcomes,</p> <p>17 you know.</p> <p>18 So I'm really directing my</p> <p>19 opinion to the screening protocol</p> <p>20 put forward. I don't really know</p> <p>21 how to answer your question within</p> <p>22 that context.</p> <p>23 BY MS. GEMAN:</p> <p>24 Q. Do you consider yourself an</p>

Page 34

1 expert in biostatistics?
2 A. I use and rely on
3 biostatistics in my clinical practice of
4 20 years. We're certainly taught
5 biostatistics in medical school. And
6 ongoing, it's important in fellowship and
7 I rely on it and refer to it in my
8 practice.
9 Q. Do you consider yourself an
10 expert in biostatistics?
11 MR. KUM: Objection. Calls
12 for a legal conclusion.
13 THE WITNESS: Again, I
14 certainly use biostatistics in my
15 practice.
16 BY MS. GEMAN:
17 Q. Do you consider yourself an
18 expert in biostatistics?
19 MR. KUM: Same objection.
20 Calls for a legal conclusion.
21 BY MS. GEMAN:
22 Q. You can answer, unless your
23 counsel instructs you not to answer.
24 A. I know. I did answer.

Page 35

1 So...
2 Q. So, my question is, to which
3 I have not gotten an answers do you
4 consider yourself an expert in
5 biostatistics?
6 MR. KUM: Same objections.
7 You can answer again,
8 Doctor.
9 THE WITNESS: Yeah, I rely
10 on biostatistics in my practice.
11 I have been in multiple lectures.
12 It's an important part of clinical
13 practice. I don't know how to
14 answer you more specifically.
15 The question is broad, even
16 though it's just a few words.
17 BY MS. GEMAN:
18 Q. Would you consider yourself
19 qualified to present yourself to a judge
20 and jury as an expert in biostatistics?
21 MR. KUM: Objection. Calls
22 for a legal conclusion.
23 If you understand.
24 THE WITNESS: I would just

Page 36

1 tell them I use it. I don't have
2 a degree in it. But I rely on it,
3 and I appreciate it, and I use it
4 in my daily practice.
5 BY MS. GEMAN:
6 Q. I mean, I have a lot of
7 friends who are biostatisticians. I rely
8 on it when I read the New York Times and
9 so on. Would you consider me an expert
10 in biostatistics?
11 MR. KUM: Objection. Vague.
12 Ambiguous.
13 THE WITNESS: I don't really
14 need to answer that question.
15 MR. KUM: Doctor, go ahead
16 and answer.
17 THE WITNESS: Okay. I --
18 MR. KUM: To the extent you
19 can, if you understand the
20 question.
21 THE WITNESS: I don't -- I
22 don't know your depth of
23 knowledge. I don't know how you
24 would present yourself. I don't

Page 37

1 know if you use it in your daily
2 practice.
3 I rely on statistics to
4 guide my patients. I use them
5 every day. I don't have a
6 master's or a Ph.D. in
7 biostatistics. But I use and rely
8 on biostatistics every day that
9 I'm in clinic caring for patients.
10 BY MS. GEMAN:
11 Q. Have you ever taught public
12 health or biostatistics?
13 A. I have not.
14 Q. Have you ever published a
15 paper about -- in a public health
16 journal?
17 A. I don't think so.
18 Q. Have you ever published a
19 paper in a biostatistics journal?
20 A. I don't think so.
21 Q. Okay. And are you offering
22 any opinions about the feasibility of
23 medical monitoring as distinct from
24 whether it's, in your view, clinically

<p>Page 38</p> <p>1 warranted?</p> <p>2 MR. KUM: Objection. Vague</p> <p>3 and ambiguous. If you understand</p> <p>4 the distinction.</p> <p>5 THE WITNESS: Yes. Only in</p> <p>6 that if the patients being offered</p> <p>7 this very intensive medical</p> <p>8 monitoring protocol are frail or</p> <p>9 very sick or -- you know, for</p> <p>10 example, repeat upper and lower</p> <p>11 endoscopy, requires anesthesia and</p> <p>12 cardiology clearance. If they</p> <p>13 have heart conditions that</p> <p>14 preclude it, then it isn't</p> <p>15 feasible. So just to that extent.</p> <p>16 BY MS. GEMAN:</p> <p>17 Q. Is it your understanding</p> <p>18 that a patient would be required to avail</p> <p>19 him or herself of the services of the</p> <p>20 medical monitoring program that has been</p> <p>21 proposed?</p> <p>22 A. It didn't say that in</p> <p>23 Dr. Kaplan's letter. I worry that if</p> <p>24 they know these are the recommended</p>	<p>Page 40</p> <p>1 MR. KUM: Objection. Vague</p> <p>2 and ambiguous. Calls for a legal</p> <p>3 conclusion.</p> <p>4 THE WITNESS: I haven't seen</p> <p>5 the "mandatory" word as I recall,</p> <p>6 but I don't know that it isn't.</p> <p>7 It's being offered. The</p> <p>8 idea is to offer it, and I think</p> <p>9 that alone would engender a lot of</p> <p>10 anxiety and fear and potentially</p> <p>11 pressure because of the fear of</p> <p>12 cancer.</p> <p>13 BY MS. GEMAN:</p> <p>14 Q. Have you purported to study</p> <p>15 the delta between the baseline fear that</p> <p>16 these class members already have and any</p> <p>17 additional fear engendered by the</p> <p>18 program?</p> <p>19 A. In my expert report, I did</p> <p>20 comment on anxiety and stress associated</p> <p>21 with cancer testing. And you know,</p> <p>22 patients that are told they are at higher</p> <p>23 risk, have more stress about it.</p> <p>24 I'll also say that the more</p>
<p>Page 39</p> <p>1 tests, because the fear of cancer is so</p> <p>2 pervasive, that they would feel a</p> <p>3 compulsion to try and do them.</p> <p>4 Q. Putting aside your worry,</p> <p>5 you understand that Dr. Kaplan is not</p> <p>6 proposing a mandatory program, correct?</p> <p>7 MR. KUM: Objection. Vague</p> <p>8 and ambiguous. Calls for a legal</p> <p>9 conclusion.</p> <p>10 THE WITNESS: He put forward</p> <p>11 a recommended protocol.</p> <p>12 I don't know. In the letter</p> <p>13 he didn't say whether or not it</p> <p>14 was mandatory.</p> <p>15 I was certainly happy during</p> <p>16 his deposition to go to the basic</p> <p>17 principle of medicine, the art of</p> <p>18 medicine, that it's a personalized</p> <p>19 approach between the patient and</p> <p>20 their physician. So I was very</p> <p>21 happy to read that.</p> <p>22 BY MS. GEMAN:</p> <p>23 Q. Do you understand that the</p> <p>24 program is not mandatory?</p>	<p>Page 41</p> <p>1 you test someone, the frequency, the more</p> <p>2 opportunity there is for false diagnoses.</p> <p>3 And just having a false positive and just</p> <p>4 being told that you might have cancer and</p> <p>5 then going through the workup, even if</p> <p>6 you're negative, it creates fear with</p> <p>7 every subsequent test.</p> <p>8 I see that in our own</p> <p>9 practice. We used to use a lot more</p> <p>10 imaging to track cancers. We were</p> <p>11 following them in surveillance.</p> <p>12 And there's actually a whole</p> <p>13 literature now around what we call</p> <p>14 "scanxiety" where the very act of testing</p> <p>15 for cancer causes anxiety.</p> <p>16 MS. GEMAN: So I'm going to</p> <p>17 be ask for that to be struck as</p> <p>18 nonresponsive.</p> <p>19 BY MS. GEMAN:</p> <p>20 Q. My question is, have you</p> <p>21 purported to study the delta between the</p> <p>22 baseline fear that these class members</p> <p>23 already have and any additional fear</p> <p>24 engendered by the program?</p>

<p style="text-align: right;">Page 42</p> <p>1 MR. KUM: Asked and 2 answered. 3 You can answer again. 4 THE WITNESS: In terms of 5 study, I have not written or 6 published in it. But I have 7 certainly experienced it in my 8 years of practice. 9 BY MS. GEMAN: 10 Q. Have you made any attempt to 11 gauge the baseline level of anxiety these 12 class members already have by dint of 13 having consumed contaminated valsartan? 14 MR. KUM: Objection. 15 Assumes facts not in evidence. 16 Vague and ambiguous. You can 17 answer. 18 THE WITNESS: I have not. I 19 am not aware of their fear level. 20 BY MS. GEMAN: 21 Q. Do you deny that there is a 22 baseline level of anxiety? Or rather -- 23 I can rephrase the question. 24 Do you have any opinions</p>	<p style="text-align: right;">Page 44</p> <p>1 that the FDA recognized their 2 cardiovascular risk and said don't 3 stop it, keep taking it until you 4 talk to your doctor. 5 BY MS. GEMAN: 6 Q. What do you mean by notable? 7 A. Well, if -- you know, 8 gauging risk, I think the FDA recognized 9 that the cardiovascular risk was great 10 and that stopping that medication would 11 cause harm. 12 Q. Did you learn about the 13 recall in real time when it happened? 14 A. No. 15 Q. And I think you said this in 16 your objections to the subpoena, but you 17 have not written or -- you have not 18 written about valsartan or blood pressure 19 medications, correct? 20 A. I have not. 21 Q. Have you talked about 22 valsartan with your patients? 23 A. Not for many years. Early 24 in my career, I did work in primary care.</p>
<p style="text-align: right;">Page 43</p> <p>1 about the baseline level of anxiety 2 experienced by the proposed class 3 members? 4 MR. KUM: Objection. Calls 5 for speculation, assumes facts not 6 in evidence. 7 THE WITNESS: Is that a 8 speculate question? 9 MR. KUM: Doctor, I'm 10 just -- I'm asserting an objection 11 on the record. 12 THE WITNESS: Okay. 13 MR. KUM: To the extent that 14 you understand her question, you 15 can answer. 16 THE WITNESS: You know, it's 17 interesting. Heart disease is the 18 number one cause of death in the 19 U.S. But my patients are more 20 afraid of cancer. 21 I can imagine that the FDA 22 report of a concern for an 23 impurity was very anxiety 24 provoking. I think it's notable</p>	<p style="text-align: right;">Page 45</p> <p>1 And I -- normally a patient came to me on 2 valsartan after a critical event, usually 3 in a hospital, myocardial infarction, new 4 diagnosis of heart failure or diabetes 5 affecting their kidney function, which 6 are indications. 7 The only instance in which I 8 wrote it primarily was if a patient was 9 intolerant of an ACE inhibitor due to 10 cough. 11 I currently do not, and have 12 instructed my office, to not renew 13 patients' medications that aren't 14 directly related to their cancer care. 15 Q. So they should go to 16 their -- another specialist or primary 17 care doctor? 18 A. You know, our patients see 19 us every week or two weeks. We write a 20 lot of prescriptions. It's very natural 21 that they would ask. But it's not the 22 area that I'm focusing now, and I think 23 it would be a disservice, and I also 24 would not want to delay the time that</p>

<p style="text-align: right;">Page 46</p> <p>1 they would then see their internist, 2 family medicine doctor, or cardiologist. 3 So it is not my practice now to write or 4 renew valsartan-containing drugs. 5 Q. Have you prescribed 6 valsartan in the last ten years? 7 A. I have not prescribed 8 valsartan in the past 18 years. 9 Q. Okay. What happened 10 18 years ago? 11 A. I moved -- I was in my 12 geriatrics clinics, which was a form of 13 primary care. And then I moved 14 exclusively to oncology clinics. I'm 15 board-certified in internal medicine, 16 geriatrics, medical oncology, and 17 palliative care. 18 So I've had a lot of 19 training. But currently, I'm working in 20 oncology clinics, subspecializing in 21 gastrointestinal malignancies. 22 Q. Do you only treat or 23 exclusively treat GI cancers? 24 A. So I largely -- I'm one of</p>	<p style="text-align: right;">Page 48</p> <p>1 A. Again, it's in the construct 2 of being an attending in the hospital and 3 in the clinic. 4 In my clinic, I only get -- 5 accept referrals for gastrointestinal 6 malignancies. But again, I like the 7 workup and teaching opportunities for the 8 fellows with cancers of unknown primary, 9 which sometimes turn out to be breast or 10 lung. So that's why I'm explaining my 11 answer. 12 And on the inpatient side we 13 don't have the luxury of just treating GI 14 cancers. We accept all of the inpatients 15 of the entire practice. 16 Q. So if you've said publicly 17 that you only do GI cancers, was that a 18 slight exaggeration for marketing 19 purposes? 20 A. That's the -- if you look at 21 the list of cancers accepted on my 22 profile, it's all GI cancers. And 23 cancers of unknown primary is listed on 24 that. That is my outpatient clinic.</p>
<p style="text-align: right;">Page 47</p> <p>1 the few in our practice that will see 2 cancers of unknown primary. So that 3 could be any range of cancers. 4 And on the inpatient side, 5 we are required to do a fair amount of 6 inpatient. I attend on the solid tumor 7 services, which is every type of cancer. 8 And actually, I also attend on the bone 9 marrow transplant service. 10 Q. Was there a time in your 11 career when you only worked on GI 12 cancers? 13 A. I've been doing this since I 14 came to Penn. That's, you know, in the 15 hospital, you see all patients. I'm 16 trained to see all patients. And I have 17 chosen to subspecialize, which is an 18 opportunity in academic medicine. And 19 that way you can have a more narrower 20 area of disease expertise. 21 Q. So I'm sorry. I'm not sure 22 I know the answer to the question. Was 23 there a time in your career when you only 24 worked on GI cancers?</p>	<p style="text-align: right;">Page 49</p> <p>1 We all have to do service 2 time. It's two weeks or four weeks a 3 year. So I just wanted to be very 4 truthful that I am exposed to other 5 cancers. 6 But in my clinic, I see 7 gastrointestinal cancers and the rare 8 cancer of unknown primary. 9 Q. So your public statement 10 that you only treat GI cancers is not 11 quite correct? 12 A. It's within -- that's my 13 specialty interest. All of us see 14 cancers that are thought to be GI and 15 turn out to be something else. So I 16 think within that, it is still my 17 intention. 18 Q. So why did you say publicly 19 you only treat GI cancers, if that is not 20 true? 21 MR. KUM: Objection. Vague 22 and ambiguous. Assumes facts not 23 in evidence. 24 If you know what she's</p>

<p style="text-align: right;">Page 50</p> <p>1 referring to.</p> <p>2 THE WITNESS: I'm not</p> <p>3 understanding your term</p> <p>4 "publicly."</p> <p>5 BY MS. GEMAN:</p> <p>6 Q. Did you put out a YouTube</p> <p>7 video available for anyone to see in</p> <p>8 which you said that you only treat GI</p> <p>9 cancers?</p> <p>10 A. The intent of my practice is</p> <p>11 GI cancers.</p> <p>12 I generally, if -- maybe</p> <p>13 there are six or seven cancers of unknown</p> <p>14 primary, which is also listed on my</p> <p>15 public profile.</p> <p>16 I tend to take the ones that</p> <p>17 have cancer below the diaphragm, assuming</p> <p>18 that they will be GI. But that's, you</p> <p>19 know, just -- that was a -- they asked me</p> <p>20 to talk about my GI practice. That is my</p> <p>21 area of expertise.</p> <p>22 Q. Did they ask you to say that</p> <p>23 you only treat GI cancers?</p> <p>24 A. I don't remember if they did</p>	<p style="text-align: right;">Page 52</p> <p>1 cancers?</p> <p>2 A. I do not treat blood cancers</p> <p>3 in the outpatient setting.</p> <p>4 Q. Do you treat them anywhere?</p> <p>5 A. I -- two years ago I</p> <p>6 attended on the inpatient transplant</p> <p>7 service. I haven't attended there for</p> <p>8 two years.</p> <p>9 Q. And previous to that</p> <p>10 attendance on the inpatient transplant</p> <p>11 service, when had been the last time that</p> <p>12 you had treated blood cancers?</p> <p>13 A. Fellowship.</p> <p>14 Q. Okay. Like 20 years ago?</p> <p>15 A. More.</p> <p>16 Q. More. How long was that</p> <p>17 attendance to which you just referred on</p> <p>18 the inpatient transplant service?</p> <p>19 A. It's two weeks every year.</p> <p>20 Q. So in the last -- so in the</p> <p>21 last greater than 20 years, have you just</p> <p>22 spent two weeks treating blood cancers,</p> <p>23 or do you mean two weeks every year? I'm</p> <p>24 sorry if I misunderstood.</p>
<p style="text-align: right;">Page 51</p> <p>1 or not. I think it was just a</p> <p>2 promotional video on behalf of the</p> <p>3 gastrointestinal program. My clinic is</p> <p>4 called the gastrointestinal malignancy</p> <p>5 clinic, and that is within the group that</p> <p>6 I practice.</p> <p>7 Q. Do you think it would be</p> <p>8 more truthful to amend that video?</p> <p>9 MR. KUM: Objection.</p> <p>10 Argumentative.</p> <p>11 THE WITNESS: I intend to</p> <p>12 treat GI cancers. I accept the</p> <p>13 cancers of unknown primary that</p> <p>14 are below the diaphragm.</p> <p>15 If they turn out to have a</p> <p>16 breast cancer, I usually pass them</p> <p>17 on to my breast cancer colleague.</p> <p>18 Not every oncologist is willing to</p> <p>19 take a cancer without a firm</p> <p>20 diagnosis.</p> <p>21 I am willing, for the</p> <p>22 interest of the patient.</p> <p>23 BY MS. GEMAN:</p> <p>24 Q. Do you currently treat blood</p>	<p style="text-align: right;">Page 53</p> <p>1 A. Oh, I -- the -- let's see.</p> <p>2 I came to Penn in 2007. I stopped doing</p> <p>3 it as a courtesy to the division. It was</p> <p>4 actually before the pandemic. So</p> <p>5 probably 2019.</p> <p>6 There are a lot of services</p> <p>7 that are tough to get coverage for. So</p> <p>8 it was a courtesy to the division.</p> <p>9 Q. So I don't think that was</p> <p>10 responsive.</p> <p>11 So do you, in the last</p> <p>12 20 years plus, other than that two-week</p> <p>13 period to which you referred, how much</p> <p>14 time have you spent treating blood</p> <p>15 cancers?</p> <p>16 A. None since fellowship.</p> <p>17 Q. Okay. So it's been two</p> <p>18 weeks in the last 20 years?</p> <p>19 A. But for 12 years in a row I</p> <p>20 did two weeks.</p> <p>21 Q. That's what I was asking.</p> <p>22 A. Yes.</p> <p>23 Q. Okay. You've had 24 weeks?</p> <p>24 A. Yes. Remember, these are</p>

Page 54

1 patients going through transplant. Our
2 role is largely to manage infection.
3 Q. Mm-hmm. As opposed to
4 treating the primary?
5 A. It's managing their
6 hospitalization.
7 Q. As opposed to treating the
8 primary cancer?
9 MR. KUM: Objection. Vague
10 and ambiguous.
11 If you understand the
12 distinction.
13 THE WITNESS: Yeah. Yeah,
14 I'm taking care of a patient,
15 getting a treatment plan in the
16 hospital. And my -- you know,
17 managing their infections, if they
18 get infection or symptoms.
19 BY MS. GEMAN:
20 Q. Do you devise their cancer
21 treatment plans?
22 A. I do not.
23 Q. Do you treat lung cancer?
24 A. Excuse me?

Page 55

1 Q. I'm sorry. Do you treat
2 lung cancer?
3 A. I do not.
4 Q. Do you treat liver cancer?
5 A. I do.
6 Q. You do. Okay. And liver
7 cancer can be cured or curable if caught
8 early; is that correct?
9 MR. KUM: Objection. Vague
10 and ambiguous. Incomplete
11 hypothetical.
12 THE WITNESS: It all depends
13 on if a surgery is possible.
14 BY MS. GEMAN:
15 Q. And if it is, liver cancer
16 can be cured if caught early; is that
17 correct?
18 A. Yes, or transplant.
19 Q. And you do treat pancreatic
20 cancer; is that correct?
21 A. About 70 percent of my
22 practice is pancreas cancer.
23 Q. Oh, wow. And how would you
24 divide the other 30?

Page 56

1 A. So 10 percent
2 esophagogastric. I'm more interested in
3 upper GI intestinal malignancies,
4 although I attend all -- we have multiple
5 tumor -- interdisciplinary tumor board.
6 We have a tumor board for every disease
7 site. So I also care for patients with
8 colorectal cancer. I would lump small
9 bowel cancer into colorectal cancer, and
10 neuroendocrine tumors.
11 Q. So of that remaining
12 20 percent, how much would you say is --
13 A. That's why I was trying --
14 three of them, 10, 10, and 10, is roughly
15 what I would say.
16 Q. So 10 for esophageal?
17 A. Esophagogastric.
18 Q. Mm-hmm. I see.
19 A. And 10 or bowel cancer,
20 large and small, and 10 percent for
21 neuroendocrine tumor.
22 Q. And forgive my ignorance.
23 Do you embed prostate cancer into
24 neuroendocrine?

Page 57

1 A. Oh, no.
2 Q. No? Okay.
3 A. That's a separate -- that's
4 GU, gastro-urinary.
5 Q. Do you treat gastro-urinary
6 cancer?
7 A. No.
8 Q. So that means that you don't
9 treat prostate or bladder; is that
10 correct?
11 A. Or kidney.
12 Q. Or kidney. And what is an
13 example of a neuroendocrine cancer?
14 A. Mm-hmm. So when you think
15 neuroendocrine, you think Steve jobs. He
16 had a pancreas neuroendocrine tumor.
17 Anything -- any
18 neuroendocrine tumor that doesn't arise
19 from the pancreas is called carcinoid
20 tumor.
21 Q. And can that happen in any
22 body part?
23 A. There is a separate entity
24 in the lung, but generally it's in the

<p>Page 58</p> <p>1 pancreas, small bowel. It can arise in 2 the rectum. Those are the normal 3 locations. 4 Q. And you consider those 5 distinct from small bowel and colorectal 6 cancers? 7 A. Completely different cell 8 type. Completely different treatment 9 regimen. Every cancer has its own 10 prescription. 11 MS. GEMAN: The reason that 12 you see me glancing at the time is 13 because I'm staring at something 14 that says 7:05 a.m., which might 15 be on Pacific time. 16 MR. KUM: That's in honor of 17 me being a west coast attorney. 18 MS. GEMAN: I'm sorry? 19 MR. KUM: It's in honor of 20 me being a California attorney. 21 MS. GEMAN: I understand. 22 Everything has to be three hours 23 earlier. 24 BY MS. GEMAN:</p>	<p>Page 60</p> <p>1 patients are not always as adherent as 2 you think. In fact, if you miss a week 3 out of a month, that's still considered 4 adherent. That's 80 percent. 5 The average is 50 percent in 6 the literature. When I have my -- 7 particularly my older patients, I have 8 them bring in a bag of their medicines so 9 I can actually look through and do a pill 10 count to try and help figure out how much 11 of them they're taking. 12 And of course, sometimes 13 there's issue with affording medications 14 or tolerating medications. A lot of 15 times I find patients stop the medication 16 without telling their physician. 17 So I think that's how -- 18 I -- assuming they're taking them, but we 19 all know that there's some variability 20 there. 21 Q. Are you offering any 22 opinions about the adherence of these 23 class members? 24 A. I have no idea what their</p>
<p>Page 59</p> <p>1 Q. Okay. Thank you. That's 2 very -- that's very helpful. 3 Do your opinions in this 4 case apply to the general population or 5 to the medical monitoring class? 6 MR. KUM: Objection. Vague 7 and ambiguous as to which opinions 8 you're referring to. 9 THE WITNESS: I specifically 10 directed my opinion to the medical 11 monitoring program put forward by 12 Dr. Kaplan for this, the 13 valsartan-containing drug 14 population that may have been 15 exposed to the impurities, NDMA 16 and NDEA. 17 BY MS. GEMAN: 18 Q. And is it your understanding 19 that they may have been exposed or that 20 they were exposed? 21 A. I only bring it up because 22 of the issue of adherence that I did 23 mention in my expert letter. And having 24 cared for patients with -- you know,</p>	<p>Page 61</p> <p>1 adherence was. I'm just speaking to a 2 general phenomenon that's well described 3 in the literature. 4 Q. Did you study the adherence 5 of the named plaintiffs? 6 MR. KUM: Objection. 7 Outside the scope. You can 8 answer. 9 THE WITNESS: I don't know 10 who they are. I don't know if 11 it's been assessed. I did not 12 study it. 13 BY MS. GEMAN: 14 Q. So you're offering no -- 15 just to be clear, you're offering no 16 expert opinions about the adherence of 17 the class here; is that correct? 18 A. I'm speaking to the general 19 study of adherence in patients taking 20 medications. It is not specific to these 21 patients or to these drugs. 22 Q. And you're offering no 23 expert opinions on that subject here, 24 correct?</p>

Page 62

1 MR. KUM: I'm going to
2 object. Other than to what she's
3 just testified to.
4 MS. GEMAN: You can't do
5 speaking objections.
6 MR. KUM: Objection. Asked
7 and answered.
8 You can answer again.
9 THE WITNESS: I addressed
10 the general concern about
11 adherence to medications in
12 general terms in my letter.
13 BY MS. GEMAN:
14 Q. But again, I'm entitled to
15 know if you are claiming to offer expert
16 opinions on the adherence of the class
17 here.
18 A. I have no idea what
19 medicines they did or did not take.
20 Q. Okay.
21 A. I don't know about any
22 individual patients.
23 Q. And as a threshold, I think
24 it's -- am I correct to think that Dr. --

Page 63

1 that your opinion is that Dr. Kaplan's
2 protocol, in your view, should not be
3 applied to the general population; is
4 that correct?
5 A. The general VCD-taking
6 population?
7 Q. No, no, no. The general
8 population?
9 MR. KUM: Vague and
10 ambiguous.
11 If you understand what she
12 means.
13 THE WITNESS: Yeah, I'm of
14 the opinion that his protocol
15 should be applied to no
16 population.
17 BY MS. GEMAN:
18 Q. Do you see any clinical
19 difference between -- or strike that.
20 Let me ask it more
21 generally, if I could.
22 Do you see any difference
23 between the general population and the
24 class here in terms of cancer risk?

Page 64

1 A. I think I'm going to answer
2 it in the other direction. So the only
3 exposure we adjust any national cancer
4 screening guidelines for is cigarette
5 smoking. And you have to have a certain
6 number of pack-years in a certain age
7 range.
8 We don't adjust screening
9 protocols for any exposure with the
10 exception of number of pack-years in a
11 certain age range.
12 Q. So the people ultimately
13 seeing this deposition will be entitled
14 to an answer to this question.
15 Do you see any difference
16 between the general population and the
17 class here in terms of cancer risk?
18 MR. KUM: Objection. Vague
19 and ambiguous. Asked and
20 answered.
21 Go ahead, Doctor.
22 THE WITNESS: I don't know
23 that they are any different from
24 the general population.

Page 65

1 I don't know -- I don't know
2 that they -- I don't see why
3 they're any different from the
4 general population, I would say,
5 based on any potential impurity.
6 We don't -- I'll give you a good
7 example.
8 Asbestos is a very well
9 defined carcinogen with a very
10 well defined literature.
11 We do not change the
12 screening recommendations for
13 patients with documented asbestos
14 exposure.
15 The only exposure for which
16 there is a specified screening
17 indication is tobacco, certain
18 number of pack-years, certain age
19 range.
20 BY MS. GEMAN:
21 Q. How long after it was clear
22 in the literature that tobacco was a
23 carcinogen was it that the tobacco
24 protocol became embedded in the cancer

<p style="text-align: right;">Page 66</p> <p>1 screening guidelines?</p> <p>2 MR. KUM: Objection. Vague</p> <p>3 and ambiguous.</p> <p>4 THE WITNESS: That's</p> <p>5 actually a great question because</p> <p>6 it speaks to the point that it</p> <p>7 takes years and decades, even when</p> <p>8 you have an established</p> <p>9 carcinogen, to prove that</p> <p>10 screening -- established human</p> <p>11 carcinogen to prove that screening</p> <p>12 confers any benefit.</p> <p>13 We've been trying to figure</p> <p>14 out for years if screening for</p> <p>15 lung cancer conferred any benefit.</p> <p>16 So it was a big deal ten years ago</p> <p>17 with the results of the national</p> <p>18 cancer lung trial using low dose</p> <p>19 spiral CT that there was actually</p> <p>20 a benefit to that class of</p> <p>21 patients.</p> <p>22 And just to be clear, it</p> <p>23 takes -- you have to screen 320</p> <p>24 patients to find one with cancer.</p>	<p style="text-align: right;">Page 68</p> <p>1 stop now. But whenever you get to</p> <p>2 a natural breaking point, can we</p> <p>3 take a comfort break?</p> <p>4 MS. GEMAN: Sure.</p> <p>5 THE WITNESS: I would</p> <p>6 actually love a comfort break.</p> <p>7 BY MS. GEMAN:</p> <p>8 Q. I'll just ask a couple more</p> <p>9 questions, and we'll do that. Otherwise,</p> <p>10 the thought will go right out of my head.</p> <p>11 You acknowledge that</p> <p>12 screening with the use of low dose CT</p> <p>13 reduces mortality from lung cancer,</p> <p>14 correct?</p> <p>15 A. There is an indication. The</p> <p>16 expert opinion put forward by the United</p> <p>17 States Preventive Task Force, that for</p> <p>18 patients that have smoked 20 years and</p> <p>19 are between the ages -- I believe, it's</p> <p>20 55 and 80, that there is a potential</p> <p>21 benefit to screening without undue risk.</p> <p>22 So it's a very specific</p> <p>23 range, duration of exposure, and a very</p> <p>24 specific age range.</p>
<p style="text-align: right;">Page 67</p> <p>1 And what's important here is</p> <p>2 we can screen for a lot of things,</p> <p>3 but we have to show that it</p> <p>4 confers benefit, and equally</p> <p>5 importantly we have to assess the</p> <p>6 magnitude of harm.</p> <p>7 So again, you know, a study</p> <p>8 makes it into New England Journal</p> <p>9 and it's practice-changing. And</p> <p>10 this was the first after years,</p> <p>11 decades, to show benefit to a</p> <p>12 screening protocol.</p> <p>13 And to your point, we have,</p> <p>14 I think, known about the</p> <p>15 carcinogenicity of tobacco smoke</p> <p>16 for years and decades even. I</p> <p>17 don't know when the original</p> <p>18 recognition of the risk of tobacco</p> <p>19 was. I would actually love to</p> <p>20 know that.</p> <p>21 MR. KUM: Counsel, we've</p> <p>22 been going about an hour.</p> <p>23 Whenever you get to a natural --</p> <p>24 I'm not saying that you should</p>	<p style="text-align: right;">Page 69</p> <p>1 Q. The New England Journal of</p> <p>2 Medicine study to which you referred did</p> <p>3 not only study for that population before</p> <p>4 reaching its conclusion about the</p> <p>5 efficacy of low dose CT screening,</p> <p>6 correct?</p> <p>7 A. I don't know that specific.</p> <p>8 I've brought up the New England Journal.</p> <p>9 That was the hallmark study. I didn't</p> <p>10 study the other populations. I really</p> <p>11 just related it to the updated screening</p> <p>12 recommendation that became the standard</p> <p>13 of good practice.</p> <p>14 Q. But I just want the record</p> <p>15 to be very clear.</p> <p>16 Do you agree, full stop,</p> <p>17 with this conclusion that screening with</p> <p>18 the use of low dose CT reduces mortality</p> <p>19 from lung cancer?</p> <p>20 A. I think that is an</p> <p>21 incomplete statement, without putting in</p> <p>22 the duration of exposure and the specific</p> <p>23 ages where it becomes reasonable to test</p> <p>24 for it.</p>

<p>Page 70</p> <p>1 It is a very strict 2 definition there. 3 Q. So if the national lung 4 screening trial research team concluded 5 that screening with the use of low dose 6 CT he reduces mortality from lung cancer, 7 would you disagree with that conclusion? 8 MR. KUM: Objection. 9 Assumes facts not in evidence. 10 You can go ahead and answer. 11 THE WITNESS: I don't really 12 know what that question means from 13 a medical lens. It was the first 14 study to show benefit to screening 15 within a defined population with 16 an acceptable risk/benefit 17 profile. 18 BY MS. GEMAN: 19 Q. And again, you're not 20 claiming that the conclusion reached by 21 the national lung screening trial 22 research team was limited to those 23 specific smoker profiles, correct? 24 A. I don't remember the exact</p>	<p>Page 72</p> <p>1 A. So we are taught to look at 2 evidence based medicine. We do certainly 3 analyze the research as it comes out. 4 I appreciate that the United 5 States Preventive Task Force agreed, and 6 I say so because they have an 7 extraordinary panel, as I mentioned 8 before, of experts who design screening 9 protocols. 10 What I actually find 11 interesting is that, again, I mention 12 there's a literature watch that they 13 follow, and the new debate with the 14 screening guidelines is whether or not it 15 serves black Americans appropriately 16 since they may present differently and 17 they're currently analyzing the 18 literature. 19 So I appreciate that they 20 keep their mind out and keep mind open 21 and they keep updated with the latest 22 studies and findings. 23 Q. Do you agree that the 24 special screening protocols for heavy</p>
<p>Page 71</p> <p>1 details. What I think is important is 2 the United States Preventive Task Force, 3 You know, they have, like, a literature 4 watch. And if an important paper comes 5 up, they convene and address it. 6 And that group of experts 7 decided it was important enough and 8 limited the testing looking at the 9 benefit and magnitude of harm to favor 10 the testing for patients between 55 and 11 80 who had smoked 20 pack-years. 12 MS. GEMAN: Okay. We can 13 take a break. 14 THE WITNESS: Thank you. 15 THE VIDEOGRAPHER: 10:18. 16 We are off the video record. 17 (Short break.) 18 THE VIDEOGRAPHER: 10:38. 19 We are on the video record. 20 BY MS. GEMAN: 21 Q. Do you agree that the 22 special screening protocols for heavy 23 tobacco smokers in the guidelines are 24 appropriate?</p>	<p>Page 73</p> <p>1 tobacco smokers in the guidelines are 2 appropriate? 3 A. Yes. 4 Q. Why? 5 A. Well, it took decades to 6 find a randomized control trial that 7 could identify something that might help. 8 Again, an earlier diagnosis, I believe, 9 again, the number needed to screen is 1 10 in 320. And they looked at it with a 11 balance with the risk of biopsy, and 12 there's obviously established risks when 13 you biopsy a lung tumor in the thorax. 14 And so I feel comfortable 15 using those screening tools. In fact in 16 our practice we have electronic medical 17 records. They are particularly designed 18 for primary care. But I see them on the 19 side of the screen. 20 And the goal there, to 21 maintain the standard of care, is to 22 offer the patient that study. That's not 23 me. That's the primary care. But I 24 appreciate that it has become the</p>

<p style="text-align: right;">Page 74</p> <p>1 national standard of care to offer the 2 patients that study. 3 Q. And when you say identify 4 something that might help, what do you 5 mean? 6 A. So you always want to find a 7 cancer earlier when you can. It turns 8 out to be a very complicated science. 9 And, you know, people think 10 there is a test, you should just take it. 11 And they don't always understand that it 12 may help them live longer or better and 13 that there are risks associated. 14 And to be very clear, I hate 15 cancer, right, like if I could, find 16 every cancer early and treat curatively, 17 curative intent. 18 Yesterday I told one new 19 patient that they would have two and a 20 half years to live with chemotherapy, 21 life with chemotherapy. I told one 22 patient that it was six months with or 23 without treatment, and I told one patient 24 it was weeks.</p>	<p style="text-align: right;">Page 76</p> <p>1 extra screening? 2 MR. KUM: Objection. Calls 3 for speculation. Incomplete 4 hypothetical. 5 THE WITNESS: I can answer? 6 MR. KUM: You can answer. 7 Doctor, just as a reminder 8 I'm just objecting for the record. 9 Unless I specifically instruct you 10 not to answer, you need to answer 11 her question. 12 THE WITNESS: I think until 13 it was established, again since 14 you're doing biopsies or surgeries 15 within the thorax, that the 16 benefit outweighed the risk. 17 I don't know that it would 18 be worth the radiation exposure. 19 I don't know that that technology 20 for low dose spiral CT was 21 available then. 22 So I can't really speak to 23 that. 24 But again, you don't want to</p>
<p style="text-align: right;">Page 75</p> <p>1 So you have to understand 2 how passionately I wish that there were 3 tests that could find this. And I 4 appreciate that that's Dr. Kaplan's wish 5 also. We are on the front lines caring 6 for the most vulnerable patients. 7 And so, if there is a 8 validated intervention that meets the 9 level of approval based on the research 10 by the United States Preventative Task 11 Force, I'm appreciative of that national 12 standard of care. 13 Q. If the -- so the tobacco 14 screening protocol came into existence on 15 date X. We don't know when it was, but 16 it was a certain date, correct? 17 A. You mean through the United 18 States Preventative Task Force. 19 Q. Yes. 20 A. I think it was 2011. 21 Q. 2000 -- 22 A. '11. 23 Q. '11. Would it have been 24 helpful to patients in 2008 to get that</p>	<p style="text-align: right;">Page 77</p> <p>1 do a test that's risky unless you 2 have some data showing that the 3 magnitude of benefit is greater 4 than the magnitude of harm, and it 5 met that threshold. 6 BY MS. GEMAN: 7 Q. So you would not have 8 supported a patient undergoing that 9 screening protocol in 2010? 10 A. I think it was only offered 11 on clinical trial, which is how these are 12 usually delivered. 13 Q. Okay. But you offer your 14 patients clinical trials all the time, 15 correct? 16 A. I always try and put 17 patients on a clinical trial when I have 18 the opportunity. 19 Q. So then would you have 20 supported a patient undergoing that 21 screening protocol in 2010? 22 A. Only within the context of a 23 clinical trial. 24 Q. Okay. But the answer then</p>

<p style="text-align: right;">Page 78</p> <p>1 is yes, you would have supported a 2 patient undergoing that screening 3 protocol in 2010? 4 MR. KUM: Objection. 5 Misstates testimony. 6 You can answer again. 7 THE WITNESS: If it were 8 within the context of a clinical 9 trial, I would support it. 10 BY MS. GEMAN: 11 Q. Are there other 12 circumstances under which you would 13 support a screening protocol that is not 14 yet embedded in the task force? 15 A. Can you give me an example, 16 please? 17 Q. Well, you said a clinical 18 trial is one; is that right? 19 A. If there were clinical trial 20 specific to that question. Again, this 21 is much more in the primary care domain. 22 They already have been diagnosed with 23 cancer by the time they reach me. So 24 it's a little hard for me to speak to</p>	<p style="text-align: right;">Page 80</p> <p>1 inform their care? How does it help 2 them? 3 If you put them on telemetry 4 which monitors their heart rate, they're 5 tethered. They may get confused. They 6 may fall. 7 You can't give them a 8 medicine to slow down the heart rate, 9 because the cause of the elevated heart 10 rate is the fever. Are you going to get 11 a cardiology consult? There's -- my 12 point is, you have to know what to do 13 with every test you order. 14 Q. I appreciate that. So I'm 15 going to ask you the same question again. 16 And just, please, if you could answer the 17 question that's asked. 18 Are there other 19 circumstances under which you would 20 recommend a screening protocol that is 21 not yet embedded in the task force? 22 A. The -- I would say, you 23 know, again through my cancer lens, 24 because I'm not on the front lines of</p>
<p style="text-align: right;">Page 79</p> <p>1 that exact circumstance. 2 But I worry that if I order 3 a test, I don't know what to do with it. 4 And I could harm the patient in the 5 workup of -- I'll put it to you this way. 6 We can order a lot of tests. 7 And there's a lot of really fun tests to 8 order that sound amazing. But every time 9 you order a test -- I teach this to the 10 residents and med students and fellows 11 all the time -- you have to know what 12 you're going to do with the result. 13 And, you know, I'll give you 14 a noncancer example, and I'll give you a 15 cancer example. 16 So if you have a patient 17 with a fever in a hospital, they may be 18 tachycardic. And a resident or a student 19 will see that elevated heart rate and 20 order an EKG. 21 And I ask them, you know, 22 why did you order the EKG? They are 23 tachycardic. What are you going to do 24 with that information? How does it</p>	<p style="text-align: right;">Page 81</p> <p>1 primary care right now. 2 If I had a patient with a 3 hereditary cancer syndrome, not only -- 4 and, you know, I can say specifically -- 5 we have a dedicated GI genetics program, 6 so I refer to them. They then manage the 7 timing of the screening. 8 I do think some of this is 9 within the caveats to the recommended 10 protocol for high risk population. But 11 that would be an example of a population 12 that's sort of ordering a test or 13 consultation based on a high risk 14 feature, cancer feature for that 15 individual patient. 16 Obviously, it's individual 17 care and personalizing the care to the 18 patient. 19 Q. So other than clinical 20 trials and hereditary cancer syndrome, 21 are there other circumstances under which 22 you would recommend screening protocols 23 that are not embedded in the task force? 24 A. And actually I think these</p>

Page 82	Page 84
<p>1 are in the task force. So inflammatory 2 bowel disease, you would refer. And 3 again, I'm not ordering a screening. I'm 4 referring to an expert who knows how to 5 manage that screening. So it's fraught. 6 It's fraught.</p> <p>7 And you didn't want an 8 example, but may I offer one?</p> <p>9 Q. Well, I'd like to, if I 10 could, follow up on what you just said.</p> <p>11 How is -- how is the 12 inflammatory bowel disease screening that 13 you recommend in the task force? Do you 14 mean it's in the caveats, or -- I just 15 want to understand.</p> <p>16 A. I think it's in the task 17 force recommendations that there are 18 different intervals within -- as we were 19 speaking, colorectal screening for a 20 certain population.</p> <p>21 Q. And what are the caveats?</p> <p>22 A. So the intervals of -- and 23 actually, I think this only applies to 24 colon cancer screening. There's no</p>	<p>1 usually -- I remember that being a higher 2 risk.</p> <p>3 I don't know that there's 4 any other caveat. There might be for 5 prostate cancer with no BRCA. But I 6 don't know for sure. I would have to 7 look at it.</p> <p>8 Q. Do you support special 9 screening for people who may be BRCA 10 positive?</p> <p>11 A. It depends. So for example, 12 with pancreas cancer, BRCA1 doesn't 13 really infer greater risk, but BRCA2 14 does. So again, it's individualized to 15 the patient.</p> <p>16 Q. Well, within that same 17 patient, that wouldn't be two separate 18 BRCA tests, correct? Wouldn't it just be 19 a test for BRCA and the information might 20 be inform relevant to one cancer than 21 another, but it's the same test; is that 22 correct?</p> <p>23 A. There is -- you know, 24 there's different -- there's Myriad,</p>
Page 83	Page 85
<p>1 special indication for esophagogastric or 2 pancreas or others deemed as high risk. 3 I believe the interval was changed of the 4 endoscopy screening.</p> <p>5 Q. So I'm -- this might be my 6 misunderstanding. You referred earlier 7 to the caveats protocol. Can you tell me 8 what that is?</p> <p>9 A. I'm not sure what that means 10 in terms of caveat protocol. I know 11 within the United States preventive task 12 force, there's a recognition that 13 hereditary cancer syndrome and 14 inflammatory bowel disease confers a 15 higher risk of bowel cancer, and the 16 interval of screening is shortened from 17 ten to five years.</p> <p>18 Q. Are there any other 19 recognitions of high risk categories in 20 the USPSTF?</p> <p>21 A. So they only recommend 22 screening for a handful of cancers. I 23 think, again, the hereditary cancer 24 syndrome changes mammography. That's</p>	<p>1 there's Ambry, there are panels that look 2 for the most concerning. They test a lot 3 of genes. It's usually about 10 to 12.</p> <p>4 We actually have specialized 5 gene profiles for every -- for every 6 disease site.</p> <p>7 Q. No, but my question was a 8 little different, which is when you -- 9 when you take that test, it's not like 10 there's a test for BRCA that -- the 11 pancreas BRCA versus the breast BRCA. 12 You're just testing for BRCA.</p> <p>13 A. Oh, I'm sorry. It's one, 14 you know, deleterious gene in the panel.</p> <p>15 Q. It's one allele?</p> <p>16 A. Yes.</p> <p>17 Q. And likewise for those 10 to 18 12 that you mentioned, each one, it's not 19 like there's organ specific alleles. You 20 have the allele or you don't; is that 21 right?</p> <p>22 A. Correct.</p> <p>23 Q. And so do you support 24 special screening for people who may be</p>

<p style="text-align: right;">Page 86</p> <p>1 BRCA positive?</p> <p>2 A. So again, I refer them to --</p> <p>3 we have cancer risk evaluation program,</p> <p>4 as do most academic institutions. I'm</p> <p>5 sure Dr. Kaplan has access to that at</p> <p>6 Rush as well. And we usually refer them</p> <p>7 to them, and then they direct the</p> <p>8 screening.</p> <p>9 We also, you know -- we test</p> <p>10 a patient for, you know, any hereditary</p> <p>11 cancer syndromes. And if we identify it,</p> <p>12 we refer them, and then they manage the</p> <p>13 patient and any evaluation for their</p> <p>14 kindred, for their family.</p> <p>15 Q. So you do support special</p> <p>16 screening for people who may be BRCA</p> <p>17 positive?</p> <p>18 A. I think that's, you know, as</p> <p>19 stated within the guidelines,</p> <p>20 appropriate. You don't want to miss that</p> <p>21 family or that patient.</p> <p>22 Q. What do you mean by miss</p> <p>23 that family or the patient?</p> <p>24 A. Well, if you don't test, you</p>	<p style="text-align: right;">Page 88</p> <p>1 Q. And would you support -- and</p> <p>2 I'm sorry.</p> <p>3 Was the company culpable in</p> <p>4 not having sufficient workplace</p> <p>5 protections?</p> <p>6 MR. KUM: Objection. Calls</p> <p>7 for a legal conclusion.</p> <p>8 THE WITNESS: I just</p> <p>9 testified about his case.</p> <p>10 BY MS. GEMAN:</p> <p>11 Q. Got it.</p> <p>12 A. And I don't really -- I</p> <p>13 didn't even know what happened until I</p> <p>14 later asked to get a copy of the</p> <p>15 deposition to present to you.</p> <p>16 Q. And I think you mentioned</p> <p>17 that there was a lot of cancers in the</p> <p>18 part of the body that -- where there had</p> <p>19 been a hood.</p> <p>20 MR. KUM: You have to give a</p> <p>21 verbal response.</p> <p>22 Sorry.</p> <p>23 THE WITNESS: Yes. Sorry.</p> <p>24 BY MS. GEMAN:</p>
<p style="text-align: right;">Page 87</p> <p>1 don't know. And if you identify the</p> <p>2 patient, you refer them.</p> <p>3 Q. Have you ever had occasion</p> <p>4 to study screening protocols that arose</p> <p>5 out of lawsuits or mass accidents?</p> <p>6 A. No.</p> <p>7 Q. Have you ever studied</p> <p>8 screening protocols for mutagens without</p> <p>9 a threshold?</p> <p>10 MR. KUM: Objection. Vague.</p> <p>11 And ambiguous.</p> <p>12 MS. GEMAN: Sure.</p> <p>13 BY MS. GEMAN:</p> <p>14 Q. Have you ever -- have you</p> <p>15 ever studied screening protocols based on</p> <p>16 a person's exposure to a mutagenic agent?</p> <p>17 A. No. The patient that I</p> <p>18 testified for, that wasn't a screening</p> <p>19 protocol issue.</p> <p>20 Q. Okay. And with that</p> <p>21 patient, was it limited to -- were the</p> <p>22 concerns about the workplace conditions</p> <p>23 limited to his workplace facility?</p> <p>24 A. Yes.</p>	<p style="text-align: right;">Page 89</p> <p>1 Q. Would you have -- were any</p> <p>2 of the -- were any of the types of</p> <p>3 cancers that that gentleman had cancers</p> <p>4 where early testing could affect the</p> <p>5 course of the illness?</p> <p>6 A. No.</p> <p>7 Q. Because they were</p> <p>8 untreatable cancers?</p> <p>9 A. There are no United States</p> <p>10 Preventive Task Force guidelines for</p> <p>11 skin. Actually, it's not -- I should say</p> <p>12 it's not recommended for skin. There are</p> <p>13 no screening recommendations for pancreas</p> <p>14 cancer. There is no screening</p> <p>15 recommendation -- well, I should say it's</p> <p>16 I, they rate it as an I, which is their</p> <p>17 lowest level of evidence.</p> <p>18 So I think pancreas is an I.</p> <p>19 Skin is an I. Melanoma -- so that's</p> <p>20 melanoma and basal cell and testicular,</p> <p>21 there are no recommendations to screen</p> <p>22 for those cancers.</p> <p>23 Q. If skin cancer is caught</p> <p>24 early, that can help stop its spread,</p>

<p style="text-align: right;">Page 90</p> <p>1 correct?</p> <p>2 A. Certainly want to have eyes</p> <p>3 on the skin. But I don't know how -- and</p> <p>4 I don't know how or why it is not in the</p> <p>5 protocol.</p> <p>6 Q. But my question is separate</p> <p>7 from what's in the protocol. If skin</p> <p>8 cancer is caught early, that can help</p> <p>9 stop its spread, correct?</p> <p>10 A. Which skin cancer?</p> <p>11 Q. Any skin cancers.</p> <p>12 MR. KUM: Vague and</p> <p>13 ambiguous.</p> <p>14 If you know.</p> <p>15 THE WITNESS: So basal cells</p> <p>16 tend to stay localized.</p> <p>17 So -- and then squamous</p> <p>18 cells can spread. Melanoma can</p> <p>19 spread.</p> <p>20 BY MS. GEMAN:</p> <p>21 Q. Okay. So if the cancer is</p> <p>22 caught early, can it help stop the spread</p> <p>23 of melanoma or squamous cell skin cancer?</p> <p>24 A. So I'm not sure why the</p>	<p style="text-align: right;">Page 92</p> <p>1 CAPS5. And it started in 2014. And it</p> <p>2 ends -- hopefully it will be accrued by</p> <p>3 2025. And their goal -- because this is</p> <p>4 an unanswered question. And it's been</p> <p>5 very elusive. And their goal is to see</p> <p>6 if you do -- I can't remember if it's</p> <p>7 every six months or yearly, endoscopic</p> <p>8 ultrasounds, and you test -- you give</p> <p>9 them secretin and you test the pancreas</p> <p>10 juice or you biopsy a cyst.</p> <p>11 And they are seeing if</p> <p>12 scheduled interval of testing affects the</p> <p>13 outcome.</p> <p>14 I -- there is another study</p> <p>15 that is very disheartening. And they</p> <p>16 took about -- let's see, it was almost</p> <p>17 700 patients, and they did endoscopic</p> <p>18 ultrasounds, and I can't remember if it's</p> <p>19 MRI or CT at very regular intervals.</p> <p>20 And they tracked -- these</p> <p>21 were patients, like, BRCA, hereditary</p> <p>22 cancer syndromes that are known to have</p> <p>23 an increased risk, about 5 to 7 percent</p> <p>24 risk.</p>
<p style="text-align: right;">Page 91</p> <p>1 decision was made that the evidence isn't</p> <p>2 robust enough to make that a</p> <p>3 recommendation. I can't speak to why to</p> <p>4 that level of evidence.</p> <p>5 Q. I appreciate that. My</p> <p>6 question is a little different, which is,</p> <p>7 in your opinion as an oncologist, if</p> <p>8 melanoma or squamous skin cancer is</p> <p>9 caught early, can that help prevent its</p> <p>10 spread?</p> <p>11 A. I think probably yes. I</p> <p>12 would assume yes. But I don't know about</p> <p>13 the screening protocol, if that actually</p> <p>14 helps it be caught early. I guess that</p> <p>15 might be the issue. We always -- that's</p> <p>16 what I would say.</p> <p>17 Q. And can certain pancreatic</p> <p>18 cancers be prevented from metastasizing</p> <p>19 if caught early enough?</p> <p>20 A. So this is a hard, hard one.</p> <p>21 And believe me, everyone is trying to</p> <p>22 figure it out.</p> <p>23 So there -- in the --</p> <p>24 there's an ongoing clinical trial called</p>	<p style="text-align: right;">Page 93</p> <p>1 And they tracked them. It</p> <p>2 actually took 16 years to get any kind of</p> <p>3 an answer. And of the 20 percent -- so</p> <p>4 that's about 70 patients who had a cyst</p> <p>5 or something growing, I think 10 or 12 of</p> <p>6 them had a frank cancer develop, and less</p> <p>7 than ten were able to go to the OR with</p> <p>8 curative intent. And I think that their</p> <p>9 five-year survival -- it wasn't</p> <p>10 100 percent, but it was a little higher.</p> <p>11 But again, this is 16 years</p> <p>12 of invasive procedures. And the problem</p> <p>13 is, we actually still don't have an</p> <p>14 answer for that population.</p> <p>15 There are three lesions</p> <p>16 that, you know, just like with colon</p> <p>17 cancer, you take it from polyp to cancer</p> <p>18 over, you know, years, decades, which is</p> <p>19 why they set the threshold of the</p> <p>20 intervals.</p> <p>21 So there's three lesions</p> <p>22 that they follow. And one is IPMN, which</p> <p>23 is an intraductal mucinous, IP --</p> <p>24 mucinous neoplasm. And the next one is</p>

<p>Page 94</p> <p>1 MCN, the mucinous cystic neoplasm. And</p> <p>2 both of those have the potential to turn</p> <p>3 into cancer, but it's very low.</p> <p>4 The most likely is something</p> <p>5 called PanIN. And unfortunately these</p> <p>6 lesions are usually under 5 millimeters.</p> <p>7 You can't see them on a scan. You really</p> <p>8 can only see them under a microscope.</p> <p>9 And they transform from PanIN 1 to PanIN</p> <p>10 3. There's -- over years, they can</p> <p>11 follow these things.</p> <p>12 And the problem with them is</p> <p>13 they may not be really visible to the</p> <p>14 human eye. This is -- this is the</p> <p>15 problem with this cancer.</p> <p>16 And so they -- but they go</p> <p>17 right to the vein. And the way the blood</p> <p>18 flows, the cancer goes into the vein and</p> <p>19 goes right to the liver.</p> <p>20 And so, you know, part of</p> <p>21 that has been the issue. We cannot</p> <p>22 reliably, even in a high risk population,</p> <p>23 know that screening is helping in any</p> <p>24 meaningful way. We're still waiting for</p>	<p>Page 96</p> <p>1 really rare cancer. It's designated as</p> <p>2 an orphan cancer. It's only 3 percent of</p> <p>3 all cancers. I think the number is 13 in</p> <p>4 100,000 people will develop pancreas</p> <p>5 cancer. Of course it has a really bad</p> <p>6 reputation, because it's difficult to</p> <p>7 treat.</p> <p>8 And just for context,</p> <p>9 cancers that have established screening</p> <p>10 protocols that are effective, breast</p> <p>11 cancer, the risk of a woman developing</p> <p>12 breast cancer, I think is 1 in 8 in her</p> <p>13 lifetime. And the general risk for colon</p> <p>14 cancer is 1 in 25.</p> <p>15 So that's just to put in</p> <p>16 perspective 13 in 100,000 people will</p> <p>17 develop pancreas cancer.</p> <p>18 And that's why it has an</p> <p>19 orphan designation. In the U.S. I think</p> <p>20 it's about 56,000 cases per year.</p> <p>21 Q. So in the Johnson & Johnson</p> <p>22 case that you -- for which you provided</p> <p>23 testimony, would you have supported</p> <p>24 workers who were similarly situated to</p>
<p>Page 95</p> <p>1 that data.</p> <p>2 And, you know, there is</p> <p>3 potential harm. They stopped screening,</p> <p>4 to be very clear, if -- they kind of base</p> <p>5 it on the patient's life expectancy. And</p> <p>6 interestingly, these cancers develop at</p> <p>7 the same age as regular patients that</p> <p>8 develop pancreas cancer, so 65, 70.</p> <p>9 Again, they followed them</p> <p>10 16 years.</p> <p>11 So, it's -- and there's no</p> <p>12 blood test that's been reliable.</p> <p>13 So it's -- it's a difficult</p> <p>14 issue. And that's why there's, you know,</p> <p>15 no guidelines. We're really trying to do</p> <p>16 clinical trials to answer the question.</p> <p>17 And there's not tremendous</p> <p>18 optimism, even for these higher risk</p> <p>19 patients, that we're going to be able to</p> <p>20 figure it out.</p> <p>21 And just one more thing. So</p> <p>22 pancreas -- you hit my sweet spot. I</p> <p>23 trained in pancreas.</p> <p>24 Pancreas is actually a</p>	<p>Page 97</p> <p>1 your patient being given notification and</p> <p>2 the option to screen for skin cancers?</p> <p>3 MR. KUM: Objection.</p> <p>4 Incomplete hypothetical. Assumes</p> <p>5 facts not in evidence.</p> <p>6 THE WITNESS: I don't know</p> <p>7 that it was known. I can't really</p> <p>8 speak to that time.</p> <p>9 There's -- even for patients</p> <p>10 with heavy history of burns,</p> <p>11 sunburns in childhood, there</p> <p>12 aren't any clear guidelines.</p> <p>13 I will say, certainly,</p> <p>14 again, falls between the patient</p> <p>15 and their caregiver and the clinic</p> <p>16 physician or provider, that if,</p> <p>17 you know, the patient reported</p> <p>18 that, they'd probably pay more</p> <p>19 attention to the skin, just like</p> <p>20 if a patient reported a symptom,</p> <p>21 they would pay attention to the</p> <p>22 symptom.</p> <p>23 BY MS. GEMAN:</p> <p>24 Q. So you would support the</p>

<p>Page 98</p> <p>1 patients being notified of the need to 2 pay more attention to their skin? 3 A. I don't know. I can't speak 4 to that time. I don't know that he knew 5 it at the time or that it was known. I 6 actually have no way to know that answer. 7 Q. So you can't answer that 8 question, as to whether you would support 9 anyone -- you know, others who may have 10 worked under the same conditions as your 11 patient being notified that they should 12 pay particular attention to their skin as 13 a result of an exposure in the workplace? 14 MR. KUM: Asked and 15 answered. 16 THE WITNESS: I don't know 17 what was known or not known. And, 18 you know, some people get exposed 19 to a lot of radiation and never 20 get cancer. And some don't. I 21 think at that time, since it was 22 all unknown, he was getting, you 23 know, more evaluations because of 24 his history of growing up at the</p> <p>Page 99</p> <p>1 shore. 2 But I don't think it was 3 known. And so I really can't 4 speak to that. 5 BY MS. GEMAN: 6 Q. But sitting here now, if 7 there were other similar workers to your 8 patient, meaning people who worked under 9 the same workplace conditions, don't you 10 think they should have been advised about 11 the risk exposure? 12 A. Well -- 13 MR. KUM: Objection. Calls 14 for speculation. Assumes facts 15 not in evidence. 16 BY MS. GEMAN: 17 Q. You can answer. 18 A. I'll just say that he didn't 19 die from metastatic melanoma or basal 20 cell cancer. They were surgically 21 removed when they were seen. He died of 22 a cancer that's deep inside the body that 23 you can't screen for. 24 So, you know, I don't know</p>	<p>Page 100</p> <p>1 how to answer that question. 2 Q. Well, I wasn't asking how 3 that -- under those terrible facts how 4 that gentleman died. 5 What I was asking is whether 6 you would support notification to other 7 workers, working under the same 8 conditions, that they should pay special 9 attention to, at minimum, their skin? 10 MR. KUM: Calls for 11 speculation. 12 THE WITNESS: I don't know. 13 I don't know the answer. It's way 14 back in time in a circumstance 15 that I really can't speak to. 16 BY MS. GEMAN: 17 Q. What is C8? 18 A. Excuse me. 19 Q. What is carbon 8? 20 A. A molecule. An element. I 21 don't know what you're -- 22 Q. Fair enough. Have you ever 23 heard of something called PFOA? 24 A. Not that I recall.</p> <p>Page 101</p> <p>1 Q. I'm going to butcher this, 2 so bear with me. Have you ever heard of 3 ammonium perfluorooctanoate? 4 A. No. I've heard of a lot of 5 things in all of my training. I can't 6 remember that exact. 7 Q. Okay. Because I butchered 8 it so badly, I'm going to ask the court 9 reporter's indulgence in spelling it. So 10 it's ammonium, A-M-M-O-N-I-U-M, 11 P-E-R-F-L-U-O-R-O-O-C-T-A-N-O-A-T-E. 12 So just to circle back, 13 whether known as carbon 8 or PFOA or 14 ammonium perfluorooctanoate, et cetera, 15 have you ever heard of that molecule in 16 connection with cancer? 17 A. It's not familiar. I 18 don't -- you know, have I ever heard of 19 it? I took organic chemistry. I may 20 have. 21 Q. Okay? 22 A. But there's a lot back in, 23 you know, 25 or 30 years ago that I -- 24 just trying to be very truthful. I</p>
--	---

Page 102

1 certainly don't remember it sitting here.
2 Q. Okay. Do you remember
3 generally that a lot of -- that there are
4 a number of carbon molecules used in --
5 not just C8, but used in industrial
6 settings that can be carcinogenic?
7 MR. KUM: Objection.
8 Outside the scope of her report.
9 THE WITNESS: Yeah, I think,
10 again, I was not -- I'm not a
11 causative witness. So I would
12 rather direct the discussion, if I
13 may, to the content of my letter,
14 which speaks to Dr. Kaplan's
15 proposed medical monitoring.
16 BY MS. GEMAN:
17 Q. Fair enough. But I am
18 entitled to the answer. Do you have
19 knowledge as to whether there are certain
20 carbon molecules regularly used in
21 industrial settings that can, under some
22 circumstances, be carcinogenic?
23 MR. KUM: Same objections.
24 If you know.

Page 103

1 THE WITNESS: I don't know
2 specific molecules. I know there
3 are industries of concerns like
4 metal and rubber. I know there
5 are inhaled concerns from certain
6 agents. But I don't really have a
7 list of them.
8 BY MS. GEMAN:
9 Q. Does the USPTF have special
10 screening guidelines for people exposed
11 to excessive C8, carbon 8?
12 A. I don't think so.
13 Q. If there were a medical
14 monitoring program approved by a court
15 that provided that individuals improperly
16 exposed to excessive levels of C8 --
17 under which those individuals could
18 receive medical monitoring, would you
19 think that was inappropriate?
20 MR. KUM: Objection.
21 Outside the scope of her report.
22 Calls for speculation.
23 If you have an opinion,
24 Doctor.

Page 104

1 THE WITNESS: It's really
2 outside of the scope of the
3 report.
4 I focused on the potential
5 exposure of an impurity. And I
6 will contend again that within the
7 construct of the national
8 guidelines, the only modification
9 for an exposure is 20 years of
10 tobacco from age 55 to 80 with the
11 example then, again, that
12 asbestos, which is known to
13 increase risk; radon, which is
14 known to increase risk, is not
15 part of that recommendation.
16 And, you know, another point
17 of knowledge is, for example, we
18 know that Barrett's esophagus,
19 which is a known precancerous
20 condition with a rate of
21 conversion to frank malignancy of
22 1 to 3 percent every year, also
23 does not change the guidelines.
24 So we have known human

Page 105

1 carcinogen exposure that don't
2 change the national guidelines,
3 and known premalignant conditions
4 that don't change the guidelines.
5 I can't speak to an exposure
6 about a chemical that I just don't
7 understand to a population that I
8 don't know about.
9 So -- but I -- I can speak
10 to the guidelines and the general
11 premise that exposures don't
12 change cancer screening.
13 BY MS. GEMAN:
14 Q. Okay. But can we agree or
15 do you agree that the presence or not of
16 a screening protocol in the task force,
17 does not prevent an otherwise valid
18 monitoring program from being enacted?
19 MR. KUM: Objection. Calls
20 for speculation. Vague and
21 ambiguous.
22 THE WITNESS: I really don't
23 know.
24 BY MS. GEMAN:

<p style="text-align: right;">Page 106</p> <p>1 Q. Okay. I mean, your upshot 2 is if the monitoring program is not in 3 the guidelines, it shouldn't be done, 4 correct, other than those circumstances 5 which you've already detailed? 6 A. My upshot is that I 7 appreciate the expertise and time that 8 the experts in general internal medicine, 9 pediatrics, biostatistics, health 10 services research, that they put the time 11 in and continue to do so based on the 12 available literature for the average risk 13 population, the asymptomatic population 14 with some added information for the high 15 risk population. 16 Again, noting that there are 17 some high risk populations that -- or 18 someone might say they were high risk, 19 where the benefit of an invasive 20 procedure is not deemed high enough 21 relative to the magnitude of potential 22 harm to change the guideline. 23 Q. Well, you understand that a 24 medical monitoring program ordered by a</p>	<p style="text-align: right;">Page 108</p> <p>1 very specifically addressed the tests put 2 forward by Dr. Kaplan. 3 Q. Okay. So it's not your 4 opinion that any protocol, other than 5 what already exists in the task force is 6 ex-ante inappropriate? 7 MS. GEMAN: Sorry, E-X, 8 A-N-T-E. 9 THE WITNESS: I don't really 10 know what that means. Is it 11 Latin? 12 BY MS. GEMAN: 13 Q. Sure. 14 It's not your opinion that 15 any protocol other than what already 16 exists in the task force, is 17 categorically inappropriate? 18 A. It is my opinion that this 19 protocol put forward by Dr. Kaplan is 20 extremely risky to these patients. And 21 quite honestly, it's not clear to me 22 they're put forward without any evidence 23 relative to the cancers he recommends 24 them for.</p>
<p style="text-align: right;">Page 107</p> <p>1 court after a finding of culpability by 2 defendants does not change the guidelines 3 for people of average risk, correct, but 4 instead focuses on a subpopulation of 5 particularized risk? 6 MR. KUM: Objection. Calls 7 for a legal conclusion. Calls for 8 speculation. 9 THE WITNESS: I don't really 10 know much about that, to be 11 honest. 12 It sounds very specific. 13 BY MS. GEMAN: 14 Q. Well, it's specific and it's 15 general. I mean the question is: Do 16 you -- do you -- is it your view that any 17 screening program is inappropriate, other 18 than the two exceptions that you 19 mentioned, unless it's already set forth 20 in the guidelines? 21 A. I don't feel really 22 comfortable commenting without reviewing 23 it. It sounds like a broad topic. It 24 was not the focus of my report, which</p>	<p style="text-align: right;">Page 109</p> <p>1 I really think I can only 2 speak to what is in my expert letter. 3 And it's really outside of the scope of 4 what I was asked to do and what I 5 prepared for to address this. 6 Q. Well, I am entitled to the 7 answer you're able to give now. Is it 8 your opinion that any protocol, other 9 than what's already extant in the task 10 force, is categorically inappropriate? 11 MR. KUM: Asked and 12 answered. 13 You can answer it again, 14 Doctor. 15 THE WITNESS: I'm just going 16 to say I don't know. 17 BY MS. GEMAN: 18 Q. Okay. 19 A. I don't have enough 20 information. But I can say that this 21 protocol is incredibly risky. And I'm 22 happy to address the different tests and 23 scenarios and risks that could arise from 24 it, for this vulnerable class of cardiac</p>

Page 110

1 patients.
 2 Q. Does the -- did the task
 3 force consider and reject the protocol --
 4 strike that.
 5 Does the task force in
 6 addition to its caveats, allow for
 7 change?
 8 A. So again, they have a very
 9 sophisticated literature watch. And if
 10 updated information comes, they very
 11 eagerly consider it.
 12 For example, the last update
 13 for pancreas cancer, they reviewed the
 14 available literature and, again, were
 15 recommended no specific protocol,
 16 screening protocol, either for
 17 asymptomatic average risk patients or
 18 high risk patients based on the evidence.
 19 So I think you're asking me
 20 if they are up-to-date and flexible. And
 21 I would say within the constructs of the
 22 available literature, they are very much
 23 attuned to evidence-based medicine.
 24 Q. So the task force has

Page 111

1 caveats, and they are not fixed forever,
 2 they can change?
 3 A. They will update their
 4 recommendations based on any new
 5 important studies or findings. That is
 6 their mandate.
 7 Q. Do you think it is
 8 appropriate for someone who has one or
 9 two biological parents with a marker for
 10 Huntington's to get the test to see if
 11 they have the marker?
 12 A. I don't know much about
 13 this.
 14 I know that if it's offered,
 15 a lot of people don't want to know.
 16 That's actually all I know in that space.
 17 Q. That's all you know in that
 18 space? Okay.
 19 A. Yeah.
 20 Q. What's the -- do you see any
 21 benefit to knowing?
 22 A. Well, it actually speaks a
 23 lot to the screening protocol. You can't
 24 change the outcome, whether you have it

Page 112

1 or not. And there's no medical
 2 intervention.
 3 So knowing it earlier won't
 4 change your outcome or overall survival,
 5 which is why I think a lot of patients
 6 elect not to.
 7 So again, that's a very
 8 individual decision, but it plays to the
 9 general point of screening, that you may
 10 identify it earlier but it doesn't change
 11 your prognosis. That's actually -- I
 12 wish I thought of that. That was a good
 13 example.
 14 Q. So to be clear, we agree
 15 that that is a paradigmatic example of
 16 something that you can't change if you
 17 know it?
 18 A. Can you slow down and say
 19 all those words, please?
 20 Q. Sorry. Sure.
 21 To be clear, we agreed that
 22 the marker for Huntington's in the HdG
 23 gene is sort of a paradigmatic example of
 24 something that you can't change. You

Page 113

1 can't prevent getting Huntington's. You
 2 can't cure Huntington's if you have it.
 3 Correct?
 4 A. So the paradigm that finding
 5 it earlier doesn't change the outcome.
 6 Yes.
 7 Q. Do you see any benefits,
 8 nonetheless, to somebody being entitled
 9 to find out if they have it?
 10 A. Can you repeat the question?
 11 Q. Sure.
 12 Do you see any benefits to
 13 somebody being entitled to find out if
 14 they have it, it being the HdG marker?
 15 A. So I think it depends on the
 16 person. It's, again, very individual.
 17 Some people would like to know so they
 18 can plan their life and family affairs.
 19 I think a large number would not want to
 20 know because of the anxiety and
 21 psychological distress that it provokes.
 22 So I think there are two
 23 sides to that. That's, I think, as I
 24 recall -- this is years ago, that's some

Page 114

1 of the controversy.
2 And again, comes down to,
3 you know, not one-size-fits-all,
4 personalized care in the sacred clinic
5 space between that patient's physician
6 and the individual wishes of the patient.
7 Q. Do you think it's
8 appropriate for someone who has one or
9 two biological parents with Parkinson's
10 to see if they have the LRRK allele?
11 MR. KUM: Objection.
12 Outside the scope.
13 THE WITNESS: Yeah, I don't
14 know about this. I don't know
15 that I can comfortably address
16 this.
17 It's not anything within the
18 mission that I was given to answer
19 to the screening protocol that was
20 put forth by Dr. Kaplan, which is
21 the focus.
22 MR. KUM: Doctor, just to be
23 clear. Ms. Geman is entitled to
24 ask you whatever questions she

Page 115

1 wants to ask you.
2 If you happen to have an
3 opinion, then you can answer her
4 question.
5 But if you can't answer it,
6 you can tell her that as well.
7 THE WITNESS: Okay.
8 MR. KUM: I just wanted to
9 let you know.
10 THE WITNESS: I don't know
11 is just sort of the answer.
12 MR. KUM: That's a --
13 THE WITNESS: That's the
14 answer.
15 MR. KUM: -- a perfectly
16 acceptable answer.
17 THE WITNESS: I'm going to
18 go with I don't know.
19 MS. GEMAN: Okay. Fair
20 enough.
21 BY MS. GEMAN:
22 Q. Let's segue back to cancer,
23 to oncology.
24 A. That's my sweet spot.

Page 116

1 Q. Do you agree that a Stage 0
2 cancer that has not metastasized is more
3 treatable than cancer that has
4 metastasized?
5 MR. KUM: Objection.
6 Incomplete hypothetical.
7 THE WITNESS: So it's a
8 fascinating question, because we
9 know that not all cancers will
10 progress.
11 And even though we offer
12 surgery or medications, we can't
13 say that this cancer will either
14 grow, progress, within your
15 lifetime.
16 So while it's sort of a
17 comforting thing to say that we
18 offer someone treatment, there's
19 no way to know that it changes
20 their overall survival.
21 And the flip is, if it
22 didn't, they've just been
23 subjected to surgery and
24 potentially other therapies that

Page 117

1 are harmful.
2 We always hope to catch it
3 earlier. That would be my dream
4 for every patient.
5 BY MS. GEMAN:
6 Q. And you would treat a Stage
7 0 cancer?
8 A. I don't really know right
9 now what the standard of care is for
10 Stage 0 cancer. There's different cancer
11 types. And that's certainly a field
12 that's had a lot of evolution and nuance
13 since my time in fellowship.
14 Q. Do you agree that cancer
15 screening can prevent certain advanced or
16 incurable cancers?
17 A. I'm going to parse that out
18 a little bit.
19 So cancer screening can --
20 it doesn't -- nothing clearly prevents
21 cancer.
22 Cancer screening is designed
23 to find cancers earlier when they're more
24 amenable to treatment.

<p style="text-align: right;">Page 118</p> <p>1 Q. So again, that's helpful.</p> <p>2 Thank you.</p> <p>3 Do you agree that cancer</p> <p>4 screening followed by appropriate</p> <p>5 treatment can prevent certain advanced or</p> <p>6 incurable cancers?</p> <p>7 A. So the data that seems the</p> <p>8 most promising, or I should say most</p> <p>9 established, is that in terms of cancer</p> <p>10 screening in an asymptomatic population,</p> <p>11 which is validated, is through the task</p> <p>12 force, and includes breast cancer, colon</p> <p>13 cancer, prostate cancer with a negative</p> <p>14 recommendation for screening, and lung</p> <p>15 cancer.</p> <p>16 I don't know what the</p> <p>17 benefit is in other cancers compared to</p> <p>18 the risk.</p> <p>19 Q. And a colonoscopy can both</p> <p>20 screen for and treat a precancer; is that</p> <p>21 correct?</p> <p>22 A. So that's a great question.</p> <p>23 So you do sort of think of</p> <p>24 it as both screening and potentially</p>	<p style="text-align: right;">Page 120</p> <p>1 don't know that data.</p> <p>2 Q. Do you believe that it's the</p> <p>3 same now as it was 35 years ago?</p> <p>4 A. I can't say with any, you</p> <p>5 know, certainty. I really don't know</p> <p>6 that data. I hope so.</p> <p>7 Q. Okay.</p> <p>8 MR. KUM: Whenever you get</p> <p>9 to another stopping point,</p> <p>10 Counsel.</p> <p>11 MS. GEMAN: Sure.</p> <p>12 Should we -- can we go off</p> <p>13 the record for a second.</p> <p>14 THE VIDEOGRAPHER: Stand by.</p> <p>15 11:31. We are off the video</p> <p>16 record.</p> <p>17 (Brief recess.)</p> <p>18 THE VIDEOGRAPHER: 11:41.</p> <p>19 We are on the video record.</p> <p>20 MS. GEMAN: I'm going to</p> <p>21 introduce two exhibits. What's</p> <p>22 marked as Exhibit 1 is entitled</p> <p>23 the Amended Notice to Take</p> <p>24 Videotaped Oral Deposition.</p>
<p style="text-align: right;">Page 119</p> <p>1 therapeutic if you're able to catch a</p> <p>2 polyp. The data actually isn't</p> <p>3 completely mature to see if it's making</p> <p>4 people live longer.</p> <p>5 But, you know, it's the</p> <p>6 practice that is the presumption. Colon</p> <p>7 cancer rates are ever so slightly</p> <p>8 decreasing, although it's interesting</p> <p>9 that there are so, so, so many</p> <p>10 colonoscopies.</p> <p>11 I would like to think that's</p> <p>12 true. I don't have the -- I haven't read</p> <p>13 any updated studies on whether or not</p> <p>14 that's confirmed. It's actually a little</p> <p>15 bit more in the gastroenterology</p> <p>16 literature.</p> <p>17 Q. And the risk of colon</p> <p>18 cancer -- I'm sorry. Strike that.</p> <p>19 The risk of perforation from</p> <p>20 a colonoscopy have gone down since 1987,</p> <p>21 correct?</p> <p>22 A. I don't know that data.</p> <p>23 That's really -- I don't know went down.</p> <p>24 I know the general perforation risk. I</p>	<p style="text-align: right;">Page 121</p> <p>1 (Document marked for</p> <p>2 identification as Exhibit</p> <p>3 Teitelbaum-1.)</p> <p>4 MS. GEMAN: What's been</p> <p>5 marked as Exhibit 3 -- we'll come</p> <p>6 back to 2 -- is Defendants'</p> <p>7 Responses and Objections to</p> <p>8 Plaintiffs' Notice of Videotaped</p> <p>9 Deposition of Dr. Ursina</p> <p>10 Teitelbaum.</p> <p>11 THE WITNESS: Ursina.</p> <p>12 MS. GEMAN: Ursina, I</p> <p>13 apologize.</p> <p>14 (Document marked for</p> <p>15 identification as Exhibit</p> <p>16 Teitelbaum-3.)</p> <p>17 MS. GEMAN: Madam Court</p> <p>18 Reporter, please hand the witness</p> <p>19 the exhibits.</p> <p>20 BY MS. GEMAN:</p> <p>21 Q. Do you recognize, Doctor,</p> <p>22 what's been marked as Exhibit 1 and</p> <p>23 Exhibit 3?</p> <p>24 A. I see Exhibit 1. And that's</p>

Page 122

1 3. And there's 2. And that's 4.
 2 I think I didn't read
 3 through Exhibit 3. But I think I've seen
 4 the document or read through it briefly.
 5 But, you know, yes.
 6 Q. Please turn to Page 3 of
 7 Exhibit 1.
 8 A. Yes.
 9 Q. Do you see where it says,
 10 "Document requests"?
 11 A. Yes.
 12 Q. Did you look for documents
 13 in response to this request?
 14 A. Every single number.
 15 Q. Do you have a formal
 16 retention letter?
 17 A. No.
 18 Q. Do you know if RX Pro has a
 19 formal retention letter?
 20 A. I don't know.
 21 Q. Is part of the income that
 22 you're earning in connection with this
 23 engagement going to RX Pro?
 24 A. I believe so, yeah. I think

Page 123

1 so.
 2 Q. So you have an hourly rate
 3 and a fee schedule, correct?
 4 A. Yes.
 5 THE VIDEOGRAPHER: I
 6 apologize. You're hitting the
 7 microphone. Yeah. Thank you.
 8 BY MS. GEMAN:
 9 Q. Is it that you're then
 10 giving part of what you receive over to
 11 RX Pro or do you understand that they are
 12 separately billing?
 13 A. I am asked to send my bills
 14 to them. And I do that, and then they
 15 pay me. And I assume that they are
 16 adding on a fee.
 17 Q. So how much per hour are you
 18 personally getting?
 19 A. I'm personally getting \$500
 20 an hour.
 21 Q. And is it different for
 22 testimony?
 23 A. That's like today?
 24 Q. Yes.

Page 124

1 A. I think that's \$750 an hour.
 2 Q. Okay. Any other hourly
 3 rates that you personally are getting?
 4 A. No.
 5 MS. GEMAN: I'm going to now
 6 introduce as Exhibit 2 some
 7 invoices.
 8 (Document marked for
 9 identification as Exhibit
 10 Teitelbaum-2.)
 11 MS. GEMAN: If the court
 12 reporter would hand them over to
 13 you.
 14 BY MS. GEMAN:
 15 Q. You have them?
 16 A. Yes.
 17 Q. So Doctor, what's been
 18 marked as Exhibit 2 is the three invoices
 19 that were provided to me. And my first
 20 question is, do you recognize this packet
 21 of three invoices?
 22 A. I've actually never seen
 23 this packet.
 24 Q. So there is a different

Page 125

1 document that you provide to RX Pro?
 2 A. Yes.
 3 Q. And that document itemized?
 4 A. Yes.
 5 Q. How many invoices have you
 6 provided to RX Pro?
 7 A. I think three.
 8 Q. Do you recall when the first
 9 one was?
 10 A. I can't remember if it was
 11 December or early January.
 12 Q. And the second?
 13 A. Was probably maybe
 14 mid-January.
 15 Q. And the third?
 16 A. I don't know the exact date.
 17 I'm guessing it was end of January or
 18 early February.
 19 Q. Have you been paid yet for
 20 all the work that you've done in this
 21 case, other than today?
 22 A. Yes, I have.
 23 Q. So there was -- you have
 24 already been paid for your deposition

Page 126

1 prep time?

2 A. I haven't been paid for any

3 time since -- I have another invoice to

4 submit. I waited until after today.

5 I don't know when the last

6 check came exactly.

7 Q. Oh, I see. So you've been

8 paid for the invoices for which you've

9 already submitted?

10 A. These are the only ones. I

11 don't know if there are dates on them.

12 Q. How much is current invoice

13 for, the one that you have not yet

14 submitted?

15 A. So it is probably about ten

16 hours, and then I would add today.

17 Q. And that's deposition prep

18 time and then the deposition today will

19 be added?

20 A. And I -- you know, I had

21 to -- yes. And the transportation.

22 Yeah.

23 Q. Okay. If you could look at

24 the first page of this invoice.

Page 127

1 Is this a standard retainer

2 of yours?

3 A. I haven't seen this. I

4 didn't -- explain what a retainer is.

5 Q. Oh, do you see under

6 description, it said retainer?

7 A. Yes.

8 Q. So I -- is this -- is this

9 an invoice for a retainer?

10 A. I don't think I have a

11 retainer. I don't know.

12 Can you just say what a

13 retainer is again? I just have an hourly

14 rate.

15 Q. I understand. Sometimes

16 experts will say, I have an hourly rate,

17 but to get us going, please send us a

18 retainer of X, and then that gets billed

19 against essentially?

20 A. I've only sent hours.

21 That's all I've sent.

22 Q. Okay. So can you please

23 turn to the second page.

24 A. Wait one second. For him,

Page 128

1 I'm going to take the chain off. Yes.

2 Q. Do you see in this invoice

3 dated 1/12/2022 that it indicates that

4 you had billed 51 hours?

5 A. Yes.

6 Q. Does that seem accurate?

7 A. Yes. I -- and you'll see

8 that in my expert letter. I reviewed --

9 and that's what the printing cost is

10 actually.

11 I reviewed all of the expert

12 letters from defense and plaintiff. My

13 living room looked like a minefield. And

14 I actually reviewed every one of them.

15 It was so long that that's why I had to

16 print, because I'm still a bit married to

17 paper, and I couldn't really do all the

18 reading on the computer.

19 So that took some time, in

20 addition to the literature search, which

21 took a fair amount of time, and then

22 writing the expert letter.

23 Q. Did you write the expert

24 report?

Page 129

1 A. I did.

2 Q. Were you provided any

3 language by others?

4 A. The only language that I

5 incorporated was that -- what is it

6 called -- Rule 26. That wasn't familiar

7 to me. But I think that's sort of an

8 expert letter or legal definition maybe.

9 Q. But everything else was

10 written by you, other than the --

11 essentially the intro?

12 A. Well, it wasn't really the

13 intro. It was a little blurb, but yes.

14 Q. Okay. And does this

15 51 hours reflect time spent writing the

16 report, as well as engaging in medical

17 review?

18 A. This 51 hours, the reason

19 it's longer, is I read, in addition to my

20 literature search, and the time I spent

21 writing, it did take some time to work

22 through those very dense expert letters.

23 Q. I appreciate that. What I'm

24 trying to understand is, does this

Page 130

1 51 hours include the time you spent
2 writing the report?
3 A. Yes.
4 Q. Okay. Do you have a sense
5 of how much time was spent writing the
6 report?
7 A. I'm trying to think.
8 Maybe -- because I kept going back and
9 looking at references.
10 It's hard to tell.
11 MR. KUM: Just ballpark it
12 if you can.
13 THE WITNESS: It was all
14 kind of entwined. Probably 12 to
15 15 hours. It's a lot of time.
16 Because my process is I
17 write, I research, I write, I
18 research.
19 And then whenever you look
20 things up, you find more things.
21 And then I go back.
22 I can tell you that it was
23 my entire winter break since
24 Omicron ruined our family travel

Page 131

1 plans. So it was a lot of time.
2 BY MS. GEMAN:
3 Q. So you spent between a half
4 an hour and 40 minutes writing each page?
5 A. I can't really process it
6 that way. I mean, some of it was
7 saying -- you know, the substantive
8 things took time. Again, it's -- I was
9 saying before, I'm a pretty fast typist
10 once I get going.
11 So there was both research
12 and writing and reviewing. I'm -- I was
13 a history major, so I really like looking
14 at primary documents and trying to
15 understand the literature.
16 Q. And the third page of this
17 document, Exhibit 2, indicates 18 and a
18 half hours?
19 A. Mm-hmm.
20 Q. This time there's a
21 breakdown of detail.
22 Do you see that?
23 A. Yes.
24 Q. Do you know why there isn't

Page 132

1 a breakdown of detail on the previous
2 page?
3 A. I'm not sure. I broke down
4 detail, I think, with each time. But I
5 can't remember for sure.
6 Q. Do you know why the RX Pro
7 provided detail on one invoice and not
8 another?
9 A. I don't know.
10 Q. Did anybody edit your
11 report?
12 A. I had, with typos and
13 grammar.
14 Q. You said I had with typos?
15 A. There was help with editing
16 for typos and grammar. But the substance
17 was mine.
18 Q. Help from RX Pro?
19 A. No. Help from -- I can't
20 remember who did it.
21 Q. Was it someone that you work
22 with?
23 A. It was someone on the team,
24 and they were, you know, capitalize this,

Page 133

1 a semicolon is better.
2 Q. You mean the legal team?
3 A. Yeah. What is CLIA? It was
4 like if I had an abbreviation. It was,
5 like, grammar.
6 Q. Okay. Fair enough. And if
7 we could -- and I'm sorry. You indicated
8 that you do have another invoice to be
9 sent, correct?
10 A. Yes. After today.
11 Q. Okay. So let's, if we could
12 now, turn back to the document requests.
13 A. Mm-hmm.
14 MR. KUM: It's Exhibit 1.
15 THE WITNESS: Yes. Mm-hmm.
16 BY MS. GEMAN:
17 Q. Now, earlier you indicated
18 you read Dr. Kaplan's deposition
19 transcript, correct?
20 A. Yes.
21 Q. All right. Did you read any
22 other documents in preparation for this
23 deposition other than those listed in
24 your report?

Page 134

1 MR. KUM: Asked and
2 answered.
3 You can go ahead.
4 MS. GEMAN: It may have
5 been. I just don't remember.
6 THE WITNESS: I read and
7 listed the expert letters from
8 both plaintiff and defense.
9 I read Dr. Kaplan's expert
10 letter. I read his deposition.
11 And I read my own letter --
12 BY MS. GEMAN:
13 Q. Sure.
14 A. -- before I came here.
15 Q. Did you rely on any of the
16 expert reports that you reviewed in
17 forming your opinions?
18 A. Actually, not at all. They
19 were so dense, really, that it would not
20 have informed my opinion.
21 And again, you know, a lot
22 of it boiled down to whether or not NDEA
23 and NDMA are a carcinogen or not. And
24 that did not at all inform my review of

Page 135

1 the medical monitoring protocol.
2 Q. Do you have an opinion about
3 whether NDMA or NDEA are carcinogens?
4 MR. KUM: Objection.
5 Outside the scope.
6 THE WITNESS: I don't think
7 it's really germane to my review
8 of Dr. Kaplan's medical
9 monitoring, again, noting that
10 known carcinogens exposure does
11 not change task force
12 recommendations.
13 BY MS. GEMAN:
14 Q. Do you have an opinion about
15 whether NDMA or NDEA are carcinogens?
16 A. I have no opinion.
17 Q. And have you authored any
18 materials about medical monitoring?
19 A. Of medical monitoring -- oh,
20 like a list of testing, screening?
21 Q. Sure.
22 A. I haven't.
23 Q. Have you authored any
24 materials about cancer screening?

Page 136

1 A. Cancer screening, like
2 specific cancers or -- I have not.
3 Q. And how did you select the
4 articles that you reviewed and that were
5 cited in your report?
6 A. I'm using the Penn
7 biomedical library, interrogated PubMed.
8 And once or twice I had to go to OVID.
9 And I had one document that I had to have
10 them -- that was sort of an archived
11 document because of age. I had to have
12 them retrieve it for me. And then I
13 could look at it.
14 Q. Was that the 1993 article?
15 A. That's the Ekstram.
16 Q. The what?
17 A. The author is Ekstram.
18 Q. Okay. Was that about
19 colonoscopies?
20 A. That was about Swedish
21 population, looking at cancer rates in, I
22 think, metal and rubber workers of
23 inhaled.
24 Q. Did you look for contrary

Page 137

1 information?
2 A. I really focused on the
3 screening protocols. I read every
4 document that I thought was updated and
5 relevant.
6 Q. So take an example of
7 anxiety caused by tests. Did you read --
8 did you look for both articles that said
9 yes, testing causes anxiety or no,
10 testing doesn't cause anxiety?
11 A. So in truth, it is a very
12 sparse literature. There isn't a lot of
13 information. So what I look for and have
14 always looked, if there seems to be a
15 predominate author who is an expert in
16 the field -- and you'll see that when you
17 pull up, some names come up over and over
18 again, which suggests to me that's really
19 their main area of study.
20 So I read those. And, you
21 know, anything that seems pertinent to
22 the topic that's more recent.
23 Q. So just to be more precise
24 though, did you look for contrary

Page 138

1 information? So if you were --
2 A. So I didn't not look for. I
3 put in the topic, and I looked at the
4 results.
5 Q. And how did you determine
6 who, in your view, seemed to be the
7 predominate author?
8 A. For which topic?
9 Q. For any topic.
10 A. Again, it was number of
11 citations.
12 Q. So in your view, if an
13 article said testing doesn't -- just
14 picking any example, testing doesn't
15 cause anxiety, such that it's -- strike
16 that.
17 If an article said the cost
18 of anxiety does not outweigh the benefits
19 of the test, and another article said the
20 opposite, do you think the one with more
21 citations wins?
22 A. I would probably list that
23 as a controversial area.
24 I definitely welcome all

Page 139

1 sides.
2 Q. And are there documents that
3 you read that you did not put in your
4 report?
5 A. If I didn't cite the source,
6 I read -- in my initial look, I looked at
7 Wikipedia to find out about the way the
8 valsartan impurity -- the date -- to kind
9 of get the dates and a context, because I
10 wasn't familiar with it.
11 I have looked at the United
12 States Preventive Task Force website.
13 And I -- you know, just to understand the
14 process.
15 Q. That's helpful. So other
16 than the wiki background and the website,
17 are there other materials that you looked
18 at that you did not cite in your report?
19 A. I'm not really sure. I'm
20 more of an overciter than an underciter
21 because I never want to plagiarize. So I
22 always try to give credit, knowing how
23 much time and effort people put into
24 their work.

Page 140

1 So I don't really know how
2 to answer that. But knowing how I do it,
3 I would imagine not.
4 Q. So sitting here now, you
5 can't think of any articles that you
6 reviewed but you didn't put in the
7 article -- put in the report? Excuse me.
8 A. There were so many -- you
9 know, I didn't open every -- you know, it
10 gives you a hundred options. I may have
11 looked through titles to see if it was
12 relevant. But I didn't open every
13 article.
14 Q. That's helpful.
15 Of the ones that you did
16 open and review, are they all cited in
17 your report?
18 A. I hope so.
19 Q. Okay.
20 MS. GEMAN: Let's introduce
21 your report.
22 Does anybody need a copy of
23 it?
24 BY MS. GEMAN:

Page 141

1 Q. Doctor, has -- is what's
2 been marked as Exhibit 4 the report that
3 you wrote?
4 A. Yes.
5 (Document marked for
6 identification as Exhibit
7 Teitelbaum-4.)
8 BY MS. GEMAN:
9 Q. Thank you. Is that your
10 signature on Page 25?
11 A. It's my electronic
12 signature.
13 Q. And it's dated January 12th;
14 is that correct?
15 A. Yes.
16 Q. And the work you did on this
17 report, as you earlier indicated, was
18 between approximately December 27th and
19 January 12th?
20 A. I think I -- well, I guess
21 the --
22 Q. Let me withdraw the
23 question. Your hesitancy reminds me that
24 my question was poor.

Page 142

1 I think you testified that
2 you started working at some point in
3 mid-December; is that correct?
4 A. Yeah, because I did a lot
5 of -- again, reading all those -- those
6 really thick documents took some time.
7 And that was more to -- to your point, to
8 understand both sides and to get some
9 context.
10 Q. And so what is Rule 26 of
11 the Federal Rules of Civil Procedure?
12 This was the point that you mentioned
13 earlier?
14 A. Yeah. I think it just
15 speaks to how I give my opinions.
16 Q. So will you please identify
17 for me any facts or data that the
18 attorneys provided to you and that you
19 considered in forming your opinions?
20 A. I -- only things that the
21 attorneys gave me were Dr. Kaplan's
22 letter and then later his deposition.
23 And again, I was very democratic in
24 reviewing all of the provided expert

Page 143

1 letters from plaintiffs and defendants.
2 And actually, this sort of
3 Rule 26 was repeated over and over again.
4 And that's quite honestly where I learned
5 about it and saw that it might be a
6 required element.
7 And I put it in, but then
8 confirmed that that was appropriate.
9 Q. Can you identify for me any
10 assumptions that the attorneys provided
11 and that you relied on in forming your
12 opinions?
13 A. They actually really just
14 wanted my opinions. There were no
15 assumptions. They gave me the document
16 and asked me to address it, which, you
17 know, that was my independent.
18 Q. Okay. And you state that --
19 in the second sentence of the second
20 paragraph, that, "Each of the opinions
21 offered in this report are given to a
22 reasonable degree of medical probability
23 and/or certainty."
24 Did you write that sentence?

Page 144

1 A. I wrote it. But again, I
2 think this was the language that I had
3 seen in the others.
4 I don't know -- I don't know
5 if that applies to the Rule 26 or not. I
6 put it in there.
7 Q. What is the meaning of
8 reasonable degree of medical probability
9 and/or certainty?
10 A. I would say that, based on
11 my -- you know, my impression, based on
12 my 20 years of practice, my extensive
13 experience with clinical care and again,
14 my review of the literature.
15 Q. So which -- which opinions
16 -- strike that.
17 About which opinions do you
18 assign probability as opposed to
19 certainty?
20 MR. KUM: Objection. Vague
21 and ambiguous.
22 THE WITNESS: I am certain
23 that I am extremely uncomfortable
24 with Dr. Kaplan's medical

Page 145

1 monitoring protocol.
2 I guess the only
3 uncertainty -- I'm trying to think
4 what I'm uncertain about. Because
5 I'm extremely certain about that
6 and would love to address it.
7 Let me think.
8 BY MS. GEMAN:
9 Q. So with which opinions are
10 you giving a reasonable degree of
11 probability rather than certainty?
12 A. I guess, you know, I know --
13 MR. KUM: Objection.
14 Assumes facts not in evidence.
15 THE WITNESS: I don't know
16 what the -- it's very hard.
17 There's a lot of opinions to parse
18 out. I'm not sure.
19 BY MS. GEMAN:
20 Q. Can you name any?
21 A. I guess I'm not certain how
22 many pills the patients took. I don't
23 know that information. I actually don't
24 know how many there were. I'm assuming

Page 146

1 it's a large number. I'm assuming there
2 are cardiac patients.
3 You know, those are not
4 certainty, because I don't have
5 information about the patient
6 specifically. But I'm assuming it's
7 about those patients.
8 Q. And what's your
9 understanding of how much contaminated
10 product was in the valsartan that the
11 patients ingested?
12 MR. KUM: Objection.
13 Outside the scope.
14 Don't guess.
15 THE WITNESS: Yeah, I --
16 again, I read it for context.
17 It's not really relevant to the
18 mission that I was set forward to
19 review Dr. Kaplan's medical
20 monitoring program.
21 BY MS. GEMAN:
22 Q. So sitting here now, you
23 just don't know how much nitrosamine was
24 in the valsartan; is that correct?

Page 147

1 A. I don't.
2 Q. You refer us to Exhibit A,
3 if we can turn to that on Page 27.
4 A. Yes.
5 Q. And a couple of -- some of
6 these individuals wrote more than one
7 report. Do you know which reports you
8 read?
9 A. I had one report from each.
10 Q. One report from each. Was
11 the report from Janice Britt about
12 general causation or medical monitoring?
13 A. There were a lot, and it was
14 a long time ago. I'm not certain.
15 Q. Do you know which of these
16 experts of defendants have subsequently
17 been withdrawn or stricken as not
18 satisfying the gatekeeper functions?
19 Let me rephrase that.
20 Do you know which of these
21 experts of defendants have subsequently
22 been withdrawn or stricken by the court?
23 A. I know Daniel Catenacci
24 was -- I don't know if it's stricken or

Page 148

1 withdrawn.
2 Q. What's the basis of that
3 knowledge?
4 MR. KUM: Again, without
5 disclosing specific conversations
6 that you've had with counsel.
7 THE WITNESS: I'm assuming I
8 was forwarded some news reports
9 from colleagues, you know, about
10 an SEC indictment.
11 I don't know for sure that's
12 what it was. But that's probably
13 a pretty good guess.
14 BY MS. GEMAN:
15 Q. And did you rely on his
16 opinions in forming your own?
17 A. I did not.
18 Q. And do you know any of these
19 individuals listed?
20 A. So I do not know
21 Dr. Etminan. I do not know Dr. Hecht. I
22 do not know Dr. Panigrahy. I do not know
23 Dr. Madigan. I do not know Dr. Lagana.
24 I have not met Dr. Catenacci in person.

Page 149

1 He was a fellow some years after I left.
2 I have seen him speak.
3 I do not know Dr. Bottorff.
4 I do not know Dr. Britt.
5 I know of Dr. Chodosh
6 because he is a very esteemed physician
7 scientist, among the best in -- I mean
8 amazing. And I don't know that he would
9 even know me. He -- there are some silos
10 at big institutions, especially with lab
11 scientists. He would probably recognize
12 my name.
13 But he mostly does
14 translational research with the breast
15 group, which is a separate subspecialty
16 group.
17 I don't know Dr. Flack. I
18 don't know how this to say this next
19 person's name, but I don't know him. I
20 don't know Dr. Gibb. I don't know
21 Dr. Johnson. And I do not know Dr. Wei.
22 Q. And you also reviewed -- and
23 you said this before -- the task force
24 guidelines, correct?

Page 150

1 A. Yes.

2 Q. Did you review any other

3 guidelines?

4 A. I briefly looked at -- and

5 again, these are actually a little bit

6 more specific to patients that have

7 already been diagnosed with cancer.

8 So the National

9 Comprehensive Cancer Network, which I

10 looked at some of the subspecialty

11 guidelines, like hepatology and

12 gastroenterology.

13 Those were sort of more

14 relevant to when I was assessing each

15 item on Dr. Kaplan's monitoring list.

16 That's what I can think of sitting here.

17 Q. Did you look at the ASCO?

18 A. ASCO. I did not.

19 Q. You did not.

20 A. ASCO?

21 Q. Yes.

22 A. I didn't look -- I mean, I

23 looked relative to referring high risk

24 patients. I just confirmed because,

Page 151

1 since I have the good fortune of being in

2 an academic center, I just wanted to be

3 sure.

4 You know, they put out these

5 guidelines to standardize care and make

6 sure all care is of a good level. So I

7 made sure that my practice was the same.

8 I mean, I look at NCCN

9 guidelines every day --

10 Q. Why?

11 A. -- multiple times a day.

12 Q. Why?

13 A. Because you always -- again,

14 it's safety and standard of care. And

15 you want to make sure that you're within

16 the consensus recommendations, not only

17 because you want the best care for the

18 patient, because it may inform insurance

19 coverage, unfortunately, of a recommended

20 treatment.

21 So, you know, I'm sort of --

22 check, check, double-check all the time,

23 if I -- you know, every prescription,

24 everything I put my name to, I

Page 152

1 double-check.

2 Q. So NCCN is part of the

3 consensus of standard of care?

4 A. National Comprehensive

5 Cancer Network puts out these guidelines.

6 And it's interesting, I don't know --

7 like, you know, you have branch points

8 from diagnosis, what stage, what the

9 options are. Obviously it's personalized

10 to the patient, both in terms of their

11 individual cancer and their fitness

12 status.

13 You know, I don't think it

14 was originally designed that way. But

15 unfortunately, insurance tends to follow

16 the guidelines. So I don't want patients

17 to get bills. So I'm careful to review

18 them.

19 Q. So is it NCCN part of the

20 consensus standard of care?

21 A. It is a national

22 comprehensive cancer -- that puts out

23 guidelines, that help -- that's part of

24 the standard of care.

Page 153

1 Q. Is it a respected

2 organization?

3 A. Very.

4 Q. Did you review their

5 screening guidelines?

6 A. I think I did. And I

7 remember that they -- again, these are

8 generally in the setting of cancer.

9 They did have some screening

10 guidelines. I can't remember exactly.

11 They were not -- it's hard to say because

12 the task force guidelines are for

13 asymptomatic patients in the primary care

14 setting.

15 The NCCN were a little more

16 nuanced, but I don't think is the

17 national standard, I wouldn't say is the

18 national standard for asymptomatic

19 patients in the primary care setting.

20 Q. To the extent NCCN and

21 U.S. --

22 A. We'll just call it the task

23 force.

24 Q. Thank you. And by task

Page 154

1 force, we mean the USPTF?
2 MR. KUM: USPSTF. You
3 missed an S.
4 THE WITNESS: S. Screening.
5 S is screening.
6 MR. KUM: You missed an S.
7 BY MS. GEMAN:
8 Q. I missed the S.
9 A. Preventive screening task
10 force.
11 Q. I apologize.
12 So to the extent that the
13 USPSTF, i.e., the task force, and NCCN
14 differ, do you think one is right and one
15 is wrong?
16 A. I would put that
17 differently. Every subspecialty group
18 comes out with it's sub -- you know, it's
19 consensus guidelines. You know,
20 hepatology, thoracic, pulmonary, they may
21 have them. That doesn't mean that they
22 are -- and it's generally different,
23 because these are patients that have been
24 referred to them.

Page 155

1 It is not the -- for
2 example, hepatology, if they have a
3 patient referred to them with known
4 cirrhosis, will have a different
5 guideline. It's usually
6 disease-specific.
7 Unfortunately, the way that
8 we know what the national standard is, is
9 what Medicare will cover.
10 Medicare will cover the task
11 force recommendations, and regular
12 insurance quickly follows. And what I
13 would say also again -- I mentioned we
14 have electronic health records that
15 prompt us to what the standardized
16 evidence-based recommendations are from
17 the task force.
18 This comes from the
19 Department of Health & Human Services.
20 And the task force recommendations are
21 what we are prompted for.
22 And I am not certain, I
23 would actually suspect not, that if you
24 follow different guidelines, it would be

Page 156

1 covered by any insurance.
2 Q. If you could please turn to
3 your CV, which is Exhibit B of your
4 report. It's within the report itself.
5 A. Okay.
6 Q. And I noted also that your
7 counsel provided a slightly more updated
8 that included abstracts?
9 A. Yeah, I thought that would
10 be more complete. It's sort of in
11 oncology. You know, you don't always put
12 your abstracts on. But I thought for
13 completeness, that would be appreciated.
14 Q. So is the with the inclusion
15 of the abstracts, is your CV complete?
16 A. Yes.
17 Q. Let's turn to, please,
18 Page 4 of your report.
19 MR. KUM: Are you marking
20 this as an exhibit?
21 MS. GEMAN: It's already --
22 well, it's within the -- I mean,
23 we received it all as one.
24 MR. KUM: Oh, that's right.

Page 157

1 Okay.
2 MS. GEMAN: Yeah, we're
3 happy to -- I don't have it
4 printed. But I'm happy to mark
5 the more updated CV if you wish.
6 Okay.
7 Actually, this is -- let's
8 go off the record and do a brief
9 lunch break now if that's okay
10 with you, Doctor.
11 THE VIDEOGRAPHER: 12:20.
12 We are off the record.
13 - - -
14 (Whereupon, a luncheon
15 recess was taken.)
16 - - -
17 THE VIDEOGRAPHER: 1:06. We
18 are on the video record.
19 - - -
20 CONTINUED EXAMINATION
21 - - -
22 BY MS. GEMAN:
23 Q. Good afternoon, Doctor.
24 Sitting here now, is there

Page 158

1 anything in your report that you would
2 like to change?
3 A. No.
4 Q. Could I ask you to please
5 turn to the last page?
6 A. Of the report?
7 Q. Yes.
8 A. Can you tell me which page?
9 Q. Yes. I'm sorry. Page 24.
10 Do you see that? Are you on Page 24?
11 A. I am. I hope your page and
12 my page match.
13 Q. Well, I'm going to read you
14 the first sentence of the second-to-last
15 paragraph.
16 "It is not clear from any of
17 the data I have reviewed on valsartan
18 that nitrosamine exposure increases the
19 pretest probability of developing any
20 cancer in the human patients and
21 therefore merits changes in validated
22 screening tests and intervals."
23 Did I read that correctly?
24 A. Yes.

Page 159

1 Q. Does this -- earlier today
2 you testified that you were offering no
3 opinion on whether nitrosamines caused
4 cancer; is that correct?
5 A. I don't -- I don't know if
6 it does or it doesn't.
7 Q. All right. And are you
8 making a causal statement here that --
9 namely, that your review of the expert
10 reports in this case leads you to infer
11 that nitrosamine exposure does not cause
12 cancer?
13 A. So I'm not a causal expert,
14 as I mentioned before.
15 I read both defendant and
16 plaintiff, sort of very different. And
17 so I wasn't sure. I think it's true that
18 I don't know from the data that it does
19 or doesn't. So that's sort of that
20 statement.
21 But again, no exposure
22 merits changing the national guidelines
23 put out by the task force.
24 So I can't speak to changing

Page 160

1 those guidelines based on whether or not
2 it is -- whether or not it is
3 carcinogenic or not. I can't -- I
4 wouldn't change the guidelines.
5 And to me, what is reflected
6 in that sentence is, I don't know.
7 Q. All right. So but whether
8 it's appropriate for medical monitoring
9 to be ordered in this case is an entirely
10 separate question from whether the
11 general population guidelines are
12 formally changed. Do you understand
13 that?
14 MR. KUM: Objection. Vague
15 and ambiguous.
16 THE WITNESS: Yeah, can you
17 repeat or re --
18 BY MS. GEMAN:
19 Q. Whether it's appropriate for
20 medical monitoring to be ordered in this
21 case is an entirely separate question
22 from whether the general population
23 guidelines are formally changed.
24 Do you understand that?

Page 161

1 MR. KUM: Same objections.
2 THE WITNESS: There's no
3 indication to change guidelines of
4 screening for asymptomatic
5 patients based on any exposure.
6 BY MS. GEMAN:
7 Q. What does that mean?
8 A. It means that whether or not
9 this is a carcinogen would not change my
10 opinion.
11 Q. So there's no amount of sort
12 of danger from the contaminated medicine
13 that the class members took that would
14 cause you to believe that any screening
15 is appropriate?
16 A. I can't speak to that. I
17 expect that the task force would review
18 confirmed human carcinogens. And whether
19 or not that would change it, is actually
20 completely in the task force hands. That
21 is not to me.
22 But what I have read and
23 reviewed is the only exposure that
24 changed any of the recommendations was

Page 162

1 20 years of tobacco between ages 55 and
 2 80.
 3 And there are lots of known
 4 human carcinogens, including asbestos,
 5 radon exposure, that are confirmed, that
 6 did not inform the task force
 7 recommendations. It did not meet the
 8 magnitude of harm, magnitude of benefit
 9 definition.
 10 Q. So I'm asking a slightly
 11 separate question, which is that, is
 12 there any amount of danger from the --
 13 danger meaning carcinogenic danger, from
 14 the contaminated medicine that the class
 15 members took that would cause you to
 16 believe that any screening is
 17 appropriate, whether or not it is
 18 accompanied by a change in the task
 19 force?
 20 MR. KUM: Asked and
 21 answered.
 22 THE WITNESS: I can't really
 23 speak to that.
 24 BY MS. GEMAN:

Page 163

1 Q. You can't answer that
 2 question?
 3 A. I don't know -- I don't know
 4 what the -- you know, again, right now
 5 it's not a known human carcinogen. I
 6 don't know really anything about the
 7 dose, kinetics, or -- I have no idea.
 8 Q. So if I ask you to assume
 9 just for purposes of this question that
 10 it is a known human carcinogen, or that
 11 it is a carcinogen, is there any amount
 12 of danger, carcinogenic danger to the
 13 class that would prompt you to conclude
 14 that screening is appropriate whether or
 15 not accompanied by a change in the task
 16 force?
 17 MR. KUM: Incomplete
 18 hypothetical. You can answer, if
 19 you can.
 20 THE WITNESS: This doesn't
 21 really address the task I was
 22 given to evaluate the tests that
 23 were put forth.
 24 And I -- you know, to your

Page 164

1 point, they were suspecting that
 2 tobacco usage was carcinogenic for
 3 years. And they didn't change the
 4 guidelines until a study came
 5 forth, randomized control trial,
 6 New England Journal, that was then
 7 reviewed by the task force, and
 8 one of the first major adjustments
 9 was put forth.
 10 So I can't speak to whether
 11 or not it would influence. It is
 12 quite honestly too hypothetical.
 13 BY MS. GEMAN:
 14 Q. Sitting here today, you
 15 can't answer that question?
 16 A. Based on what I know of
 17 screening and how exposures are handled,
 18 I do not think it would change the
 19 guidelines. And I do not think that the
 20 medical monitoring put forth would prove
 21 of more benefit than harm.
 22 I think the medical
 23 monitoring program put forth by
 24 Dr. Kaplan is extraordinarily harmful and

Page 165

1 dangerous to an asymptomatic patient.
 2 Q. What screening would you
 3 suggest for patients who were exposed to
 4 dangerous amounts of nitrosamine in their
 5 valsartan due to culpable behavior of the
 6 defendants, which is the assumption that
 7 I'm offering for purposes of this
 8 question?
 9 A. I --
 10 MR. KUM: Objection.
 11 Assumes facts not in evidence.
 12 Incomplete hypothetical.
 13 You can answer.
 14 THE WITNESS: I don't know
 15 of any exposure right now that
 16 changes the guidelines, including
 17 radon, asbestos, and others
 18 currently. I don't -- I don't
 19 know. That is the premise of my
 20 opinion.
 21 BY MS. GEMAN:
 22 Q. If Galleri were available,
 23 would you use it?
 24 A. Galleri?

Page 166

1 Q. Galleri.
2 A. So it's -- it's so
3 interesting. So I would not use it
4 outside of the context of a clinical
5 trial. Frankly, I'm not sure how
6 Dr. Kaplan is ordering it since it's not
7 FDA approved. It has a spectacular
8 advertising campaign. I have patients
9 ask me about it all the time.
10 It would not be covered by
11 insurance. It is not FDA approved. And
12 it is particularly not validated in
13 screening. The only studies today are
14 observational. They are not even fully
15 prospective.
16 I suspect sometimes these
17 companies come to particularly private
18 practice offices. They're not allowed in
19 ours. And they give them some free ones
20 to kind of encourage interest and
21 enthusiasm for ordering them.
22 I don't know how he could
23 order it and have an insurance pay. So
24 that's what I suspect is happening.

Page 167

1 Q. So I'm sorry. Are you
2 suggesting that Dr. Kaplan recommended
3 this test because, in your imagination,
4 they may have gone to his office?
5 A. I have no idea how -- you
6 know, they come in these boxes. You have
7 to either order them or oftentimes the
8 reps will deliver them. He specifically
9 stated in his deposition that he ordered
10 them a few times.
11 They often give them gratis
12 because they want, in the future, the
13 doctors to order them. So I don't even
14 know how he gets the kit. It's only FDA
15 approved that -- or potentially
16 commercially available -- not FDA
17 approved. It is not FDA approved. But
18 it is only commercially available in New
19 York, based on what I read.
20 So I don't even know how he
21 had access to the test.
22 Q. Well, you didn't cite the --
23 anything for the proposition that it's
24 only commercially available in New York.

Page 168

1 A. It's in my letter.
2 Q. Can you point to the cite?
3 A. Sure. Happy to.
4 Q. It's probably on Galleri,
5 Galleri -- Galleri, Galleri. It's on
6 Page 20 -- 21.
7 A. So Number 1, these tests are
8 not FDA approved. Galleri has --
9 Q. Excuse me. I'm going to ask
10 you to answer my question. What is the
11 cite for your statement that it's not
12 commercially available outside of New
13 York? There are no citations here.
14 A. I might have gotten it from
15 the -- I looked at the website. I can't
16 say for sure. I did look at the website
17 of the company. I didn't cite the
18 website.
19 Q. So does this refresh your
20 recollection about other documents that
21 you looked at but did not cite in your
22 report?
23 A. I'm not sure if a commercial
24 website for a product is a document. But

Page 169

1 I would add that to it then.
2 Q. What other websites did you
3 look at that you did not cite in your
4 report?
5 A. I think that's the only test
6 that I had looked up. I wasn't familiar
7 with it, and I wanted to see, you know,
8 how they were presenting it.
9 Q. Are you aware that Galleri
10 is available all across the country?
11 A. It depends on in what
12 context. I don't know how to order it.
13 I've never -- you know, I don't know how
14 it's done. It is not FDA approved. So
15 it would not be something that I would be
16 ordering.
17 Q. Do you have any -- you use
18 tests that aren't FDA approved
19 frequently, don't you?
20 A. No.
21 Q. None of your blood tests are
22 not FDA approved?
23 A. I mean, they're all done in
24 a CLIA lab. Which blood test do you

Page 170

1 mean?

2 Q. Name for me the blood test

3 that you use and tell me, please, which

4 are FDA approved as distinct from CLIA

5 certified?

6 MR. KUM: Objection. Vague

7 and ambiguous. Overbroad.

8 Outside the scope of her report.

9 But you can answer.

10 THE WITNESS: I mean, any

11 lab I order within the Penn system

12 is CLIA approved. It is a

13 CLIA-approved lab.

14 I've ordered Signatera,

15 which is FDA approved. I've

16 ordered Caris. I've ordered

17 Foundation.

18 The point is I don't order

19 tests for patients that I don't

20 think will get covered. I don't

21 do the free test from the company

22 strategy. I don't want a patient

23 to get a multithousand-dollar bill

24 for an uncertain indication.

Page 171

1 BY MS. GEMAN:

2 Q. So let's parse that, because

3 that's a different answer. So you do use

4 tests that are CLIA certified, correct?

5 A. Absolutely.

6 Q. Okay. And this Galleri is

7 or is not CLIA certified, to your

8 knowledge?

9 A. I don't know.

10 Q. And if I tell you that it's

11 CLIA certified, would that change your

12 disinclination to offer it to your

13 patients?

14 A. It's not FDA approved, and

15 the indication is uncertain. Every

16 time -- and I -- actually, this is a good

17 opportunity.

18 I looked at the data.

19 There's been a couple studies.

20 The biggest issue with the

21 Galleri GRAIL test as it pertains to

22 Dr. Kaplan's recommendation is, first of

23 all, the initial studies were validation

24 studies. If it says it's colon cancer,

Page 172

1 does the patient have colon cancer.

2 The other issue is it

3 depends to a degree how active the cancer

4 is, how many cell-free tumor DNAs in the

5 blood that can be measured.

6 And if you look at the most

7 updated data, for Stage I cancers, it

8 picks it up 14 percent of the time. For

9 Stage II, it picks up 40 percent of the

10 time.

11 For Stage III, it picks up

12 cancer 70 percent of the time. And for

13 Stage IV, it picks up cancer 90 percent

14 of the time.

15 And again, it speaks to the

16 activity of the tumor which is secreting

17 the cell-free DNA into the bloodstream.

18 My point with that is I

19 think Dr. Kaplan is hoping to find these

20 early stage cancers using this screening

21 tool. And there is poor evidence that it

22 is helpful in the early stages.

23 My concern would be, if a

24 patient got a false -- if it was false

Page 173

1 negative, again, they might discount any

2 symptoms or screenings that were relevant

3 to that cancer.

4 That is my biggest concern

5 with Galleri. It is not -- also, it's

6 not validated in the screening setting

7 for average risk or high risk. That

8 study is actually going on right now.

9 And the scientists -- the oncologists are

10 extremely good, George Fisher, Brad

11 Wolpin, top docs that are using this.

12 I just have to say, I love

13 the study design. So -- and it will take

14 years.

15 So they have two sets of

16 patients that are equivalent. One set

17 they do standard screening. The other

18 set they do Galleri in addition to

19 standard screening. And if a signal is

20 picked up on Galleri, they leave the

21 decision between the patient and their

22 doctor whether or not to pursue it.

23 And the key there is if a

24 patient, is -- for example, if they're

Page 174

1 not a surgical candidate because of their
2 cardiovascular disease or renal disease
3 or frailty or whatever reason, you don't
4 want to put someone through invasive
5 tests when you then can't act on the
6 findings.
7 Q. Dr. Teitelbaum, we're going
8 to have to keep coming back if you're not
9 going to answer my questions. And I will
10 use many of these answers as Exhibit A of
11 the motion to extend this deposition.
12 It is your job today to
13 answer the questions that I ask, not to
14 make speeches.
15 Do you understand that?
16 MR. KUM: Objection.
17 Argumentative. She did answer the
18 question. If you want to ask
19 another question, feel free.
20 BY MS. GEMAN:
21 Q. Do you understand that?
22 A. I would love to hear your
23 question again, if you think I didn't
24 address it. I'm happy to.

Page 175

1 Q. Good. Does it surprise you
2 that the test is CLIA certified?
3 MR. KUM: Asked and
4 answered.
5 THE WITNESS: That is not a
6 tough metric. Essentially every
7 lab in any sort of hospital or
8 clinic or LabQuest or Labcorp is
9 CLIA certified. They can't
10 process anything in the labs if
11 it's not CLIA certified.
12 BY MS. GEMAN:
13 Q. But you just said in your
14 earlier answer in support of the tests
15 that you order that they were CLIA
16 certified. So is it a different standard
17 for this test?
18 A. It's the standard for all
19 tests we order. I -- sometimes if we are
20 in -- doing a clinical trial, we just
21 have to apply for a CLIA certification to
22 make sure the test is considered valid.
23 But essentially anything
24 that I order at my hospital is CLIA

Page 176

1 certified.
2 Q. So contrary to your view in
3 your report, the test is CLIA certified.
4 It is available outside of New York.
5 Do you understand that?
6 MR. KUM: Objection.
7 Misstates testimony.
8 Was there a question?
9 MS. GEMAN: Yes.
10 BY MS. GEMAN:
11 Q. Do you understand that?
12 A. Well, you said contrary.
13 I said Galleri does have --
14 IDE -- I don't -- where is the -- I don't
15 say that it's CLIA certified?
16 Q. Well, that's a good
17 question. What is IDE approval?
18 A. Investigative device
19 exemption. It's just so that it can be
20 used in clinical trials.
21 Q. Do you believe that -- and
22 is it used in clinical trials?
23 A. I just mentioned the
24 PATHFINDER study. There's actually three

Page 177

1 big ones going on right now. PATHFINDER,
2 STRIVE, something else. Everyone would
3 love to know if this is effective.
4 Again, we all hate cancer.
5 Q. How many oncologists are
6 already using Galleri?
7 A. I don't know any that are
8 using it.
9 Q. How many oncologists are
10 there in the U.S.?
11 A. I don't know that.
12 Q. If I told you there is about
13 13,000, does that seem accurate?
14 MR. KUM: Don't guess.
15 THE WITNESS: I have no
16 idea.
17 BY MS. GEMAN:
18 Q. Do you know what percent of
19 those are already using Galleri?
20 A. (Shaking head.)
21 THE COURT REPORTER: You
22 have to answer.
23 THE WITNESS: No.
24 MR. KUM: Could you just

Page 178

1 verbally answer?
2 Could you re-ask the
3 question?
4 BY MS. GEMAN:
5 Q. Do you know what percent of
6 oncologists are already using Galleri?
7 A. I do not.
8 Q. Well, do you have any
9 estimate?
10 A. I have none.
11 Q. Okay. If it's more than a
12 thousand, would that surprise you?
13 MR. KUM: Calls for
14 speculation.
15 THE WITNESS: I have no
16 idea.
17 BY MS. GEMAN:
18 Q. Given that it's already
19 in -- let me ask a different question.
20 Do you have any reason to
21 believe that it won't be FDA approved as
22 soon as next year?
23 A. I have no idea.
24 Q. Have you ever -- have you

Page 179

1 heard any -- I mean, you -- sometimes
2 one -- sometimes there's information
3 pre-FDA determination that leads one to
4 have doubt as to whether a drug might be
5 approved.
6 Do you agree?
7 A. I don't know the process of
8 the FDA nor do I get that, like,
9 preapproval. But it sounds reasonable.
10 Q. For example, there might
11 be -- have you ever read about a study
12 that didn't meet one of its clinical
13 endpoints?
14 A. Of course.
15 Q. Okay. And have you ever
16 read news about a drug that -- where
17 there is consensus or belief among
18 medical professionals that FDA approval
19 is in doubt?
20 A. Broadly, I'm sure I have
21 heard that.
22 Q. Have you heard that about
23 Galleri?
24 A. I have not heard anything

Page 180

1 about. I just really focused on the
2 research aspect. And I think the key
3 here is the data to date about early
4 stage findings because that's really the
5 question here.
6 Can it be used as a
7 screening tool to find early stage
8 cancers when it's at an intervenable
9 interval.
10 There is no data, and I will
11 share with you as I did in this letter.
12 I do not know that any of the high risk
13 clinics nationally are using it, the high
14 risk clinics.
15 Q. Do you find 14 percent a low
16 number?
17 A. Yes. That means that -- and
18 again, this is in patients with confirmed
19 Stage I cancer. It means that 86 percent
20 don't think they have cancer. And that's
21 devastating if they do.
22 Q. So I want to make sure I
23 understand the statistic.
24 Your understanding is that

Page 181

1 there's an 86 percent false negative
2 rate?
3 A. Yes.
4 Q. Okay. And when people are
5 using Galleri, is that the only
6 healthcare they're getting?
7 A. I don't know.
8 Q. Did Dr. Kaplan suggest use
9 of Galleri to the exclusion of other
10 treatments?
11 A. He just said he's using it.
12 Q. Is it your understanding
13 that Dr. Kaplan suggested using Galleri
14 to displace all other care?
15 A. Can we look at his -- I
16 don't recall. Can we look at his
17 deposition?
18 Q. You can tell me your
19 recollection of that. No, we can't look
20 at his deposition.
21 MR. KUM: She can ask you
22 whatever question. You can answer
23 it.
24 THE WITNESS: I don't recall

Page 182

1 one way or another.
2 BY MS. GEMAN:
3 Q. So your primary concern
4 about Galleri, or one of them, is the
5 false negative rate in early stage
6 cancers, correct?
7 A. And, you know -- yes. I
8 mean, the good news is it didn't seem to
9 have false positives.
10 Q. Meaning people, if it said
11 you had something, you had something?
12 A. Yes.
13 Q. Okay. You mentioned before
14 a concern a patient getting a large bill.
15 Can you explain -- or an unexpected bill.
16 I'm not trying to put words in your
17 mouth. But can you tell me what you
18 meant by the link between FDA approval
19 and billing?
20 A. So I don't know the
21 insurance companies' process on paying
22 for a study that's not FDA approved or in
23 the guidelines. And we've certainly had
24 patients get bills, even for approved

Page 183

1 tests, and they are large.
2 And the other point I'd like
3 to make is that there are tests that are
4 FDA approved that we don't yet use in our
5 cancer practice. So FDA approval in and
6 of itself is not the only metric,
7 although I find it important.
8 For example, there's a test
9 called -- and it goes again to ordering a
10 study and then not knowing what to do
11 with the results, which is the harm.
12 There is a test that is FDA
13 approved -- we're actually not sure how
14 in the oncology world -- called
15 Signatera. And it assesses the presence
16 or absence of circulating tumor material
17 for colon cancer.
18 And the way that it's
19 indicated is after the cancer is removed
20 and before you start chemo, if there are
21 cancer cells in the bloodstream detected,
22 the risk of recurrence is higher. That's
23 what it tests. And if at the end, they
24 draw this test and it clears, your risk

Page 184

1 of recurrence is lower.
2 The problem is, it doesn't
3 say, if you draw this test it is
4 positive, and you draw it after the six
5 months are chemo are done and it's
6 positive, what do you do? You have no
7 measurable disease in the body. You have
8 no tumor marker. You don't know what
9 you're treating.
10 Do you watch this anxious
11 patient who knows they have circulating
12 tumor colon cancer cells? Do you try a
13 different chemo?
14 And even though it's FDA
15 approved, it's not really clear what to
16 do with the test.
17 So in our practice, we only
18 use it within a context of a clinical
19 trial because, again, it causes anxiety
20 without meaningful intervention.
21 So FDA approval is one
22 metric. It's not the only. And it would
23 have to have the indication of early
24 screening in an asymptomatic patient as

Page 185

1 one of the indications, and it would have
2 to be vetted by the United States
3 Preventive Task Force because it's in the
4 arena of cancer screening in asymptomatic
5 patients.
6 Q. What was the name of that
7 test?
8 A. Signatera.
9 Q. Where in Dr. Kaplan's report
10 did you see his recommending it?
11 A. He didn't.
12 Q. He didn't. Okay.
13 A. I'm explaining to you the
14 risk of ordering tests and then not
15 knowing what to do with them. Another
16 good one in there --
17 Q. Well, hang on.
18 MR. KUM: Hang on.
19 BY MS. GEMAN:
20 Q. There's no question.
21 There's no question.
22 A. Sorry.
23 Q. Wait for the question.
24 Are there other clinical

Page 186

1 facilities that use Signatera, yes or no?
2 A. I assume yes.
3 Q. Okay. So there's a dispute
4 of opinion about that particular test and
5 its efficacy?
6 A. In -- I don't know about --
7 I mean, it's accurate at measuring the
8 cancer cells. The question is then what
9 do you do with it.
10 Q. There's a dispute of opinion
11 among oncologists as to whether to use
12 that particular test, Signatera, correct?
13 A. I don't know that it's a
14 dispute. I think the question is, what
15 do you do with the results.
16 Every time you order a test,
17 you have to think about the results
18 because that's where the potential for
19 harm comes. It's easy --
20 Q. Some oncologists -- some
21 oncologists use the test; some do not,
22 correct?
23 A. I presume, yes.
24 Q. Similarly with Galleri, some

Page 187

1 oncologists use it, some do not, correct?
2 A. That's what I heard from
3 you.
4 Q. Do you have any independent
5 knowledge otherwise?
6 A. I don't know anyone that's
7 ordered it.
8 Q. Do you dispute that there
9 are hundreds, maybe even more than a
10 thousand, providers that have used it?
11 MR. KUM: Objection. Calls
12 for speculation.
13 Don't guess.
14 THE WITNESS: I have no
15 idea.
16 BY MS. GEMAN:
17 Q. Have you discussed Galleri
18 with colleagues outside of this
19 litigation?
20 A. Only thing I asked is if we
21 are using it in the high risk setting.
22 If we have it on -- I mean, there was
23 nobody ordering it.
24 Q. And was -- is some of the

Page 188

1 concern, not all, but some of the concern
2 about its use, the price tag?
3 A. That actually wasn't the
4 concern. The concern is that it's not a
5 validated screening tool. And it has
6 poor results in early screening, Stage I
7 and Stage II.
8 Q. When you mentioned earlier
9 the concern about the test, that if it's
10 not FDA approved, the consumer might have
11 to pay, are you now withdrawing that
12 testimony?
13 MR. KUM: Objection. Vague
14 and ambiguous.
15 THE WITNESS: I don't really
16 understand your question. I think
17 they're kind of unconnected. But
18 I'm happy to hear it again.
19 BY MS. GEMAN:
20 Q. Sure. You testified a bit
21 ago that one concern for you with not
22 using an FDA-approved intervention is
23 that it might not be covered by
24 insurance; is that correct? Do you

Page 189

1 recall that testimony?
2 A. It was the opposite. I said
3 if it's not FDA approved, I would be
4 concerned that the patient would carry
5 the economic toxicity.
6 Q. I'm sorry. I said it
7 converse. But that's what I meant.
8 So one concern with using a
9 drug that is not FDA approved is the
10 financial impact on the patient?
11 A. You know, patients have
12 tremendous economic toxicity from all of
13 the tests. We write a prescription or
14 order a test. We don't always know and
15 they don't always tell us when the bill
16 comes.
17 I do have patients bring the
18 bill to me. And it's incredibly
19 stressful. And we help them work through
20 it, and we contest it, often for things
21 that are approved.
22 So even without the
23 conundrum of ordering a non-FDA-approved
24 or a test that's not indicated in that

Page 190

1 setting, we have patients getting bills,
2 and I've had patients be foreclosed upon
3 for tests that are certainly covered.
4 And so for me, with this
5 vulnerable class of patients, I have to
6 be sure they are not going to get a bill.
7 I will say that the task
8 force guidelines were created without
9 regard to the cost of the testing.
10 So it was completely
11 financially blind when they were
12 assessing the screening tests.
13 Q. And how much, in your
14 experience, of patient anxiety about
15 testing relates to -- great phrase that I
16 hadn't used before -- economic toxicity?
17 A. So this is actually just
18 that and "scanxiety." These are terms
19 that are just -- it's sort of a brand-new
20 field of study.
21 And you have to imagine, if
22 you're ill and you have a limited time to
23 live, we're actually studying the burden
24 of waiting room time, travel time. This

Page 191

1 is sort of a whole new field looking
2 at -- in health sciences research
3 actually, to look at all of the impacts
4 of our cancer care on our patients, not
5 just the side effects of the chemotherapy
6 or the symptoms from the cancer.
7 Q. And so thank you. I
8 appreciate that clarification.
9 How much of patient anxiety
10 in testing relates to economic toxicity,
11 in your view?
12 A. They all ask me, "Am I going
13 to get a bill?" I had a patient -- I
14 have a patient on a Signatera trial we're
15 getting -- we're doing. And she said --
16 she messaged into our office and called
17 two times and said, "Am I going to get
18 billed for this?" Patients are very
19 anxious. Our supportive -- yeah.
20 Q. Were you done with your
21 answer?
22 A. Yes, relating to that.
23 Q. And you -- I'm going to give
24 you a hypothetical.

Page 192

1 Let's say a 73-year-old was
2 exposed to substances that are proven to
3 raise his risk of prostate cancer by a
4 statistically significant degree.
5 And he is otherwise very
6 healthy.
7 Do you think it's
8 appropriate to screen him for prostate
9 cancer?
10 MR. KUM: Incomplete
11 hypothetical.
12 You can answer if you can.
13 THE WITNESS: I do not.
14 BY MS. GEMAN:
15 Q. What about for lung cancer?
16 A. I'm going to go back to the
17 prostate cancer, if I may.
18 Q. Well, no, no, if I may, I
19 meant specifically a 73-year-old was
20 exposed to substances that are proven to
21 raise his risk of lung cancer by a
22 statistically significant degree, and
23 he's otherwise healthy.
24 Would you consider it

Page 193

1 appropriate to screen him for lung
2 cancer?
3 MR. KUM: Incomplete
4 hypothetical.
5 You can answer if you can.
6 THE WITNESS: I would not.
7 BY MS. GEMAN:
8 Q. You would not.
9 What would need to change
10 about the hypothetical to incline you to
11 recommend screening for lung cancer for
12 that gentleman?
13 MR. KUM: Assumes facts not
14 in evidence. Calls for
15 speculation.
16 THE WITNESS: Again,
17 exposures don't change guidelines,
18 generally, in asymptomatic
19 patients.
20 I'll just say, you know, it
21 takes decades for people to make
22 cancer. That's been well
23 established.
24 I don't know what the life

<p style="text-align: right;">Page 194</p> <p>1 expectancy of a 73-year old is. I 2 don't know if that fits in with 3 the magnitude of risk and 4 magnitude of benefit. 5 I personally would not 6 screen that person for lung 7 cancer. 8 BY MS. GEMAN: 9 Q. So if that person came in 10 your office and said essentially -- 11 incredibly healthy guy. Let's say he has 12 a living parent even. His mom is living. 13 And you learned that he was, 14 in the workplace, exposed to a substance 15 that gave him a dramatically higher risk 16 of lung cancer, and he wanted to be 17 screened. You would tell him what? 18 MR. KUM: Incomplete 19 hypothetical. 20 THE WITNESS: You know, is 21 the risk of being exposed to 22 ionizing radiation without a -- 23 you know, referring -- exposure 24 that hasn't changed the</p>	<p style="text-align: right;">Page 196</p> <p>1 wouldn't go to an oncologist because they 2 would have to go through an internist 3 first, basically? 4 A. Oh, we don't see patients 5 without a biopsy. 6 Q. Do you understand that there 7 are oncologists who see patients who just 8 want to make an appointment because of 9 their concerns or what have you? 10 MR. KUM: Calls for 11 speculation. 12 THE WITNESS: In private 13 practice, probably, not at an 14 academic center. 15 BY MS. GEMAN: 16 Q. But you don't dispute, then, 17 in private practice, doctors see patients 18 without a biopsy frequently, correct? 19 A. I've never even thought 20 about that. It's not really something I 21 think about. Most every -- there's the 22 mnemonic, "Tissue is the issue. Cancer 23 is the answer." 24 It sounds funny. But</p>
<p style="text-align: right;">Page 195</p> <p>1 guidelines, I wouldn't do it. I 2 wouldn't test him. 3 BY MS. GEMAN: 4 Q. Do you think most 5 oncologists would or would not test that 6 person? 7 A. Again, this is going to be 8 not an oncologist. This will be in the 9 internal medicine space. 10 He would not be coming to an 11 oncologist for some report of an 12 exposure. 13 I don't even know if that 14 test would be covered under that 15 indication. I suspect not. I do not 16 think someone would order it for that 17 indication. 18 Q. Let's assume the test was 19 paid for by the employer who caused the 20 exposure, and so he doesn't have to pay 21 for it. 22 Do you think most -- and 23 sorry, let me go back. If somebody was 24 afraid of lung cancer, you think they</p>	<p style="text-align: right;">Page 197</p> <p>1 everything we do is based on pathology. 2 I assume what you're saying 3 is they are seeing them in their -- their 4 internal medicine Hatt. I don't 5 understand why that would happen. But it 6 sounds like you know that it does. 7 Q. Just -- you've been an 8 oncologist for decades, right? 9 A. Mm-hmm. 10 MR. KUM: You have to give a 11 verbal answer, Doctor. 12 THE WITNESS: I've been an 13 oncologist, yes, two decades. 14 BY MS. GEMAN: 15 Q. Do you feel you have an 16 understanding of the sort of range of 17 conditions or presenting conditions or 18 reasons why patients go see private 19 oncologists? 20 MR. KUM: Objection. Vague 21 and ambiguous. 22 BY MS. GEMAN: 23 Q. Do you know why people see 24 oncologists?</p>

<p style="text-align: right;">Page 198</p> <p>1 A. When they're diagnosed with 2 cancer. 3 Q. Okay. Do you know why, 4 outside of that, people see oncologists? 5 A. I don't know why. 6 Q. Okay. You're not aware of 7 people who are just concerned because of 8 an exposure seeing -- making an 9 appointment to see an oncologist? 10 A. I just know that I wouldn't 11 see that patient without a confirmed 12 cancer. 13 Q. But are you aware -- do you 14 have any knowledge at all about the 15 extent to which private practice 16 oncologists might see that patient, or 17 for that matter, oncologists in other -- 18 in other hospital settings? 19 MR. KUM: Calls for 20 speculation. 21 THE WITNESS: I have no 22 idea. 23 BY MS. GEMAN: 24 Q. Let us, in we could, turn</p>	<p style="text-align: right;">Page 200</p> <p>1 three, four, five -- 6, at last year's 2 ASCO. 3 The problem is that Covid 4 has really slowed down data acquisition, 5 not just for these trials, but for a lot 6 of studies, so there hasn't been much 7 lately that I could find. And so that's 8 why I commented on that being the most 9 extensive data to date. 10 Q. And why is it -- in your 11 view, is it good if a test does not have 12 false positives? 13 A. If a test does not have 14 false -- is it good? 15 Q. Mm-hmm? 16 A. False positive. I don't 17 know that I said it's good. 18 Q. Sorry. I'm asking. In your 19 view, is it good if a test does not have 20 false positives? 21 A. Yes, because otherwise 22 you're subjecting a patient to a 23 potentially risky and invasive workup. 24 And the more you test them, the more</p>
<p style="text-align: right;">Page 199</p> <p>1 to -- well, I apologize. Before we leave 2 Page 20 and 21 about Galleri, other than 3 the company's own website and the 4 articles cited in Footnotes 44 and 45, 5 are you relying on any materials about 6 Galleri? 7 A. I think I mentioned the 8 abstract I looked at in ASCO. It's 9 actually very hard to find out much about 10 Galleri because the studies are in 11 process, which is not unusual. 12 So, you know, I've really 13 tried hard to find information. 14 Q. Can you tell me -- I 15 don't -- forgive me. I don't recall the 16 abstract that you mentioned in ASCO. 17 Can you tell me if that's 18 cited in the report here? 19 A. I just mentioned that a 20 poster, which again, is not -- is 21 usually -- an abstract is presented on a 22 poster of any updated data, was presented 23 by the -- by Thomas Bayer. 24 So in Number -- one, two,</p>	<p style="text-align: right;">Page 201</p> <p>1 likely you'll have false positives. So 2 yeah, that can be devastating for a 3 patient. 4 Q. If a test does not have 5 false positives, then having that test 6 frequently does not engender a risk of 7 false positives, correct? 8 A. So there's no test that does 9 not have false positives. 10 The whole premise is, you 11 know, we learn a lot about -- and you 12 probably came across this -- sensitivity 13 and specificity. And these are the way 14 we grade the value of a test or a study. 15 Sensitivity means true 16 positive. You really want the positive 17 patients to really have whatever you're 18 looking for. 19 And the other really 20 important thing is specificity, which is 21 true negative. You don't want to get a 22 negative result and in fact the patient 23 has cancer. 24 That was my point on the</p>

Page 202

1 Stage I, Stage II findings of Galleri,
2 that you will have 60 to 86 percent of
3 the patients potentially feeling
4 reassured that they don't have cancer
5 when they do.
6 Q. If a test is highly
7 sensitive, recurrent use of that test
8 doesn't change its sensitivity; isn't
9 that correct?
10 A. I believe the sensitivity is
11 set out, but there is no test that
12 doesn't have false positive or false
13 negatives.
14 Those specificity rates are
15 the -- the best ones are always in the
16 90 percent. But none of them are ever
17 100 percent.
18 Q. When you say the specificity
19 rates are in the 90 percent --
20 A. A good test.
21 Q. Sorry.
22 -- do you mean the
23 sensitivity rates or --
24 A. Both. You grade them with

Page 203

1 both, sensitivity and specificity.
2 Q. But again, if a test, is
3 highly -- strike that.
4 When you say that, quote,
5 the sensitivity is set out, you mean that
6 a highly sensitive test doesn't become
7 less highly sensitive on repeat use,
8 correct?
9 A. It should have the same
10 statistic. But it's never 100 percent.
11 Q. Can we please turn to Page 4
12 of your report.
13 A. Yes.
14 Q. I'm looking at the
15 third-to-last sentence where you say,
16 "Screening for and surveillance of
17 Barrett's esophagus is a controversial
18 topic among gastroenterology societies,
19 and no guidelines exist in USPSTF
20 recommendations for serial endoscopy."
21 Do you see that?
22 A. Yes.
23 Q. What is the cite for the
24 proposition that screening and

Page 204

1 surveillance of Barrett's esophagus is
2 controversial?
3 A. I don't remember which one
4 of these articles that specifically came
5 from. Let me just look at nine, because
6 sometimes if I cite it, I carry on after.
7 I would guess that it was --
8 Q. It's right after Footnote
9 11.
10 MR. KUM: Doctor, you have
11 your references there, if you want
12 to just pull them.
13 THE WITNESS: Oh, yeah.
14 MR. KUM: But take off your
15 microphone first.
16 THE WITNESS: So, yeah. No,
17 I mean, in my -- the way that I
18 write things out, and again, I
19 would have to -- I'm happy to look
20 at the article and find it. But
21 the way I usually cite things, it
22 would be from that 11 on down.
23 BY MS. GEMAN:
24 Q. Okay. So if we wanted to

Page 205

1 look for an article that stated that
2 proposition, we should look to the JAMA
3 article in Footnote 11, or perhaps the
4 article in Discovery Med on footnote 12?
5 A. I'm happy to look through
6 them.
7 Q. No, I'm sorry, Footnote 12
8 is Gastric.
9 And do you recall reading an
10 article that said that screening for and
11 surveillance of Barrett's esophagus is
12 controversial? Or is that your
13 inference?
14 A. Well, I know it's
15 controversial because most centers don't
16 do it.
17 But I'm not sure.
18 Q. What do you mean by
19 controversial?
20 A. So a lot of this is in the,
21 you know, American Gastric Society.
22 There's differences between the Europeans
23 and the Americans. Sometimes -- some say
24 you should never scope again serially.

<p style="text-align: right;">Page 206</p> <p>1 Some day one scope, and that's the 2 standard. I think they used to say 3 scopes every two years and then went out 4 of favor. 5 So some of this is just what 6 I've learned over the years. And so it 7 may not be specifically cited. It may go 8 to my clinical knowledge and experience. 9 Q. Okay. And if you could 10 please turn to Page 9. Do you see that 11 between Pages 9 and 13, there's -- 12 there's a number of charts imported? 13 A. Yes. 14 Q. And those were taken 15 verbatim from the task force website? 16 A. Correct. 17 Q. Okay. So you did not change 18 the language in these charts, correct? 19 A. I couldn't even correct 20 anything of them, if it got cut off. I 21 don't know why. 22 Q. Okay. Is there a reason 23 that you didn't use the updated C 24 definition?</p>	<p style="text-align: right;">Page 208</p> <p>1 practice in what you cited is, "Offer or 2 provide this service only if other 3 considerations support the offering or 4 providing this service in an individual 5 patient." 6 Do you see that? 7 A. Mm-hmm. 8 Q. If I tell you that the 9 current language is, "Offer or provide 10 this service for selected patients 11 depending on individual circumstances" -- 12 well, first of all, does that sound 13 familiar? 14 A. I don't know that I've read 15 that. 16 Q. Okay. Does that seem more 17 sort of pro-screening or less or neither? 18 A. I think, to me, that would 19 read, you know, if a patient had medical 20 comorbidities that would make it, you 21 know, tough for the patient or without an 22 opportunity to -- circumstances, to me, 23 says what the patient's circumstances 24 are. It would probably be their health</p>
<p style="text-align: right;">Page 207</p> <p>1 A. I'm not sure what that is. 2 Q. So if you see Grade C on 3 Page 9. 4 A. Yes. 5 Q. Okay. And you note that 6 that statement was undergoing revision? 7 A. You know, at whatever point 8 I pulled it, that's what it said. So I 9 can look. I think it was when I pulled 10 it January 2022. And I know because this 11 came up when we were printing off all of 12 the articles and stuff for the binders. 13 And the comment was, that's what I cited. 14 So I don't know if it had changed in the 15 interim. 16 I guess that's your 17 question. There wasn't a reason. 18 Q. Okay. Do you know if the 19 current definition for C is more 20 pro-screening or less pro-screening? 21 A. I don't know. This is what 22 it was when I looked at it. I'd love to 23 know. 24 Q. Well, the suggestion for</p>	<p style="text-align: right;">Page 209</p> <p>1 circumstance. 2 I think we're -- you know, 3 I'm not sure what the benefit is of fine 4 tuning this recommendation. But 5 circumstance to me would speak to the 6 patient's circumstance, their health and 7 well-being. 8 And perhaps, you know, if a 9 patient is sick you wouldn't want to put 10 them through a test. 11 Q. And is it your understanding 12 that the new definition of C was slightly 13 less focused on patient preferences and 14 more on professional judgment? 15 A. I'm not sure. I don't know 16 the answer to that. 17 Q. Then I want to talk about 18 something that you said on Page 11, 19 please. 20 Now, it's your interest in 21 limiting risk of harm from, quote, 22 unnecessary or unreliable 23 tests/procedures? 24 A. Yeah.</p>

<p style="text-align: right;">Page 210</p> <p>1 Q. Correct?</p> <p>2 A. Correct.</p> <p>3 Q. What is your -- what is the</p> <p>4 distinction between unnecessary and</p> <p>5 unreliable?</p> <p>6 A. Oh. That's straightforward.</p> <p>7 So for example, the task</p> <p>8 force does not -- the task force does not</p> <p>9 recommend checking a PSA. It has a D</p> <p>10 level of recommendation.</p> <p>11 It used to be a stronger</p> <p>12 recommendation, but they discovered over</p> <p>13 time that even though they were</p> <p>14 diagnosing cancers earlier, it didn't</p> <p>15 change the overall survival.</p> <p>16 I actually was speaking</p> <p>17 to -- when I was writing this, I was</p> <p>18 really thinking about Dr. Kaplan's</p> <p>19 recommendation for sending inflammatory</p> <p>20 markers.</p> <p>21 Inflammatory markers are</p> <p>22 erythrocyte sedimentation rate or CRP.</p> <p>23 Because these can be elevated in a lot of</p> <p>24 conditions including vascular disease,</p>	<p style="text-align: right;">Page 212</p> <p>1 of when a test becomes unreliable. Do</p> <p>2 you have a threshold for specificity and</p> <p>3 sensitivity?</p> <p>4 A. I mean, in this case I would</p> <p>5 follow the tests put forth by the task</p> <p>6 force.</p> <p>7 Q. Well, I'm asking a different</p> <p>8 question, which is what is -- in your</p> <p>9 view the threshold for sensitivity and</p> <p>10 specificity to warrant a test being</p> <p>11 considered reliable?</p> <p>12 A. I haven't evaluated all the</p> <p>13 tests in terms of that. That was not</p> <p>14 what was asked of me in going for the</p> <p>15 this mission.</p> <p>16 I'm happy to go through all</p> <p>17 of his recommended medical monitoring.</p> <p>18 And I'm happy to give an opinion on that.</p> <p>19 Q. Do you have an opinion about</p> <p>20 the threshold for sensitivity and</p> <p>21 specificity that must be reached for a</p> <p>22 test, in your view, to be considered</p> <p>23 reliable?</p> <p>24 A. I don't know a number there.</p>
<p style="text-align: right;">Page 211</p> <p>1 and I don't know what one would do with</p> <p>2 the information of an elevated</p> <p>3 inflammatory marker. It does not</p> <p>4 necessarily mean cancer or infection.</p> <p>5 In fact, I do believe that I</p> <p>6 listed a long list of things that it</p> <p>7 could be.</p> <p>8 So that, to me, is a test</p> <p>9 that is unreliable.</p> <p>10 Q. What is the distinction</p> <p>11 you're drawing between unnecessary and</p> <p>12 unreliable?</p> <p>13 A. You know, I think</p> <p>14 unnecessary, like a task force</p> <p>15 recommendation, you know, it's important</p> <p>16 what they recommend and what they do not</p> <p>17 recommend. So that would be in the</p> <p>18 unnecessary category.</p> <p>19 Whereas, a test that may</p> <p>20 falsely elevate a patient's fear of</p> <p>21 cancer, if it's being tested in a cancer</p> <p>22 screening and is not a sensitive or</p> <p>23 specific test, that would be unreliable.</p> <p>24 Q. And what's your definition</p>	<p style="text-align: right;">Page 213</p> <p>1 I mean, you always want as high as you</p> <p>2 can for both numbers. I'm going to leave</p> <p>3 it there.</p> <p>4 Q. And a lot of tests are high</p> <p>5 on one number and low on the other,</p> <p>6 right?</p> <p>7 A. The best tests are higher on</p> <p>8 both.</p> <p>9 Q. But a lot of tests are high</p> <p>10 on one number and low on another,</p> <p>11 correct?</p> <p>12 A. I'm not sure.</p> <p>13 Q. Are you -- I mean, you use a</p> <p>14 lot of tests in your -- in your work; is</p> <p>15 that right?</p> <p>16 A. Well, I mean, what do I</p> <p>17 order? I order a CBC. I order a liver</p> <p>18 panel, a kidney panel. And I order tumor</p> <p>19 markers. That's the general testing that</p> <p>20 I order for a cancer patient when I'm</p> <p>21 supervising their chemotherapy.</p> <p>22 Q. So to the extent that</p> <p>23 Dr. Kaplan suggests similar tests, then</p> <p>24 you would agree that those are necessary</p>

Page 214

1 and reliable?

2 A. I think you have to know

3 what the context is. He is recommending

4 in the setting of screening asymptomatic

5 patients. I'm using them in the setting

6 of giving these patients cytotoxic

7 chemotherapy and monitoring their safety

8 and response.

9 Q. Are there -- and you

10 understand that Dr. Kaplan is

11 recommending screening in the context of

12 patients who were exposed to carcinogens

13 that, in his framework, are causally

14 linked with certain specific cancers,

15 correct?

16 MR. KUM: Objection.

17 Assumes facts not in evidence.

18 THE WITNESS: He said he

19 based his assumptions and sort of

20 was very careful about that, of

21 reading three expert letters from

22 the plaintiffs.

23 He sort of -- I don't even

24 understand how he picked some of

Page 215

1 these tests -- puts together a

2 potpourri of screening tests

3 without any evidence offered and

4 without any thought to whether or

5 not they're safe or appropriate

6 for these patients: It's honestly

7 a strange collection.

8 And I -- it doesn't pass the

9 sniff test for me. I would not

10 subject myself or my loved one to

11 those tests.

12 BY MS. GEMAN:

13 Q. He's seen tens of thousands

14 and treated tens of thousands of cancer

15 patients and is a well regarded

16 physician.

17 Do you believe that his

18 protocol was entered into without regard

19 for the safety of patients?

20 MR. KUM: Objection.

21 Assumes facts not in evidence.

22 Go ahead.

23 THE WITNESS: He is a lovely

24 private practice physician who

Page 216

1 maintains an academic affiliation

2 so that he can do teaching, which

3 I find very lovely, mentoring of

4 oncology fellows in his clinic.

5 I cannot -- he doesn't

6 really explain his thought process

7 or give any evidence or

8 explanation for his test

9 recommendations.

10 So I can't -- I've been

11 trying to understand his thought

12 process. I have -- I can't.

13 It is not evidence or data

14 driven.

15 BY MS. GEMAN:

16 Q. In your opinion?

17 A. That's what you were asking,

18 right?

19 Q. Yes.

20 A. Okay. In my opinion, there

21 is no merit to this testing protocol.

22 Q. So to the extent that he's

23 suggesting tests that are within the

24 standard of care, do you think they've

Page 217

1 become rendered meritless by his dint of

2 suggesting them?

3 MR. KUM: Objection.

4 Assumes facts not in evidence.

5 THE WITNESS: I actually

6 went through his list and I

7 assessed sort of what standard of

8 care.

9 I looked at -- you know, I

10 was sort of surprised to hear that

11 a CBC is -- you don't have to

12 order that every year in a primary

13 care visit.

14 A liver and kidney panel,

15 you actually don't have to.

16 The only mandated things are

17 the history and physical.

18 The primary care would also

19 recommend against thyroid testing.

20 There's no mention of inflammatory

21 markers.

22 You know, it's -- I can go

23 through that list with you. I'd

24 be delighted, because I actually

Page 218

1 put that exact question to the
2 test reviewing each of his
3 proposed medical monitoring study.
4 BY MS. GEMAN:
5 Q. Do you agree that patients
6 should have -- and specifically patients
7 who have been exposed to a carcinogen
8 that is causally linked in this scenario
9 to various cancers, including many that
10 even you agree can be, you know, treated
11 if caught early -- annual physicals?
12 A. Annual physical is standard
13 primary care. It's already done.
14 Q. And do you think it's
15 appropriate to have questions directed
16 towards signs/symptoms of malignancies?
17 A. That's actually done at
18 every primary care visit also.
19 You know, the -- what we're
20 taught, the art of medicine, actually
21 it's talking to the patient and examining
22 the patient. You get a lot of
23 information.
24 And to your point with

Page 219

1 asking questions or directing to
2 exposure, the history -- the history is
3 sort of the age old fundamental of the
4 primary care visit, and specifically a
5 yearly visit.
6 MR. KUM: Counsel, whenever
7 you get to a reasonable breaking
8 point, can we take a break?
9 MS. GEMAN: We can do that
10 now.
11 THE WITNESS: I'd love that.
12 Thank you.
13 THE VIDEOGRAPHER: All
14 right. 2:04. We are off the
15 video record.
16 (Short break.)
17 THE VIDEOGRAPHER: 2:16. We
18 are on the video record.
19 BY MS. GEMAN:
20 Q. Doctor, would you please
21 turn to Page 14 of your report.
22 Do you see you have a
23 section on patient anxiety/psychological
24 distress?

Page 220

1 A. Yes.
2 Q. And among other things you
3 state that, "Patients in established
4 higher risk categories with validated
5 enhanced screening protocols are known to
6 have more psychological distress
7 associated with screening, even if
8 ultimately found to be at average risk.
9 False positives also generate a lot of
10 anxiety at the time of the positive test
11 result and with subsequent screening
12 tests."
13 A. Yes.
14 Q. Okay. Just to help me, what
15 is the cite for that?
16 A. So, again, 36 going down.
17 Q. That's Chad-Freidman?
18 A. And actually 37. I don't
19 know why I changed my format, because 37,
20 "Implications of False Positives," should
21 actually be at the end of -- because
22 that's where it really starts --
23 "Screening Findings and Workups."
24 MS. GEMAN: All right. So

Page 221

1 let's, if we could, mark as
2 Exhibit 5 the article cited in
3 Footnote 36 of the doctor's report
4 which is "Psychological Distress
5 Associated With Cancer Screening.
6 A Systematic Review."
7 (Document marked for
8 identification as Exhibit
9 Teitelbaum-5.)
10 THE WITNESS: Is this the
11 same thing?
12 BY MS. GEMAN:
13 Q. What's been marked as
14 Exhibit 5 is an article in the journal
15 Cancer; is that correct?
16 A. Yes.
17 Q. And that is a well regarded
18 peer-reviewed journal?
19 A. Yes.
20 Q. Okay. And if you could --
21 well, let me ask first, do you know any
22 of the authors of this study?
23 A. I do.
24 Q. Do you know them -- do you

Page 222

1 work with them or do you know them
2 personally?
3 A. It looks like they're
4 psychiatrists, so no. And in Boston, so
5 no.
6 Q. Wait, I'm sorry. You do
7 know them personally or you do not?
8 A. I do not know them at all.
9 They are in Boston, and they are
10 psychiatrists.
11 Q. Okay. I misunderstood or
12 misheard your earlier answer. And if you
13 could turn to Page 3892, which is the
14 last substantive page of the article.
15 And can you please read the
16 first sentence of the conclusions?
17 A. Under summary of results or
18 under discussion?
19 Q. Under conclusions.
20 A. Which page?
21 Q. Page 3892. Or I can read
22 it. That's fine. Just look on, please,
23 Page 3892.
24 A. Yes.

Page 223

1 Q. Do you see the first
2 sentence reads, "For this review, we
3 examined the literature on distress at
4 cancer screening and concluded that, with
5 the exception of colorectal cancer
6 screening, distress associated with
7 cancer screening itself is low."
8 Do you believe they made the
9 proper inferences from their data?
10 A. I mean, I would have to -- I
11 would ask then to have some time to go
12 through the article.
13 I think the question is, if
14 this is in the setting of asymptomatic
15 general screening or -- I think the point
16 I was showing was if Dr. Kaplan is
17 calling this population high risk, that
18 there's a different anxiety level
19 associated with the recommended
20 screening.
21 Q. Well, are you changing your
22 opinion on what this article purportedly
23 concludes or supports?
24 MR. KUM: Objection.

Page 224

1 Argumentative. Misstates
2 testimony.
3 THE WITNESS: I'd have to
4 read through the article again.
5 I'm happy to do that now.
6 MR. KUM: Doctor, take your
7 time.
8 THE WITNESS: Yeah.
9 MR. KUM: Go ahead.
10 BY MS. GEMAN:
11 Q. Did you -- well, I'm not
12 asking you to read the whole article.
13 MR. KUM: Well, but
14 Counselor, you've just given her
15 an article to read, which is a
16 paper which is numerous pages
17 long. She wasn't -- she's not
18 required to memorize this from --
19 you know, word for word.
20 And she's just asked if she
21 could just be given a minute to
22 review it. So if you're not
23 allowing her to review it, okay, I
24 want that on the record. But

Page 225

1 she's just asked if she could just
2 have a minute to simply flip
3 through it.
4 MS. GEMAN: Well, let me ask
5 my question.
6 BY MS. GEMAN:
7 Q. And absolutely if you need
8 to review it to answer the question, of
9 course that's completely fine. Take all
10 the time you need.
11 Did you read the article
12 before citing it in your report?
13 A. Yes.
14 Q. Okay. And for what
15 proposition were you citing this article?
16 A. So just speaking to the
17 sentence that was written, you know, it's
18 a little bit out of context, which is why
19 I think it would be useful for me to have
20 some time with the article.
21 Let me just look at my
22 paragraph again.
23 Q. Sure.
24 A. And again, I say here, the

Page 226

1 bulk is -- of anxiety associated with a
2 more invasive procedure, screening,
3 colonoscopy.
4 I have to look back -- it's,
5 you know, been about two months --
6 whether or not this differentiates
7 between average risk and high risk.
8 I suspect this is average
9 risk patients having anxiety with a
10 colonoscopy, and I have to go back again.
11 But I am concerned about the anxiety in
12 patients that have been called high risk.
13 Q. Do you know to what the
14 authors attribute the exception, meaning
15 why is it in the authors' view that it's
16 colorectal cancer screening patients who
17 had -- everyone else had low distress and
18 they had higher distress?
19 A. I don't know the answer. I
20 would have to have 20 or 30 minutes to go
21 through the article. And it just -- you
22 know, I read every line to try and
23 understand what your question is.
24 Q. And did you look for all the

Page 227

1 articles that you could find on
2 psychological distress associated with
3 cancer screening?
4 A. There are not many articles
5 that come up.
6 Q. Did you review all the ones
7 that you could find?
8 A. Yes.
9 Q. So in addition to what's
10 been marked as Exhibit 5, did you tell me
11 a minute ago that another article from
12 Cancer that you cited is "Implications Of
13 False Positive Results For Future Cancer
14 Screenings"?
15 A. Yes.
16 Q. Okay.
17 MS. GEMAN: Okay. So let's
18 please mark as Exhibit 6 the
19 article that is cited in Footnote
20 37 of the doctor's report. And
21 it's entitled "Implications Of
22 False Positive Results For Future
23 Scanning" -- I'm sorry -- "For
24 Future Cancer Screenings."

Page 228

1 (Document marked for
2 identification as Exhibit
3 Teitelbaum-6.)
4 THE WITNESS: So I'm going
5 to read these two articles now?
6 MR. KUM: Well, read the
7 next article. She moved on
8 questions from the prior article.
9 THE WITNESS: Okay.
10 BY MS. GEMAN:
11 Q. I have a general question
12 before this.
13 What is the -- does a false
14 positive mean someone is told, "You have
15 cancer," or does it mean that they're
16 told something like, "We have a result
17 that we want to follow up more on"?
18 A. I mean, a patient is told
19 they have patient. And then they get the
20 next test in the workup, and they don't
21 have cancer.
22 Q. So your testimony is when
23 there's an anomalous result, the patient
24 is told that they have cancer?

Page 229

1 A. No. They are told there is
2 a positive result, and there needs to be
3 a further workup.
4 Q. Okay.
5 A. It prompts a workup for
6 cancer.
7 Q. But not the --
8 A. That's what the anxiety is
9 associated with.
10 Q. And the concern -- or by
11 including Taksler, is one of the points
12 that you're making then a concern of a
13 false positive is that it's inherently
14 stressful and also that it might deter
15 your willingness to get more tests?
16 A. Let me just have some time
17 to read. And again, the one thing that
18 I'm going to say is the more frequently
19 you test somebody, the more chance of a
20 false positive.
21 But if I could have some
22 time with this article, I would
23 appreciate it so that I have a basis for
24 properly answering your questions.

Page 230

1 Q. Yes. Would you mind
2 answering my question first, and then you
3 can look at the article. Because my
4 question was about your report.
5 A. Oh. You were asking --
6 okay.
7 Q. Are you making the point in
8 your report that a concern of a false
9 positive, in addition to its being
10 inherently stressful, is that it might
11 deter willingness to get subsequent
12 tests? If I could just ask you that
13 question.
14 A. I'm just going to read my
15 report, if you don't mind.
16 MR. KUM: She's looking at
17 her report.
18 BY MS. GEMAN:
19 Q. Right. Well, no I was --
20 right. At your report. That's fine.
21 A. Yep.
22 Q. Go ahead.
23 A. And again, these are average
24 risk patients from cancer screening.

Page 231

1 So you're still on false
2 positive, right?
3 Q. Yeah.
4 A. What is your question?
5 Q. So what is the concern with
6 a false positive? You mentioned anxiety.
7 A. Well, there's both a
8 physical concern and a psychological
9 concern. You know, if you are then --
10 all right.
11 So let's say you have a
12 positive finding on a low dose spiral CT.
13 Well, the only way to
14 confirm or deny that you have cancer,
15 again, in our oncology world is to get a
16 biopsy.
17 A biopsy for a lung mass is
18 actually very difficult. You either have
19 to stick a needle through the chest wall,
20 and sometimes the first biopsy is not
21 conclusive and you have to do it again.
22 Or you have to do even a
23 more invasive test, where you put a scope
24 down, which, again, requires sedation and

Page 232

1 for a cardiac patient, would require
2 cardiac clearance.
3 And this is a more risky
4 test than an upper endoscopy, because it
5 requires -- goes in the airway. And then
6 when they're in the airway, they take a
7 needle and poke through the bronchus to
8 get to the lung mass to biopsy it.
9 So the only way to prove
10 cancer is a biopsy. And both of those
11 are invasive and have established risks.
12 There's no tumor marker for
13 lung cancer.
14 MR. KUM: Doctor, now you
15 can read the article.
16 MS. GEMAN: We can go off
17 the record if you want to read
18 your article.
19 THE WITNESS: Can you tell
20 me what your question is again?
21 MR. KUM: Why don't you read
22 the paper first.
23 THE WITNESS: This -- and
24 you want Number 6.

Page 233

1 MR. KUM: It's this Taksler.
2 THE VIDEOGRAPHER: Off the
3 record?
4 MS. GEMAN: Yeah.
5 THE VIDEOGRAPHER: 2:30 p.m.
6 We are off the video record.
7 (Short break.)
8 THE VIDEOGRAPHER: 2:40. We
9 are on the video record.
10 BY MS. GEMAN:
11 Q. Doctor, do you know any of
12 the authors of the article that's been
13 marked as Exhibit 6?
14 A. I do not.
15 Q. Do you see in the
16 conclusions here on the first Page 2390,
17 in the abstract? Do you see where it
18 says, "Conclusions: Patients who
19 previously had a false positive breast or
20 prostate screening cancer test were more
21 likely to engage in future screening"?
22 A. I do.
23 Q. Do you think these authors
24 accurately drew that conclusion from the

Page 234

1 data and information they used?
2 A. I -- this is their
3 single-institution dataset. It looks
4 like it matches their tables.
5 Q. Is that consistent with your
6 personal experience as an oncologist?
7 A. I don't order these
8 screening tests. They already have
9 cancer when they come to me.
10 Q. When was the last time in
11 your career that you saw patients who
12 were asymptomatic?
13 A. You mean with respect to
14 cancer?
15 Q. Yes.
16 A. Because I have patients that
17 have completed cancer therapy. They're
18 asymptomatic.
19 In a primary care setting,
20 the last time was 2006.
21 Q. Okay. And do you have --
22 and so your experience in the last
23 16 years has been only with patients who
24 have already had a cancer diagnosis,

Page 235

1 correct?
2 A. I practice to the top of my
3 scope as an oncologist.
4 Q. Practice to the top of my
5 scope -- that's figurative, right?
6 A. No. It's actually a term
7 that's used. I did a three-year
8 hematology/oncology fellowship. I use
9 those skills learned to manage cancer
10 patients.
11 Q. So you do not have
12 experience in the last 16 years treating
13 patients who are -- who have not already
14 had a cancer diagnosis?
15 A. The patients that I treat
16 have cancer.
17 Q. So the answer to my question
18 is yes?
19 A. Can you repeat the question
20 again?
21 Q. Sure.
22 You do not have experience
23 in the last 16 years of treating patients
24 who have not already had a cancer

Page 236

1 diagnosis, correct?
2 A. Yes.
3 Q. When you -- you indicated
4 that you looked for all the articles that
5 you could find, and you did note that the
6 field is sparse on psychological effects
7 in screening?
8 A. Yes.
9 Q. Okay. Have you ever heard
10 of the Journal of Clinical Oncology?
11 A. Yes.
12 Q. Is that a refereed journal?
13 A. Is that a what?
14 Q. A refereed journal?
15 A. Refereed -- do you mean
16 peer-reviewed?
17 Q. Yes.
18 A. Yes.
19 Q. Okay. Is it a respected
20 journal?
21 A. Yes.
22 Q. Do you recall coming across
23 an article from the Journal of Clinical
24 Oncology entitled "Impact of BRCA1/BRCA2

Page 237

1 Mutation Testing on Psychologic Distress
2 in a Clinic-Based Sample"?
3 A. I was -- in my search was
4 looking at screening in asymptomatic
5 patients. I did not look at -- obviously
6 patients with cancer is a different
7 scenario.
8 Q. Well, somebody can have
9 BRCA1 or 2 and be asymptomatic, correct?
10 A. Oh. So these are not cancer
11 patients, these are patients that have
12 been appropriately referred to a cancer
13 risk evaluation program?
14 Q. Well, my question is,
15 somebody can have BRCA1 or 2 and be
16 asymptomatic, correct?
17 MR. KUM: So I'm going to
18 object. Counsel is referring to
19 an article.
20 I think the deponent is
21 entitled to see the article that
22 she's referring to. She already
23 had a question about it. So if
24 you could show it to her.

<p>Page 238</p> <p>1 MS. GEMAN: I'm happy to do 2 that. But I'm asking a sort of 3 question that's irregardless -- 4 true or false irregardless of the 5 article. 6 BY MS. GEMAN: 7 Q. Someone can have BRCA1 or 2 8 and be asymptomatic, correct? 9 A. Yes. 10 Q. And I'll show you the 11 article, and you can tell me if you came 12 across it in your -- in the literature 13 analysis. 14 MS. GEMAN: And for the sake 15 of the court reporter, I'll say 16 this is -- Exhibit 7 will be an 17 article entitled "Impact of 18 BRCA1/BRCA2 Mutation Testing on 19 Psychologic Distressed in a 20 Clinic-Based Sample." 21 (Document marked for 22 identification as Exhibit 23 Teitelbaum-7.) 24 THE WITNESS: I'm the only</p> <p>Page 239</p> <p>1 one without it. 2 MR. KUM: No, the court 3 reporter -- let's go off the 4 record. 5 THE VIDEOGRAPHER: 2:46. We 6 are off the video record. 7 (Brief pause.) 8 THE VIDEOGRAPHER: The time 9 is 2:47. We are on the video 10 record. 11 BY MS. GEMAN: 12 Q. Doctor, did you come across 13 what's been marked as Exhibit 7 in your 14 research for your report? 15 A. I don't think I searched the 16 database for the BRCA population. So I 17 do not -- I did not bring this up. Or if 18 I did, I didn't include it because it 19 didn't seem relevant. 20 Q. I'm going to read the 21 conclusion. 22 "These results" -- and I'm 23 on the first page under conclusion. 24 A. Mm-hmm.</p>	<p>Page 240</p> <p>1 Q. "These results suggest that 2 clinic-based BRCA1/2 testing can lead to 3 psychologic benefits for individuals who 4 receive negative test results. At six 5 months after disclosure those who receive 6 positive or uninformative test results 7 did not exhibit increased psychological 8 distress or perceived risk." 9 Did I read that correctly? 10 MR. KUM: So I'm going to 11 object. Dr. Teitelbaum has asked 12 to read this paper. She hasn't 13 finished reading it. 14 THE WITNESS: I don't think 15 this is screening for cancer. I 16 think this is offering a 17 BRCA1/BRCA2 test, and I will -- to 18 family members of an identified 19 patient with BRCA1/BRCA2. 20 And what I would just say 21 here, is this is an entirely 22 different literature. This is not 23 based on offering cancer-directed 24 screenings.</p> <p>Page 241</p> <p>1 This is simply identifying 2 if they're BRCA1 or BRCA2 or not. 3 In fact, this is in the 4 world of testing and disclosure of 5 testing. It's like an ethics 6 literature kind of thing. 7 I would not have searched 8 about genetic testing in my 9 search. 10 BY MS. GEMAN: 11 Q. So your best recollection, 12 is you didn't do a search that would have 13 uncovered this article? 14 A. I would not have typed in 15 testing for BRCA1/BRCA2 mutations and 16 psychological distress. 17 Q. If you had found it, would 18 you have included it, to the extent that 19 you can answer that counterfactual? 20 A. Well, again to your point, 21 these patients are -- this is just about 22 identifying whether or not they carry a 23 mutation, not about implementing the 24 screening tests.</p>
--	---

<p>Page 242</p> <p>1 So I wouldn't have searched 2 for it, because it wasn't the question 3 being asked. 4 MR. KUM: Doctor, if you 5 want to read it. 6 THE WITNESS: I mean, 7 normally, I don't just read the 8 abstract. I read the entire 9 article. 10 I will, for the purpose of 11 this, because I don't understand 12 why this is relevant, I will just 13 quickly read through the -- 14 MS. GEMAN: We can go off 15 the record if you want and you can 16 read it. 17 THE WITNESS: Okay. That 18 would be great. 19 THE VIDEOGRAPHER: 2:50. We 20 are off the video record. 21 (Short break.) 22 THE VIDEOGRAPHER: 2:58. We 23 are on the video record. 24 BY MS. GEMAN:</p> <p>Page 243</p> <p>1 Q. Doctor, did you have the 2 chance to review what's been marked as 3 Exhibit 7? 4 A. Yes. Thank you for that 5 time. 6 Q. Sure. 7 Did it refresh your 8 recollection as to whether you had or had 9 not seen it before? 10 A. It didn't. 11 Q. Okay. 12 A. I read a lot of JCO, so I'm 13 not sure. 14 Q. JCO is the Journal of 15 Clinical Oncology? 16 A. Yes. 17 Q. And I just wanted to 18 understand something about your earlier 19 testimony. 20 Do you consider testing for 21 BRCA1/2 distinct from screening? 22 A. So it is actually, as of 23 three years ago, standard to test all 24 pancreas cancer patients -- I can only</p>	<p>Page 244</p> <p>1 speak to that -- for BRCA1, BRCA2. 2 PALB2, CHEK2, ATM. 3 There's a high risk. 4 We actually refer them to 5 the cancer risk evaluation program 6 because, as is stated in this article, 7 it's a very emotional decision, and it 8 requires a lot of extensive counseling 9 before. I'll just comment that they 10 think that might be part of that 11 response. 12 This is actually -- the 13 tricky thing here -- and there are other 14 articles that speak to this question, 15 which I'm not completely sure how it 16 refers to my expert letter, but I'll 17 continue. 18 So there -- what I find when 19 I make the referral is there's actually a 20 large amount of patients that choose not 21 to. So this is selecting for a very 22 motivated group. And I would be 23 interested to find out how many didn't. 24 And the reason I think they choose not</p> <p>Page 245</p> <p>1 to -- I mean, I don't know. 2 But I would just say there 3 is a big literature around choosing and 4 around how you inform people and how you 5 counsel people. 6 This is like a field in and 7 of its own. But I am -- you know, I read 8 this, and I would just say this isn't 9 exactly a cancer screening. This is 10 finding out your genetics. And this 11 looks like a self-selected group that was 12 beautifully supported in the 13 decisionmaking. 14 MS. GEMAN: So move to 15 strike all of that as 16 nonresponsive. 17 BY MS. GEMAN: 18 Q. The question is: Do you 19 consider BRCA testing as distinct from 20 screening? 21 MR. KUM: Asked and 22 answered. 23 You can go ahead again. 24 THE WITNESS: I don't see it</p>
--	--

Page 246

1 as any part of the Preventative
2 task force.
3 It is not a screening test
4 for cancer because not every BRCA1
5 or BRCA2 patient gets cancer. I
6 think it would be a screening for
7 a high risk -- for someone you
8 would include in a high risk
9 population if they were willing to
10 be followed.
11 BY MS. GEMAN:
12 Q. So your testimony under oath
13 is that the BRCA test, is not one that
14 you consider part of a cancer screening
15 because not everyone with BRCA develops
16 cancer; is that correct?
17 A. I mean, this isn't a general
18 test that's offered in an asymptomatic
19 patient population, which is what Dr.
20 Kaplan is addressing. These patients are
21 probably, to your point, also
22 asymptomatic.
23 But it's not a cancer
24 screening test. It is a prerequisite, if

Page 247

1 they are positive, to refer them to a
2 high risk cancer screening program.
3 Q. And the cancer risk
4 evaluation program, that's a screening
5 and treatment program or a counseling
6 program?
7 A. We have three of them. We
8 have one, actually, exclusively for BRCA
9 patients with breast and ovarian cancer.
10 We have one for GI cancers. And we have
11 one for, like, all the other weird stuff.
12 And there are different
13 people in charge of each of them. And
14 they help counsel and recommend any
15 Preventative procedures that might be
16 indicated.
17 I don't practice in that
18 clinic, so I'm not really sure of the
19 whole procedure. I just know --
20 Q. You don't consider them
21 screening programs?
22 A. So I don't consider ordering
23 the test a screening program. I consider
24 it a prerequisite for referring to a

Page 248

1 screening program.
2 Q. So under your logic, a
3 mammogram is not a screening; is that
4 right?
5 MR. KUM: Objection.
6 Misstates testimony.
7 THE WITNESS: Mammogram is a
8 task force-approved screening test
9 for breast cancer.
10 BY MS. GEMAN:
11 Q. Even though not every
12 abnormality found leads to cancer,
13 correct?
14 A. I'm still trying to figure
15 out the connection. But mammography is a
16 well established test for women within a
17 certain age range to assess for cancer.
18 Q. And my question, which you
19 did not answer, and I will ask you to try
20 to focus on the questions.
21 Not every abnormality found
22 in a mammogram leads to cancer, correct?
23 MR. KUM: Asked and
24 answered. Argumentative.

Page 249

1 THE WITNESS: Correct.
2 BY MS. GEMAN:
3 Q. All right. And yet, a
4 mammogram is a cancer screening test,
5 correct?
6 A. Correct.
7 Q. And a pap smear, do you
8 consider that a cancer screening test?
9 A. That's no longer recommended
10 as the same yearly frequency. That's
11 been newly elevated to three. But it is
12 a screening test for changes at the
13 cervix.
14 MS. GEMAN: Move to strike
15 as nonresponsive.
16 BY MS. GEMAN:
17 Q. I do need you to answer my
18 questions. I didn't ask you how frequent
19 or about changes in the interval.
20 A pap smear is a cancer
21 screening test, correct?
22 A. Yes.
23 Q. Not every strand of HPV
24 leads to cancer, correct?

Page 250

1 A. Correct.
2 Q. Not every abnormality found
3 in a pap smear leads to cancer, correct?
4 A. Correct.
5 Q. Not every cell that's
6 abnormal in a pap smear leads to a
7 cervical cancer finding, correct?
8 A. Correct.
9 Q. All right. So mammograms
10 and pap smears are cancer screening. But
11 in your view, a test for BRCA is not,
12 because not everyone with a BRCA gene
13 develops cancer. Is that the logic I'm
14 understanding?
15 MR. KUM: Objection.
16 Misstates testimony.
17 THE WITNESS: A BRCA test is
18 to assess someone if they have a
19 hereditary cancer syndrome.
20 BY MS. GEMAN:
21 Q. So it is a cancer screening
22 test in your view or --
23 A. It's a test for hereditary
24 cancer syndrome.

Page 251

1 Q. So would you put it in the
2 bucket of screening?
3 A. I -- not in asymptomatic
4 patients.
5 Q. But if it's conducted on --
6 regardless of the person on whom it's
7 conducted, do you consider it a screening
8 test?
9 A. I cons -- not for cancer. I
10 consider it a screening test for
11 hereditary cancer syndrome.
12 Q. And the relevance of --
13 strike that.
14 Do you consider the
15 literature on the psychological distress
16 in connection with BRCA testing relevant
17 to the study of psychological distress
18 associated with other tests that likewise
19 test either for cancer or a precursor to
20 cancer?
21 A. I don't think they're the
22 same thing.
23 Q. Do you have any cite for
24 drawing a distinction psychologically

Page 252

1 between those two?
2 A. This is, you know, 20 years
3 of practice. I think this is -- one is
4 testing for a gene that may predispose
5 you and merits referral to a center. And
6 again, this is a single-institution study
7 that only assessed distress in motivated
8 patients.
9 And I think your other
10 question was mammography and pap smear,
11 which is not part of the U.S. task
12 force -- screening task force. But I'm
13 directing your attention to mammography.
14 That is a screening test for cancer.
15 Q. And you mentioned 20 years
16 of practice. How many years -- how many
17 years were you in practice before 2006?
18 A. I was -- before practice.
19 So I was in residency and fellowship and
20 then I came on faculty in 2005 at
21 University of Chicago.
22 Q. Were you ever in private
23 oncology practice?
24 A. No.

Page 253

1 Q. Okay. So you've never --
2 even before 2006, it wasn't a regular
3 part of your practice to see patients who
4 might benefit from cancer screening,
5 correct?
6 MR. KUM: Objection. Vague
7 and ambiguous.
8 MS. GEMAN: Fair enough.
9 BY MS. GEMAN:
10 Q. Even before 2006 you weren't
11 seeing patients who had not been
12 diagnosed with cancer?
13 A. Actually, I did have a
14 geriatric primary care practice, 2005 to
15 2006, where I was the attending. And in
16 that setting I was ordering screening
17 according to guidelines.
18 Q. But that was in geriatric
19 primary care, not oncology, correct?
20 A. Right. We don't -- they
21 have cancer by the time they get to us,
22 so we're not ordering screening for
23 cancer.
24 Q. You also express a concern

Page 254

1 in your report about overdiagnosis,
2 correct?
3 A. Oh, yes. Mm-hmm.
4 Q. Okay. So I'd like to -- and
5 you used as an example a hypothetical
6 where a person died at 70, regardless of
7 whether they were tested at age 60 or
8 tested at age 67, correct?
9 A. They both die at the same
10 time, the time of diagnosis is different.
11 The age of death is the same.
12 Q. And that was a hypothetical
13 where the authors expressly acknowledged
14 the limitation that the earlier -- "The
15 earlier diagnosis did nothing to change
16 the course of the disease." Is that
17 correct?
18 A. That's what's represented in
19 that cartoon.
20 Q. Okay. So that hypothetical
21 is not speaking at all about instances
22 where testing -- or where catching a
23 cancer earlier can affect the course of
24 the disease, correct?

Page 255

1 A. That is not describing those
2 cancers.
3 Q. Okay. And the NCI was not
4 advocating less screening in that
5 article, but instead more sort of
6 numeracy in context for information,
7 correct?
8 A. I think it speaks to
9 individualized recommendation for the
10 patient, doing no harm, making sure that
11 you know what you're testing for, and if
12 it will impact the patient's life.
13 Q. And as an oncologist, if
14 you're presented with an otherwise
15 healthy 60-year-old who does have -- you
16 know, who did have a prostate cancer
17 diagnosis based on the screen, what would
18 you do?
19 A. So to be fair, I wouldn't be
20 seeing that patient because --
21 Q. Oh, yeah. You don't treat
22 prostate.
23 A. Right.
24 Q. Do you have an understanding

Page 256

1 of what -- I don't know if it's still
2 called a proctologist? I don't know.
3 A. I'd say urologist.
4 Q. Okay. What would a urologic
5 oncologist -- what might a urologic
6 oncologist do in that scenario?
7 A. Can you repeat the question?
8 Q. Sure.
9 So she's presented with a
10 patient who's an otherwise totally
11 healthy 60-year-old who has prostate
12 cancer that was caught by that screen.
13 A. Mm-hmm.
14 It depends on the stage, the
15 grade. There's very specific treatment
16 algorithms. In truth, urologists, or the
17 most straightforward ones, often start
18 androgen deprivation therapy. And they
19 don't get to a genitourinary oncologist
20 until they have more advanced disease.
21 Q. But the point is there's
22 things that can be done for that
23 60-year-old, right? Unlike in the
24 hypothetical where there was nothing that

Page 257

1 could be done.
2 A. If the patient is well
3 enough to treat, there are therapies to
4 be offered.
5 Q. So it would be helpful for
6 that person to know at age 60 -- it would
7 be helpful for someone to know at age 60,
8 who is otherwise healthy, that they have
9 prostate cancer as opposed to only
10 knowing it when it's too late to do
11 anything about it? Can we agree with
12 that?
13 MR. KUM: Objection.
14 Incomplete hypothetical.
15 THE WITNESS: I mean, I
16 think it's completely based on the
17 grade of the tumor. If you have a
18 low grade, and I'm sure you're
19 familiar with the term, watchful
20 waiting.
21 I think -- and again, I'm
22 not doing this, but there's
23 different recommendations, some of
24 which are just observation based

Page 258

1 on the grade of the tumor and the
2 stage.
3 I know watchful waiting was
4 something that was accepted in
5 Europe. And we've worked to
6 assess it here through -- and
7 integrate it in the care.
8 If you have an indolent
9 cancer, you may be offered
10 watchful waiting or other
11 therapies.
12 BY MS. GEMAN:
13 Q. And so do you agree that it
14 is helpful for someone to know at age 60
15 that they have prostate cancer as opposed
16 to only learning about it when it's too
17 late to do anything about it?
18 MR. KUM: Asked and
19 answered. Incomplete
20 hypothetical.
21 THE WITNESS: I think,
22 again, I can't answer that without
23 knowing the grade and the other
24 comorbidities.

Page 259

1 You said healthy. But, you
2 know, what the life expectancy,
3 the activity level. We assess
4 performance status. There's a lot
5 that goes into a decision to
6 treat.
7 BY MS. GEMAN:
8 Q. Under what circumstances is
9 it better to know at age 60 that you have
10 an early stage cancer as opposed to
11 waiting for seven years until it's too
12 late?
13 A. Well, I think if you have --
14 I think that's exactly the point of that
15 graphic.
16 If you're diagnosed at 63,
17 we may be obliged to do more invasive
18 treatments, but you still die at 70. But
19 if you're not diagnosed at 63, and you
20 have the same indolent cancer, you know,
21 at that time, you have years more of
22 normal uninstrumented or chemotherapy or
23 hormone therapy life.
24 Q. No, no. That hypothetical

Page 260

1 was expressly limited to a circumstance
2 where there was nothing the person can
3 do. And the articles -- the authors of
4 that article acknowledge that. So
5 whether you learned at 60, 61, 65 or 67,
6 you were going to die at 70. That was
7 the hypothetical in that article,
8 correct?
9 A. I would have to look back at
10 it.
11 Q. That's your recollection,
12 correct?
13 A. I don't --
14 Q. You just said that a second
15 ago when we were talking about that.
16 A. I just -- I don't know when
17 you die or when you die from or what that
18 discussion is. I'm sorry.
19 Q. You die at 70 from prostate
20 cancer. Do you recall that now?
21 A. I recall the graphic.
22 Q. Okay. What I'm --
23 MR. KUM: Doctor, you can
24 pull your report.

Page 261

1 THE WITNESS: Okay. No, no.
2 I agree. You die at 70 from
3 prostate -- that's the premise of
4 that graphic.
5 BY MS. GEMAN:
6 Q. And I'm moving off that
7 hypothetical, which is the situation
8 where -- I'm saying generally, if
9 there's -- if there's possibly something
10 you can do about it, isn't it better to
11 learn that at 60 rather than at 67 when
12 it's too late?
13 MR. KUM: Asked and
14 answered. Incomplete
15 hypothetical.
16 You can answer.
17 THE WITNESS: So you're
18 saying if you are diagnosed at 60,
19 and, I guess -- grade matters, so
20 I don't know how to -- I don't
21 know how to answer this question.
22 It's not exactly how we do
23 the evaluation from an oncology
24 perspective. You can never make

Page 262

1 an assessment without looking at
2 the grade and stage of the cancer.
3 I'm not -- if you want to
4 repeat the question.
5 BY MS. GEMAN:
6 Q. Yeah.
7 A. I'm trying to answer. And I
8 apologize.
9 Q. No, it's not something that
10 one would necessarily -- a layperson
11 might imagine to be controversial. If
12 you learn about something at age 60 and
13 can do something about it, isn't that
14 better than learning about it at 67 when
15 there's nothing you can do about it?
16 MR. KUM: Incomplete
17 hypothetical.
18 THE WITNESS: I mean,
19 there's always something you can
20 do about it even if it's later
21 stage. If somebody is not
22 eligible for surgery, it's not
23 curative. They may have different
24 treatments.

Page 263

1 I'm not really sure how to
2 answer this. I'm trying to figure
3 out.
4 It's -- there's so many
5 factors. It's not really that
6 black and white because the stage,
7 grade -- you know, how it looks
8 under the microscope tells you how
9 aggressive it's going to be.
10 BY MS. GEMAN:
11 Q. Let's talk about your
12 discussion that overtreatment is a
13 particular concern for lung and prostate,
14 correct, while we're on the subject?
15 A. Yes.
16 Q. You cited Carter for that
17 proposition, correct?
18 A. Mm-hmm.
19 MS. GEMAN: So I'm going to
20 mark as Exhibit 8 -- I'm just
21 trying to help the court reporter
22 by saying where it was in your
23 report -- what's referenced in
24 Footnote 38 of the doctor's

Page 264

1 report. "What is Overdiagnosis
2 and Why Should We Take It
3 Seriously in Cancer Screening?"
4 (Document marked for
5 identification as Exhibit
6 Teitelbaum-8.)
7 BY MS. GEMAN:
8 Q. Do you recognize what's been
9 marked as Exhibit 8?
10 A. I do.
11 Q. And you were referring in
12 your report to the -- I'm trying to
13 figure out the page -- to the
14 second-to-last substantive page.
15 At the -- you see with the
16 Figure 2 at the bottom?
17 A. Mm-hmm.
18 Q. And I'm looking at the last
19 full paragraph.
20 MR. KUM: Doctor, just a
21 reminder, you have to give a yes
22 or no.
23 THE WITNESS: Oh, sorry.
24 MS. GEMAN: That's okay.

Page 265

1 MR. KUM: You keep saying
2 "mm-hmm." And that's what the
3 court reporter is taking down.
4 THE WITNESS: I apologize.
5 BY MS. GEMAN:
6 Q. And it says, "Some cancers
7 are more likely to be overdiagnosed than
8 others."
9 Do you see that?
10 A. Can you show me where again?
11 Which page?
12 Q. Yes, it's on --
13 A. Page 3?
14 Q. That's a better way to do
15 it. Yes, Page 3.
16 A. Okay.
17 Q. It's a short article. Do
18 you see that?
19 A. That, "Slow-growing cancer
20 is asymptotically present in the body
21 for much longer"?
22 Q. "Some cancers are likely" --
23 "are more likely to be overdiagnosed than
24 others."

Page 266

1 Do you see that?

2 A. Yes.

3 Q. Okay. And was this -- and

4 they quote an article from 2013; is that

5 correct?

6 A. Who does?

7 Q. The authors here. They

8 refer to this Estermann.

9 A. Yes.

10 Q. Okay. And these authors

11 note that screening that detects and

12 prompts removal of changes that can later

13 become cancer can occur for colorectal

14 screening, correct?

15 A. That's what it says.

16 Q. Okay. And did the 2013

17 study, the Estermann study that you

18 referenced in your report, raise a

19 concern about overdiagnosis for the seven

20 cancers in -- at issue in this case,

21 other -- that are not lung and prostate?

22 A. Could I see the report? I

23 quoted the seven cancers from

24 Dr. Kaplan's report. I didn't come up

Page 267

1 with those seven cancers on my own.

2 I directly referred to his

3 list, which he said he got from his

4 experts.

5 Q. Okay. Does this article

6 talk about liver cancer in this section?

7 A. In which section?

8 Q. The one we're talking about,

9 the one where they identify --

10 A. In Estermann or in this

11 text?

12 Q. In Estermann, which is what

13 you were quoting in your article.

14 A. I need to see the article of

15 Estermann. I don't have the opportunity

16 to comment on an article without the

17 opportunity to read it.

18 Q. Well, I'm just using what

19 you gave us. So I have -- this is

20 literally the document that you cited in

21 your report.

22 A. But you're asking me a

23 question about Estermann.

24 Q. That's right, because that

Page 268

1 was the section that you cited in your

2 report that you attributed to these

3 authors.

4 A. I'd like the opportunity to

5 see it.

6 Q. Okay. Well, you didn't cite

7 it in your report, so --

8 A. But you asked me about it.

9 Q. Right, because you ascribe

10 their conclusions to another author.

11 A. Okay. Okay. I'm happy to

12 look at it.

13 Q. Okay. Do you see -- do you

14 see where it says overdiagnosis -- and

15 you quoted this in your article.

16 "Overdiagnosis, or identification of

17 indolent cancer, is common in breast,

18 lung, prostate, and thyroid cancer"?

19 A. Yes.

20 Q. Do you see that?

21 Is liver in that list?

22 A. I don't see it in that list.

23 Q. Okay. Is stomach?

24 A. I don't see it in that list.

Page 269

1 Q. Is colorectal?

2 A. I don't see it in that list.

3 Q. Is esophageal?

4 A. I don't see it in that list.

5 Q. Is bladder?

6 A. Bladder is not in that list.

7 Q. Is pancreatic?

8 A. Pancreatic is not in that

9 list.

10 Q. Is blood cancer?

11 A. Blood cancer is not in that

12 list.

13 Q. Okay. And are you aware of

14 research from around 2020 that suggests

15 that less PSA testing was coming at a

16 steep price?

17 A. I'd have to --

18 MR. KUM: Objection.

19 Assumes facts not in evidence.

20 THE WITNESS: Yeah, I have

21 to see the article.

22 BY MS. GEMAN:

23 Q. Well, I'm just -- I'm asking

24 about your sort of general -- general

Page 270

1 knowledge. Do you know if there's talk
2 of changing the PSA testing
3 recommendations?
4 A. I don't know.
5 Q. Okay. And looking at your
6 article -- I'm sorry, looking at your
7 report again, you indicate what -- on
8 Page 15, you say, "The paradox" -- you
9 reference on Page 15 -- and then --
10 A. Oh.
11 Q. Mm-hmm.
12 A. Mm-hmm.
13 MR. KUM: Doctor. Again,
14 please refrain from saying mm-hmm.
15 THE WITNESS: I'm sorry.
16 I'm sorry.
17 MS. GEMAN: No, no. It's
18 okay.
19 THE WITNESS: I'm just
20 trying to keep up with this. It's
21 like a lot of documents. I
22 apologize.
23 BY MS. GEMAN:
24 Q. Sorry. The good news is

Page 271

1 this is back to your report.
2 You state in the last
3 sentence of the full -- sorry, the
4 second-to-last full paragraph on Page 15
5 that, "Screening is less likely to find
6 the aggressive, rapidly progressive
7 cancers that cause the greatest mortality
8 and morbidity."
9 Do you see that?
10 A. Yes.
11 Q. And when I read the articles
12 that were referenced by you, they weren't
13 suggesting that the screens, like, catch
14 a small tumor and miss a large tumor, but
15 instead that -- instead that the those
16 tumors are faster growing, and by the
17 time -- and people are more likely to
18 have symptoms that present?
19 A. So just one thing, back to
20 the list. The cancers you mentioned,
21 only colon cancer has an indicated
22 screening option.
23 So just to speak to those
24 cancers on the list, the only one that --

Page 272

1 the only four that we have national
2 guidelines are -- with identified
3 screening tests are prostate, lung, colon
4 and -- I'm getting tired -- thyroid. Not
5 thyroid. Prostate, lung, and breast.
6 And there are specific
7 recommendations not to screen for
8 thyroid, pancreas.
9 So I think the distinction
10 here is people are trying to screen for
11 them or trying to test for them, and
12 that's not sort of the indication.
13 They're actually recommended against.
14 So -- and you actually said
15 it perfectly, that some cancers have a
16 different biology and may be very
17 aggressive and don't always obey the
18 general carcinogenesis timeline of
19 decades. And perhaps there is an
20 aberrant cell that at year seven in your
21 screening interval of ten years appears
22 and grows rapidly.
23 And I think the point here
24 is that using established protocols of

Page 273

1 recommendations in that individual
2 patient, the screening would not catch
3 that cancer.
4 Q. I see. Because under the
5 recommended intervals, it just wouldn't
6 catch it. It's not as though if the
7 person had a test on year eight, that it
8 would miss it?
9 A. Right.
10 Q. It's just they wouldn't have
11 been screened at all?
12 A. They wouldn't have been
13 screened. And again, this is -- there's,
14 you know, individuals and then there's
15 population science, and the guidelines
16 are based on population.
17 Q. Are you against endoscopies?
18 A. Upper or lower?
19 Q. Upper.
20 A. Against? I'm not against
21 endoscopies.
22 Q. Can -- I wanted to come back
23 to a subject about which we had some
24 colloquy earlier.

<p style="text-align: right;">Page 274</p> <p>1 Which tests do you use that 2 are not FDA approved, to your knowledge? 3 A. I don't know. 4 Q. Do you have knowledge of the 5 FDA approval status of every test that 6 you use? 7 A. The -- I mean, I have a list 8 of tests that I can order from. 9 I don't -- you know, usually 10 the ones that are outside the realm are 11 common boxes that we have to order 12 separately. The ones that I can click in 13 my order panel are FDA approved. 14 And again, I'm ordering very 15 standard tests to monitor the toxicities 16 of cytotoxic chemotherapy. So that's the 17 reference. 18 Q. What are the tests that you 19 use that you have to order separately? 20 A. I could order Signatera, as 21 I said, which is FDA approved. Because 22 of the controversy, I only order it 23 within the context of a clinical trial. 24 I order Next Generation</p>	<p style="text-align: right;">Page 276</p> <p>1 minute ago -- 2 A. Mm-hmm. 3 Q. -- a minute ago, you said 4 you weren't sure about the approval 5 status of some of your tests. 6 A. I said I know what isn't. 7 But I don't know -- you know, I order 8 very -- CBC is FDA approved. Liver panel 9 is FDA approved. I order very standard 10 tests. 11 The question for me comes 12 when it's a non-standard test. And 13 that's when the FDA approval is relevant 14 to me. 15 Q. And what, in addition to the 16 genomic sequencing that you mentioned, 17 are there any other non-standard tests 18 that you use? 19 MR. KUM: Other than the 20 Signatera that she also mentioned 21 to you. 22 MS. GEMAN: I think the 23 doctor said she does not use 24 Signatera.</p>
<p style="text-align: right;">Page 275</p> <p>1 Sequencing, which is an indicated 2 indication to find out a mutational 3 status of the tumors, to see if there's a 4 targeted therapy. So like a lock and a 5 key, that's actually a genomic mutation 6 analysis of the tumor. 7 These are things that we 8 have in our lab. So I don't, and I 9 don't -- you know, I know things that 10 aren't, but I don't know how to say what 11 I do. I have -- 12 Q. I'm sorry. I -- 13 A. I know what isn't FDA 14 approved, and I know what is. And I hope 15 that you picked up that even if it is, I 16 make an informed decision. Even if it's 17 available, it's really easy to order a 18 test. 19 But again, you have to know 20 what to do with the test and that speaks 21 to pretest probability and efficacy and 22 what you would do for it. 23 Q. But you just said, "I know 24 what isn't FDA approved." But then a</p>	<p style="text-align: right;">Page 277</p> <p>1 THE WITNESS: I use it 2 within the context of a clinical 3 trial. 4 BY MS. GEMAN: 5 Q. Clinical trial, right. 6 A. So I have certainly ordered 7 it. 8 Q. Okay. 9 A. I just don't feel 10 comfortable outside of the context of a 11 clinical trial. 12 I order Next Generation 13 Sequencing, which is indicated. That's 14 mostly what I order. 15 I actually don't order 16 genetic testing of patients for 17 hereditary cancer syndrome, to your 18 point. I actually refer them out, so 19 that they have all of the supportive care 20 that goes along with that recommendation, 21 including a genetic counselor and all of 22 those things. 23 Q. And why do you use Next Gen 24 Sequencing if it isn't approved?</p>

Page 278

1 A. I didn't say it isn't
2 approved. I said it's indicated.
3 MR. KUM: I was going to
4 object. That misstates her
5 testimony.
6 MS. GEMAN: Oh, I may have
7 misunderstood.
8 BY MS. GEMAN:
9 Q. Because I had asked what
10 tests you use that aren't FDA approved,
11 you included Next Gen Sequencing among
12 your answer. So I may have
13 misunderstood.
14 MR. KUM: Actually, your
15 question was non-standard tests.
16 That's not the same as --
17 MS. GEMAN: But the doctor
18 also answered the previous
19 question, which was not FDA
20 approved. So let's just clarify
21 this.
22 BY MS. GEMAN:
23 Q. Next Gen Sequencing is
24 approved by the FDA?

Page 279

1 A. Yes.
2 Q. Okay. And Signatera is not?
3 A. It is approved.
4 MR. KUM: Is.
5 BY MS. GEMAN:
6 Q. Is approved. Okay.
7 Are there tests that you use
8 that are not FDA approved?
9 MR. KUM: Objection. Asked
10 and answered.
11 You can answer again.
12 THE WITNESS: I don't know.
13 I don't think, unless I know it
14 has approval, which usually means
15 when you can easily order it, and
16 I know the indication that I'm
17 ordering it for, then I order it.
18 BY MS. GEMAN:
19 Q. Okay. I understand better
20 now.
21 So there are tests that you
22 use that you know are FDA approved. And
23 there are tests that you use about which
24 you are agnostic as to the FDA approval

Page 280

1 status?
2 MR. KUM: Actually.
3 Objection. Misstates testimony.
4 She never says she uses
5 non-FDA-approved tests.
6 MS. GEMAN: Well, actually
7 you're testifying for the witness.
8 MR. KUM: I'm not. She
9 actually -- you asked this
10 question several times earlier,
11 and now you're asking this
12 question again.
13 So you can go ahead and ask
14 it again.
15 BY MS. GEMAN:
16 Q. Is this correct: You use
17 some tests that are FDA approved. Not
18 all tests that are FDA approved are ones
19 that you use, obviously. You also use
20 some tests where you are agnostic as to
21 whether they are approved.
22 MR. KUM: Objection.
23 Misstates testimony.
24 THE WITNESS: I order basic

Page 281

1 tests, CBC, liver panel, kidney
2 panel. Those are the majority of
3 tests that are -- they are so long
4 standing, I'm not sure of their
5 FDA status.
6 But they are certainly
7 indicated and recommended, not
8 just in all of the 20 years that
9 I've been doing this, but the NCCN
10 guidelines certainly indicate that
11 we should be testing all of those
12 things to safely treat our
13 patients.
14 BY MS. GEMAN:
15 Q. Are there any tests that you
16 use, other than those where you are
17 agnostic about the FDA approval status?
18 MR. KUM: Objection. Vague
19 and ambiguous.
20 THE WITNESS: I don't order
21 many tests.
22 BY MS. GEMAN:
23 Q. Okay.
24 A. I order the same panel.

Page 282

1 MS. GEMAN: Okay. Let's
2 take a brief break if that's all
3 right.
4 THE VIDEOGRAPHER: 3:32. We
5 are off the video record.
6 (Short break.)
7 THE VIDEOGRAPHER: 3:49, we
8 are on the video record.
9 BY MS. GEMAN:
10 Q. Doctor, have you been
11 designated as an expert in any litigation
12 other than this one where you're a
13 proposed expert?
14 A. I mentioned the two
15 depositions.
16 MR. KUM: She means as an
17 expert, like a paid expert. Not
18 just any depos.
19 THE WITNESS: Oh, I did some
20 in residency, like a review of
21 records.
22 BY MS. GEMAN:
23 Q. Okay. So when you were a
24 resident, you were designated -- or do

Page 283

1 you know if you were designated as a
2 testifying expert in any of those cases?
3 A. It was more -- I think -- it
4 was a long time ago. I think it was more
5 kind of a review of records from a
6 medical standpoint so that the attorneys
7 could make a decision whether or not they
8 wanted to pursue.
9 Q. In a medical malpractice?
10 A. In a medical malpractice.
11 Q. Did any of those cases
12 involve cancer?
13 A. I don't remember. I did --
14 I did maybe three. I didn't -- I was too
15 tired as a resident to really do them
16 with any frequency, so I stopped.
17 Q. Do you remember the subject
18 matter?
19 A. I don't.
20 Q. Are you -- other than this
21 case -- and this is a yes/no question.
22 Have you been retained as a
23 consultant or testifying expert in any
24 other cases?

Page 284

1 MR. KUM: You mean like
2 ever, right?
3 MS. GEMAN: Yeah.
4 THE WITNESS: Yes, I was
5 asked -- although it never went
6 anywhere. I was asked to review a
7 record about a patient with a
8 diagnosis of pancreas cancer, and
9 I think it was a missed diagnosis
10 on imaging.
11 BY MS. GEMAN:
12 Q. For which side were you
13 asked to review records?
14 A. The patient, is the
15 plaintiff, right?
16 For the defense.
17 Q. For the defense. Did you
18 conclude that there had been a missed
19 diagnosis?
20 A. It was apparent on the
21 imaging. It was for a different
22 indication, but it was present.
23 Q. And do you know if they
24 settled?

Page 285

1 A. I know they settled.
2 Q. Were you ever disclosed to
3 the court, if you know?
4 MR. KUM: Don't guess.
5 THE WITNESS: I don't know.
6 Sorry.
7 BY MS. GEMAN:
8 Q. And presently, are you
9 working on any cases as an expert other
10 than this one?
11 A. Not a single one.
12 MS. GEMAN: All right. I
13 have nothing further.
14 BY MS. GEMAN:
15 Q. Actually, I'm sorry. I
16 didn't mean that as a bait and switch,
17 although I'm sure it sounded like it. I
18 apologize. I have just a couple more.
19 Did you just -- did you
20 discuss with your counsel -- or with this
21 counsel the question and answers that
22 they are going to ask now?
23 MR. KUM: I'm going to
24 object that --

Page 286

1 BY MS. GEMAN:
2 Q. Yes or no?
3 MR. KUM: -- it invades the
4 attorney work product privilege,
5 and I'm going to instruct you not
6 to answer.
7 THE WITNESS: Okay.
8 MS. GEMAN: All right. Pass
9 the witness.
10 Thank you for your time.
11 THE WITNESS: Thank you.
12 THE VIDEOGRAPHER: Let's go
13 off the record.
14 MR. KUM: Yeah.
15 THE VIDEOGRAPHER: 3:52. We
16 are off the video record.
17 (Brief pause.)
18 THE VIDEOGRAPHER: 3:54. We
19 are on the video record.
20 - - -
21 EXAMINATION
22 - - -
23 BY MR. KERNER:
24 Q. Dr. Teitelbaum, good

Page 287

1 afternoon. It's been a relatively long
2 day. So I will try keep this as short as
3 possible. I just have a few questions.
4 And let's see if we can get through them.
5 Am I correct that you work
6 at Penn?
7 A. Yes.
8 Q. And you teach at Penn?
9 A. Yes.
10 Q. What's your title there?
11 A. I am the Deenie Greizer and
12 Daniel Haller associate professor of
13 gastrointestinal malignancies, which is
14 an endowed chair. And my current title
15 is associate professor of clinical
16 medicine.
17 Q. Are you also involved in the
18 Pancreatic Cancer Research Center there?
19 A. Oh, yeah. I'm the clinical
20 director of the Penn Pancreatic Cancer
21 Research Center.
22 Q. What do you do in connection
23 with that?
24 A. Oh, that's a really fun part

Page 288

1 of my job.
2 So we have -- we get to -- I
3 work with the lab researchers and the
4 translational researchers, and we look
5 through our portfolio of clinical trials
6 and research questions, and we help
7 direct the efforts and the funds towards
8 those projects.
9 One of the things that we
10 like to do the most, actually, are
11 investigator-initiated trials, where --
12 you know, there's big, collaborative
13 trials but you're always interested in
14 independent research.
15 Q. You said that you direct the
16 efforts and the funds towards those
17 projects?
18 A. We work together to figure
19 it out. And I also -- I get money as
20 part of my endowed chair that I get to
21 put to clinical trials. So every year I
22 get to pick a study.
23 Q. Not money that goes to you?
24 Money that goes to the trials?

Page 289

1 A. I don't get money from the
2 endowed chair. I actually direct it all
3 to interesting research projects that
4 need funding.
5 Q. Okay. I think you just said
6 that you were an associate professor?
7 A. Yes.
8 Q. That's your current title?
9 A. Yes.
10 Q. Do you also treat patients
11 in a clinical setting?
12 A. Oh, yes. I practice
13 primarily -- exclusively in the cancer
14 clinic.
15 Q. Can you tell me a little bit
16 about your clinical experience?
17 A. Oh, it's busy.
18 You know, I will see new
19 patients that are, you know, first
20 diagnosis with a difficult cancer. And I
21 do a lot of the education about their
22 diagnosis, prognosis, and treatment
23 plans.
24 I see a large number of

<p style="text-align: right;">Page 290</p> <p>1 patients in consultation and render an 2 opinion, and then will often work with 3 their treating physician to help guide 4 their care. 5 I present every patient in 6 our multi-disciplinary clinic. We have a 7 multi -- interdisciplinary clinic with 8 surgery, radiation -- radiation oncology, 9 all the disciplines, pathology. 10 And we -- I present every 11 one of my patients to make sure they have 12 the best treatment options. 13 And I run the 14 pancreatobiliary multidisciplinary 15 conference every Wednesday. 16 I also have a large percent 17 of patients that I'm actively treating 18 with chemotherapy. So they will often 19 come every week or every other week, 20 depending on their regimen, and then 21 monitor them with scans and -- at 22 prescribed intervals. 23 And then I have patients 24 that are referred after surgery who meet</p>	<p style="text-align: right;">Page 292</p> <p>1 submit that regimen for insurance 2 coverage and do all the planning, chemo 3 teaching. 4 And again, if a patient is 5 on regimen, I don't present them unless 6 there's a clinical question. But if a 7 patient progresses on a therapy or 8 doesn't tolerate it, then I'll put them 9 up to tumor board again to get input. 10 Q. Okay. In the ordinary 11 course of your care and treatment of your 12 patients, are you required to weigh the 13 risks and benefits of administering 14 certain tests? 15 A. I have to think about every 16 test that I offer. And one of the most 17 important things is I have to make sure a 18 patient of mine is well enough. 19 These are cancer patients. 20 They are vulnerable. A lot of them 21 are -- for example, colon cancer and 22 quite well and working. But I still have 23 to make sure that it's safe and tolerable 24 for them.</p>
<p style="text-align: right;">Page 291</p> <p>1 the indications for benefit of -- it's 2 called -- we call it adjuvant therapy, 3 postoperative therapy. And the goal of 4 that therapy is to reduce the risk of 5 recurrence. So it's enhancing their 6 chance for care. 7 Q. Okay. And I think you've 8 sort of just answered this. But I'm 9 going to ask it anyway. So feel free to 10 tell me you've just answered it. 11 In the ordinary course of 12 your care and treatment of your patients, 13 have you been responsible or are you 14 responsible for determining an 15 oncological care plan for those patients? 16 A. Oh, I have to devise an 17 oncologic care plan for each patient. We 18 always try and put patients on clinical 19 trial because you always want to see if 20 you can improve the standard of care 21 generally. 22 And by definition, if you're 23 enrolling them on trial or you're putting 24 them on standard therapy, you have to</p>	<p style="text-align: right;">Page 293</p> <p>1 Q. And so the short answer to 2 my question was yes? 3 A. Yes. 4 Q. Okay. And my follow-up 5 question, which you started to answer, 6 is, what analysis do you conduct in 7 determining whether a particular test or 8 procedure is appropriate for a particular 9 patient? 10 A. Sure. So performance status 11 is really the language of oncology. We 12 have EGOG performance status or Karnofsky 13 where we actually grade the wellness of 14 the patient. 15 And for example, if you have 16 zero symptoms, you're a performance 17 status zero. 18 If you are -- have some 19 symptoms day to day, but you're largely 20 functional, you are a one. 21 If you're up and out of bed 22 50 percent of the time but very affected 23 by your cancer, you're a two. 24 If you're in bed or chair</p>

Page 294

1 greater than 30 percent, you are a three.
2 And if you're bedbound,
3 you're a four.
4 And this does two things.
5 We use those criteria to assess whether
6 or not a patient is appropriate for
7 clinical trial. Only zeros and ones go
8 to trial. But we also track the wellness
9 and well-being of the patient.
10 Q. Okay. Now, in assessing the
11 risks and benefits of a particular test
12 or procedure, have you reviewed medical
13 studies to help analyze those risks and
14 benefits?
15 MS. GEMAN: Objection.
16 THE WITNESS: I review -- I
17 try to be as informed as I can
18 about every test I'm offering, be
19 it a lab or a procedure. In the
20 same context, I strive to be
21 informed by the therapies that I
22 give.
23 BY MR. KERNER:
24 Q. And in connection with that,

Page 295

1 you'll review medical literature?
2 A. Absolutely, or NCCN.
3 Q. All right. With respect to
4 this matter, how did you go about looking
5 into the question of whether Dr. Kaplan's
6 medical monitoring plan was appropriate
7 for the proposed class?
8 A. So, you know, first I went
9 to the standard of care, the national
10 standard of care guidelines for
11 asymptomatic patients.
12 And then I looked at his
13 recommendations. And I think, as you can
14 see in my expert report, actually went
15 through each test. And, for example
16 history as part of standard screening, I
17 commented on what is and what isn't in
18 the primary care setting.
19 And then I discussed what I
20 agreed with or what I had concerns about.
21 Q. And did you conduct a
22 literature search in connection with your
23 analysis?
24 A. Yes.

Page 296

1 MS. GEMAN: Objection.
2 BY MR. KERNER:
3 Q. How did you do that?
4 MS. GEMAN: Objection.
5 Asked and answered.
6 THE WITNESS: I did a
7 literature search.
8 BY MR. KERNER:
9 Q. And how did you do that?
10 A. I --
11 MS. GEMAN: Same objection.
12 BY MR. KERNER:
13 Q. You can answer.
14 A. -- looked at U.S. --
15 Q. How did you conduct the
16 literature search?
17 A. Oh, I looked up the task
18 force recommendations, and then I looked
19 at each test with the data to see if
20 there was data supporting it.
21 Q. In addition to -- in
22 addition to the materials on your list of
23 materials considered in your report, did
24 you also employ any general or background

Page 297

1 knowledge or experience that you might
2 have?
3 MS. GEMAN: Objection.
4 THE WITNESS: I look at
5 everything with my clinical
6 experience. I can't -- you know,
7 I've done this for 20 years. So
8 my personal experience, I can't
9 not have that as I evaluate a
10 regimen or a patient. It's who I
11 am.
12 BY MR. KERNER:
13 Q. Okay. And after employing
14 the methodology -- excuse me -- that you
15 employed, did you reach a conclusion as
16 to whether Dr. Kaplan's medical
17 monitoring plan is appropriate for the
18 proposed class members?
19 MS. GEMAN: Objection.
20 THE WITNESS: I do not think
21 it's appropriate for these class
22 members or anybody.
23 BY MR. KERNER:
24 Q. Why not?

<p>Page 298</p> <p>1 A. There are a lot of tests 2 that are risky that have no indication, 3 that would cause significant harm. And 4 You know, we -- we actually, you know, 5 take an oath to do no harm. 6 And I think the magnitude of 7 harm that recommending this regimen would 8 be profound. 9 Q. Okay. And what did you rely 10 on to form that conclusion or that 11 opinion? 12 MS. GEMAN: Objection. 13 THE WITNESS: Again, I 14 reviewed each of the tests. I 15 looked at what the indications 16 were for and what the indications 17 weren't for. 18 I mean, I even worry, again, 19 that you know, some of the 20 invasive tests these patients 21 wouldn't even be candidates for, 22 based on their cardio -- 23 significant cardiovascular 24 disease, like heart failure.</p> <p>Page 299</p> <p>1 So -- but even without those 2 comorbidities, I wouldn't 3 recommend this for any person. 4 BY MR. KERNER: 5 Q. And your conclusions are all 6 stated in your report, correct? 7 A. Regarding the medical 8 monitoring? 9 Q. Yes. 10 A. They are all stated. 11 Q. Thank you. 12 Do you have an opinion as to 13 whether Dr. Kaplan's proposed medical 14 monitoring plan would increase longevity 15 for any individual proposed class member? 16 A. I have zero clue if it 17 would. I worry, conversely, about the 18 real harm it might have for a patient. I 19 mean, for example, if you do a 20 transrectal ultrasound biopsy, the risk 21 of sepsis is one in a thousand, which is 22 significant. If -- I think we mentioned 23 before, colonoscopy, risks from the 24 procedure is 0.8. But if you have a</p>	<p>Page 300</p> <p>1 medically ill or older patient and you 2 put them through a colonoscopy prep, you 3 know, causes nausea, vomiting, 4 dehydration, and diarrhea -- and we used 5 to put these patients in the hospital 6 because the preps are so onerous for sick 7 or older adults. 8 And, you know, I don't know 9 that there's a literature, but I would 10 worry if someone fell. It's not going to 11 say prepping for a colonoscopy on their 12 hospital admission or death certificate. 13 It would say fall. 14 So I don't know if all of 15 the morbidity is represented in that 16 procedure risk data. 17 Q. Okay. You mentioned 18 colonoscopy. And I think you mentioned 19 perforation as well. 20 You were asked some 21 questions earlier today by counsel as to 22 whether there was a trend in the last 23 30 years of a decrease in perforations. 24 Do you remember that</p> <p>Page 301</p> <p>1 questioning? 2 A. I do. 3 Q. And I think you -- and I'm 4 paraphrasing, so I apologize if I don't 5 quote you exactly. I think you said 6 something like you weren't familiar with 7 that data. 8 Are you familiar with the 9 data of perforations in 2022? 10 A. Given that Dr. Kaplan is 11 recommending that test in 2022, I looked 12 at the current data, so I would know the 13 risk. 14 Q. And you're familiar with 15 that now? 16 A. I was always familiar with 17 that. I didn't think a trend was 18 relevant. 19 Q. We're almost there, 20 Dr. Teitelbaum. 21 You were also asked some 22 questions earlier today -- you talked 23 about adherence, the concept of 24 adherence.</p>
---	---

Page 302

1 A. Yes.

2 Q. And I think you were asked

3 whether you knew the specific adherence

4 of the individual class members, the

5 proposed class members?

6 A. Correct.

7 Q. I think you said that you

8 didn't know the specific class members'

9 adherence, correct?

10 A. I have no Epic -- I have no

11 access to their pharmacy data or pill

12 boxes.

13 Q. Okay. You do -- you are

14 aware of the adherence numbers in the

15 general population, correct?

16 A. Yes.

17 Q. And what are they again?

18 A. Adherence is generally

19 around 50 percent. And just to be clear,

20 a person that is taking 80 percent of

21 their medications is considered adherent.

22 And that means that you're essentially

23 missing one day -- one week every month,

24 right.

Page 303

1 So just to sort of establish

2 what the standard in the general

3 population is.

4 Q. Okay. And again, just the

5 concept of adherence, tell us very

6 quickly what that is.

7 A. It's interesting. It used

8 to be compliance. But that's a little

9 judgy, so we call it adherence now. And

10 it's if you're prescribed a pill, do you

11 take it at the prescribed dose, and do

12 you stop it on your own. A lot of

13 patients stop it on their own. It's

14 exactly that, adherence to the

15 prescription as written.

16 Q. Okay. And so 50 percent

17 adherence would mean to a layperson that

18 the individual taking the medication or

19 prescribed the medication complies or

20 takes the medication 50 percent of the

21 time, correct?

22 A. Adheres 50 percent of the

23 time. People -- nobody finishes their

24 antibiotics. Like I've been guilty of

Page 304

1 that. You know, a lot of people are not

2 adherent to their medications.

3 Q. Do you have any reason to

4 think that the adherence of the purported

5 class is any different than the general

6 population?

7 A. I would imagine it is. This

8 was --

9 Q. You imagine it is what?

10 A. -- a general medicine

11 population.

12 Q. Would you imagine that it is

13 different?

14 A. That it is the same.

15 Q. As the general population?

16 A. I would imagine it is the

17 same as the general population.

18 Q. Okay. I'm sorry.

19 There was some testimony

20 earlier today and some questioning from

21 counsel about the levels of nitrosamines

22 in the valsartan-containing drugs.

23 Do you remember that?

24 A. Yes.

Page 305

1 Q. Is the level of nitrosamine

2 in valsartan-containing drugs relevant to

3 your opinion concerning Dr. Kaplan's

4 medical monitoring protocol?

5 A. Completely irrelevant.

6 Q. Why?

7 A. It doesn't change the

8 screening recommended. We don't change

9 screening just on the basis of an

10 exposure without evidence that -- and

11 there's only one exposure-driven task

12 force recommendation for screening. And

13 that's lung cancer, 20 years, ages 55 to

14 80. That is the only exposure-driven

15 recommendation for screening.

16 Q. Okay. Dr. Teitelbaum, would

17 an internist assessing cancer screening

18 for an asymptomatic patient in a clinic

19 refer to the NCCN guidelines for

20 screening recommendations?

21 MS. GEMAN: Objection.

22 Objection. Incomplete

23 hypothetical.

24 MR. KERNER: Sorry.

Page 306

1 BY MR. KERNER:
2 Q. You can answer.
3 A. Oh, the National
4 Comprehensive Cancer guidelines?
5 Q. Yes.
6 A. I don't even think they'd
7 even know what they are.
8 Q. So is it your testimony that
9 in your opinion the internist would not
10 refer to the NCCN?
11 A. They would not --
12 MS. GEMAN: Same objection.
13 THE WITNESS: -- refer to
14 the NCCN guidelines.
15 BY MR. KERNER:
16 Q. Okay. Dr. Teitelbaum, in
17 Dr. Kaplan's deposition -- and I think
18 you may have referred to this earlier, he
19 talked about or he testified that he
20 would order a PSA on a healthy
21 95-year-old man.
22 Do you recall reading that
23 testimony?
24 A. Yes.

Page 307

1 Q. Would you order a PSA on a
2 healthy 95-year-old man to screen for
3 prostate cancer?
4 A. Never.
5 Q. Why not?
6 A. First of all, we know --
7 I've seen the numbers everywhere from 50
8 to 90 percent for patients 80 and above,
9 that they all have prostate cancer. They
10 don't -- at autopsy, I remember
11 50 percent of 80-year-olds have prostate
12 cancer. It's not what they die from.
13 It's what they die with.
14 And then again, it speaks --
15 you know, people don't think ordering a
16 test is risky. But if you order a test,
17 you have to think about what you're going
18 to do.
19 So you sort of open the can
20 of worms that the PSA is high and the
21 patient has prostate cancer, even though
22 it's unlikely to impact them in the
23 entire course of their life.
24 And so if you get that test,

Page 308

1 what are you going to do next? Are you
2 going to refer them for a transrectal
3 ultrasound biopsy, which is, again, very
4 difficult to sterilize, because you're
5 going through the rectum. I think of
6 E. coli when I think of rectal organisms.
7 The act of the biopsy can
8 cause incontinence, impotence, blood in
9 your urine, blood in your sperm, in
10 addition to bleeding.
11 And so it's an invasive
12 test. The risk of sepsis is one in a
13 thousand. And the risk goes up if you're
14 older or if you have any medical issues
15 or you're on anticoagulants.
16 So then if you get -- so
17 then if you put the patient through that
18 test, then you have to figure out -- and
19 it's positive, are you going to treat
20 them? Again, I mentioned watchful
21 waiting as an option. But it's really
22 difficult to say to them, watchful
23 waiting, when you've put them through
24 this invasive test.

Page 309

1 Some people think, oh, you
2 can put them on androgen deprivation
3 therapy, Lupron, but then the risk is
4 muscle wasting, loss of bone density, and
5 cognitive impairment, which any
6 95-year-old can ill afford. Almost
7 certainly not going to give them
8 chemotherapy and will not be offered
9 surgery.
10 So you've put a patient
11 through the anxiety of having a diagnosis
12 which is unlikely to affect them in their
13 lifetime, for which the therapies are
14 potentially incredibly toxic.
15 So that is actually not just
16 the rationale why not to order -- I think
17 he said 80-year-old, 90-year-old.
18 95-year-old, but really the question of
19 ordering it all.
20 MR. KERNER: Okay.
21 Dr. Teitelbaum, thank you very
22 much for your time. I have
23 nothing else.
24 - - -

Page 310

1 EXAMINATION
2 - - -
3 BY MS. GEMAN:
4 Q. Dr. Teitelbaum you spoke a
5 little bit about the ACOG grades?
6 A. ECOG. It's the European --
7 it's the European Cooperative Oncology
8 Group.
9 Q. Okay. And are those grades
10 different for each person or is it the
11 same grading scale but different people
12 can have different grades?
13 A. It's unique to a patient
14 with cancer.
15 Q. But is it the same grading
16 scale applied to all patients with cancer
17 and different people can have different
18 grades?
19 A. Yes. Mm-hmm.
20 Q. Okay. And you said that you
21 reviewed medical literature, right, when
22 you were doing your research for this
23 report, correct?
24 A. Yes.

Page 311

1 Q. And that medical literature
2 was done on studies of populations,
3 correct, groups of people?
4 A. Can you clarify? I don't --
5 MR. KUM: Objection. Vague
6 and ambiguous.
7 THE WITNESS: -- understand
8 your question.
9 BY MS. GEMAN:
10 Q. Sure.
11 None of -- none of those
12 articles did a study on just one person,
13 correct?
14 MR. KERNER: Let me
15 interject for one second. I
16 apologize can we go off the record
17 for one second and not leave the
18 room.
19 THE VIDEOGRAPHER: Stand by.
20 4:14. We are off the video
21 record.
22 (Brief pause.)
23 THE VIDEOGRAPHER: 4:15. We
24 are on the video record.

Page 312

1 BY MS. GEMAN:
2 Q. None of those articles did a
3 study on just one person, correct?
4 A. I don't recall looking at a
5 case report. So I would say no.
6 Q. Typically, the medical
7 literature rises out of studies on groups
8 of people together, correct?
9 A. Yes.
10 Q. Okay. You weren't
11 suggesting that 0.8 percent of people die
12 from a colonoscopy, were you?
13 MR. KUM: Objection.
14 Misstates testimony.
15 THE WITNESS: I said the
16 complication rate. And you know,
17 it's broad. It can include a
18 large range of complications that
19 I listed in my expert letter.
20 BY MS. GEMAN:
21 Q. So the answer is you weren't
22 suggesting that .8 percent of the people
23 die, correct?
24 A. No.

Page 313

1 Q. All right. And would you
2 advise against someone from getting a
3 colorectal screening on the basis that
4 they might be kind of dizzy from the
5 treatment and fall?
6 MR. KUM: Objection.
7 Incomplete hypothetical.
8 THE WITNESS: I -- as you
9 can tell, Dr. Kaplan and I, when
10 we're doing the standard of care,
11 you have to make sure that the
12 patient can tolerate the prep.
13 That's actually really important,
14 and be well enough to undergo a
15 procedure with sedation, if that's
16 your question.
17 BY MS. GEMAN:
18 Q. So my question was, would
19 you advise against someone from getting a
20 colorectal screening on the basis that
21 they might fall?
22 MR. KUM: Same objections.
23 THE WITNESS: To your point,
24 again, that's an individual

Page 314

1 patient, and you'd have to
2 obviously weigh the risk of your
3 suspicion that the patient had --
4 in my field it would be the
5 suspicion that there's bleeding or
6 some sort of issue with the -- you
7 know, if a patient can't get a
8 ride home from their prep, if they
9 can't get the prep. There's a lot
10 that goes into that.
11 BY MS. GEMAN:
12 Q. And you recall Dr. Kaplan
13 talking about the distinction between
14 screening and treatment, correct?
15 A. I think -- I don't remember
16 exactly. But I'm sure that that's the
17 phraseology.
18 Q. And there is a difference,
19 correct?
20 A. Oh, yes.
21 Q. You quoted a 50 percent
22 adherence rate. And that's across all
23 medications?
24 A. I will have to refer to that

Page 315

1 primary article.
2 Q. Well, you just answered
3 questions to Mr. Kerner about it. To
4 your knowledge, is that across all
5 medications?
6 A. I think it is not medication
7 specific. I think it's a general
8 principle of prescription adherence.
9 Q. I'm sorry. Prescriptions
10 for medications?
11 A. Medications.
12 Q. So it is medication
13 specific?
14 A. It's -- oh, I see what
15 you're saying. I thought it was like a
16 specific medication. It's a prescribed
17 medication.
18 Q. So it includes birth control
19 pills?
20 A. I don't remember seeing that
21 specifically. So I can't say.
22 Q. Do you have any reason to
23 believe that's excluded?
24 A. I don't know.

Page 316

1 Q. Do you acknowledge that it
2 includes antibiotics?
3 A. I would have to look at the
4 article to see.
5 As you said, they analyze
6 study groups. And what their methods
7 were, I don't know if it included
8 short-term therapies or preventive
9 therapies. I'm not sure. I would have
10 to look at that article and look at the
11 study group and how the study was done.
12 Q. So you have absolutely no
13 reason or even enough knowledge about
14 that figure to think that it applies to
15 the -- this particular class of valsartan
16 patients, correct?
17 MR. KUM: Objection.
18 Misstates testimony.
19 THE WITNESS: I reviewed the
20 literature. This was the figure I
21 read and quoted in the general
22 population. I use the general
23 population as the metric in this
24 sort of subspecialty area of

Page 317

1 adherence.
2 BY MS. GEMAN:
3 Q. Do you think that's valid
4 methodology to say that a statistic that
5 includes antibiotics, birth control
6 pills, short-term medications, has any
7 applicability to blood pressure
8 medication?
9 A. I would have to look again.
10 I think this was a primary care
11 population. But I'm happy to look
12 through that data. I don't know if it
13 separated into different prescriptions.
14 Q. And you said that you had no
15 reason to assume that this -- you said
16 that you had no basis of knowledge about
17 the adherence of this class; is that
18 correct?
19 A. I have no information on
20 that.
21 Q. Did you ignore contrary
22 evidence?
23 MR. KUM: Objection.
24 Assumes facts not in evidence.

Page 318

1 THE WITNESS: I looked at
2 the general principle. I
3 didn't -- I have no -- I don't
4 know anything about this
5 population.
6 BY MS. GEMAN:
7 Q. Did you ask to see the
8 information about this population that's
9 available?
10 MR. KUM: Objection.
11 Outside the scope of her report.
12 THE WITNESS: I addressed
13 the medical monitoring and just
14 included adherence as one of the
15 concerns, if you're assigning
16 whatever dose of the impurity was
17 there.
18 BY MS. GEMAN:
19 Q. So did you ask to see
20 information about this population that's
21 available, if you're describing adherence
22 in your report at all?
23 A. I didn't --
24 MR. KUM: Same objection.

Page 319

1 Sorry.
2 THE WITNESS: I didn't know
3 it was available.
4 BY MS. GEMAN:
5 Q. Are you purporting to draw
6 any conclusions about adherence sitting
7 here now?
8 MR. KUM: Asked and
9 answered.
10 THE WITNESS: I describe the
11 concept.
12 BY MS. GEMAN:
13 Q. No. But are you purporting
14 to draw any conclusions whatsoever about
15 the adherence of this class?
16 A. I'm not.
17 MS. GEMAN: Thank you.
18 Okay.
19 Thank you for your time.
20 MR. KUM: Good. Thank you.
21 MR. KERNER: Thank you.
22 THE VIDEOGRAPHER: 4:21 p.m.
23 We are off the video record.
24 This concludes the video

INSTRUCTIONS TO WITNESS

Please read your deposition over carefully and make any necessary corrections. You should state the reason in the appropriate space on the errata sheet for any corrections that are made.

After doing so, please sign the errata sheet and date it.

You are signing same subject to the changes you have noted on the errata sheet, which will be attached to your deposition.

It is imperative that you return the original errata sheet to the deposing attorney within thirty (30) days of receipt of the deposition transcript by you. If you fail to do so, the deposition transcript may be deemed to be accurate and may be used in court.

Page 324

ACKNOWLEDGMENT OF DEPONENT

I, _____, do hereby certify that I have read the foregoing pages, 1 - 325, and that the same is a correct transcription of the answers given by me to the questions therein propounded, except for the corrections or changes in form or substance, if any, noted in the attached Errata Sheet.

 URSINA R. TEITELBAUM, M.D. DATE

Subscribed and sworn to before me this _____ day of _____, 20____.

My commission expires: _____

<p style="text-align: right;">Page 10</p> <p style="text-align: center;">- - - DEPOSITION SUPPORT INDEX - - -</p> <p>Direction to Witness Not to Answer PAGE LINE None.</p> <p>Request for Production of Documents PAGE LINE 64 9</p> <p>Stipulations PAGE LINE None.</p> <p>Questions Marked PAGE LINE None.</p>	<p style="text-align: right;">Page 12</p> <p>1 having been first duly sworn, was 2 examined and testified as follows: 3 4 EXAMINATION 5 6 BY MR. STANOCH: 7 Q. Good morning, Mr. Anderson. 8 A. Good morning. 9 Q. Could you just say your full 10 name for the record, sir? 11 A. Timothy A. Anderson. 12 Q. Thank you. Where are you 13 located today, sir, for this deposition? 14 A. I am located in Danbury, 15 Connecticut. 16 Q. And you're in a conference 17 room in a hotel right now for this remote 18 deposition, I believe? 19 A. Correct. 20 Q. And other than your counsel, 21 Mr. Harkins, is anybody else in the room 22 with you, sir? 23 A. No, sir. 24 Q. And you've been deposed</p>
<p style="text-align: right;">Page 11</p> <p style="text-align: center;">- - -</p> <p>THE VIDEOGRAPHER: We are now on the record. My name is Danny Ortega, and I'm the legal videographer for Golkow Litigation Services. Today's date is March 9th, 2022, and the time is 9:22 a.m. This video deposition is being held in the matter of Valsartan, Losartan, and Irbesartan Products Liability Litigation MDL, for the United States District Court, District of New Jersey. The deponent today is Timothy Anderson. All counsel will be noted on the stenographic record. The court reporter today is Michelle Gray and will now swear in the witness. - - - ... TIMOTHY A. ANDERSON, M.S., MBA,</p>	<p style="text-align: right;">Page 13</p> <p>1 before, I take it; is that right? 2 A. I have. 3 Q. So you understand the 4 process here. I'll be asking a series of 5 questions. You'll be providing answers. 6 Everything everyone says will be taken 7 down by the stenographer and on video. 8 You understand that, right? 9 A. I understand. 10 Q. Is it fair that I'll assume 11 you understand my question unless you 12 tell me otherwise, and I'll attempt to 13 rephrase? 14 A. That will be true, yes. 15 Q. Okay. And you know that you 16 should answer the question, unless your 17 counsel instructs you otherwise, right? 18 A. Correct. 19 Q. All right. If we need to 20 take a break later, just say so. If 21 there's a question pending, I'd ask that 22 you answer it. Is that fair? 23 A. That is fair. 24 Q. Okay. Any reason that you</p>

Page 14

1 cannot testify truthfully and accurately
2 today, sir?
3 A. No reason at all.
4 Q. Excellent. Let's get into
5 it.
6 Mr. Anderson, what's your
7 understanding of this litigation?
8 A. My understanding is that
9 John Quick has prepared a report, a
10 declaration that I was asked to review
11 and to rebut. And I was also asked to
12 review cGMP issues that were made by
13 auditors and inspectors.
14 Q. You've rendered opinions in
15 this case reflected in your report that
16 you submitted, correct?
17 A. Correct.
18 MR. STANOCH: I'm going to
19 mark that as Exhibit 1.
20 (Document marked for
21 identification as Exhibit
22 Anderson-1.)
23 BY MR. STANOCH:
24 Q. Let me know, sir, when you

Page 15

1 can access that on your screen.
2 MR. HARKINS: I'm going to
3 copy the exhibit share into the
4 chat if it hasn't already been
5 done so that he can open it up.
6 He also has a hard copy of the
7 report in front of him.
8 MR. STANOCH: That's fine.
9 And Mr. Harkins, do you want to
10 wait to get that set up with the
11 remote, or do you want me to start
12 asking questions? I'm fine
13 proceeding either way.
14 MR. HARKINS: Let's get it
15 set up. We had it on the other
16 computer. We switched. So we'll
17 quickly do that.
18 Do you see the chat
19 function?
20 THE WITNESS: I do.
21 MR. HARKINS: The link just
22 went up there.
23 BY MR. STANOCH:
24 Q. Just let me know when you

Page 16

1 can see that Exhibit 1, sir.
2 A. I'll let you know. I'm
3 trying to move it over to the other
4 screen. Okay. I'm there.
5 Q. Okay. Exhibit 1 is a copy
6 of your report in this litigation, right?
7 A. That's correct.
8 Q. And your report includes all
9 the opinions you're currently offering in
10 this matter, right?
11 A. Correct.
12 Q. And your opinions in your
13 report apply to all the plaintiffs in
14 this litigation, right?
15 A. They apply to Teva.
16 Q. You mentioned in Paragraph
17 19 class plaintiffs.
18 Do you see that?
19 A. Yeah.
20 Q. And what's your
21 understanding of who the class plaintiffs
22 are in this case?
23 A. I understand that there are
24 a class of plaintiffs and that there are

Page 17

1 a class of defendants in this case.
2 Q. Can you describe in more
3 detail the class of plaintiffs in this
4 case?
5 A. The class of plaintiffs are
6 those who are alleging injury. The class
7 of defendants are those who are accused.
8 Q. What injuries are the class
9 of plaintiffs alleging, to your
10 knowledge?
11 MR. HARKINS: Objection.
12 Requires a legal conclusion.
13 But you can answer if you do
14 understand.
15 THE WITNESS: I do not
16 understand all of the matters that
17 constitutes plaintiffs'
18 complaints.
19 BY MR. STANOCH:
20 Q. Well, what's the harm that
21 the class plaintiffs allege, to your
22 understanding?
23 A. They are -- they are
24 complaining of -- about valsartan.

Page 18

1 Q. In what respect?
2 A. In respect that they have
3 named, of all of these complaints
4 specifically that they are alleging. I
5 just know that they are alleging
6 complaints.
7 Q. You don't know the
8 complaints that the class plaintiffs are
9 alleging in this litigation against the
10 defendants?
11 A. Not in detail, no.
12 Q. Can you tell me anything
13 besides what you've told us already about
14 the complaints that the class plaintiffs
15 are alleging in this litigation against
16 the defendants?
17 A. All I know is that the class
18 plaintiffs are alleging harm.
19 Q. What kind of harm?
20 A. I do not have direct insight
21 into what specific class plaintiffs are
22 alleging.
23 Q. So you can't give me any
24 more detail about the purported harm that

Page 19

1 the class plaintiffs are alleging?
2 A. I cannot.
3 Q. Can you tell me who the
4 class plaintiffs are, either by name or
5 categorically?
6 A. I cannot.
7 Q. Can you tell me the forms of
8 relief that the class plaintiffs seek in
9 this litigation?
10 MR. HARKINS: Object to
11 form. Calls for a legal
12 conclusion.
13 THE WITNESS: I have no
14 legal opinion on that.
15 BY MR. STANOCH:
16 Q. I don't need a legal
17 opinion, sir, just your lay
18 understanding.
19 Can you tell me the forms of
20 relief that the class plaintiffs seek in
21 this litigation? And if you can't, you
22 can say you can't.
23 A. I can't.
24 Q. Can you tell me how many

Page 20

1 class plaintiffs there are?
2 A. I do not know.
3 Q. Can you tell me how many
4 states the class plaintiffs hail from?
5 A. I do not know.
6 Q. Can you tell me the time
7 period for which the class plaintiffs
8 alleged harm?
9 A. I don't know what exact time
10 frame the plaintiffs are alleging harm.
11 Q. Can you tell me any details
12 about the time frame for which the class
13 plaintiffs are alleging harm?
14 A. I cannot.
15 Q. Can you tell me anything
16 about the theories of liability the class
17 plaintiffs allege against the defendants
18 in this litigation?
19 MR. HARKINS: Form. Calls
20 for legal conclusion. Outside the
21 scope.
22 THE WITNESS: I have no
23 legal opinion to offer on this.
24 BY MR. STANOCH:

Page 21

1 Q. Putting aside any legal
2 opinion, which I don't want from you,
3 sir, can you tell me anything about the
4 theories of liability the class
5 plaintiffs allege against the defendants
6 in this litigation?
7 MR. HARKINS: Same
8 objection. Calls for a legal
9 conclusion.
10 THE WITNESS: My ability is
11 outside the scope of my report.
12 BY MR. STANOCH:
13 Q. Did you read the complaints
14 filed by the class plaintiffs in this
15 case, sir?
16 A. I read them once.
17 Q. And so -- and you did that
18 to familiarize yourself with the case,
19 I'm sure, right?
20 A. Generally correct.
21 Q. And can you identify for me
22 a single theory alleged in the class
23 complaints that you've read by the class
24 plaintiffs against the defendants?

Page 22

1 MR. HARKINS: Objection.
2 THE WITNESS: There is no
3 theory that I recall.
4 BY MR. STANOCH:
5 Q. Do your opinions in this
6 case depend on the number of class
7 members in a litigation?
8 A. No, it does not.
9 Q. Your opinions are the same
10 no matter how many class members there
11 may be, correct?
12 A. Correct.
13 Q. Do your opinions vary based
14 on which states a class plaintiff may
15 hail from?
16 A. No.
17 Q. Your opinions apply equally
18 no matter what particular state a
19 plaintiff may hail from, right?
20 A. Correct.
21 Q. Your opinions don't depend
22 on the specific theory of liability
23 alleged by any particular class
24 plaintiff, does it?

Page 23

1 A. I have no theory with
2 respect to liability.
3 Q. So your opinions don't
4 depend on the specific theory of
5 liability alleged by a particular class
6 plaintiff, correct?
7 A. Correct.
8 Q. How, if at all, can you tell
9 me that your opinions fit the theories of
10 liability alleged by the class plaintiffs
11 in this case?
12 MR. HARKINS: Object to
13 form. Vague. Calls for a legal
14 conclusion.
15 You can answer.
16 THE WITNESS: I'm not
17 opining on anything having to do
18 with liability or legal matters.
19 BY MR. STANOCH:
20 Q. So you cannot tell me how
21 your opinions fit the theories of
22 liability alleged by the class plaintiffs
23 in this case, correct?
24 MR. HARKINS: Object to

Page 24

1 form. Calls for legal conclusion,
2 scope. Asked and answered.
3 THE WITNESS: This is
4 outside the scope of my report.
5 BY MR. STANOCH:
6 Q. So the answer to that is,
7 correct, you cannot tell me how your
8 opinions fit the theories of liability
9 alleged by the class plaintiffs in this
10 case?
11 MR. HARKINS: Same
12 objection.
13 THE WITNESS: I stated that
14 it's outside the scope of my
15 report.
16 BY MR. STANOCH:
17 Q. Therefore, your opinions
18 have no bearing on fitting the theories
19 of liability alleged by the class
20 plaintiffs in this case?
21 MR. HARKINS: Object to
22 form. Calls for a legal
23 conclusion, misstates testimony.
24 Vague.

Page 25

1 THE WITNESS: Could you
2 repeat the question, please?
3 MR. STANOCH: Stand by.
4 THE WITNESS: Could you
5 repeat the question, please?
6 BY MR. STANOCH:
7 Q. Yes, sir. I was just
8 finding the question.
9 So earlier I asked you if
10 you can -- whether you could tell me how
11 your opinions fit the theories of
12 liability alleged by the class plaintiffs
13 in this case.
14 Objections.
15 And you said, I believe, "I
16 stated that's outside the scope of my
17 report."
18 Do you remember that?
19 A. I do remember that.
20 Q. So --
21 A. And --
22 Q. -- it's correct then that
23 you cannot tell me how your opinions fit
24 the theories of liability alleged by the

Page 26	Page 28
<p>1 class plaintiffs in this case?</p> <p>2 MR. HARKINS: Same</p> <p>3 objection.</p> <p>4 THE WITNESS: I have no</p> <p>5 opinion concerning liability.</p> <p>6 BY MR. STANOCH:</p> <p>7 Q. You cannot tell me how your</p> <p>8 opinions fit the theories alleged by the</p> <p>9 class plaintiffs in this case, can you?</p> <p>10 MR. HARKINS: Objection.</p> <p>11 Calls for a legal conclusion.</p> <p>12 You can answer.</p> <p>13 THE WITNESS: In that is a</p> <p>14 legal conclusion, I have no</p> <p>15 opinion.</p> <p>16 BY MR. STANOCH:</p> <p>17 Q. Again, I'm not asking for</p> <p>18 your legal conclusion ever, sir.</p> <p>19 Can you tell me how your</p> <p>20 opinions fit the theories alleged by the</p> <p>21 class plaintiffs in this case?</p> <p>22 MR. HARKINS: Same</p> <p>23 objection.</p> <p>24 THE WITNESS: I'm commenting</p>	<p>1 any of the particular theories alleged by</p> <p>2 class plaintiffs?</p> <p>3 MR. HARKINS: Object to</p> <p>4 form. Asked and answered. Calls</p> <p>5 for a legal conclusion.</p> <p>6 THE WITNESS: I am</p> <p>7 commenting on cGMP-related</p> <p>8 answers -- matters as they pertain</p> <p>9 to my rebuttal of John Quick's</p> <p>10 report.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. And that's the only thing</p> <p>13 that you're opining on, correct?</p> <p>14 A. Correct.</p> <p>15 Q. So you're not then opining</p> <p>16 on the application of any of your</p> <p>17 opinions to any particular theory alleged</p> <p>18 by plaintiffs, correct?</p> <p>19 MR. HARKINS: Form.</p> <p>20 THE WITNESS: I'm commenting</p> <p>21 only on cGMP-related matters.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. And are you applying your</p> <p>24 opinions of the cGMP matters to a</p>
Page 27	Page 29
<p>1 only on cGMP-related matters, not</p> <p>2 matters of liability.</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. So how if at all do your</p> <p>5 theories fit -- strike that, sir.</p> <p>6 So how, if at all, do your</p> <p>7 opinions fit the theories alleged by the</p> <p>8 class plaintiffs in this case?</p> <p>9 MR. HARKINS: Object to</p> <p>10 form. Asked and answered.</p> <p>11 THE WITNESS: I'm commenting</p> <p>12 only on cGMP-related matters.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. None of your opinions have</p> <p>15 anything to do with the particular</p> <p>16 theories alleged by class plaintiffs</p> <p>17 then?</p> <p>18 MR. HARKINS: Object to</p> <p>19 form. Asked and answered.</p> <p>20 THE WITNESS: As I said, I'm</p> <p>21 commenting only on cGMP-related</p> <p>22 matters.</p> <p>23 BY MR. STANOCH:</p> <p>24 Q. Are you commenting then on</p>	<p>1 particular theory alleged by the class</p> <p>2 plaintiffs?</p> <p>3 MR. HARKINS: Object to</p> <p>4 form. Calls for a legal</p> <p>5 conclusion.</p> <p>6 THE WITNESS: I am</p> <p>7 commenting on cGMP-related</p> <p>8 matters.</p> <p>9 Theory is something which is</p> <p>10 vague.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. We talked earlier about the</p> <p>13 legal theories of harm alleged by class</p> <p>14 plaintiffs. You remember that, right?</p> <p>15 A. I recall you asking me about</p> <p>16 that.</p> <p>17 Q. Right. And I think you said</p> <p>18 that you're not familiar with the</p> <p>19 particular theories of harm alleged by</p> <p>20 the plaintiffs, correct?</p> <p>21 A. That's correct. Perhaps you</p> <p>22 have a theory that you'd like to bring</p> <p>23 up.</p> <p>24 Q. And I'm simply asking you</p>

Page 30

1 then, that the opinions you're offering
2 on cGMP are not applied to particular
3 theories of harm alleged by the class
4 plaintiffs, right?
5 MR. HARKINS: Form. Calls
6 for a legal conclusion.
7 THE WITNESS: Theory is a
8 very broad and general term, and I
9 can't answer that without knowing
10 what theory it is that you have a
11 question about.
12 BY MR. STANOCH:
13 Q. The theories of harm, sir.
14 A. Can you state what theory of
15 harm you're talking about?
16 Q. I asked you, sir, what were
17 class plaintiffs' theories of harm. And
18 you said that you don't know any of the
19 specific ones, correct?
20 A. Correct.
21 Q. So I'm asking you then, sir,
22 how do your opinions -- strike that.
23 So I'm asking you, sir,
24 whether it's true that because you don't

Page 31

1 know the class plaintiffs' theories of
2 harm, your opinions are not being applied
3 to a particular theory of harm alleged by
4 the class plaintiffs, right?
5 MR. HARKINS: Objection to
6 form. Asked and answered. Calls
7 for a legal conclusion.
8 THE WITNESS: Respectfully,
9 if there was a theory that you
10 have in mind, I can comment on it
11 in the context of cGMP-related
12 matters only.
13 BY MR. STANOCH:
14 Q. Got it. But sitting here
15 right now, you can't tell me a particular
16 theory of harm alleged by the class
17 plaintiffs, right?
18 MR. HARKINS: Object to
19 form. Asked and answered.
20 You can answer.
21 THE WITNESS: If you have a
22 theory of harm that is framed in
23 the context of cGMP issues, then I
24 can comment.

Page 32

1 Outside of that, your
2 request for me to comment on
3 theories which you have not
4 enunciated are ones I find are too
5 general for me to answer at this
6 time.
7 BY MR. STANOCH:
8 Q. Can you tell me a particular
9 claim alleged by any class plaintiffs?
10 MR. HARKINS: Object to
11 form. Asked and answered.
12 THE WITNESS: No, I cannot.
13 BY MR. STANOCH:
14 Q. Can you tell me then how
15 your opinions specifically apply to a
16 particular claim alleged by the class
17 plaintiffs?
18 MR. HARKINS: Object to
19 form. Asked and answered. Calls
20 for a legal conclusion.
21 THE WITNESS: I can comment
22 on cGMP-related matters as it
23 pertains to any comment that was
24 made in John Quick's report and on

Page 33

1 cGMP issues that were raised by
2 auditors and inspectors.
3 BY MR. STANOCH:
4 Q. Can you tell me how any
5 comments you make about Mr. Quick's
6 report or cGMP issues should fit any
7 particular claim alleged by the class
8 plaintiffs?
9 MR. HARKINS: Object to
10 form. Vague. Calls for a legal
11 conclusion.
12 THE WITNESS: I was asked to
13 evaluate John Quick's report and
14 to rebut John Quick's report and
15 provide opinions related to audits
16 and inspections made by FDA.
17 BY MR. STANOCH:
18 Q. Are you offering any
19 opinions, sir, on cGMP issues and how --
20 A. Yes --
21 Q. -- those issues fit to a
22 particular claim alleged by the class
23 plaintiffs?
24 MR. HARKINS: Object to

<p style="text-align: right;">Page 34</p> <p>1 form. Compound. Calls for a 2 legal conclusion. 3 THE WITNESS: I am 4 commenting on cGMP issues that 5 John Quick commented on and opined 6 upon and I was asked to rebut. 7 BY MR. STANOCH: 8 Q. And respectfully, sir -- 9 MR. STANOCH: Mr. Harkins, 10 as we've gone over a number of 11 times, per your side's request, 12 we're entitled to a yes or no 13 answer and then the witness may 14 explain. 15 So I'm going to ask it one 16 more time. And I'd ask that you 17 follow the Court's prior rulings. 18 And he can explain his answer 19 after he answers it yes or no. 20 BY MR. STANOCH: 21 Q. So, sir, can you tell me how 22 your opinions fit a particular claim 23 alleged by the class plaintiffs? 24 MR. HARKINS: Object to</p>	<p style="text-align: right;">Page 36</p> <p>1 Q. Did your opinions take into 2 account the specific legal claims alleged 3 by the class plaintiffs? 4 MR. HARKINS: Object to 5 form. Asked and answered. 6 THE WITNESS: Again, whether 7 they are legal claims, I do not 8 know. 9 To the extent that they are, 10 I'm only commenting on 11 cGMP-related matters. 12 BY MR. STANOCH: 13 Q. Were you asked by counsel to 14 make any assumptions for the purposes of 15 your report? 16 A. That question is a bit 17 general. Do you have a specific 18 assumption that you have in mind? 19 Q. I'm asking you, sir. I 20 don't know what you were asked to assume, 21 if anything. 22 Were you asked to assume any 23 fact in the preparation of your report? 24 MR. HARKINS: Just remind</p>
<p style="text-align: right;">Page 35</p> <p>1 form. Calls for a legal 2 conclusion. 3 To the extent that you were 4 asking for a yes or no answer as 5 to how his opinions fit the legal 6 theories that the parties are 7 discussing in this case, he is not 8 going to provide a yes or no 9 answer because he was not asked to 10 provide an opinion on how legally 11 any of his opinions fit the any of 12 the theories by either the 13 plaintiffs or the defendants in 14 this case. 15 You can answer. 16 THE WITNESS: As I said, I 17 was asked to rebut John Quick's 18 report and provide opinions on 19 inspections and audits that were 20 conducted by Teva and by health 21 authorities. 22 That is the extent of what I 23 was asked to do. 24 BY MR. STANOCH:</p>	<p style="text-align: right;">Page 37</p> <p>1 the witness not to discuss the 2 substance of any conversations 3 with counsel. 4 But subject to that, you can 5 answer. 6 THE WITNESS: There are no 7 assumptions that were sent to me, 8 if that's where you're going with 9 that. 10 BY MR. STANOCH: 11 Q. Were you asked to assume 12 that Teva's finished dose products 13 contained nitrosamines? 14 A. I was asked to review 15 documents that alleged that that is the 16 case. 17 Q. Are you assuming in 18 rendering your opinions in this case that 19 Teva's finished dose valsartan products 20 did contain nitrosamines? 21 A. There is evidence from 22 documentation to say such. 23 Q. Were you asked to assume 24 that nitrosamines became present in</p>

Page 38

1 Teva's finished dose products through API
2 purchased by ZHP or Mylan?
3 A. Documents were presented to
4 me which showed evidence thereof. There
5 were no assumptions that were made.
6 Q. Were you asked to assume
7 that at all times between 2012 to June of
8 2018, the valsartan API which Teva used
9 for its valsartan finished dose product
10 contained nitrosamines?
11 MR. HARKINS: Object to
12 form. Vague.
13 THE WITNESS: I was not
14 asked to assume anything.
15 Documentation was supplied to me
16 to provide evidence or lack
17 thereof that such a situation
18 existed.
19 BY MR. STANOCH:
20 Q. And what's your assessment
21 of whether such a situation existed?
22 A. The situation that I found
23 existed was that ZHP informed Teva of the
24 presence of NDMA in their drug substance,

Page 39

1 and they notified Teva of this fact. I
2 believe it was on June 6th of 2018.
3 Q. We'll come back to that,
4 sir.
5 Do you know whether Teva's
6 valsartan finished dose product between
7 2012 and June 2018 contained
8 nitrosamines?
9 A. Excuse me. May I revise
10 that last answer that I just gave you?
11 Q. Please.
12 A. Yes. More correctly, June
13 20th was the date on which Teva was
14 informed. As I'm recalling the document
15 that I read, it was on June 6th that ZHP
16 confirmed that they had nitrosamines in
17 their API, just for clarification.
18 Q. That's fine. I'll repeat
19 the question before the revision, which
20 was completely fine, Mr. Anderson. Feel
21 free to -- if you need to do that
22 throughout the day, let me know.
23 Do you know whether Teva's
24 valsartan finished dose product between

Page 40

1 2012 and June 2018 contained
2 nitrosamines?
3 A. I have no evidence to
4 suggest that.
5 Q. You don't know whether
6 Teva's valsartan finished dose products
7 contained nitrosamines?
8 A. You asked during a specific
9 time period. And I have no evidence that
10 Teva knew that there was NDMA present in
11 any of the drug product.
12 Q. Putting aside what Teva
13 knew. From your review of materials in
14 this case, did Teva's valsartan finished
15 dose product between 2012 and June 2018
16 contain nitrosamines?
17 A. Not as they were tested by
18 Teva. It wasn't evident.
19 Q. Regardless of whether Teva
20 tested them or not, do you know whether
21 Teva's finished dose product between 2012
22 and June of 2018 contained any
23 nitrosamines?
24 A. The API that was evaluated

Page 41

1 by ZHP in 2018 in terms of the
2 information request that FDA made of ZHP
3 showed that there were -- there was
4 evidence of NDMA in the API that ZHP
5 supplied lots for.
6 I don't know what lots Teva
7 had in their product, so it's hard for me
8 to say anything beyond what was revealed
9 in the ZHP response to FDA with regard to
10 specific lots of API.
11 Q. Is it fair to say that
12 you're not opining on which lots or
13 batches of valsartan finished dose
14 product made by Teva did or did not
15 contain nitrosamines?
16 A. I did not -- do not have
17 visibility to any direct connection
18 between a specific lot of API that was
19 manufactured by ZHP which had NDMA in it
20 and a lot of API that was utilized in a
21 Teva product.
22 Q. Right. But you did not
23 conduct any analysis in your report about
24 the levels of nitrosamines in any

<p>Page 42</p> <p>1 valsartan finished dose product, right?</p> <p>2 A. I do not.</p> <p>3 Q. You're not opining, right,</p> <p>4 about the levels of nitrosamines in any</p> <p>5 valsartan finished dose product, correct?</p> <p>6 A. I am not.</p> <p>7 Q. You're not opining about</p> <p>8 whether or not a particular valsartan</p> <p>9 finished dose product did or did not</p> <p>10 contain nitrosamines, right?</p> <p>11 A. Correct.</p> <p>12 Q. You're not opining about the</p> <p>13 levels of nitrosamines in any valsartan</p> <p>14 API, correct?</p> <p>15 A. I'm not opining about the</p> <p>16 specific levels, not at all.</p> <p>17 Q. You're not opining on</p> <p>18 whether a particular batch of valsartan</p> <p>19 API did or did not contain nitrosamines,</p> <p>20 right?</p> <p>21 A. I am not opining. I have</p> <p>22 reviewed documents supplied by ZHP</p> <p>23 specifically where they revealed that</p> <p>24 they had NDMA present in lots of API</p>	<p>Page 44</p> <p>1 with dimethylformamide, DMF.</p> <p>2 Q. And we can agree for</p> <p>3 purposes of today that NDMA, that's a</p> <p>4 type of nitrosamine, right?</p> <p>5 A. It is.</p> <p>6 Q. We can agree for purposes of</p> <p>7 today that NDEA is a type of nitrosamine,</p> <p>8 correct?</p> <p>9 A. Correct.</p> <p>10 Q. And is it fair then that</p> <p>11 when we refer to nitrosamines throughout</p> <p>12 the day, that would include both NDMA and</p> <p>13 NDEA, fair?</p> <p>14 A. In the proper context, yes.</p> <p>15 Q. Sure.</p> <p>16 If you ever need to ever</p> <p>17 split it out, feel free to do so. Is</p> <p>18 that okay?</p> <p>19 A. That's okay.</p> <p>20 Q. Do you agree that</p> <p>21 nitrosamines are genotoxic?</p> <p>22 A. It is alleged that they are</p> <p>23 genotoxic. And it is suspected that they</p> <p>24 are genotoxic. There have been studies</p>
<p>Page 43</p> <p>1 which were featured as part of that</p> <p>2 response to FDA.</p> <p>3 But I have no connection to</p> <p>4 any one of those lots of API, as they</p> <p>5 were -- with respect to Teva products.</p> <p>6 Q. That's fair. You're not</p> <p>7 conducting any batch or lot analysis of</p> <p>8 valsartan API for nitrosamine levels,</p> <p>9 fair?</p> <p>10 A. That is correct.</p> <p>11 Q. And we've been talking about</p> <p>12 nitrosamines a little bit. What's your</p> <p>13 understanding of a nitrosamine, sir?</p> <p>14 A. Nitrosamines is a an</p> <p>15 artifact of production, a process</p> <p>16 impurity specifically, which arises and</p> <p>17 was found to arise in a detailed sense as</p> <p>18 described by ZHP, where, if I recall,</p> <p>19 that there was a substitution of</p> <p>20 triethylamine hydrochlorothiazide with</p> <p>21 zinc chloride as a catalyst.</p> <p>22 And I believe that there was</p> <p>23 a -- either an admission or substitution</p> <p>24 of methyl tertiary butyl either, MTBE</p>	<p>Page 45</p> <p>1 that have been done, as I understand it,</p> <p>2 preclinically to suggest that they are</p> <p>3 genotoxic.</p> <p>4 Q. Did you have any</p> <p>5 professional familiarity with</p> <p>6 nitrosamines prior to your engagement in</p> <p>7 this case?</p> <p>8 A. I did not.</p> <p>9 Q. Do you agree that</p> <p>10 nitrosamines are probable human</p> <p>11 carcinogens?</p> <p>12 MR. HARKINS: Object to</p> <p>13 form. Scope.</p> <p>14 THE WITNESS: They have been</p> <p>15 characterized as such by FDA.</p> <p>16 BY MR. STANOCH:</p> <p>17 Q. Do you agree that</p> <p>18 nitrosamines are not an active ingredient</p> <p>19 in any FDA-approved drug?</p> <p>20 A. I agree, to my knowledge,</p> <p>21 that that is true.</p> <p>22 Q. Do you agree that</p> <p>23 nitrosamines are part of the cohort of</p> <p>24 concern under ICH M7 guidance?</p>

<p style="text-align: right;">Page 46</p> <p>1 A. I'm aware of that, yes.</p> <p>2 Q. Would you agree that the</p> <p>3 presence of nitrosamines, even at trace</p> <p>4 levels, could be considered unacceptable</p> <p>5 because these impurities are potential</p> <p>6 human carcinogens?</p> <p>7 MR. HARKINS: Object to</p> <p>8 form. Vague. Scope.</p> <p>9 THE WITNESS: There's a</p> <p>10 point in time that they were</p> <p>11 deemed to be unsuitable and</p> <p>12 unacceptable according to a</p> <p>13 registry standard that FDA</p> <p>14 established for them.</p> <p>15 BY MR. STANOCH:</p> <p>16 Q. Do you recall what that</p> <p>17 specific point in time was?</p> <p>18 A. That point in time there</p> <p>19 were initial limits that were set by FDA.</p> <p>20 I believe it was in December of 2018.</p> <p>21 Q. Okay. Prior to December of</p> <p>22 2018, were there any limits set by the</p> <p>23 FDA for how much nitrosamine could be in</p> <p>24 any drug?</p>	<p style="text-align: right;">Page 48</p> <p>1 Pharmaceuticals, Arrow Pharmaceuticals,</p> <p>2 which over time became Teva companies.</p> <p>3 So they are affiliates in</p> <p>4 that sense that they were not part of the</p> <p>5 original Teva, but are entities,</p> <p>6 operating entities, that predate Teva's</p> <p>7 acquisition of them. Hence, I refer to</p> <p>8 them as affiliates.</p> <p>9 Q. Got it. So it's fair to say</p> <p>10 Watson, Actavis, Arrow would be</p> <p>11 predecessor entities that were acquired</p> <p>12 or became part of Teva at a certain</p> <p>13 point?</p> <p>14 A. Correct.</p> <p>15 Q. Do you know when any of</p> <p>16 those entities became a part of Teva?</p> <p>17 A. I don't have the exact</p> <p>18 recollection of specific dates. I</p> <p>19 believe they are in my report. And I</p> <p>20 don't have immediate recollection of what</p> <p>21 those are.</p> <p>22 If you would like me to go</p> <p>23 through my report and find that paragraph</p> <p>24 where I detailed it, I would be happy to</p>
<p style="text-align: right;">Page 47</p> <p>1 A. There were none.</p> <p>2 Q. And were you aware of any</p> <p>3 limits that allowed any amount of NDMA or</p> <p>4 NDEA in a drug set by any regulatory</p> <p>5 agency or professional body?</p> <p>6 A. None of which I am aware.</p> <p>7 Q. In Paragraph 19 of your</p> <p>8 report, sir -- tell me when you're there.</p> <p>9 A. I'm here.</p> <p>10 Q. You say that counsel for</p> <p>11 Teva Pharmaceuticals USA, Inc., and its</p> <p>12 affiliates, collectively Teva, asked you</p> <p>13 to review and respond to certain issues</p> <p>14 as you set forth in this paragraph,</p> <p>15 right?</p> <p>16 A. Correct, as I've stated.</p> <p>17 Q. Who are the affiliates that</p> <p>18 you're including in your definition of</p> <p>19 Teva?</p> <p>20 A. Teva company is comprised of</p> <p>21 a series of -- we'll call them predicate</p> <p>22 companies' names, of which that come to</p> <p>23 mind are Watson Pharmaceuticals,</p> <p>24 Actavis -- excuse me -- yes, Actavis</p>	<p style="text-align: right;">Page 49</p> <p>1 try and locate it and read it back to</p> <p>2 you.</p> <p>3 Q. I appreciate that. But we</p> <p>4 don't need to do that quite yet. Just so</p> <p>5 we are on the same page throughout the</p> <p>6 day.</p> <p>7 Is it your understanding</p> <p>8 that Watson was acquired by Actavis, and</p> <p>9 then Actavis was acquired by Teva at some</p> <p>10 point?</p> <p>11 A. I believe that was the</p> <p>12 sequence.</p> <p>13 Q. I think Arrow, that was also</p> <p>14 a facility that was -- or company under</p> <p>15 Actavis, and then Actavis came part of</p> <p>16 Teva, right?</p> <p>17 A. That could be true. I don't</p> <p>18 have immediate recollection to know. But</p> <p>19 I'll accept your statement.</p> <p>20 Q. All right. And so</p> <p>21 throughout the day, we may refer to Teva.</p> <p>22 And can we understand that Teva would</p> <p>23 mean both sort of legacy Teva, as well as</p> <p>24 entities which it acquired at some point</p>

Page 50

1 for purposes of your report?

2 A. Yes.

3 Q. Right. So for example, we

4 can say, you know, Teva sourced valsartan

5 API from two suppliers, ZHP and Mylan,

6 right?

7 A. Yes.

8 Q. And we understand though,

9 that it might have been Actavis initially

10 sourcing that API from ZHP, but then it

11 continued doing that once it was acquired

12 at some point by Teva, right?

13 A. Agreed, yeah.

14 Q. Great. And you agree that

15 Actavis was sourcing valsartan API from

16 ZHP, correct?

17 A. Yes. That's correct.

18 Q. And then it continued to do

19 so once it was acquired by Teva, right?

20 A. Correct.

21 Q. And Teva was also sourcing

22 API from Mylan for manufacture into

23 finished dose valsartan at its Jerusalem

24 facility, right?

Page 51

1 A. That is my understanding,

2 yes.

3 Q. Do you know approximately

4 when Actavis was acquired by Teva?

5 A. I can look up that exact

6 date, I believe that I have in my report.

7 I have an idea of what that date is. But

8 if you'll allow me the freedom to guess

9 on this --

10 MR. HARKINS: Don't guess,

11 please.

12 THE WITNESS: I've been

13 advised not to guess.

14 Would you like me to find it

15 in my report?

16 BY MR. STANOCH:

17 Q. Sure.

18 I'm just making sure that we

19 have a timeline as we go through the day,

20 sir. And if later, you have to correct

21 it.

22 When do you think Teva

23 acquired Actavis? Even a year is fine.

24 A. Again, yeah, I don't want to

Page 52

1 guess. What I will say is that it is

2 sometime between 2012 and 2018.

3 Q. That's good enough. I

4 appreciate that, sir. We can agree, you

5 know, for now, that sometime during the

6 2012 and 2018 time period, Actavis was

7 acquired by Teva, right?

8 A. Agreed.

9 Q. Great. And if later it

10 becomes particularly pertinent about the

11 timing on it, feel free to look it up

12 your report and let me know that you need

13 to.

14 Is that okay?

15 A. I will.

16 Q. Great. In Paragraph 20 of

17 your report, sir, you talk about some of

18 the regulatory inspections that were

19 pertinent to your opinions here?

20 A. Correct.

21 Q. That includes FDA inspection

22 of Teva facilities, right?

23 A. It does.

24 MR. HARKINS: Are you

Page 53

1 hearing an echo?

2 MR. STANOCH: Yes.

3 MR. HARKINS: Can we go off

4 the record for one second.

5 THE VIDEOGRAPHER: The time

6 right now is 10:01 a.m. We are

7 off the record.

8 (Short break.)

9 THE VIDEOGRAPHER: The time

10 right now is 10:04 a.m. We're

11 back on the record.

12 BY MR. STANOCH:

13 Q. Mr. Anderson, welcome back.

14 We were looking at Paragraph 20 of your

15 report. Do you remember that?

16 A. I see the paragraph, yes.

17 It's in front of me.

18 Q. And we were saying how you

19 looked at FDA inspections of Teva

20 facilities, right?

21 A. Yes, that is correct. I

22 believe that's in Paragraph 21.

23 Q. And that would be FDA

24 inspections of the two Teva facilities

<p style="text-align: right;">Page 54</p> <p>1 that manufactured valsartan for the U.S. 2 market, the Jerusalem facility, and I'll 3 call it the Malta facility? 4 A. Correct. 5 Q. And you also looked at the 6 Malta authority's inspection of, I 7 assume, the Teva Malta facility? 8 A. Correct. 9 Q. Did you look at any Israeli 10 inspections of the Teva Jerusalem 11 facility? 12 A. I did. 13 Q. You did. Where do you say 14 that? 15 A. There is evidence thereof in 16 the appendix and later on in the report 17 of -- if it is not mentioned in this 18 paragraph, that is just something that I 19 did not happen to include, but it is 20 something which is very much part of my 21 report. 22 Q. So you're saying that you 23 did look at Israeli authority inspection 24 documents for the Teva Jerusalem</p>	<p style="text-align: right;">Page 56</p> <p>1 look at any Israeli government authority 2 inspections of Teva's Jerusalem facility? 3 A. I did not. 4 Q. And you mentioned the 5 materials considered. I want to ask you 6 a few questions about that. 7 You have an appendix on 8 exhibit to your report, Exhibit B, 9 correct? 10 A. Yes, I do. 11 Q. And this is the list of 12 materials considered; is that right? 13 A. That is correct. 14 Q. And I also understand, and I 15 can put it in front of you, there's a 16 slightly revised version of this to 17 update that you may have read a few 18 additional deposition transcripts or 19 parties' experts who might have been 20 deposited since you issued your report, 21 right? 22 A. That is correct. 23 Q. I can put it in front of 24 you. But other than the other deposition</p>
<p style="text-align: right;">Page 55</p> <p>1 facility? 2 A. I did. 3 Q. And I don't see it here in 4 your Section 2. 5 Where might that appear in 6 your report? 7 A. Okay. One moment, please. 8 I do make reference to the host of 9 inspections which were -- which had taken 10 place. I'm looking at Page 43 of my 11 report, Section 3, which is entitled "FDA 12 Inspection of Teva Israeli, October 13th 13 through 17 of 2013." Following on Page 14 44, with "FDA Inspection of Teva Israeli 15 June 16th to 22, 2015." 16 And of course the details of 17 the observations that were made by FDA at 18 Teva Israeli are noted in the appendix. 19 Q. I certainly agree that you 20 opine in your report about FDA 21 inspections of Teva Israel, including 22 those set forth in Paragraphs 172 to 176 23 of your report. 24 My question was, did you</p>	<p style="text-align: right;">Page 57</p> <p>1 transcripts that you might have read 2 between the issuance of your report and 3 now, were there any other differences 4 that you recall between your original 5 materials considered list and the more 6 recent material considered list? 7 A. Well, to be complete, I 8 received expert reports from defendants 9 that were supplied to me as well as 10 expert reports from plaintiffs' side. So 11 that's in addition to reviewing 12 deposition transcripts, to be very clear. 13 So that is how this 14 materials considered has been 15 supplemented. 16 Q. Perfect. And just for the 17 record I'm going to mark as Exhibit 2 18 your updated materials considered list so 19 if we need it throughout the day, it will 20 be there. 21 I don't think we need to 22 belabor it at this point. 23 (Document marked for 24 identification as Exhibit</p>

<p style="text-align: right;">Page 58</p> <p>1 Anderson-2.)</p> <p>2 BY MR. STANOCH:</p> <p>3 Q. So going back to the</p> <p>4 materials considered, are all of these</p> <p>5 documents and other materials listed on</p> <p>6 it, your Exhibit B, are you relying on</p> <p>7 all of this material to render your</p> <p>8 opinions in your report?</p> <p>9 A. No, I am not. And</p> <p>10 particularly the new reports and</p> <p>11 deposition transcripts which were not in</p> <p>12 existence prior to January 12th when I</p> <p>13 submitted my completed report, these were</p> <p>14 not part of anything that informed me</p> <p>15 during the writing of my report because</p> <p>16 they did not exist at that time.</p> <p>17 Q. That's fair. But everything</p> <p>18 else you list, these are all documents</p> <p>19 that you're relying onto render your</p> <p>20 opinions?</p> <p>21 A. I have -- this is a list of</p> <p>22 materials considered.</p> <p>23 Not every document here is</p> <p>24 one with which I elect to become</p>	<p style="text-align: right;">Page 60</p> <p>1 sounds like your Exhibit B, materials</p> <p>2 considered, is sort of the universe of</p> <p>3 what was made available to you, and then</p> <p>4 ultimately what you relied upon is some</p> <p>5 subset of that universe?</p> <p>6 A. Relied upon to rebut John</p> <p>7 Quick's report, that is correct.</p> <p>8 Q. Right. So how can I tell,</p> <p>9 looking at your Exhibit B, materials</p> <p>10 considered, what materials you're relying</p> <p>11 on rendering your opinions in this case,</p> <p>12 and which were simply materials made</p> <p>13 available to you that you might have</p> <p>14 looked at briefly but you're not really</p> <p>15 relying on to render your opinions?</p> <p>16 A. We would actually have to go</p> <p>17 down a list one by one there and then</p> <p>18 make a comparison to what specific</p> <p>19 citation was made in John Quick's report.</p> <p>20 If there is a citation in John Quick's</p> <p>21 report that also appears on this list of</p> <p>22 materials considered, one may say I was</p> <p>23 relying on that very specific document to</p> <p>24 form my opinion.</p>
<p style="text-align: right;">Page 59</p> <p>1 intimately familiar, although I may have</p> <p>2 read it.</p> <p>3 The documents which are in</p> <p>4 here should line up with those that were</p> <p>5 ones that John Quick had referenced. And</p> <p>6 this is really where I started my</p> <p>7 document review, was directly in line</p> <p>8 with documentation that John Quick has</p> <p>9 supplied for his report.</p> <p>10 And so all of that</p> <p>11 documentation resides in this list of</p> <p>12 materials considered. So I would have</p> <p>13 made the point to review those references</p> <p>14 that John Quick made specifically.</p> <p>15 However, there are other</p> <p>16 documents in here that, while they were</p> <p>17 made available to me, I may have simply</p> <p>18 had a look at them and decided at that</p> <p>19 point that they were not necessary for me</p> <p>20 to actually cite in my report.</p> <p>21 But in the manner of full</p> <p>22 disclosure, these are the documents that</p> <p>23 I became acquainted with to some degree.</p> <p>24 Q. I appreciate that. So it</p>	<p style="text-align: right;">Page 61</p> <p>1 Q. Have you undertaken that</p> <p>2 exercise of -- that you just described,</p> <p>3 making the comparison?</p> <p>4 A. I do that in my report.</p> <p>5 In fact, there are a number</p> <p>6 of occasions where I quote Mr. Quick</p> <p>7 directly and also comment upon the</p> <p>8 citation that he has provided.</p> <p>9 Q. So sitting here today, is</p> <p>10 there any way you can tell me, in your</p> <p>11 materials considered, which materials are</p> <p>12 ones that you are relying on in rendering</p> <p>13 your opinions, or would you have to go</p> <p>14 through this comparison exercise, as you</p> <p>15 described it?</p> <p>16 A. I think the comparison</p> <p>17 exercise would be the most accurate way</p> <p>18 to go about doing that.</p> <p>19 Q. Have you undertaken that</p> <p>20 comparison exercise prior to today?</p> <p>21 A. I made it a point to provide</p> <p>22 to counsel the list of materials that I</p> <p>23 used to prepare my report that were those</p> <p>24 which John Quick relied upon, and other</p>

Page 62

1 materials that I requested that I wanted
2 to see to provide more color to my
3 understanding of an issue.
4 Q. I don't think that list
5 was -- go ahead.
6 A. Yeah. Let me give you a for
7 instance. When John Quick says that he
8 did not review any of the details of the
9 Mylan inspection that Teva provided, by
10 contrast, I requested that document to
11 review myself, to become acquainted with
12 what the issues were that Teva inspectors
13 found at Mylan.
14 It was really the same with
15 respect to any of these other audit
16 reports that the outcomes of --
17 observations of which are contained in my
18 exhibit.
19 So those were not ones that
20 John Quick appeared to have any knowledge
21 of, as I read his -- as I read his
22 transcript, but in fact, I made it a
23 point to obtain myself to inform me.
24 Q. Short of us engaging in the

Page 63

1 comparison exercise that you've described
2 and going by one by one through all the
3 documents and other materials in your
4 Exhibit B right now, is there any other
5 way that you'd be able to tell me which
6 materials considered you actually relied
7 upon in rendering your opinions in your
8 report?
9 A. If I footnote them in my
10 report they will be references that
11 appeared in John Quick's report, pretty
12 closely one to one, since I'm rebutting
13 point for point. And I'm also taking
14 into consideration what documentation he
15 used to support his opinion.
16 So if you read my report and
17 read the footnotes in there, those are
18 what comprise the core of my opinion and
19 what documents were very specific to
20 informing my opinion.
21 Q. So is it fair to say that if
22 a material is mentioned in the body or
23 footnotes of your report, it was
24 something that you relied upon for your

Page 64

1 opinions, and that would give me the full
2 list of the reliance materials?
3 MR. HARKINS: Object to
4 form. Compound.
5 THE WITNESS: Well,
6 materials that I reference in my
7 report are those which support my
8 opinion.
9 MR. STANOCH: Right. And
10 well, first before I forget, I'm
11 just going to put on the record,
12 you know, that we weren't provided
13 any list of the reliance materials
14 versus materials considered, as
15 Mr. Anderson mentioned a few
16 moments ago. So we're going to
17 request that.
18 BY MR. STANOCH:
19 Q. And so Mr. Anderson, let me
20 just take an example.
21 So go to -- if I just go to
22 your materials considered, there's a
23 number of certificates of analysis and
24 certificates of conformance listed,

Page 65

1 right?
2 A. Yeah.
3 Q. And these were made
4 available to you, I take it, correct?
5 A. Correct.
6 Q. Now, how do I know which, if
7 any, of these certificates of analysis or
8 conformance you're relying on to render
9 the opinions reflected in your report?
10 A. If I refer you to --
11 certificate of conformance --
12 (Audio interference.)
13 BY MR. STANOCH:
14 Q. We did not get your answer
15 from audio interference on your end. So
16 just for the record, I'm going to re-ask
17 my question, sir, and then you can begin
18 again. Okay?
19 A. That's fair enough. Thank
20 you.
21 Q. How do I know which, if any,
22 of these certificates of analysis or
23 conformance you're relying on to render
24 the opinions reflected in your report?

<p style="text-align: right;">Page 66</p> <p>1 A. You will note it on the 2 materials considered. There is also a 3 Bates number that corresponds to that 4 certificate of conformance. And if I 5 referred to anything having to do with 6 that specific certificate of conformance, 7 it would be footnoted in my report 8 according to the Bates number that 9 corresponds to it.</p> <p>10 Q. I see. So unless the Bates 11 number or other unique identifier is 12 footnoted or explicitly noted in the body 13 of your report, that material is not one 14 you're relying on to render your 15 opinions?</p> <p>16 A. That is correct.</p> <p>17 Q. Let's flip back to the body 18 of your report around Page 6 and 7. And 19 tell me when you're there, sir?</p> <p>20 A. I'm there.</p> <p>21 Q. And in Paragraph 22, you're 22 summarizing your opinion about whether 23 Teva had evidence to suggest that NDMA or 24 NDEA would be present in the API</p>	<p style="text-align: right;">Page 68</p> <p>1 I know what certificates of analysis 2 you're relying on to render your opinion 3 as to whether Teva had evidence or not 4 from certificates of analysis?</p> <p>5 A. I cannot tell you what is on 6 each of the specific certificates of 7 analysis that are listed in the list of 8 materials considered.</p> <p>9 There were certificates of 10 analysis that were available for review, 11 let's say, in the ANDAs.</p> <p>12 There were -- that I recall 13 being familiar with. They could be among 14 those certificates of conformance -- 15 conformance or analysis, as they're 16 described, that I reviewed in the course 17 of reviewing documentation generally for 18 this case.</p> <p>19 Q. Well, you told us moments 20 ago that unless it's specifically cited 21 in the body of your report, it's not one 22 you're relying on for your opinions, 23 right?</p> <p>24 A. That is correct.</p>
<p style="text-align: right;">Page 67</p> <p>1 purchased from ZHP or Mylan, right?</p> <p>2 A. Correct.</p> <p>3 Q. And what types of evidence 4 are you referring to in that instance?</p> <p>5 A. Evidence that would have 6 appeared on certificates of analysis.</p> <p>7 Q. Anything else?</p> <p>8 A. Evidence that would have 9 arisen as a consequence of an observation 10 made either by an auditor from Teva or an 11 inspector from FDA.</p> <p>12 Q. Anything else?</p> <p>13 A. Nothing else.</p> <p>14 Q. And which certificates of 15 analysis are you referring to 16 specifically?</p> <p>17 A. There would be certificates 18 of analysis that pertained to Teva 19 product that would be issued for API, as 20 well as for completed and finished drug 21 product.</p> <p>22 Q. As we talked about some 23 moments ago, there's no footnote or Bates 24 citation here in Paragraph 22. So how do</p>	<p style="text-align: right;">Page 69</p> <p>1 Q. So now I'm asking you, where 2 in your report at Paragraph 22 or 3 otherwise, are you specifically citing 4 any certificate of analysis that you just 5 told us is the basis for your opinion in 6 Paragraph 22, at least in part?</p> <p>7 A. I'm saying that I reviewed 8 certificates of analysis. And those 9 certificates of analysis that I reviewed 10 reported no evidence of the presence of 11 NDMA or NDEA in any of them.</p> <p>12 Q. Which certificates did you 13 review?</p> <p>14 A. I reviewed some certificates 15 for API and some certificates for drug 16 product.</p> <p>17 Q. Which ones?</p> <p>18 A. I cannot tell you at this 19 time, which ones that I reviewed 20 specifically --</p> <p>21 Q. You --</p> <p>22 A. -- apart from the ones -- 23 apart from the ones that are listed in 24 the materials considered.</p>

Page 70

1 They may have been
2 considered, and I may have, upon viewing
3 them, made a mental note that no, I don't
4 have -- see any NDMA or NDEA evidence on
5 any certificates of analysis.
6 Q. You may have.
7 Did you do that? Yes or no?
8 A. I did. I looked at all of
9 the certificates of conformance that are
10 listed there. But I had no specific
11 comments to make on any of them in that I
12 did not find any NDMA or NDEA mentioned
13 on any of the certificates of analysis.
14 Q. So there's nothing in the
15 body of your report, though, that tells
16 me which specific Bates number I should
17 look at for the certificates of analysis
18 or conformance that you're claiming you
19 reviewed for your opinion that Teva did
20 not have evidence to suggest NDMA or NDEA
21 would be present.
22 MR. HARKINS: Object to
23 form. Asked and answered.
24 THE WITNESS: I do not make

Page 71

1 a direct connection between
2 certificates of analysis. They're
3 in the materials considered, so
4 they do appear in the materials
5 considered. I don't cite them
6 here.
7 BY MR. STANOCH:
8 Q. So how -- looking at your
9 report, how am I to know whether or not
10 any material listed in your materials
11 considered is actually something you
12 relied upon for an opinion as written in
13 your report, or if it was just something
14 that you looked at but you're not
15 specifically relying on it?
16 MR. HARKINS: Object to
17 form.
18 He just explained exactly
19 how you should do that for this
20 material.
21 THE WITNESS: Again, the
22 certificates of conformance or
23 certificates of analysis, as they
24 are also often referred to, that

Page 72

1 are listed here are ones which I
2 considered.
3 And in that they did not
4 contain NDMA or NDEA in any kind
5 of report on there, it was not
6 necessary for me to say anything
7 more than what I've said here
8 about that matter, because I found
9 no records of NDMA or NDEA that
10 were in those certificates of
11 conformance.
12 BY MR. STANOCH:
13 Q. How can I replicate your
14 analysis if I don't know what specific
15 documents you're relying on for specific
16 opinions in the paragraphs of your
17 report?
18 MR. HARKINS: Object to
19 form. Asked and answered.
20 THE WITNESS: Once again, if
21 there is documents that I have
22 cited in this report or has been
23 referenced by Mr. Quick and I've
24 discussed it as a matter of that,

Page 73

1 certainly it has been footnoted
2 here.
3 And again as I say, I was
4 furnished a number of documents
5 here which, while I reviewed them,
6 I did not find -- feel it was
7 necessary to have to go through
8 document by document by document
9 here to say that I didn't see any
10 NDMA on certificate analysis
11 Number 1, Number 2, Number 3,
12 Number 4, Number 5.
13 I didn't find that to be
14 necessary for me to do, but merely
15 to state that as I've done so
16 here.
17 BY MR. STANOCH:
18 Q. We can agree that Paragraph
19 22 doesn't mention certificates of any
20 form, right?
21 A. Correct.
22 Q. And you have no footnote as
23 any source for Paragraph 22, correct?
24 A. That's correct.

Page 74

1 Q. All right. And you told us
2 that if it wasn't specifically cited in
3 the body or a footnote in your report,
4 you're not relying on it, correct?
5 MR. HARKINS: Object to
6 form.
7 He just explained how he was
8 relying on the certificates of
9 conformance for the paragraph
10 you're talking about. Misstates
11 his testimony.
12 THE WITNESS: Again, I
13 believe I've discussed how I
14 incorporate here and account for
15 on the list of materials that I
16 considered, which materials those
17 were.
18 But you're correct, there is
19 no citation for certificates of
20 analysis in Paragraph 22.
21 BY MR. STANOCH:
22 Q. And the only way that I
23 would be able to determine which
24 documents you relied on for, say, the

Page 75

1 opinion in paragraph 22, would be to go
2 document by document with you through
3 your materials considered?
4 A. That's correct. And also
5 you may consult my evaluation of the
6 auditors and inspectors reports which
7 reside in the exhibit that's provided for
8 them.
9 Q. And you also made a list of
10 the documents that you relied on, which
11 was a subset of the materials considered,
12 which you gave to counsel, right?
13 MR. HARKINS: Object to
14 form. Misstates the testimony.
15 THE WITNESS: I did not make
16 a separate list which involved
17 only documents that were
18 referenced by John Quick.
19 BY MR. STANOCH:
20 Q. Did you make a separate list
21 of the materials that you relied on to
22 render the opinions in your report, which
23 was a subset of the materials considered?
24 MR. HARKINS: Object to

Page 76

1 form. Misstates his testimony.
2 THE WITNESS: And how you
3 clarified that correctly was to
4 say that these were documents that
5 Mr. Quick supplied in his report,
6 and I confirmed that in fact that
7 is -- that's the documents that I
8 used to rebut John Quick's
9 statements on the basis of
10 references that he made to such
11 documents.
12 So you characterized that as
13 a subset of documents, and you're
14 free to do so. But there was no
15 separation of documentation in
16 that way that I made in this
17 report that way.
18 BY MR. STANOCH:
19 Q. Then the next paragraph, you
20 talk about Teva's quality control
21 systems?
22 A. Correct.
23 Q. And you make reference to
24 Teva quality system, specifically the

Page 77

1 standard operating procedure, SOP CORP --
2 CORP-0001.
3 A. Correct.
4 Q. And that is -- strike that.
5 That SOP is what?
6 A. That SOP is the -- we'll
7 call it an anchor SOP from which other
8 SOPs proceed.
9 It is a statement of what
10 the quality system is that Teva is
11 expected to uphold.
12 And from that SOP, there are
13 other SOPs that proceed to cover specific
14 areas that comprise the quality system.
15 Q. And SOP CORP-0001, that's a
16 Teva standard operating procedure, right?
17 A. Yes. It is a foundational
18 SOP.
19 Q. SOP CORP-0001 would not have
20 applied to Actavis prior to Teva's
21 acquisition of Actavis, correct?
22 A. Not prior to Teva's
23 acquisition of Actavis. I understand
24 that CORP-0001 as an SOP is something

<p style="text-align: right;">Page 78</p> <p>1 that was instituted, if memory serves 2 correctly, in 2011.</p> <p>3 So as a corporate SOP, it 4 was something that was living within 5 Teva's system. It was not part of 6 Actavis's system in this specific form.</p> <p>7 Q. Right. And in this 8 paragraph, you don't say that you 9 reviewed any Actavis-specific quality 10 system SOPs prior to Actavis's 11 acquisition by Teva, correct?</p> <p>12 A. That is correct. The 13 serialization of SOPs, as they are, are 14 in a Teva format. But if I might just 15 refer to the list here, just to be 16 absolutely sure that in fact these all 17 have the CORP -- okay.</p> <p>18 I've seen the CORP 19 designation here for all of the Teva 20 SOPs. We have another SOP in here which 21 does not bear the CORP label to it.</p> <p>22 But -- and we also have 23 QAG-51 Actavis SOP on deviations of 24 nonconformance, which continues to be one</p>	<p style="text-align: right;">Page 80</p> <p>1 corporations.</p> <p>2 But deviations of 3 nonconformance, QAG-51, was one of 4 Actavis's SOPs that was continued to be 5 kept in its current form, and also 6 product complaints is another one, SOP 7 0197, which, again, does not have a Teva 8 corporate inventory -- SOP inventory 9 number to it.</p> <p>10 So I'll say that, what I'm 11 recalling from it, it may or may not be a 12 Teva inventory specifically.</p> <p>13 That could have been one 14 from an earlier -- an earlier company to 15 which that product complaint SOP 16 pertained.</p> <p>17 But again, deviations of 18 nonconformance was an Actavis SOP that 19 remains current within Teva's SOP 20 inventory system and denoted this way.</p> <p>21 So it's still a Teva SOP, as 22 much as Actavis is -- as we agreed it's 23 considered a Teva company. So it is 24 something which can be understood in that</p>
<p style="text-align: right;">Page 79</p> <p>1 which was utilized but does not appear to 2 have been updated into Teva's listing in 3 terms of formalization as a Teva SOP.</p> <p>4 There are some SOPs that 5 were carried forward at some of these 6 affiliate units here, and they are listed 7 here.</p> <p>8 Q. What are you referring to, 9 that you're looking at?</p> <p>10 A. I'm sorry.</p> <p>11 The -- I have a list of SOPs 12 that were comparing ones which -- 13 actually as informed by ones which John 14 Quick noted were examples of SOPs which 15 were relevant to governing quality 16 systems.</p> <p>17 I'm on Page 21 and 22 where 18 I've got a box that I've provided that 19 describes which SOP was operative for 20 which system.</p> <p>21 The CORP SOP designation 22 here would be one that was part of Teva's 23 main corporate level SOPs and extends 24 also to other Teva operating</p>	<p style="text-align: right;">Page 81</p> <p>1 sense.</p> <p>2 Q. Do you offer any analysis 3 anywhere in your report about which 4 Actavis quality policies were integrated 5 into Teva's policies upon acquisition?</p> <p>6 A. I don't have any specific 7 commentary with respect to that. Again, 8 there are -- this isn't meant to be a 9 complete list of all SOPs that Teva has.</p> <p>10 There are quite a number of 11 them. And some of the SOPs, clearly, 12 even as evidenced by this, were carried 13 over from the prior company and were 14 found to be suitable in the way that they 15 were composed.</p> <p>16 And Teva, for their reasons 17 that I don't know, elected to keep them 18 with the same serialization as they had 19 before.</p> <p>20 Q. You didn't do any analysis 21 as to which Actavis policies were 22 replaced by Teva policies upon Teva's 23 acquisition of Actavis, did you?</p> <p>24 A. I don't know that there were</p>

<p style="text-align: right;">Page 82</p> <p>1 policies, actually, that were different 2 with respect to Actavis and Teva. 3 The SOPs are things which 4 are reviewed periodically for their 5 accessibility, for operation, at that 6 particular site, because there are 7 site-specific SOPs for operations that 8 are unique to those sites. 9 So in terms of policy, one 10 can say that as soon as Actavis was 11 acquired by Teva, they came under the 12 control of the overall CORP-0001 13 corporate policy of Teva. 14 Q. So you're saying once 15 Actavis became part of Teva, the Teva 16 umbrella of CORP-designated SOPs, in your 17 view, was applied to the Actavis Malta 18 facility? 19 A. Correct. 20 Q. But other than the one 21 deviation Actavis policy you noted from 22 Paragraph 84 of your report, could you 23 tell us what, if any, Actavis policies 24 for quality continued to be in force upon</p>	<p style="text-align: right;">Page 84</p> <p>1 Q. Right. Other than a 2 specific Actavis policy that may be 3 mentioned in the body or your footnotes 4 of your report, you're not offering any 5 opinion on any Actavis policies up 6 through the point of acquisition by Teva? 7 A. I am not offering an opinion 8 there, no. 9 Q. Do you know if Actavis had a 10 policy on quality systems similar to 11 Teva's SOP CORP-0001 up to the point of 12 Actavis's acquisition by Teva? 13 A. I don't know what the 14 structure was that Actavis had in place. 15 Only knowledge of what these specific 16 SOPs are that were carried over, post 17 acquisition of Actavis. 18 Q. Other than the one Actavis 19 policy, you talked about earlier in 20 Paragraph 84 of your report, what other 21 Actavis policies were carried over and 22 remained in effect upon Actavis's 23 acquisition by Teva? 24 A. I have no direct</p>
<p style="text-align: right;">Page 83</p> <p>1 Teva's acquisition of Actavis? 2 A. Not down to that specific 3 level. 4 I only reviewed the SOPs 5 specifically for this comparison purpose, 6 again, against what John Quick had 7 detailed in his report. 8 And I did this for the 9 purpose of showing that John Quick made 10 it the point to say that these are the 11 types of SOPs that one should have in 12 place to govern these essential quality 13 system matters, that in fact there was 14 evidence that Teva companies had evidence 15 of these SOPs in place to govern these 16 quality system matters. 17 Q. And back to Paragraph 23, 18 where you reference Teva's SOP CORP-0001, 19 you didn't review any overarching Actavis 20 quality policies that were in effect up 21 to the point of Actavis' acquisition by 22 Teva, did you? 23 A. No, I made no such 24 comparison.</p>	<p style="text-align: right;">Page 85</p> <p>1 recollection of which ones were carried 2 over by Teva and deemed suitable enough 3 to continue with that kind of 4 documentation maintenance structure. 5 Q. And in fact, not only do you 6 not have any recollection, but you did 7 not undertake any analysis of which, if 8 any, Actavis policies carried over and 9 remained in effect upon acquisition by 10 Teva, right? 11 MR. HARKINS: Asked and 12 answered. 13 THE WITNESS: I did not 14 review every single Actavis SOP 15 that was in place that was carried 16 over by Teva. 17 But what I did speak to were 18 those specific SOPs that were 19 mentioned by John Quick as being 20 areas that companies should have 21 under control and governed by SOPs 22 as part of quality systems. 23 So I looked specifically at 24 only those SOPs.</p>

<p style="text-align: right;">Page 86</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. How did you know that</p> <p>3 Actavis policy for handling of events and</p> <p>4 deviation investigations, as referenced</p> <p>5 in Paragraph 84 of your report, continued</p> <p>6 to remain in force and effect upon Teva's</p> <p>7 acquisition of Actavis?</p> <p>8 A. Well, one has to appreciate</p> <p>9 the fact that at the point in time that I</p> <p>10 asked what Teva's current SOPs were that</p> <p>11 governed these particular aspects here,</p> <p>12 in that the SOP is one that happens to</p> <p>13 have mentioned Actavis or possibly have</p> <p>14 some reference to Actavis there, in that</p> <p>15 Actavis as a company predated the</p> <p>16 acquisition by Teva, it is that SOP that</p> <p>17 was carried over as a procedure that was</p> <p>18 in place, established by Actavis in</p> <p>19 advance of Teva having acquired them.</p> <p>20 So at a time prior to Teva's</p> <p>21 acquisition, it's possible that that SOP</p> <p>22 could get looked at and a revision</p> <p>23 history could be drawn from the SOP, so</p> <p>24 you'd properly understand exactly when</p>	<p style="text-align: right;">Page 88</p> <p>1 deviations and nonconformance.</p> <p>2 Q. So the only policy that you</p> <p>3 received when you asked Teva for</p> <p>4 deviations and nonconformance which was</p> <p>5 the Actavis policy which you identify in</p> <p>6 Paragraph 84 of your report?</p> <p>7 A. I asked for what the current</p> <p>8 SOPs were for Teva, and this was supplied</p> <p>9 to me as a current SOP for Teva.</p> <p>10 Q. So it's your understanding</p> <p>11 that the legacy Actavis policy for</p> <p>12 deviations of nonconformance that you</p> <p>13 cite in Paragraph 84 of your report,</p> <p>14 applies to all Teva's facilities now?</p> <p>15 MR. HARKINS: Object to</p> <p>16 form.</p> <p>17 THE WITNESS: Well,</p> <p>18 certainly those that pertains to</p> <p>19 Actavis.</p> <p>20 I don't know to what extent</p> <p>21 the Actavis SOP is one that</p> <p>22 extends to other facilities. But</p> <p>23 this happens to be the way that</p> <p>24 Teva has chosen to serialize their</p>
<p style="text-align: right;">Page 87</p> <p>1 the SOP was implemented and how many</p> <p>2 different revisions it may have gone</p> <p>3 through before it exists in its current</p> <p>4 form.</p> <p>5 So there's a date certain</p> <p>6 that the SOP came into existence in that</p> <p>7 form, and maybe even superseded another</p> <p>8 SOP that wasn't named specifically called</p> <p>9 handling of events and deviations</p> <p>10 investigations. It may have been called</p> <p>11 something different at a point in time in</p> <p>12 the past by Actavis. But I'm not aware</p> <p>13 of what that SOP might have been or</p> <p>14 whether it's a predecessor.</p> <p>15 Q. I don't understand that,</p> <p>16 Mr. Anderson. I'd like you to explain a</p> <p>17 little more.</p> <p>18 Did you say that you asked</p> <p>19 for active policies and this is one that</p> <p>20 was provided?</p> <p>21 A. Correct.</p> <p>22 Q. You weren't given any policy</p> <p>23 that was a Teva CORP-designated policy?</p> <p>24 A. Not which pertained to</p>	<p style="text-align: right;">Page 89</p> <p>1 SOPs.</p> <p>2 And when I asked for what</p> <p>3 was the SOP that pertained to</p> <p>4 deviations of nonconformance, this</p> <p>5 was the SOP that was supplied to</p> <p>6 me.</p> <p>7 BY MR. STANOCH:</p> <p>8 Q. Is it your understanding</p> <p>9 that this SOP on deviations of</p> <p>10 nonconformance from Actavis would apply</p> <p>11 to Teva's Jerusalem facility that was</p> <p>12 making valsartan finished dose products?</p> <p>13 A. In that this was the SOP</p> <p>14 that was supplied to me, that is what I</p> <p>15 believe is the deviations of</p> <p>16 nonconformance SOP that is applied in</p> <p>17 Teva's company.</p> <p>18 Q. Right. So we're clear, the</p> <p>19 only policy that was given to you by Teva</p> <p>20 when you asked for a policy on deviations</p> <p>21 of nonconformance was the QAG-51B Actavis</p> <p>22 policy for handling deviations and</p> <p>23 investigations?</p> <p>24 MR. HARKINS: Object to</p>

Page 90

1 form. Vague.
2 THE WITNESS: To be clear,
3 this is not a policy. It is a
4 procedure.
5 SOP means standard operating
6 procedure. So I just want to be
7 very clear.
8 But I asked for standard
9 operating procedures, not
10 policies.
11 BY MR. STANOCH:
12 Q. Fair enough.
13 A. Policies are, again,
14 something that provide an environment
15 within which SOPs are generated. They
16 are not necessarily the SOP itself.
17 Q. So when you --
18 A. This is the SOP.
19 Q. So when you asked for the
20 standard operating procedure at Teva for
21 deviations of nonconformance, the only
22 operative policy they gave you was
23 QAG-51B Actavis SOP for handling
24 deviations investigations?

Page 91

1 MR. HARKINS: Object to
2 form. Vague. Asked and answered.
3 THE WITNESS: Correct.
4 BY MR. STANOCH:
5 Q. Are you aware of any Teva
6 SOP under the CORP designation or
7 otherwise, that would deal with handling
8 events and deviation investigations?
9 A. This is the only SOP that
10 was supplied to me from Teva when I asked
11 them for the Teva SOP that governed
12 deviations of nonconformance.
13 Q. So as far as you know, there
14 is no Teva-specific SOP for handling
15 deviation investigations and events other
16 than this policy from Actavis?
17 MR. HARKINS: Object to
18 form. Speculation.
19 You can answer if you know.
20 THE WITNESS: This is,
21 again, what is in Teva's inventory
22 here for governing deviations of
23 nonconformance. It happens to be
24 named QAG-51B. Its derivation

Page 92

1 happened to be from Actavis.
2 But to be clear, it's my
3 understanding that Actavis did not
4 just have one site that it owned
5 when it was a company. And when
6 Teva bought that site, or bought
7 that name, Actavis, bought that
8 company, it also bought the assets
9 that belonged to that and
10 facilities that belonged to that.
11 And this deviations of
12 nonconformance SOP applied to
13 Actavis companies.
14 So as it applied to Actavis
15 companies and the processes and
16 the products that were made by
17 Actavis which were now owned by
18 Teva, was clear that there was not
19 a name change that was applied to
20 the SOP and an incorporation of
21 any renaming of the SOP to fit the
22 CORP regimen of SOP inventory.
23 BY MR. STANOCH:
24 Q. Did you do anything to

Page 93

1 confirm that the Actavis SOP for handling
2 deviation investigations, QAG-51B,
3 applies to Teva facilities that were not
4 legacy Actavis facilities?
5 MR. HARKINS: Form. I'm
6 just going to instruct the witness
7 not to answer anything to the
8 extent it reflects conversations
9 with counsel.
10 You can answer.
11 THE WITNESS: Right. The --
12 when I made the request, I made
13 the request for the Teva SOP. And
14 Teva supplied this SOP to be
15 representative of the current SOP
16 for deviations of nonconformance.
17 If this in fact the current
18 Teva SOP, as was represented to me
19 as being the case, then I would
20 expect that this SOP applies also
21 to Teva's Jerusalem facilities,
22 although Teva was clearly in
23 possession of those facilities
24 under their name at a time prior

<p style="text-align: right;">Page 94</p> <p>1 to acquiring Actavis. 2 BY MR. STANOCH: 3 Q. And certainly, Actavis's SOP 4 for handling deviation investigations 5 would not have applied to any Teva 6 facility prior to Teva's acquisition of 7 Actavis, right? 8 A. That is correct. 9 Q. So you don't then cite any 10 SOP for deviation investigations at Teva 11 prior to Teva's acquisition of Actavis? 12 A. That's correct. 13 Q. Are you aware of any Teva 14 SOP for handling events and deviation 15 investigations that existed prior to 16 Teva's acquisition of Actavis? 17 A. I asked them for the current 18 SOP and they supplied the current SOP. 19 Q. Current as of when? 20 A. Current as of my request. I 21 guess that would have been either in 22 December of '21 or in January of '22. 23 Q. First, are you aware of any 24 Teva SOP for handling events and</p>	<p style="text-align: right;">Page 96</p> <p>1 in connection with the litigation. 2 It's all inappropriate. 3 He has indicated the 4 document he received, what he 5 relied on it for, and we're 6 getting way close to 7 attorney/client privilege here. 8 You can answer, if you can, 9 subject to the instruction not to 10 reflect any communicated with 11 counsel. 12 THE WITNESS: The purpose 13 for my asking for the SOPs 14 themselves was simply to provide 15 evidence of the fact that Teva had 16 necessarily, or has necessarily, 17 excuse me, SOPs in place that are 18 reflective of a quality system 19 that are governing these essential 20 points that John Quick had made in 21 his report. 22 So it was in direct 23 response, generally, to supporting 24 the fact that Teva has evidence of</p>
<p style="text-align: right;">Page 95</p> <p>1 deviation investigations that existed 2 prior to Teva's acquisition of Actavis? 3 MR. HARKINS: Object to 4 form. Asked and answered. 5 THE WITNESS: I have not 6 seen an SOP other than this one. 7 BY MR. STANOCH: 8 Q. And your requests, you said, 9 were for then-active Teva SOPs as of 10 December of 2021 or January of 2022; is 11 that right? 12 A. That is correct. 13 Q. You did not ask for copies 14 of Teva or Actavis SOPs that were in 15 effect during the relevant time frame at 16 issue in this litigation of 2012 to 2018? 17 MR. HARKINS: Object to 18 form. 19 Instruct the witness not to 20 answer to the extent that it 21 reflects communications with 22 counsel, the back-and-forth on 23 what he requested or was 24 represented to by counsel or Teva</p>	<p style="text-align: right;">Page 97</p> <p>1 the quality systems, as governed 2 by the SOP. 3 I did not intend to make any 4 kind of historic comparison of 5 what was available in times past, 6 because, again, my sole intention 7 was to show that, in fact, Teva is 8 a company that is governed by SOPs 9 that manage the quality system. 10 BY MR. STANOCH: 11 Q. Your understanding though, 12 is that the SOPs you cite in your report 13 are the current versions of those quality 14 SOPs, right? 15 A. Correct. 16 Q. You did not undertake to 17 analyze or review which, if any, of those 18 policies might have been in effect and in 19 what forms during the 2012 to 2018 time 20 period, correct? 21 A. The SOP that is in place 22 here for Actavis, and as I'm 23 understanding that when it pertained to 24 products that were manufactured by</p>

<p style="text-align: right;">Page 98</p> <p>1 Actavis, certainly this form of deviation 2 and nonconformance procedure applied 3 to -- applied to the Actavis facility, 4 which, again, was eventually acquired by 5 Teva. 6 So at the time that 7 valsartan drug products were being made 8 at the Arrow facility, which I understand 9 was at one time an Actavis facility, the 10 deviations of nonconformance that 11 pertained to that facility was in fact 12 this SOP, or a version of this SOP that 13 was current at that time. 14 Q. You did not cite or analyze, 15 though, any prior versions of the Actavis 16 QAG-51B SOP, other than the current 17 version, correct? 18 A. That is correct. 19 Q. And your answer a moment ago 20 focused on the QAG-51B Actavis policy. 21 It's correct, is it not, that you did not 22 undertake any analysis to determine 23 which, if any, of the Teva CORP policies 24 that you identify in your report might</p>	<p style="text-align: right;">Page 100</p> <p>1 effect when and in what forms during the 2 2012 to 2018 time period, did you? 3 MR. HARKINS: Object to 4 form. 5 The policies, he said, were 6 dated, and we're discussing these 7 without looking at them, including 8 the dates on which they would have 9 been effective. 10 But you can answer if you 11 recall. 12 MR. STANOCH: No need to 13 coach, Mr. Harkins. Please 14 refrain. 15 Objection to form only. 16 BY MR. STANOCH: 17 Q. Go ahead, Mr. Anderson. 18 A. We're capable of bringing up 19 each one of these individual SOPs with 20 their documentation that you should also 21 have in your possession. 22 And we can go through the 23 revision history to gain some 24 appreciation for when the SOPs themselves</p>
<p style="text-align: right;">Page 99</p> <p>1 have been in effect and in what forms 2 during the 2012 to 2018 time period, 3 correct? 4 A. I did not review that level 5 of detail as to when necessarily a 6 specific version of the corporate SOPs 7 came into existence. 8 What I do know is that the 9 CORP-0001 SOP, I did make a point to 10 seeing what was the overarching quality 11 philosophy that was going to be the 12 umbrella SOP, if you will, that was going 13 to be defining how quality systems were 14 structured. 15 And I do recall that that 16 SOP in its original form was initiated in 17 2011. 18 So it does, in fact, cover 19 the time during which valsartan products 20 were manufactured. 21 Q. Other than Teva standard 22 operating procedure CORP-0001, you did 23 not undertake any analysis to determine 24 which other Teva quality SOPs came into</p>	<p style="text-align: right;">Page 101</p> <p>1 were initiated. 2 Q. You yourself, sir, testified 3 that the SOPs in Paragraph 84 are the 4 current versions, as of a few months ago, 5 right? 6 A. Correct. 7 Q. And all I'm asking you, 8 because I don't see it anywhere in your 9 report -- and point to it if I'm wrong. 10 Nowhere in your report do 11 you opine as to which Teva quality CORP 12 SOPs came into effect when, and what they 13 say, do you? 14 A. I do not. But in that I 15 have referenced them here, and they are 16 in my footnotes, and named individually, 17 those documents can be pulled up if there 18 is a question that pertains to when, in 19 fact, they were initially employed. 20 Q. Sure. And if we pulled one 21 up and it said it came into effect 22 July 2019, right, that would mean that 23 you would not know anything as to what 24 that policy might have said prior to that</p>

Page 102

1 effective date, right?

2 MR. HARKINS: Form.

3 Speculation.

4 THE WITNESS: That is not

5 true. SOPs have a history, a

6 revision history, which is part of

7 the SOP, typically found at the

8 back of the SOP, which describes

9 what iterations of the SOP and

10 version of the SOP had existed in

11 the past, and often contain what

12 were the updates to that revision

13 that caused the issuance of a new

14 revision.

15 So you will get what the

16 date is, what the initial issuance

17 of what that SOP was, and when it

18 went into effect.

19 BY MR. STANOCH:

20 Q. But you don't opine anywhere

21 in your report, do you, as to what

22 revisions occurred, to what Teva policies

23 and when, correct?

24 A. I do not.

Page 103

1 Q. We'll get back to Teva

2 policies in a little bit.

3 Let's go to Paragraph 25 of

4 your report, sir. Tell me when you're

5 there.

6 A. I'm there. Yes. I'm there.

7 Q. Could you read this

8 paragraph for me?

9 A. Paragraph 25, "None of the

10 observations made during FDA's

11 inspections of Teva's or the relevant API

12 suppliers' facilities, nor Teva's own

13 observations made during audits of the

14 suppliers' facilities, prevented Teva

15 from identifying the NDMA or NDEA

16 impurities at issue in valsartan

17 medications, which were previously

18 unknown by both the industry and FDA

19 prior to Teva receiving notification of

20 the impurity from ZHP in June of 2018."

21 Q. Thank you.

22 And, you know, I want to

23 talk about some of the wording in this,

24 because there's a few clauses offset by

Page 104

1 commas in this paragraph, right?

2 A. There are.

3 Q. I think because -- if I read

4 it as, "None of the observations made

5 during the FDA's inspection of Teva's or

6 the relevant API suppliers' facilities

7 prevented Teva from identifying the NDMA

8 or NDEA impurities at issue in valsartan

9 medications"?

10 A. That is what I've written.

11 Q. Right. So you're saying

12 none of the observations prevented Teva

13 from identifying the NDMA or NDEA

14 impurities?

15 A. That's true.

16 Q. Right. So in other words,

17 the observations would have allowed Teva

18 to identify the NDMA or NDEA impurities

19 at issue?

20 MR. HARKINS: Object to

21 form. Misstates the testimony.

22 THE WITNESS: Again, as I'm

23 saying, these were previously

24 unknown by industry and FDA. And

Page 105

1 none of these audits or

2 inspections prevented Teva from

3 identifying NDMA or NDEA.

4 BY MR. STANOCH:

5 Q. Right. None of the

6 observations got in the way of Teva

7 identifying the NDMA or NDEA impurities

8 at issue, in valsartan, right?

9 MR. HARKINS: Object to

10 form. Misstates testimony.

11 THE WITNESS: As I'm stating

12 in my quotation here, none of the

13 observations prevented Teva from

14 identifying NDMA or NDEA.

15 BY MR. STANOCH:

16 Q. Okay. In Paragraph 27, you

17 start talking about Mr. Quick's report;

18 is that right?

19 MR. HARKINS: And, Dave,

20 we've been going over an hour. I

21 want to at least take a break at

22 some point shortly, check on our

23 tech issues and see if we have

24 anything better. So whenever you

Page 106

1 find it's time for a break.
2 MR. STANOCH: We were about
3 to flip the page.
4 BY MR. STANOCH:
5 Q. Mr. Anderson, would you like
6 to keep going for another 10 or 15 or
7 take a break? I'll let you decide.
8 A. I can take -- I can go on
9 for another ten minutes if you'd like.
10 But let us be sure to agree to have a
11 break in ten minutes.
12 Q. That's fine by me. So
13 Mr. Anderson, here you write,
14 "Mr. Quick's statement that FDA's
15 official position regarding cGMPs is that
16 if a company is not complying with cGMP
17 regulations, any drug it makes is
18 considered adulterated under the law, is
19 completely untrue and unsupported by the
20 materials relied upon by Mr. Quick."
21 Did I read that right?
22 A. You read that correctly.
23 Q. And I should have clarified
24 this earlier, but as you used it in your

Page 107

1 report, cGMP stands for current good
2 manufacturing practices, right?
3 A. Correct.
4 Q. So it's your view then that
5 a company not complying with cGMP does
6 not render the company's drugs
7 adulterated?
8 A. The statement that Mr. Quick
9 has drawn -- made this conclusion from,
10 is what I'll consider a cherry-picked
11 statement. It is a very general
12 statement that is made, not in a policy
13 document by FDA. It is something that
14 exists in an information web page as it
15 pertains to this.
16 But the context in which
17 this statement appears does not appear in
18 Mr. Quick's citation of this portion
19 here.
20 So it's -- it is an
21 incomplete rendering. And it is not a
22 statement of FDA quote-unquote official
23 policy.
24 Q. You know, with all due

Page 108

1 respect, Mr. Anderson, you don't really
2 say any of that in your report. You say
3 that Mr. Quick's statement is completely
4 untrue and unsupported, don't you?
5 A. I do.
6 MR. STANOCH: Stand by.
7 Please pull up Exhibit 3. Let me
8 know when you're there.
9 (Document marked for
10 identification as Exhibit
11 Anderson-3.)
12 MR. HARKINS: It will be in
13 the DropBox. So go here and hit
14 X. Now refresh the page. Great.
15 Yeah, when you exit out, make sure
16 not to exit out of the whole
17 thing. Just exit out of the inner
18 window.
19 THE WITNESS: I hit the
20 three document, but --
21 MR. HARKINS: It's loading.
22 MR. STANOCH: I can try to
23 move this along while it's
24 loading, sir. Hopefully the

Page 109

1 document will load. I can try to
2 share my screen just to move this
3 along.
4 BY MR. STANOCH:
5 Q. Can you see my screen, sir?
6 A. Yes. It says David Stanoch
7 has started screen sharing. I cannot see
8 a document yet.
9 Q. You don't see a document?
10 A. I don't see a document. No.
11 MR. HARKINS: Let me make
12 sure that he's not pinned to a
13 different screen.
14 THE WITNESS: Ah, here we
15 go.
16 MR. HARKINS: Here we go.
17 BY MR. STANOCH:
18 Q. And again, you can access
19 the full document once it's available on
20 the folder.
21 But for now, on my screen,
22 you can see the document entitled "Facts
23 About the Current Good Manufacturing
24 Practices," cGMPs?

Page 110

1 A. I see that, yes.
2 Q. Have you seen this document
3 before, sir?
4 A. I have seen this document.
5 Q. All right. And it's from
6 the FDA, correct?
7 A. It is -- it appears to be
8 the rendering that was from an online
9 source supplied by FDA.
10 Q. Right.
11 A. I don't see FDA's name, for
12 instance, in the link that you have above
13 there.
14 Q. Well, the link is obviously.
15 Right, the -- I'm sorry. Go ahead. I'm
16 sorry. I apologize. Where were you
17 looking?
18 A. I'm looking at the very
19 first line where it says, "Pharmaceutical
20 quality/drug development approval
21 process." It doesn't say FDA in that.
22 This looks familiar to me
23 from something that I have seen supplied
24 on the FDA website. But it's not obvious

Page 111

1 that it's necessarily from FDA in the
2 form that you have it here.
3 For instance, you have not
4 brought me to the website, the FDA's
5 formal website. This is a reproduction
6 of something that appears that was on the
7 website.
8 Q. Right.
9 A. I can't -- it's not an FDA
10 document. Okay. I'm just making that
11 clear.
12 Q. All right. That's fair.
13 You understand that we're not in a
14 dynamic situation where I'm pulling up
15 live websites as we go, right? You
16 understand that?
17 A. I understand only what you
18 told me here. I didn't know that that
19 was not a possibility that you had.
20 Q. Right. And, you know, if we
21 need to do that, we'll start doing that.
22 But for now, this is something that we
23 did pull from the FDA website. And I'll
24 represent that to you.

Page 112

1 And you're familiar --
2 regardless, you're familiar with this
3 being something from the FDA website,
4 right?
5 A. This appears to be from the
6 FDA website.
7 Q. And you see this section
8 here, it says, "If a manufacturer is not
9 following cGMPs, are drugs safe for use?"
10 Do you see that?
11 A. Yes.
12 Q. And read that first sentence
13 for me.
14 A. At the bottom of this page
15 here? Or do you have -- there we go. We
16 have more of the document. Let's move
17 the document up here.
18 So, "If a manufacturer is
19 not following cGMPs, are drug products
20 safe for use?"
21 Could you move that to the
22 top of your page so we include the entire
23 narrative?
24 Q. How's that?

Page 113

1 A. Keep going. The narrative
2 continues below the page, and I don't see
3 that. Is there a way to move that up?
4 There we go. Okay. Here we
5 go.
6 Q. Again, the question is,
7 could you read that first sentence?
8 A. Yeah. Happily.
9 The first sentence as it
10 reads is: "If a company is not complying
11 with cGMP regulations, any drug it makes
12 is considered 'adulterated' under the
13 law."
14 Q. Right. And as your
15 Paragraph 27 notes, Mr. Quick is quoting,
16 "If a company is not complying with cGMP
17 regulations, any drug it makes is
18 considered 'adulterated' under the law."
19 Correct?
20 A. That is a statement that is
21 made here and that Mr. Quick is relying
22 upon.
23 Q. Right. So it's not then
24 that his statement was completely untrue

<p style="text-align: right;">Page 114</p> <p>1 and unsupported, right? Because we're 2 looking at something that he took it 3 verbatim from, from the FDA website, 4 correct? 5 A. He took this statement from 6 the FDA website, but it is not taken in 7 the full context in which it exists. 8 And that is the reason, 9 because it doesn't take in account the 10 full context, it is unsupported. 11 Q. Well, you don't say that in 12 Paragraph 27, do you? 13 A. Well, standing on its own, 14 it is not the complete context within 15 which this statement resides. And if 16 you're only telling half the story, and 17 not the whole story, that's half the 18 truth and not the full truth. 19 So in that sense, it is not 20 a truthful statement. It merely just 21 cherry-picks and cuts that statement out 22 of there, as though that is the only 23 representation of what FDA's official 24 position is.</p>	<p style="text-align: right;">Page 116</p> <p>1 completely untrue and unsupported, right? 2 MR. HARKINS: Object to 3 form. Asked and answered. 4 THE WITNESS: The statement 5 characterized as FDA's official 6 policy is untrue. Completely. 7 BY MR. STANOCH: 8 Q. You're agreeing though that 9 he's accurately quoting this sentence in 10 his report, right? 11 A. I'm not challenging that he 12 hasn't accurately quoted the sentence. 13 My challenge is it's 14 completely untrue to say that that is the 15 sole statement of what forms FDA's 16 official policy. That is untrue. And it 17 is unsupported, particularly in the fact 18 that there is context which surrounds the 19 way that sentence should be appreciated. 20 Q. And nothing in your 21 Paragraph 27 says anything about context, 22 right? 23 Do you see any mention of 24 context in your Paragraph 27?</p>
<p style="text-align: right;">Page 115</p> <p>1 Q. So you're disagreeing that 2 Mr. Quick quoted this sentence 3 accurately? 4 A. He quoted the sentence 5 alone. He did not quote it in context; 6 hence, it is unsupported. 7 And because it is not quoted 8 in context, it is not entirely true as a 9 standalone statement. 10 Q. Right. Well, not entirely 11 true is not the same as completely untrue 12 and unsupported, is it, sir? 13 A. It is certainly unsupported 14 because it is out of context and it is 15 untrue if just held -- and held this 16 sentence alone, as he chose to quote it, 17 and to then characterize that as FDA's 18 official position. 19 Q. Mm-hmm. And you take 20 Mr. Quick to task for exaggerations. But 21 then it sounds like, Mr. Anderson, you're 22 exaggerating in Paragraph 27 when you say 23 this accurate verbatim quotation of a 24 sentence from the FDA web website is</p>	<p style="text-align: right;">Page 117</p> <p>1 A. I have not used that word. 2 Q. Right. And do you reference 3 any of that so-called context in 4 Paragraph 27 that you now say is missing? 5 A. I speak to it later in the 6 report, where I take this whole matter 7 apart, and I do furnish what the context 8 is within which this opening statement 9 appears. 10 Q. We'll get to that part. 11 And if you look at Paragraph 12 28, in part you note the FDA's guidance 13 with respect to the presence of NDMA and 14 NDEA. 15 Do you see that? 16 A. I see that. If you'd like 17 to read it. 18 Q. You can read it to yourself. 19 My question about that 20 guidance is, that's the guidance issued 21 when? 22 A. Well, Paragraph 28 opens 23 with Mr. Quick's statement that valsartan 24 products containing NDMA and impurities</p>

Page 118

1 were misbranded is similarly incorrect
2 and unsupported.
3 May I continue?
4 Q. I'm not asking you to read,
5 Mr. Anderson. I'm focused on your
6 reference to FDA's guidance in the last
7 sentence of that paragraph.
8 Do you see that?
9 A. Very good. Starting at,
10 "Moreover." Is that correct?
11 Q. That's where I am, sir,
12 absolutely. And I'm asking, which
13 guidance is that, sir?
14 A. Okay. FDA's guidance with
15 respect to NDMA and NDEA is the current
16 guidance that was published in its latest
17 form in February 2021.
18 Q. And when was that guidance
19 first published?
20 A. Guidance was first published
21 back in, I believe it was December of
22 2018, when interim impurities --
23 acceptable impurity levels for these NDMA
24 and NDEA were communicated.

Page 119

1 Q. And prior to December of
2 2018, were there any guidance from the
3 FDA allowing any amount of nitrosamines
4 in valsartan or any other drug products?
5 A. FDA specifically had not
6 communicated a guidance having the
7 name -- having to do with nitrosamine
8 content in drug products.
9 Q. Absent an interim limit for
10 nitrosamines prior to December 2018, then
11 the allowable limit was zero, correct?
12 A. That's not correct as you've
13 stated it. It simply meant there was no
14 limit specified, not that the allowable
15 limit was zero.
16 Q. Mm-hmm. So the FDA never
17 set any allowable limit prior to December
18 of 2018 for nitrosamines, right?
19 A. Not formally, no.
20 Q. Informally?
21 A. Not even informally. There
22 was what was the governing standard by
23 which applications that Teva had for
24 valsartan at that time governed the

Page 120

1 presence of impurities as they might be
2 evaluated against standards that were
3 communicated in ICH -- that's
4 International Conference of
5 Harmonization, ICH, Value Q3A.
6 Q. There was never an allowable
7 limit for nitrosamines in drug products
8 per the FDA until December of 2018,
9 right?
10 A. Not one specified, no.
11 Q. Rather than getting into the
12 ICH, let's take that break Mr. Anderson.
13 A. Very good. Thank you.
14 THE VIDEOGRAPHER: The time
15 right now is 11:17 a.m. We are
16 off the record.
17 (Short break.)
18 THE VIDEOGRAPHER: The time
19 right now is 11:33 a.m. We're
20 back on the record.
21 BY MR. STANOCH:
22 Q. Welcome back, Mr. Anderson.
23 Just yes or no, did you talk to your
24 counsel during the break?

Page 121

1 A. Yes.
2 Q. Did you review any
3 documents?
4 A. None.
5 Q. Did you talk or communicate
6 in any way, text, e-mail, phone,
7 otherwise, with anyone besides
8 Mr. Harkins at the break?
9 A. No.
10 Q. Great.
11 You're familiar with the
12 term "adulteration," right?
13 A. I am.
14 Q. Right. And what's your
15 understanding of an adulteration of a
16 drug?
17 A. Adulteration is defined in
18 law in the FD&C Act. It is also found in
19 regulations, specifically at 21 C.F.R.
20 210 that defines adulteration as any --
21 excuse me.
22 May I actually bring up the
23 specific quotation from 210 and read it
24 so that I do this accurately?

<p style="text-align: right;">Page 122</p> <p>1 Q. I don't need you to read 2 from memory, sir. We can say, fair 3 enough that you agree with the term 4 "adulteration" as it's defined in statute 5 and regulations? 6 A. Yes. 7 Q. And can a drug be 8 adulterated even if it was AB-rated? 9 A. Yes. 10 Q. Do you agree that drugs 11 could be adulterated even if they do not 12 contain any contaminants or impurities? 13 A. Yes. 14 Q. For instance, a drug could 15 be found to be adulterated if it was 16 manufactured in a way that was not in 17 conformance with current good 18 manufacturing practices, right? 19 A. I agree with that. 20 Q. And do you agree that 21 adulteration can occur absent official 22 action indicated by the FDA? 23 A. Adulteration is a 24 determination that FDA themselves make.</p>	<p style="text-align: right;">Page 124</p> <p>1 A. That's not what I said. I 2 said there is a point in time at which 3 FDA determines that a drug product or 4 substance is in their -- and then 5 declared to be adulterated. 6 Q. Right. And the fact of 7 adulteration can be existent prior to the 8 FDA determination, correct? 9 A. Adulteration is an 10 interpretation that is made by FDA with 11 respect to the drug product or drug 12 substance. And it is pertinent to the 13 point in time at which FDA thinks that is 14 the case. 15 Q. When the FDA makes the 16 determination that a drug is adulterated, 17 is that a prospective only determination? 18 A. That would be from a 19 specific point in time and going forward 20 thereafter. 21 Q. And the FDA can choose a 22 point in time for adulteration that 23 predates the date of the FDA's opinion, 24 correct?</p>
<p style="text-align: right;">Page 123</p> <p>1 THE COURT REPORTER: I think 2 we lost defense counsel. 3 MR. STANOCH: Stand by. 4 (Whereupon a discussion was 5 held off the record.) 6 BY MR. STANOCH: 7 Q. Mr. Anderson, you agree that 8 the FDCA and C.F.R. regulations 9 concerning adulteration make no mention 10 of official action indicated prior to the 11 existence of adulteration, yes? 12 A. FDA determines adulteration 13 at a specific point in time. The law, as 14 you've quoted it there, does not speak to 15 a specific point in time, merely the fact 16 that adulteration can exist given certain 17 conditions, and FDA will make that 18 determination at that time whether 19 adulteration is -- rises to -- that 20 adulteration -- it rises to the level of 21 adulteration. 22 Q. A drug product can be 23 adulterated then prior to the FDA's 24 saying so, correct?</p>	<p style="text-align: right;">Page 125</p> <p>1 A. FDA determines from a 2 specific date, and they communicate what 3 that specific date is that they made that 4 determination. 5 Q. I'm sorry. Are you talking 6 about a specific date of the FDA's 7 determination? Or are you saying a 8 specific date that the FDA believes from 9 which adulteration existed? 10 A. The specific date that FDA 11 communicates that a product or an API is 12 adulterated. 13 Q. So if the FDA issues a 14 statement today, March 9, 2022, that a 15 drug product has been adulterated, you 16 can certainly say that it's been 17 adulterated for some period of time up to 18 today, correct? 19 A. FDA does not say that in the 20 context of valsartan. 21 Q. Well, I'm not talking about 22 that context specifically, sir. All 23 right. 24 In my hypothetical, today,</p>

Page 126

1 March 9, 2022, FDA issues a statement
2 that a drug product has been adulterated.
3 It can certainly say that it's been
4 adulterated for some period of time up to
5 today, correct?
6 MR. HARKINS: Form.
7 Hypothetical.
8 You can answer.
9 THE WITNESS: It is
10 hypothetical. In my experience
11 I've not read FDA makes a
12 declaration of that type that I
13 have read.
14 BY MR. STANOCH:
15 Q. So you're saying that a drug
16 that might have been contaminated and
17 adulterated because of that, is not
18 adulterated up until the time that the
19 FDA says adulteration, and all the sales
20 prior to that date were not adulterated?
21 A. You have to be careful with
22 your use of terms here. You have said
23 the word contaminant.
24 I believe we are not talking

Page 127

1 about a contaminant here.
2 We're talking about a
3 process impurity. There is a difference.
4 Q. Again, you're saying that a
5 drug that has been contaminated for years
6 up until March 9, 2022, until the FDA
7 issues a letter saying adulteration,
8 you're saying all the drug products sold
9 prior to that letter of today was not
10 adulterated?
11 A. You'll need to quote a
12 statement from FDA specifically saying
13 that a product is as you have described
14 it and what the context of that is.
15 Q. So you can't tell me sitting
16 here today, whether -- when the FDA says
17 a product is adulterated, you're saying
18 that it cannot, it does not say that's a
19 retrospective determination?
20 MR. HARKINS: Object to
21 form. Misstates the testimony.
22 THE WITNESS: Respectfully,
23 Mr. Stanoch, you used the term
24 "has been," and as a -- what is

Page 128

1 that -- past-perfect use of that.
2 It is not the present tense.
3 And the FDA is speaking of
4 valsartan in the present tense as
5 they describe in their warning
6 letters that were issued, the
7 first one being issued with
8 respect to ZHP mentioning that
9 valsartan API is or are --
10 products are adulterated.
11 So as of that point in time,
12 November 29th, I believe it was,
13 2018, when that warning letter was
14 issued, as of that point in time,
15 from that point forward,
16 adulteration is the
17 characterization of the APIs made
18 by ZHP.
19 BY MR. STANOCH:
20 Q. Part of that issue with ZHP
21 was nonconformance with cGMP, correct?
22 A. There were cGMP observations
23 that FDA made.
24 Q. About ZHP's processing of

Page 129

1 valsartan API, right?
2 A. There were 483s that were
3 initially issued. But the warning letter
4 that was the outcome of FDA's
5 investigation after having received ZHP's
6 response and having performed assays on
7 drug substances that they collected from
8 ZHP, FDA determined that as of
9 November 29, 2018, ZHP's products are
10 adulterated, valsartan products are
11 adulterated.
12 Q. So all -- I apologize.
13 So all the valsartan API
14 product that was being manufactured under
15 the same deviations from the cGMP, none
16 of that was adulterated until
17 November 29, 2018, that's your
18 testimony?
19 A. Correct.
20 Q. And the exact same facts
21 that the FDA would cite in the
22 November 29th, 2018 letter could have
23 existed -- in fact, did exist prior to
24 that date, as to valsartan API, right?

Page 130

1 MR. HARKINS: Form. Facts
2 not in evidence.
3 THE WITNESS: As we've said,
4 there is a date upon which FDA
5 declares that drug substance or
6 product is adulterated. They did
7 so on November 29th, 2018, and not
8 at a time before that.
9 BY MR. STANOCH:
10 Q. Right. You agree, though,
11 that the facts that led the FDA to issue
12 its declaration on November 29, 2018,
13 existed prior to that date, correct?
14 MR. HARKINS: Object to
15 form.
16 THE WITNESS: There was a
17 fact-finding exercise that FDA
18 underwent in order to make that
19 final declaration on November 29,
20 2018, to say that ZHP's products
21 are adulterated.
22 BY MR. STANOCH:
23 Q. And that fact finding
24 occurred prior to November 29, 2018,

Page 131

1 correct?
2 A. Correct.
3 Q. And the facts that were
4 found occurred prior to November 29,
5 2018, correct?
6 A. Correct.
7 But the point is, the
8 product was not declared adulterated
9 until November 29, 2018, which is the
10 important point.
11 Q. Well, every fact underlying
12 the FDA's decision on November 29, 2018,
13 existed prior to that date, correct?
14 MR. HARKINS: Object to
15 form. Vague.
16 THE WITNESS: The body of
17 data and observations that they
18 had to inform what their final
19 determination and declaration with
20 respect to adulteration of, were
21 events which occurred in advance
22 of declaring that adulteration on
23 11/29/2018.
24 At no point -- at no time

Page 132

1 prior to that did FDA declare
2 valsartan API products made by ZHP
3 or by Teva, for that matter, as
4 adulterated.
5 BY MR. STANOCH:
6 Q. There was no question
7 pending there. So I appreciate you to
8 confine your answers that way and not
9 spontaneously speak, Mr. Anderson. But
10 that's neither here nor there.
11 When did the FDA learn of
12 the events which led to its declaration
13 on November 29, 2018, as to ZHP's
14 valsartan API?
15 A. According to the information
16 request that was satisfied by ZHP in
17 2018, which was made by the FDA, I recall
18 reading in that information request that
19 ZHP became aware of NDMA on or about
20 June 6, 2018.
21 Q. You talk about this a little
22 in your report in the context, I think,
23 of referencing -- was it Mr. Tony
24 Binsol's testimony?

Page 133

1 Do you recall that?
2 A. If you could point me to the
3 paragraph that you're referring to, I'll
4 be happy to speak to it.
5 Q. Sure.
6 MR. STANOCH: Stand by.
7 BY MR. STANOCH:
8 Q. Look, starting around
9 Paragraph 95 and 96. Tell me when you're
10 there.
11 A. I'm at Paragraph 95 and 96.
12 Q. And here you're talking
13 about bullets in Mr. Quick's report; is
14 that right?
15 A. Paragraph 95 begins with
16 statements which were attributable to
17 Mr. Binsol, and the reason that I
18 reviewed those statements were because
19 Mr. Quick refers to this testimony.
20 Q. Right. And you agree in
21 Paragraph 95 that Mr. Quick's bullets,
22 which rely on Mr. Binsol's testimony are,
23 in your words, "The common and current
24 understanding in the pharmaceutical

Page 134

1 industry for what constitute the general
2 expectations made of API suppliers, and
3 in this specific case of Teva's suppliers
4 of valsartan API."
5 Right?
6 A. Correct.
7 Q. Okay. And you agree with
8 Mr. Binsol's setting forth of the general
9 expectations, right?
10 A. Could you be more specific,
11 please?
12 Q. Well, Mr. Quick had, you
13 know, one through eight in his paragraph
14 about common and current understanding
15 for the general expectation made of API
16 suppliers. And he cited to Mr. Binsol,
17 right?
18 A. He did.
19 Q. And then in Paragraph 96,
20 you talk a little bit more about those
21 same statements, right?
22 A. I do.
23 Q. Right. And you agree with
24 Mr. Binsol's testimony about the general

Page 135

1 expectations of API suppliers,
2 specifically Teva's suppliers of
3 valsartan API, right?
4 A. Correct.
5 Q. And in Paragraph 96, you go
6 on to say that -- you identify that some
7 of the statements attributable to
8 Mr. Binsol were about the obligations of
9 an API manufacturer to internally control
10 and document their processes.
11 A. That is an expectation.
12 Q. And you agree with that
13 expectation, right?
14 A. I do.
15 Q. And then you also speak
16 about some of the statements attributed
17 to Mr. Binsol about an API supplier's
18 obligation to promptly inform API
19 customers of the potential or suspected
20 presence of genotoxic impurities which
21 the API supplier identifies in the API,
22 right?
23 A. Correct.
24 Q. And you agree with those

Page 136

1 obligations as well, correct?
2 A. I'm sorry. I didn't hear.
3 What kind of obligations?
4 Q. The supplier's -- API
5 supplier's obligations, as you refer to
6 them in your Paragraph 96.
7 A. Exactly true. Yes.
8 Q. And the only -- you say the
9 only thing that you would add to the
10 expectations of an API supplier, to those
11 that Mr. Binsol identified was that, "An
12 API customer of any potential or
13 suspected not previously known or
14 characterized impurity by the
15 manufacturer, however determined, whether
16 arising from a customer complaint or a
17 health authority notification or solely
18 by an investigation accomplished at the
19 API manufacturer as described, and not
20 just of genotoxic impurities which it
21 detected, should constitute a reason for
22 notifying the API manufacturer's relevant
23 customer base."
24 Did I read that correctly?

Page 137

1 A. You did read that correctly.
2 Q. And the gist of this is that
3 the only thing that you would add to the
4 eight points above that were attributable
5 to Teva's Mr. Binsol, was about this one
6 about an API customer's obligation to
7 notify its customers of any potential or
8 suspected impurities, genotoxic or not?
9 A. That is what Paragraph 97 is
10 intending to convey, correct.
11 Q. Then you go on to discuss,
12 as you understand it, when ZHP first
13 informed Teva about the NDMA issues in
14 valsartan API, right?
15 A. Could you rephrase that
16 question for me, please?
17 Q. Sure. And then starting on
18 Paragraph 98 of your report, you start to
19 discuss when Teva first learned from ZHP
20 of the NDMA issue with valsartan API?
21 A. That is correct.
22 Q. And I think you say here
23 that ZHP first learned of the presence of
24 NDMA in ZHP's API, from ZHP, on June 20,

Page 138

1 2018?

2 A. Correct. That is my

3 understanding.

4 Q. And I think you said earlier

5 today, and you can correct me if I'm

6 wrong, that ZHP was made aware of the

7 potential for NDMA by another customer in

8 June 6th of 2018?

9 A. June 6, 2018, is the date,

10 as I recall it, from the response to the

11 information request made to FDA in August

12 of 2018.

13 Q. And who is the customer then

14 that raised the NDMA issue with ZHP in

15 early June of 2018?

16 A. That was never made known to

17 me at the time that I prepared this

18 report.

19 Subsequent to that, as I

20 have been reading Mr. Quick's report, he

21 has said that it is Novartis that was the

22 one who determined by way of ZHP that

23 NDMA existed.

24 Q. And you were not aware of

Page 139

1 that fact until after you had issued your

2 report?

3 A. That's correct.

4 Q. And have you since

5 investigated for yourself whether it was

6 in fact Novartis who informed ZHP about

7 the NDMA issue in ZHP's valsartan API?

8 A. I have not pursued that, no.

9 Q. Do you know how Novartis was

10 able to detect NDMA in ZHP's Valsartan's

11 API?

12 A. I do not know what method

13 they employed to make that determination.

14 Q. Do you know how Novartis was

15 able to detect NDMA in ZHP's valsartan

16 API while other ZHP customers, such as

17 Teva, had not done so to that point?

18 A. I do not know how it was

19 that Novartis became aware of NDMA or

20 what the method was that they used

21 specifically that was different than ones

22 which were methods for qualifying API for

23 impurities, according to the way that the

24 applications themselves were approved by

Page 140

1 FDA.

2 Q. Because you have not

3 undertaken to analyze how Novartis was

4 able to detect NDMA in the valsartan API,

5 you're not offering any opinion, one way

6 or the other, on whether Teva should have

7 detected it as well, are you?

8 MR. HARKINS: Object to

9 form.

10 THE WITNESS: Again, I don't

11 know exactly which method Novartis

12 used to detect NDMA in valsartan

13 that was obtained from ZHP.

14 BY MR. STANOCH:

15 Q. And so you don't know if

16 Teva was employing the same testing

17 methods as Novartis at the time on

18 June 2018 for valsartan API, do you?

19 A. I don't know what the method

20 was that Novartis was using.

21 There was an approved method

22 that was validated that Teva was

23 employing to assess the purity of drug

24 substance received from -- received from

Page 141

1 ZHP and also, for that matter, from

2 Mylan.

3 But I do not know in what

4 specific ways Teva's methods differed

5 from the one that Novartis employed to

6 evaluate the product that they examined.

7 I have no idea which method they used.

8 Q. Do you agree that a drug

9 finished dose -- strike that.

10 Do you agree that a finished

11 dose drug manufacturer is responsible for

12 the APIs used in their finished dose

13 product?

14 A. They are responsible for the

15 API used in their drug product and it

16 must conform to specifications that have

17 been approved in their application.

18 Q. So, Teva, from a quality

19 perspective, as a finished dose

20 manufacturer, was ultimately responsible

21 for the valsartan API that it used from

22 ZHP or Mylan, correct?

23 A. It has to utilize API that

24 conforms with specifications that were

Page 142

1 agreed to with FDA at the time of the
2 approval of the drug product or at a
3 subsequent time when supplemental
4 applications may have been filed to
5 update that ANDA.
6 Q. Do you disagree then that
7 Teva was ultimately responsible for any
8 quality issues for the valsartan API it
9 was incorporating into its own finished
10 dose valsartan product?
11 MR. HARKINS: Objection.
12 Asked and answered.
13 THE WITNESS: It was
14 required to verify that the API
15 that they were using was of the
16 quality that was expected and
17 satisfied conformance to the
18 specifications that they had,
19 which were purchasing
20 specifications, which also
21 mirrored those which were the
22 approved specifications that FDA
23 reviewed and granted approval for
24 their application based on.

Page 143

1 BY MR. STANOCH:
2 Q. Did Teva -- strike that.
3 Did ZHP first learn about
4 the potential for nitrosamines in
5 valsartan API from Novartis on June 6,
6 2018?
7 A. That is the document to
8 which I referenced, and I believe that
9 ZHP has an obligation to make statements
10 to FDA which are truthful, and they
11 attest to that fact. So on that basis,
12 I'm accepting of that date that they
13 communicated.
14 Q. If ZHP knew about for --
15 strike that.
16 So if ZHP knew of a
17 potential or suspected nitrosamine
18 impurity in valsartan API at an earlier
19 date, it would be your expectation that
20 ZHP would inform its customers such as
21 Teva, correct?
22 MR. HARKINS: Object to
23 form. Speculation.
24 THE WITNESS: The approved

Page 144

1 specifications for valsartan API
2 are ones which were in force for
3 Teva as a product manufacturer.
4 And if there were impurities
5 which rose above which were those
6 that were required -- those that
7 were appearing at levels above
8 those that were required by ICH
9 Q3A, it would be incumbent upon
10 the API supplier to communicate
11 that to the customer, in this
12 case, ZHP communicating such a
13 thing to Teva.
14 That was not the case here.
15 BY MR. STANOCH:
16 Q. Let's be more pointed,
17 Mr. Anderson.
18 If ZHP knew about the
19 potential for nitrosamines in valsartan
20 APIs prior to June of 2018, would it have
21 been incumbent upon them to notify Teva,
22 its customer?
23 A. Not necessarily.
24 Q. So ZHP, if it, in your

Page 145

1 words, knew of a potential or suspected
2 not previously known impurity, it did not
3 have to notify Teva?
4 A. Not necessarily.
5 Q. Even if that's a
6 nitrosamine?
7 A. Not necessarily.
8 Q. So what circumstances to you
9 then would ZHP have to inform Teva of a
10 potential or suspected nitrosamine
11 impurity in valsartan API it was selling
12 to Teva?
13 A. FDA approved the
14 application, the valsartan application
15 for Teva based on the specifications for
16 the API such as they were supplied by ZHP
17 and Mylan to Teva for utilization in
18 valsartan products.
19 The impurity profile that
20 was operative at that time was based on,
21 as many API manufacturers who were
22 expected to conform to and currently are,
23 is ICH Q3, where the reporting threshold
24 of impurities in API is set at a place

<p>Page 146</p> <p>1 where 0.05 percent is the threshold. 2 Below that threshold, that 3 was not a requirement for ICH Q3A. The 4 conformance of ICH Q3A was the 5 requirement for the approval of the 6 valsartan application. 7 That's not to say that ZHP 8 could not have undertaken their own 9 research and development to study their 10 valsartan processes even more thoroughly 11 than what was required for approval and 12 for meeting purchasing specs for Teva. 13 So again, nothing prevented 14 them from doing research and development. 15 And it may be that there were, depending 16 on studies that were done and whatever 17 the conditions of those studies as they 18 were performed, there may have been side 19 reactions that were identified that gave 20 rise to impurities at a level which fell 21 below that required reporting level, and 22 then one would be doing more R&D for 23 further characterizing as to what the 24 nature of those impurities were and how</p> <p>Page 147</p> <p>1 consistent it was an impurity to have 2 formed. 3 There are a lot of things 4 that go into an investigation of this 5 type. But these are things which happen 6 inside of ZHP. It is not the instant -- 7 it's not instantly necessary for the 8 manufacturer of API to inform a customer 9 of impurities which fall below what are 10 ICH qualifiable and quantifiable and 11 reportable impurities, which was the 12 regulatory metric that FDA employed to 13 approve and allow the marketing of 14 valsartan products. 15 Q. You agreed this morning that 16 nitrosamines fall in the cohort of 17 concern, didn't you? 18 A. I did. 19 Q. Right. And under the ICH 20 guidelines that you're referencing, a 21 cohort of concern should have materials 22 assessed because they might test at lower 23 thresholds than normal thresholds, 24 correct?</p>	<p>Page 148</p> <p>1 A. But I'll also be clear on 2 that, that ICH Q3A where you're quoting 3 that stipulation from does not specify 4 levels at which potentially high potency 5 or other toxic substances would be 6 limited. They do not specify any limits 7 for them. 8 Q. That's right. They put the 9 obligation on the manufacturer, and in 10 this case, the API manufacturer, to 11 properly characterize and assess an 12 impurity that falls within the cohort of 13 concern, don't they? 14 A. That would be the obligation 15 of the API manufacturer. 16 Q. Do you think Teva would have 17 wanted to know about the nitrosamine 18 impurities sooner, if ZHP knew about them 19 sooner than June 6, 2018? 20 MR. HARKINS: Objection to 21 form. Vague. 22 THE WITNESS: What I'm 23 hearing, and the way that I'm 24 interpreting, was the information</p> <p>Page 149</p> <p>1 request response that ZHP made 2 to -- made to FDA, is as of that 3 date, June 6, 2018, that ZHP was, 4 at that time, at that point in 5 time then thoroughly convinced 6 that what they were seeing in 7 their valsartan API was identified 8 accurately and at levels that they 9 had confirmed. 10 It was likely within a range 11 of values that they had selected 12 from an assortment of APIs that 13 were under examination. 14 And at that one point in 15 time finally at which they were 16 convinced, they then, as I 17 understand it, or as I recall it, 18 is when they informed -- began to 19 initiate informing the API 20 customers of theirs, and upon 21 which then roughly two and a half 22 weeks later, Teva was notified 23 formally by ZHP who said that they 24 were working with FDA on this</p>
--	---

Page 150

1 issue, that the presence of NDMA
2 had been identified in their
3 valsartan drug substances.
4 BY MR. STANOCH:
5 Q. Had you seen or relied on
6 any evidence suggesting that ZHP might
7 have suspected nitrosamines in valsartan
8 API earlier than June 6, 2018?
9 A. No documentation to that
10 effect. But when one is doing research
11 and development, I don't have any
12 visibility to exactly what they knew as
13 of what specific date.
14 All I know is what they have
15 represented to FDA. And I'll take that
16 as a statement of truth.
17 Q. Should Teva take as a
18 statement of truth everything its API
19 supplier, such as ZHP, say about the
20 product?
21 MR. HARKINS: Object to
22 form. Scope.
23 THE WITNESS: Respectfully,
24 I said I took that as a statement

Page 151

1 of truth, that ZHP represented a
2 truthful statement that was being
3 made to FDA.
4 And in particular, in the
5 fact that FDA was working with
6 ZHP, I'm sure that they would be
7 able to attest -- or evaluate the
8 veracity of what it was that ZHP
9 stated in their information
10 request.
11 I, just as an outside
12 observer reading this document,
13 take it on its face that it's
14 truthful, because it is a
15 representation that they made to
16 FDA, and it is the obligation of
17 those who manufacture drug product
18 and drug substances to be truthful
19 with FDA.
20 BY MR. STANOCH:
21 Q. And is it incumbent on a
22 finished dose drug manufacturer such as
23 Teva to have quality processes in place
24 to assure that its API suppliers are

Page 152

1 being truthful with Teva?
2 MR. HARKINS: Vague. Scope.
3 THE WITNESS: I don't have
4 visibility at this moment to all
5 documents that Teva used to
6 support their impression of
7 veracity of representations made
8 to them by ZHP.
9 But this is something that I
10 really can't -- cannot comment on,
11 beyond what representations there
12 was that ZHP made to FDA.
13 And I believe that Teva
14 relies on representations made by
15 ZHP to FDA every bit as much as I
16 would.
17 BY MR. STANOCH:
18 Q. And does Teva rely on the
19 FDA to make sure that Teva's own API
20 suppliers are complying with good
21 manufacturing practices?
22 MR. HARKINS: Form. Scope.
23 THE WITNESS: FDA, excuse
24 me. Teva remains abreast of

Page 153

1 findings that FDA has made at
2 their suppliers.
3 And these observations are
4 those which appear in 483. And at
5 some point, should they have
6 access to it, as I even had access
7 to some of these in the
8 preparation of this report, the
9 establishment inspection reports.
10 BY MR. STANOCH:
11 Q. You don't know how Teva
12 remains abreast of findings of the FDA
13 for its suppliers. You don't opine on
14 that in your report, do you?
15 A. I don't make a statement
16 specific to that. But everything that I
17 have written in the report and have
18 referred to in the report involve
19 communications that Teva has had with FDA
20 in the course of the valsartan recall,
21 for instance.
22 The presence of NDMA as was
23 communicated by ZHP to Teva was in part
24 on a consequence of involvement of not

<p style="text-align: right;">Page 154</p> <p>1 only the ZHP customer, who was the -- 2 whose API was being studied, but also the 3 fact that FDA were, to my understanding, 4 involved in the knowledge of the 5 investigation that proceeded with respect 6 to NDMA. 7 So I believe communications 8 from FDA that are made by those who 9 interact with them are informative. And 10 if I was Teva, I would find those to be 11 very informative. 12 Q. Nowhere in your report do 13 you analyze any policy, practice, or 14 procedure at Teva for monitoring findings 15 of the FDA for Teva's suppliers, do you? 16 A. I don't know if that's one 17 that is covered in one of the SOPs that 18 was cited. If I could just refer -- it 19 was Paragraph 84, I think you referred 20 to. I'm going to see if there's an SOP 21 here that may -- but without having it in 22 front of me, I can't say for sure. 23 But I would expect something 24 like that would possibly be referred to</p>	<p style="text-align: right;">Page 156</p> <p>1 inform -- yeah, here we go. I believe we 2 are talking -- it's at Paragraph 110, on 3 Page 28. 4 I mention that since 2015 5 Teva, by way of Actavis, had in place the 6 quality agreement for active 7 pharmaceutical ingredients dated 8 3/24/2016, and entered into with ZHP, 9 Section 7.1 and 7.2 are a part of this 10 signed agreement, which reads as follows: 11 7.1, "Zhejiang Huahai shall 12 inform Actavis within" -- and I'm 13 saying -- is lacking a word here -- 14 "within of any regulatory inspection that 15 relates to the manufacture of any API 16 supplied to Actavis, Zhejiang Huahai 17 shall provide Actavis with the 18 certificate issued after such an 19 inspection upon request." 20 7.2, "Zhejiang Huahai shall 21 promptly notify Actavis in writing on the 22 receipt of a regulatory inspection 23 report, deficiency letter, or written 24 regulatory compliance observation which</p>
<p style="text-align: right;">Page 155</p> <p>1 in the risk management SOP, the out of 2 specification SOP, product complaint SOP. 3 Predominately those three 4 SOPs I would expect might have some 5 procedural narratives that would pertain 6 to information that Teva should know. 7 Q. You are speculating right 8 now, right? 9 A. I'm not recalling. I'm 10 saying if you'd like to go to those SOPs, 11 we could look at those SOPs and to see to 12 what degree they do. And we can read 13 from them together. 14 Q. You're not offering any 15 opinion in your report, are you, sir, 16 that Teva had policies, procedures, and 17 practices in place to assure -- that 18 monitored FDA actions as to Teva's API 19 suppliers, are you? 20 A. Okay. Let me speak 21 specifically to ZHP. 22 I believe I have quoted from 23 the agreement which was in place with 24 ZHP, which causes them to be obligated to</p>	<p style="text-align: right;">Page 157</p> <p>1 contains any significant adverse finding 2 that relates to API or the facilities 3 used to produce, test, or warehouse the 4 API sold and shipped to Actavis which 5 might impact the quality of the API 6 intended to be shipped to Actavis and/or 7 potentially affecting the ability of 8 Zhejiang Huahai to produce or ship the 9 API to Actavis, such as FDA Form 483, or 10 a warning letter received from any 11 applicable regulatory authority or 12 suspension/withdrawal of one or more 13 CDPs." 14 What this is telling me is 15 they had this agreement in place with ZHP 16 in -- as far back as 2016. 17 You'll note that the 18 agreement was structured in the context 19 of Actavis, which as an agreement didn't 20 have to be changed in Teva's case and for 21 their purposes to say anything different 22 than it does say here. 23 And that the obligation 24 exists that ZHP is expected to inform</p>

Page 158

1 Teva of any inspections and outcomes that
2 a health authority has at their site.
3 Q. Sir, the agreement that you
4 fortuitously just read without being
5 asked to do so, that speaks to ZHP's
6 obligation to inform Teva, correct?
7 A. Correct.
8 MR. HARKINS: Object to the
9 colloquy. It's directly
10 responsive.
11 BY MR. STANOCH:
12 Q. You are not offering any
13 opinion in your report, sir, that Teva
14 had policies or procedures or SOPs in
15 place to ensure that Teva monitored FDA
16 actions as to Teva's API suppliers, are
17 you?
18 A. There is an SOP which
19 required Teva to have quality agreements
20 in place and the substance of that SOP
21 can be reviewed.
22 Q. We'll get to that, because
23 certainly, Teva did not have a quality
24 agreement in place with Mylan for

Page 159

1 valsartan API, did it?
2 A. It did not.
3 Q. Right. So under that same
4 SOP you just said that required quality
5 agreements, Teva wasn't following that at
6 least with respect to Mylan, right?
7 A. Not in the context of Mylan,
8 no.
9 Q. Right. And so that would be
10 an instance in which Teva was not
11 following an SOP that it had in place for
12 quality, correct?
13 A. It did not have a quality
14 agreement in place. An SOP specified
15 that a quality agreement would need to be
16 in place. They did not follow it in this
17 context.
18 That being said, not having
19 a quality agreement in place with Mylan
20 did not stand in the way of Teva being
21 able to interact with Mylan freely with
22 regard to questions that arose and that
23 pertained to cGMP issues or scheduling of
24 audits by Teva of Mylan's facilities.

Page 160

1 Q. We'll certainly get to the
2 Mylan situation a little more. But let's
3 go back to what ZHP should have told Teva
4 about valsartan API.
5 So is it your belief, sir,
6 that under the quality agreement between
7 ZHP and Actavis, which Teva inherited,
8 that ZHP should have informed Teva about
9 any suspected impurities in the valsartan
10 API?
11 MR. HARKINS: Object to
12 form. Vague.
13 THE WITNESS: Not in all
14 circumstances.
15 MR. STANOCH: Stand by.
16 BY MR. STANOCH:
17 Q. In fact, the agreement that
18 you quoted and as you indicate in your
19 report, it's actually illegible about the
20 time within which ZHP shall inform
21 Actavis about a regulatory inspection,
22 right?
23 A. You used a word there that
24 was garbled. Could you repeat the

Page 161

1 question again, please?
2 Q. In the quality agreement
3 between ZHP and Actavis that you quote in
4 your report, you yourself indicate that
5 the agreement has some sort of
6 typographical error about the time frame
7 within which ZHP shall inform Actavis of
8 regulatory inspections, right?
9 A. What the typo is that's in
10 the agreement here is they've inserted
11 the word "within." And I just reproduced
12 that accurately as was residing in the
13 agreement.
14 But if one was to read that
15 cleanly, it would be, "Zhejiang Huahai
16 shall inform Actavis of any regulatory
17 inspections that relate to the
18 manufacture," and so forth here as I said
19 before.
20 But 7.2, I know you thought
21 this was a labored reading of this. But
22 it's important to know that 7.2 is very
23 clear to say that Zhejiang Huahai shall
24 promptly notify Actavis in writing. It

Page 162

1 does not, you know, specify what promptly
2 necessarily is in terms of days or weeks
3 or months or anything like that, how
4 promptly is interpreted.
5 But from my experience in
6 reviewing such quality agreements,
7 promptly means right away. And that, I
8 believe, is probably how this was
9 expected to be interpreted as well. And
10 that would be the expectation that Teva
11 had with ZHP.
12 Q. Quantify promptly for me
13 based on your experience. What do you
14 mean by right away?
15 A. Promptly would be some time
16 at such point in time that they have
17 received their 483 report from -- from
18 FDA specifically, or at whatever the time
19 a report was produced from the health
20 authority, because that forms a basis to
21 inform a customer of the outcome of a
22 regulatory visit.
23 So it would be the most
24 meaningful information point in time to

Page 163

1 which that would happen.
2 And the firm typically has
3 15 days within to which to respond to
4 observations that are made in the 483.
5 So if you're going to be
6 communicating this kind of thing, it is
7 certainly within the ability of ZHP to
8 say oh, by the way, Teva, FDA stopped by.
9 We're still going over what the number of
10 observations are and the nature of
11 observations, such as they are. We
12 haven't settled exactly on what those
13 are, because we're still preparing
14 responses to them.
15 So what the outcome of that
16 inspection is, is still unknown at this
17 time. So the firm could communicate that
18 to Teva. ZHP could communicate that to
19 Teva in this instance and be considered
20 prompt, or they could potentially wait
21 until they have all the facts, and
22 certainly within 15 days there is
23 considered to be a reasonable amount of
24 time and -- where one actually has

Page 164

1 meaningful information with respect to
2 the inspection.
3 Q. And you're aware, are you
4 not, right, that the FDA inspected ZHP in
5 May of 2017, right?
6 A. I'm aware of that, yes.
7 Q. You are aware that that
8 inspection was not reported by ZHP to
9 Teva until quite some time after,
10 correct?
11 A. Correct.
12 Q. In fact, I think it was --
13 and you reference to your report -- a
14 Teva procurement officer stumbled upon
15 the existence of the May 2017 inspection
16 from a Bloomberg article, correct?
17 A. Correct.
18 Q. All right.
19 MR. STANOCH: I'll mark as
20 Exhibit 4.
21 (Document marked for
22 identification as Exhibit
23 Anderson-4.)
24 BY MR. STANOCH:

Page 165

1 Q. Tell me when you can see it,
2 sir.
3 MR. HARKINS: Refresh the
4 DropBox.
5 THE WITNESS: One moment,
6 please.
7 BY MR. STANOCH:
8 Q. Of course.
9 A. Loading Exhibit 4. I'm
10 there.

18 non-specific requirements of our clients.

19 But what did Teva consider

20 prompt in this case, I can't speak to.

21 Q. Are you saying it's

22 reasonable for Teva to receive

23 notification from ZHP over a year after

24 the FDA conducted an inspection of ZHP?

MR. HARKINS: Object to

form. Scope.

THE WITNESS: You asked what

I did with respect to other

customers and what my experience

was with them. I have no

experience with Teva in this

Page 171

1 matter.

2 So I don't know what Teva

3 would consider to be the full and

4 complete definition of prompt.

5 You asked me earlier what

6 was it in my experience. I gave

7 you what was in my experience.

8 I do not have what is Teva's

9 experience or how they would

10 interpret this.

11 BY MR. STANOCH:

12 Q. Based on your experience,

13 understanding that it does not relate to

14 any work that you've ever done with Teva,

15 you would agree that ZHP did not promptly

16 notify Teva about the FDA's May 2017

17 inspection, correct?

18 MR. HARKINS: Object to

19 form. Scope.

20 THE WITNESS: I spoke to the

21 experience that I had with my own

22 clients, not experience that

23 anyone -- that Teva had with its

24 own suppliers or how they

Page 172

1 interpreted prompt in this case.

2 That's all I'm saying.

3 BY MR. STANOCH:

4 Q. Based on your experience

5 then, outside of ZHP and Teva, would you

6 advise a paying client of yours that it's

7 okay for the API supplier to wait over a

8 year to inform them about an FDA

9 inspection?

10 MR. HARKINS: Object to

11 form. Scope. Speculation. You

12 can answer.

13 THE WITNESS: Again, that is

14 speculative and far too general a

15 consideration here.

16 I have worked with other

17 clients, other than Teva. So what

18 Teva's interpretation of what

19 their agreement with ZHP is, I

20 would leave it up to Teva to

21 comment on. I'm not here to

22 comment on that.

23 BY MR. STANOCH:

24 Q. Have you ever advised any

Page 173

1 client of yours that it's okay to find

2 out about a regulatory inspection over a

3 year after it occurs at an API supplier?

4 MR. HARKINS: Object to form

5 scope. Speculation.

6 THE WITNESS: I do not

7 recall a circumstance where that

8 hypothetical has presented itself.

9 BY MR. STANOCH:

10 Q. You can't recall any example

11 in your decades of regulatory experience

12 in which an API supplier waited over a

13 year to tell the finished dose customer

14 about an FDA regulatory inspection; is

15 that right?

16 A. I have not encountered a

17 similar situation with the hundreds of

18 audits of API suppliers and product

19 manufacturers that I have conducted,

20 worldwide.

21 Q. Could you identify for me

22 any Teva SOP that was in place at the

23 time that should have required Teva to

24 follow up on whether the FDA conducted an

Page 174

1 inspection of ZHP in 2017?

2 MR. HARKINS: Object to

3 form. Vague.

4 THE WITNESS: Very vague in

5 the sense that I have not

6 memorized the content of SOPs and

7 would know immediately which SOP

8 contained that information.

9 We could go through the body

10 of SOPs one by one, I suppose, and

11 see where that appears.

12 BY MR. STANOCH:

13 Q. Well, you know, which SOPs

14 are you talking about? The ones that you

15 relied on in your report, or the bunch of

16 ones that you're citing in your materials

17 considered?

18 A. It could be something

19 possibly that is found in either. It's

20 not something that I have immediate

21 knowledge of. As I said, we could always

22 go through the SOPs and find out where

23 that exists.

24 Q. We can agree, though, I

Page 175

1 believe, Mr. Anderson, that you're not

2 opining on whether or not Teva had an SOP

3 in place that would have required it to

4 monitor FDA actions at API suppliers such

5 as ZHP, correct?

6 A. I am not certain which SOP

7 governs that particular operation.

8 Q. You can't even tell me

9 sitting here whether there is an SOP that

10 governed that, correct?

11 MR. HARKINS: Form. Scope.

12 You can answer.

13 THE WITNESS: Again, the

14 content of SOPs that -- such they

15 are at Teva, is not something that

16 I familiarized myself with deeply,

17 nor do I quote from any of the

18 SOPs, with the exception on, I

19 believe, one SOP that I thought

20 was necessary to make a point.

21 But I obviously don't recall

22 which SOP this particular

23 monitoring requirement is

24 detailed.

Page 176

1 BY MR. STANOCH:

2 Q. All right. Sitting here

3 now, can you identify for me any Teva SOP

4 that would have spoke to Teva's

5 obligation to monitor regulatory activity

6 at one of Teva's API suppliers?

7 MR. HARKINS: Form. Scope.

8 THE WITNESS: Again, I have

9 no immediate recall of which SOP

10 governs that function.

11 MR. HARKINS: Dave, I don't

12 know if you're switching to a new

13 thing. We've been going over an

14 hour. And I think we'll want to

15 recheck on what we're doing for a

16 lunch arrangement. So probably a

17 short break here when it's ready.

18 MR. STANOCH: Steve, let's

19 go a little longer on this

20 subject, and then we can take a

21 break depending on Mr. Anderson's

22 stamina.

23 BY MR. STANOCH:

24 Q. Mr. Anderson, you talk a

Page 177

1 little bit more about this particular

2 e-mail exchange, I believe, in your

3 report around Paragraphs 112 through 117.

4 A. I do.

5 Q. Can you recall any instance

6 in your decades of experience in which a

7 finished drug product manufacturer had to

8 learn about an FDA inspection at one of

9 its API suppliers over a year later

10 through a public news article?

11 A. I have had no example of

12 that in my many years of experience

13 consulting.

10 BY MR. STANOCH:

11 Q. And you said that you didn't

12 undertake any analysis to determine if

13 anyone at Teva learned about the May 2017

14 inspection prior to August of 2018,

15 right?

16 A. This is the only document

17 that I was supplied with.

18 Q. Right. Had Teva learned of

19 the May 2017 FDA inspection of ZHP

20 sooner, it could have had conversations

21 with ZHP about those inspection

22 observations at an earlier time, right?

23 MR. HARKINS: Form. Vague.

24 Speculation.

Page 191

[REDACTED]

Page 193

1 THE WITNESS: That is

2 speculation. And what the nature

3 of those conversations are and the

4 timing as to those conversations,

5 it certainly depends on when those

6 happen.

2 THE VIDEOGRAPHER: The time
3 right now is 2:11 p.m. We're back
4 on the record.
5 - - -
6 CONTINUED EXAMINATION
7 - - -
8 BY MR. STANOCH:
9 Q. Welcome back, Mr. Anderson.
10 Other than Mr. Harkins, did
11 you talk or communicate with anybody else
12 during the lunch break?
13 A. No, I did not.
14 Q. Did you look at any
15 documents during the break?
16 A. No.
17 Q. What's your understanding of
18 some of the root causes identified by the
19 FDA eventually for NDMA and NDEA?
20 A. I believe, as I recall from
21 the way that FDA has identified potential
22 root causes, had to do with formation of
23 nitrous acid during a reaction using the
24 new catalysts and new DMF solvents and

Page 195

[REDACTED]

12 MR. STANOCH: Mr. Anderson,
13 now is a good time for a lunch
14 break. I'm happy to do it or we
15 can keep going. You let me know.
16 THE WITNESS: Let's break
17 for lunch at 1 o'clock.
18 MR. STANOCH: Okay.
19 THE VIDEOGRAPHER: The time
20 right now is 12:57 p.m. We are
21 off the record.
22 - - -
23 (Whereupon a luncheon recess
24 was taken.)

Page 197

1 the side reactions that resulted from
2 that which were not heretofore detected
3 was a reason for having this process
4 impurity manifest itself, at least
5 certainly by the ZHP process.
6 The Mylan process is not the
7 same as ZHP's process. And the presence
8 of NDEA, which I understand is at a
9 concentration far less than NDMA, is
10 present in or was found in the Mylan
11 process to be a consequence of a
12 contamination entered into the API by use
13 of recycled solvent that are used in
14 manufacturing, or possibly water too that
15 was used in the manufacturing process.
16 Q. Thank you.
17 And that first potential
18 root cause with respect to the ZHP
19 valsartan API, you understand generally
20 it had to do with the nitrous acid and
21 the quenching process during the
22 manufacture?
23 A. Yes. Reaction quenching
24 process, yes, correct.

Page 198

1 Q. And I think we testified --
2 we talked about this a little bit before
3 lunch, that, you know, you cite in your
4 report that it was Novartis telling ZHP
5 about NDMA in the valsartan API in early
6 June of 2018, right?
7 A. Correct.
8 Q. And you're not aware of
9 whether or not ZHP knew about the
10 potential for nitrosamines in valsartan
11 API prior to June 2018?
12 A. I'm not aware of what ZHP
13 knew to that point. All I know is what
14 they attest to in the information request
15 response to FDA.
16 MR. STANOCH: I'm going to
17 mark the next exhibit. Exhibit 5.

4 [REDACTED]
5 [REDACTED]
6 BY MR. STANOCH:
7 Q. You're saying until the FDA
8 figured it out in December of 2018, all
9 the other manufacturers, even if they
10 found out about it, didn't have to do
11 anything?
12 MR. HARKINS: Object to
13 form. Misstates testimony.
14 Scope.
15 THE WITNESS: Well, they
16 certainly took it upon themselves
17 to pay attention to the issue. I
18 don't know what they mean by pay
19 attention to the issue. But it
20 certainly wasn't ignored, the
21 issue, okay.
22 So I don't know what level
23 of attention they were giving to
24 this, though they were put on

Page 227

1 notice to do so in 2017.
2 And again, I don't know at
3 what point ZHP began to speak with
4 FDA concerning the presence of
5 NDMA, NDEA, or any of the levels
6 that FDA might at some point adopt
7 for limiting substances in API.
8 But there were no limits
9 established for API during the
10 time -- during the time that Teva
11 was marketing their valsartan
12 products.
13 BY MR. STANOCH:
14 Q. When you say without --
15 there were no limits, that means the
16 limit is zero; isn't that right?
17 MR. HARKINS: Object to
18 form. Scope.
19 THE WITNESS: I think there
20 are no limits that are present.
21 It's not that limit is zero.
22 When you said limit is limit
23 is zero, that's coming with an
24 expectation that no, absolutely

Page 228

1 zero, NDMA, NDEA may be present in
2 a drug product.
3 FDA never said that. Even
4 today FDA never said that.
5 So when you use that
6 terminology, in saying zero in
7 this context, I think it's not --
8 it's not operative.
9 BY MR. STANOCH:
10 Q. Was it your testimony a
11 moment ago that the FDA never said that
12 zero was the appropriate amount of
13 nitrosamines in sartan API?
14 A. As a specification, as they
15 have stated it, they never said zero.
16 Q. As a specification. That's
17 how you're qualifying the answer?
18 A. Yes, because that is the
19 regulatory metric that is used and how
20 enforcement is understood.
21 Q. And you understand, I take
22 it then, that the FDA has said in the
23 past that a drug substance should not
24 contain any nitrosamines because it's

Page 229

1 controlled. Do you recall that?
2 A. What I recall is that they
3 were at that time that you're referring
4 to -- this document I believe was
5 something that was issued in 2019.
6 You're talking about the
7 general advice, I believe, where FDA
8 essentially, in a perfect world, one
9 would not want to have impurities of --
10 really of any kind that are in a drug
11 substance.
12 Okay. You realize that is
13 not the real world and that impurities
14 are there. And in fact, FDA established
15 limits for the impurities specific to
16 NDMA and NDEA as far back at that point
17 as December of 2018.
18 So it is a -- it is a time
19 where FDA is -- is writing even as
20 they're thinking.
21 They are formulating, you
22 know, the direction that something like
23 this is going to go, is ultimately going
24 to go.

<p style="text-align: right;">Page 230</p> <p>1 This is a time that they 2 have not yet developed what became the 3 GC-MS assay method, which is now what is 4 operative for API manufacturers in order 5 to determine what level, if any, of NDMA 6 or NDEA are present in drug substances. 7 And that didn't come around until roughly 8 2020. 9 Q. Are you aware of any risk 10 assessment that Teva conducted of 11 valsartan API for genotoxic impurities 12 prior to June of 2018? 13 A. I do not have any -- I did 14 not review any risk assessments that 15 mentioned genotoxic impurities. 16 Q. Are you aware of any risk 17 assessment Teva conducted of its own 18 valsartan finished dose product prior to 19 June of 2018? 20 A. I did not review any 21 documents pertaining to genotoxicity and 22 discussions that Teva had as a product 23 manufacturer about it. 24 Q. Did you review any Teva SOPs</p>	<p style="text-align: right;">Page 232</p> <p>1 time the risk assessment SOP is dated. I 2 know what I requested to look is what the 3 current version of that is. I don't know 4 what the version history of it is. 5 Q. You can't say sitting here 6 what the Teva SOP for risk assessment was 7 during the 2012 to 2018 time period? 8 MR. HARKINS: Form. Scope. 9 THE WITNESS: I don't have 10 an immediate recollection of what 11 was in the risk assessment SOP or 12 what its revision history is. 13 BY MR. STANOCH: 14 Q. And the risk assessment SOP 15 that you cite in your report, the current 16 version, that's as it relates to an 17 assessment in the summer of 2018, right? 18 A. The SOP that I referred to 19 and the purposes that I referred to it 20 was to, again, compare against John 21 Quick's mention of risk assessment SOPs 22 as being meaningful to governing quality 23 systems. 24 I did not read the SOP to</p>
<p style="text-align: right;">Page 231</p> <p>1 regarding when it should conduct risk 2 assessments and what they should entail 3 for API or finished dose product prior to 4 June 2018? 5 MR. HARKINS: Object to 6 form. Scope. 7 THE WITNESS: Could you 8 rephrase that question, please? 9 BY MR. STANOCH: 10 Q. Did you review any Teva SOPs 11 concerning Teva's conducting risk 12 assessments for finished dose product or 13 API? 14 MR. HARKINS: Same 15 objection. 16 THE WITNESS: I read the 17 risk assessments SOP that is based 18 on the ICH Q9. I did just do a 19 cursory read through it. 20 BY MR. STANOCH: 21 Q. That's the one that was put 22 into effect after the recalls began in 23 the summer of 2018, right? 24 A. I don't know exactly what</p>	<p style="text-align: right;">Page 233</p> <p>1 any amount of depth. I gave it a cursory 2 review and confirmed that, in fact, one 3 existed. That's the only thing that I 4 did with respect to that SOP. 5 Q. Do you know if the Teva SOP 6 on risk assessments related to conducting 7 analyses of API before it is purchased? 8 A. Again, what is contained in 9 that SOP is not something that I have an 10 immediate memory about. It certainly can 11 be brought up and we can read the SOP 12 from front to back and learn what is in 13 it. 14 Q. We had talked about 15 June 2018 and NDMA, and then I think you 16 write, starting in Paragraph 100, about 17 Teva's awareness of NDEA. 18 A. I'm going to that paragraph 19 right now. 20 MR. HARKINS: Which 21 paragraph? 22 THE WITNESS: 100, I believe 23 he mentioned. 24 Okay. I am at Paragraph</p>

Page 234

1 100.
 2 BY MR. STANOCH:
 3 Q. And here you write in part
 4 that Teva first became aware of the
 5 potential of a different impurity, NDEA
 6 in valsartan API purchased from Mylan,
 7 India, by way of a notification from
 8 Swissmedic on November 5, 2018. And then
 9 you continue there, right?
 10 A. That is correct.
 11 Q. Okay. So your belief is
 12 that Teva first became aware of the
 13 potential for NDEA on November 5, 2018?
 14 A. In Mylan's API, yes.
 15 Q. Well, you're qualifying
 16 there with Mylan's API. When did Teva
 17 first become aware of the potential for
 18 NDEA in valsartan API, period?
 19 MR. HARKINS: Form. Scope.
 20 THE WITNESS: I understand
 21 that Teva was in the process of
 22 doing some significant
 23 investigation with respect to
 24 their valsartan API, first

Page 235

1 starting with respect to NDMA.
 2 But also expanding into the
 3 possibility that the nitrosamine
 4 NDEA and possibly others might
 5 also be present.
 6 So I believe this was all
 7 part of something that Teva was
 8 investigating at the time, but
 9 learned conclusively by way of a
 10 field alert here that involved
 11 Swissmedic, who reported that they
 12 found NDEA in Mylan API.
 13 BY MR. STANOCH:
 14 Q. So you agree that Teva was
 15 aware of the potential for NDEA to form
 16 in valsartan API prior to November 5th,
 17 2018, correct?
 18 MR. HARKINS: Form.
 19 Misstates testimony.
 20 THE WITNESS: I believe that
 21 they were studying the possibility
 22 of its formation.
 23 I do not know whether they
 24 determined that there was anything

Page 236

1 as a matter of an emergence of
 2 NDEA as a process impurity with
 3 their synthetic process.
 4 Here, again, Mylan's
 5 synthetic process is different
 6 from ZHP's. And Mylan in fact
 7 related to Mylan -- excuse me.
 8 Mylan related to Teva early
 9 on in its investigative process,
 10 that its method of synthesis was
 11 different from ZHP's.
 12 So an inquiry was made of
 13 Mylan, do you suspect that NDMA is
 14 part of your process, as we have
 15 found it to be elsewhere.
 16 Mylan says that is not our
 17 process. And on that basis, Teva
 18 did not at that time suspect that
 19 NDMA would be part of Mylan's
 20 process.
 21 And I don't know that I have
 22 read anything to suggest that I
 23 recall that NDMA is part of
 24 Mylan's process. Although it was

Page 237

1 revealed that NDEA was associated
 2 with Mylan's process.
 3 BY MR. STANOCH:
 4 Q. Right. And you're saying
 5 that was not revealed, about the NDEA,
 6 until Swissmedic affirmatively told Teva
 7 that Teva's own product contained NDEA on
 8 November 5th, 2018?
 9 A. By way of that notification
 10 from Swissmedic, yes, that Mylan API was
 11 found to contain NDEA, as I wrote down.
 12 Q. From your knowledge, did
 13 Teva ever test any of its own valsartan
 14 or the valsartan API that it was buying
 15 from Mylan, for NDEA prior to
 16 November 5th, 2018?
 17 MR. HARKINS: Object to
 18 form. Scope.
 19 THE WITNESS: I have no
 20 knowledge of what kind of testing
 21 was being done specifically on
 22 Mylan's API.
 23 BY MR. STANOCH:
 24 Q. From a cGMP perspective,

Page 238

1 would it be appropriate for a finished
2 dose manufacturer on notice of the
3 potential for NDEA, to test its valsartan
4 and valsartan API for that substance?
5 MR. HARKINS: Form. Vague.
6 Speculation.
7 THE WITNESS: What Teva had
8 to inform themselves were
9 certificates of analysis from
10 their suppliers that showed
11 whether they conformed with the
12 specifications that were appended
13 to their purchasing of that API,
14 and whether in fact those
15 specifications were the same as
16 the ones that were approved for
17 the application.
18 Now, unless there was a
19 notification that any one of those
20 specifications were offended, Teva
21 was of the reasonable belief that
22 the drug substance, based on how
23 it was represented as conforming
24 with the specification, was

Page 239

1 something that was remaining
2 within cGMP compliance.
3 BY MR. STANOCH:
4 Q. Well, let's unpack some of
5 that. Well, first of all, certificates
6 of analysis that you reference, you told
7 us this morning that you don't rely on
8 specific ones in your opinions in your
9 report, right?
10 MR. HARKINS: Object to
11 form. Misstates testimony.
12 THE WITNESS: I don't
13 reference them as footnotes in my
14 report, although they are
15 documents considered.
16 BY MR. STANOCH:
17 Q. Right. And again, how am I
18 supposed to replicate your analysis,
19 Mr. Anderson, and know whether something
20 in your materials considered was or was
21 not actually relied upon for the body or
22 footnotes of your report?
23 MR. HARKINS: Form. Asked
24 and answered.

Page 240

1 THE WITNESS: You're welcome
2 to review any one of those
3 certificates of analysis and
4 inform yourself, even as I was.
5 BY MR. STANOCH:
6 Q. That's not my question, sir.
7 How am I supposed to know
8 from reading your report, right, which
9 certificates of analysis you're relying
10 on for your opinions, not that you saw
11 and put aside, that you're relying on for
12 your opinions?
13 How can I know that?
14 MR. HARKINS: Form. Asked
15 and answered.
16 THE WITNESS: There was no
17 specification for NDMA and NDEA at
18 the time that any of those
19 certificates of analysis were
20 generated; hence, the requirement
21 in a regulatory sense was not
22 there to report presence of NDMA
23 or NDEA in concentrations as
24 measured against the specification

Page 241

1 which did not exist.
2 BY MR. STANOCH:
3 Q. I'm going to ask my question
4 again about the certificates that you
5 relied on, sir.
6 How am I supposed to know
7 reading from your report which
8 certificates of analysis you're relying
9 on for your opinions?
10 MR. HARKINS: Objection to
11 form. Asked and answered.
12 You can answer again.
13 THE WITNESS: Again, you're
14 welcome to go through me -- with
15 me, each one of those certificates
16 of analysis to determine whether
17 there was an NDMA or NDEA value
18 that was reported to them or by
19 specification was required to be
20 reported to them. And you will
21 find that there is no such
22 specification or report in any one
23 of them.
24 BY MR. STANOCH:

Page 242

1 Q. You understand, sir, that
2 you're supposed to identify the materials
3 that you relied upon in forming your
4 opinions. Do you understand that?
5 MR. HARKINS: Dave, he told
6 you that he reviewed all of them
7 and did not find it necessary to
8 cite any of them in his report.
9 And he's explained the
10 specific reason that he didn't
11 feel it was necessary to cite any
12 of them, because he did not find
13 the information that he's
14 described five times in a row now,
15 in any of those certificates of
16 analysis.
17 You can answer again.
18 THE WITNESS: Again, the
19 specifications for NDMA and NDEA
20 did not exist until December 2018.
21 The certificates of analysis
22 that I reviewed predated that
23 specification; hence, it was no
24 surprise to me, as I reviewed

Page 243

1 them, that there was no presence
2 of data that pertained to NDMA or
3 NDEA qualification or a
4 specification against which they
5 were evaluated or anything having
6 to do with the regulatory
7 submission that required any such
8 evaluation in order to remain
9 within cGMP compliance.
10 BY MR. STANOCH:
11 Q. Sir, you understand you're
12 supposed to identify the materials that
13 you rely upon in forming your opinions.
14 Do you understand that?
15 A. I understand that.
16 Q. Right. And you've told me
17 in the morning that you rely in your
18 opinions on the materials that are in
19 cited the body or the footnotes of your
20 report; is that right?
21 A. That is correct.
22 Q. So the only way I know what
23 you relied on is if it's cited in a
24 paragraph or in a footnote, correct?

Page 244

1 MR. HARKINS: Object to
2 form. Misstates the testimony.
3 THE WITNESS: And there is
4 also this exhibit which has the
5 list of materials considered so
6 one is able to do as you have done
7 and ask me what those list of
8 materials were, and they happen to
9 include certificates of analysis
10 that are named that don't happen
11 to have specifications or data
12 pertaining to NDMA and NDEA,
13 unsurprisingly.
14 BY MR. STANOCH:
15 Q. So now you're telling me all
16 the certificates of analysis in your
17 materials considered exhibit were things
18 that you relied on now. Is that what
19 you're saying now?
20 A. I'm saying that I looked at
21 those, but I didn't have to make a
22 statement regarding numerical
23 specifications and conformance therewith
24 until FDA issued its specification

Page 245

1 guidance in 2018, December of 2018.
2 Q. In terms of these
3 specifications you keep saying, if a
4 manufacturer is put on notice of the
5 potential for an impurity in their
6 product, that's not on the specification,
7 is it incumbent on them to test and
8 evaluate for that or just ignore that?
9 MR. HARKINS: Form. Scope.
10 THE WITNESS: Again, to
11 remain within cGMP compliance,
12 there is the expectation of FDA
13 that you make products in
14 accordance with the production as
15 it is described in the ANDA using
16 the API of the quality that is
17 approved to be used in that
18 application and to conform to
19 those specifications in order to
20 continue marketing the product.
21 NDMA and NDEA were not part
22 of API specifications to which
23 Teva's products were required to
24 conform because the specifications

<p>Page 246</p> <p>1 did not exist when valsartan made 2 by Teva was being marketed. 3 At the time the 4 specifications went in, there was 5 no valsartan product being 6 marketed by Teva. 7 BY MR. STANOCH: 8 Q. So you're saying that even 9 if Teva had reason to believe that its 10 valsartan products contained NDEA, it had 11 no obligation to do anything with that 12 information if and unless the FDA changed 13 the specification? 14 MR. HARKINS: Object to 15 form. Vague. Speculation, 16 misstates testimony. Compound. 17 THE WITNESS: In order to 18 continue marketing their product, 19 it was Teva's obligation to 20 conform to approved 21 specifications. NDMA and NDEA 22 content were not governed by 23 FDA-directed specifications during 24 the time of Teva's marketing of</p>	<p>Page 248</p> <p>1 Did Teva have any obligation 2 to do anything with that information from 3 a cGMP standpoint? 4 MR. HARKINS: Form. Scope. 5 Speculation. 6 THE WITNESS: From a cGMP 7 aspect, the product that they had 8 to market had to contain API that 9 conformed to the specifications as 10 stated for reporting impurities, 11 and that threshold level was at 12 the level of 0.05 percent. 13 NDEA appears in valsartan 14 when it does at levels far below 15 0.05 percent. 16 In fact, we are talking in 17 terms of parts per million and 18 parts per billion. 19 So these types of 20 quantification and qualification, 21 per the specifications that 22 pertain to Teva's valsartan during 23 the time that it was being 24 manufactured and distributed and</p>
<p>Page 247</p> <p>1 valsartan. 2 BY MR. STANOCH: 3 Q. Did Teva have any obligation 4 to do anything if it had reason to 5 believe its valsartan products might 6 contain NDEA? 7 MR. HARKINS: Form. Scope, 8 vague. 9 THE WITNESS: Teva had the 10 obligation to conform with 11 specifications in their 12 application. 13 BY MR. STANOCH: 14 Q. Anything else? 15 MR. HARKINS: Objection. 16 THE WITNESS: In order to 17 conform to cGMP compliance, which 18 is the scope of my report, nothing 19 else. 20 BY MR. STANOCH: 21 Q. So let's take that a step 22 farther then. Let's say Teva knew that 23 its product -- its valsartan had the NDEA 24 in it.</p>	<p>Page 249</p> <p>1 marketed, Teva had to conform to 2 the approved specifications based 3 on ICH Q3A. 4 BY MR. STANOCH: 5 Q. What if some of Teva's 6 valsartan product had a thousand 7 milligrams of anthrax in it. Anthrax is 8 not in the specification, is it? 9 A. Anthrax is also, you 10 understand, an externally added 11 contaminant. It is not something that is 12 part of the valsartan process. There is 13 a difference. 14 Q. Let's say there -- tell 15 me -- tell me a very highly toxic poison 16 impurity. 17 MR. HARKINS: Dave, he 18 wasn't finished his answer. So 19 I'm going to ask you to let him to 20 complete. 21 THE WITNESS: Yes. Allow me 22 to complete. 23 Anthrax as an external 24 contaminant to the product itself</p>

Page 250

1 is exactly that. And there is law
2 that speaks to contaminations.
3 Okay.
4 Process impurities are not
5 contaminations. You must
6 distinguish that in your lexicon
7 here, because, again, what this is
8 is nitrosamine in the context of
9 ZHP, were process impurities that
10 happened from a side reaction
11 which no one anticipated, no
12 regulatory authority anticipated,
13 no other manufacturer of valsartan
14 product or API anticipated, and
15 FDA admitted caught them
16 unexpectedly.
17 Okay. So that's a process
18 impurity.
19 What you have described,
20 anthrax, is something which in its
21 substance is so completely foreign
22 to the process of either valsartan
23 API synthesis or valsartan drug
24 product manufacture, it can only

Page 251

1 be classified as a contaminant.
2 So it's a very different
3 kind of circumstance that we're
4 talking about here, as an external
5 impurity.
6 BY MR. STANOCH:
7 Q. Are you done, sir?
8 A. I'm done now.
9 Q. Very good. I wanted to make
10 sure.
11 Take another process
12 impurity that you can imagine, and say it
13 was in a thousand milligrams of it in
14 Teva's valsartan. But it's not in the
15 specification.
16 Does Teva have any
17 obligation to do anything about that?
18 MR. HARKINS: Speculation.
19 Scope. Objection.
20 THE WITNESS: Let me start
21 off by saying that the valsartan
22 products there, I don't believe,
23 were tableted with a potency of
24 valsartan higher than

Page 252

1 320 milligrams.
2 So when you're talking about
3 a thousand milligrams of some
4 external entity being found as a
5 contaminant of a product, of a
6 valsartan product, this is a very
7 obvious contamination here.
8 BY MR. STANOCH:
9 Q. Now, it's a contamination,
10 not an impurity? I don't understand,
11 sir. We are talking about process
12 impurities, right?
13 A. It is contamination, not a
14 process impurity, because that did not
15 form during the process.
16 Q. So you're telling me that
17 any process impurity that Teva might have
18 been aware of in its valsartan that was
19 not in the specification for valsartan
20 would not have to be acted on in any way
21 by Teva?
22 MR. HARKINS: Object to
23 form. Misstates the testimony.
24 THE WITNESS: That was not

Page 253

1 above a reportable level,
2 according to ICH Q3, which I have
3 stated many times.
4 BY MR. STANOCH:
5 Q. And ICH Q3, which
6 incorporates the M7 guidance, says that
7 it's incumbent on the manufacturer to
8 characterize and assess potential cohort
9 of concern impurities, such as
10 nitrosamines, and come up with a
11 potential level or control, does it not?
12 A. M7 mentions the cohort of
13 concern, if I recall correctly, not ICH
14 Q3.
15 But that taken into
16 consideration, there is a cohort of
17 concern about which manufacturers of drug
18 substances should be aware and design
19 processes to minimize.
20 And in fact, looking at your
21 Exhibit Number 5, where it says to the
22 leaders, "Please pay attention to this
23 issue, I think that's something that's
24 done in the spirit of following the

Page 254

1 guidance that M7 recommends.
2 Q. And to your knowledge, was
3 Teva ever designing any process to
4 minimize the NDEA in its valsartan
5 product prior to November 5, 2018?
6 MR. HARKINS: Object to
7 form. Scope.
8 THE WITNESS: You do
9 understand that Teva is not
10 manufacturing the API within which
11 any of the NDMA or NDEA were
12 found. This wasn't a subject of
13 product formulation or counting
14 specifications or dissolution
15 profiling or anything having to do
16 with that.
17 That's what Teva was
18 preparing and was marketing to the
19 public. It incorporated API from
20 either ZHP or from Mylan.
21 And it was Teva's obligation
22 to tablet the product for
23 marketing purposes that conforms
24 with its specifications, and it

Page 255

1 did so during the time that it was
2 marketing valsartan.
3 BY MR. STANOCH:
4 Q. You're not aware of Teva
5 ever communicating with any of its
6 valsartan API suppliers about processes
7 to minimize the NDMA or NDEA in the
8 valsartan API that Teva was purchasing,
9 correct?
10 MR. HARKINS: Objection.
11 Scope.
12 THE WITNESS: Not to my
13 knowledge during the time that
14 they were still marketing and
15 manufacturing the valsartan
16 products.
17 I do understand that there
18 were some investigations and there
19 was some dialogue that Teva
20 continued to have with the API
21 suppliers with respect to their
22 processes.
23 BY MR. STANOCH:
24 Q. Do you think it's

Page 256

1 appropriate for Teva to ignore customer
2 requests to test Teva's own valsartan
3 product for nitrosamines?
4 MR. HARKINS: Object to
5 form. Foundation. Scope.
6 THE WITNESS: I'm not aware
7 of any condition that you are
8 speaking of here, so I can't
9 really comment.
10 BY MR. STANOCH:
11 Q. Well, from the cGMP
12 perspective, is it appropriate for Teva
13 to ignore a customer request to test
14 Teva's own valsartan product for
15 nitrosamines?
16 MR. HARKINS: Form.
17 Foundation. Scope.
18 THE WITNESS: Teva handled
19 complaints. It had an SOP which
20 is part of its quality system,
21 which describes how complaints are
22 handled.
23 It is not specific to the
24 type of complaints that it might

Page 257

1 be able to field with any specific
2 context.
3 Complaints are fielded by
4 customers for any number of
5 reasons. And it is possible that
6 a customer could have complained
7 about the level of valsartan --
8 excuse me -- the NDMA, NDEA, that
9 it found to be present in the drug
10 product that Teva made.
11 BY MR. STANOCH:
12 Q. Would it be appropriate from
13 a cGMP perspective for Teva to ignore
14 such a customer request?
15 MR. HARKINS: Same
16 objection.
17 THE WITNESS: As I said,
18 there was an SOP which governs the
19 handling of complaints. And since
20 any and all complaints would be
21 ones that Teva would be
22 considering and reporting, which
23 they must do by law, it is not up
24 to Teva to ignore complaints when

Page 258

1 they come in, no matter what they
2 are.
3 BY MR. STANOCH:
4 Q. So if a customer asked Teva
5 if NDEA was in Teva's product, they
6 should report that complaint to the FDA?
7 A. Well, you're doing two
8 things here. One of them is asking a
9 question. The other one is actually
10 saying we found NDEA in the valsartan
11 tablets, and we are watching that
12 complaint. It's not making an inquiry of
13 whether Teva found NDEA or NDMA in a
14 product. That's a different thing.
15 That's not a complaint.
16 Q. So it would only be a
17 customer complaint if the customer
18 affirmatively identified the NDEA itself
19 in Teva's products?
20 MR. HARKINS: Object to
21 form. Foundation. Scope.
22 THE WITNESS: When one is
23 complaining, one is accusing.
24 So there must be a basis for

Page 259

1 what that accusation is. And if
2 the accusation has any merit, it
3 will be judged accordingly by Teva
4 with respect to its severity, its
5 frequency, and the type of
6 complaints that was being made and
7 whether there is in fact any
8 evidence that is presented by the
9 one lodging the complaint that the
10 complaint itself is valid at all.
11 BY MR. STANOCH:
12 Q. What obligations from a cGMP
13 standpoint does Teva have to investigate
14 a complaint itself?
15 A. Teva has the obligation to
16 investigate the complaint thoroughly.
17 And whatever that complaint is, the
18 definition of thoroughness is per the
19 complaint itself.
20 Q. What obligations from the
21 cGMP standpoint does Teva have to
22 investigate an inquiry as to whether
23 Teva's products contain nitrosamines?
24 A. Well, that would be a

Page 260

1 different unit. That would probably be
2 the medical information officer that
3 would be handling an inquiry that you're
4 describing here. That's not a complaint.
5 Medical affairs is a
6 department which exists to address
7 questions. But when we're talking about
8 product complaints, we're talking about
9 something that is directly related to
10 potential cGMP issues. The other one is
11 merely an inquiry about certain aspects
12 of the drug product that someone may have
13 in their possession or not.
14 Q. So if a Teva customer asked
15 Teva, "Is there nitrosamines in this
16 valsartan product you sold me?" is that a
17 complaint or an inquiry?
18 A. That's an inquiry.
19 Q. Okay. So that would go to
20 Teva medical affairs?
21 A. Right. If the --
22 Q. Did you review -- hold on.
23 I'm sorry, go ahead.
24 A. I'm sorry. If the customer

Page 261

1 comes to him, comes to Teva, and says, we
2 have detected NDMA in your drug product,
3 then that would be made part of the
4 complaint investigation to determine the
5 scope of what the complaint involved, how
6 the complaint was arrived at, what
7 evidence exists that the customer has
8 that it happened to exist at a certain
9 level, or if it exists at all.
10 The mere accusation is not
11 sufficient there for Teva to have to make
12 something actionable from a regulatory
13 standpoint apart from reporting what the
14 complaint itself is.
15 And if, after investigation,
16 they found there was no evidence for the
17 complaint, the complaint is closed.
18 Q. What, if any, steps did Teva
19 take to assure that its own valsartan
20 product did not contain NDEA prior to
21 November 5, 2018?
22 MR. HARKINS: Object to
23 form. Foundation. Scope.
24 THE WITNESS: I know that

Page 262

1 Teva was undertaking
2 investigation.
3 In fact, if I recall
4 correctly, Teva's determination
5 that NDEA may be present in
6 valsartan products was a
7 determination that they came to
8 within days of learning of this
9 from Swissmedic.
10 So it was something that
11 they were looking at at that time.
12 But, of course, they had to make
13 sure that the data they were
14 requiring was data that was
15 supportive of the possibility that
16 NDEA was present. So it was
17 something they were looking at.
18 BY MR. STANOCH:
19 Q. Was Teva aware that NDEA was
20 present in the valsartan API it was
21 purchasing from Mylan prior to
22 Swissmedic's notification of November 5,
23 2018?
24 MR. HARKINS: Object to

Page 263

1 form. Scope.
2 THE WITNESS: I know that
3 they were studying both NDMA and
4 NDEA from -- whether they were
5 looking at both Mylan's as well as
6 ZHP's, I would consider that a
7 possibility. But I don't know
8 what the scope of their
9 investigation was at that point,
10 only to say that NDEA was
11 something that was suspect as
12 possible, as might be any other
13 nitrosamines that were part of
14 that group.
15 So I think they were doing
16 kind of a broad investigation and
17 study of API suppliers, and I
18 don't know for certain, but it may
19 have come up that it was NDMA --
20 NDEA that was associated with
21 Mylan's API.
22 BY MR. STANOCH:
23 Q. How soon do you believe NDEA
24 was something that Teva suspected was

Page 264

1 possible in its valsartan products?
2 A. I would say that as they
3 were undergoing their own investigations,
4 these studies, without having an exact
5 reference, would be ones that would have
6 happened at some point in time that they
7 were notified by ZHP that NDMA was
8 present in their -- in their API.
9 I don't know exactly on what
10 date they initiated studies to look at
11 the presence of nitrosamines of other
12 kinds in all of the sources of APIs that
13 they were obtaining and where
14 nitrosamines might be possible.
15 I don't know the dates on
16 which they began their testing and
17 studies with regard to that.
18 Q. What cGMP obligations, if
19 any, did Teva have to study the presence
20 of nitrosamines of other kinds, as you
21 say, in all the sources of the valsartan
22 APIs that it was purchasing?
23 MR. HARKINS: Object to
24 form. Scope. Compound.

Page 265

1 THE WITNESS: As far as cGMP
2 investigation was concerned, one
3 is doing investigations in
4 conjunction with what approved
5 specifications are. This is what
6 cGMP is governing.
7 CGMP is not governing R&D
8 investigations.
9 BY MR. STANOCH:
10 Q. Anything else?
11 A. Nothing else.
12 MR. HARKINS: Dave, we've
13 been going over an hour. I don't
14 know if there's a spot for
15 five-minute coffee and bio break
16 whenever you're finding a good
17 spot.
18 MR. STANOCH: Yeah, let's
19 wrap this up for a few more
20 minutes and then we can do that.

1 26 of your report.
2 A. I'm there.
3 Q. And here, starting at
4 Paragraph 101 and then the ensuing
5 paragraphs, you're rebutting an assertion
6 by Mr. Quick about SOPs Teva had in
7 place, which you say were called upon to
8 manage the customer API supplier
9 relationships with ZHP and Mylan; is that
10 right?
11 A. That's correct.
12 Q. And we already discussed
13 that Teva did not have a quality
14 agreement in place with Mylan, right?
15 A. Correct.
16 Q. And then you go on to say,
17 well, in Paragraph 103 and 104, Teva had
18 SOPs in place to manage the customer API
19 supplier relationships anyway, right?
20 A. Correct.
21 Q. And then in 103, you
22 identify -- one, two, three, four -- six
23 CORP policies of Teva that you say
24 governs the customer API supplier

Page 275

1 [REDACTED]
2 [REDACTED]
3 [REDACTED]
4 [REDACTED]
5 MR. HARKINS: Object to
6 form. Scope.
7 BY MR. STANOCH:
8 Q. You can put that aside.
9 MR. STANOCH: Why don't
10 you -- we take that five-minute
11 break you want.
12 MR. HARKINS: Okay. Is five
13 good with you or --
14 THE WITNESS: Yeah, five is
15 good with me.
16 THE VIDEOGRAPHER: The time
17 right now is 3:28 p.m. We are off
18 the record.
19 (Short break.)
20 THE VIDEOGRAPHER: The time
21 right now is 3:36 p.m. We're back
22 on the record.
23 BY MR. STANOCH:
24 Q. Sir, if you can flip to Page

Page 277

1 relationship, right?
2 A. Yeah. These were just
3 mentioned to you. There were others that
4 I don't have to mention.
5 Q. Well, I can only read the
6 ones that you do mention, right?
7 A. Right. But it's -- my
8 reference here "just to mention a few,"
9 is that of the inventory of SOPs that
10 pertain to these subjects, these are the
11 highlights. There are others. But these
12 are relevant highlights.
13 Q. Fair enough. And sitting
14 here today, can you tell me what other
15 ones there would be on this particular
16 point that you're opining on in Paragraph
17 103 besides the six that you identify?
18 A. Not from memory, no.
19 Q. That's fine. All right. So
20 I'm going to -- let's pull up the first
21 one here, CORP 0111.
22 MR. HARKINS: In the exhibit
23 box.
24 THE WITNESS: Oh.

Page 278

1 MR. STANOCH: Hold on.
2 Stand by. Okay. Exhibit 7.
3 (Document marked for
4 identification as Exhibit
5 Anderson-7.)
6 BY MR. STANOCH:
7 Q. This is the first example
8 SOP that you cite that Teva had in place
9 to manage the customer API supplier
10 relationship with ZHP and Mylan, right?
11 A. Yes.
12 Q. You'll see here on Page 1,
13 there's references.
14 Do you see that first
15 reference to CORP-176, quality technical
16 agreements?
17 A. Yes.
18 Q. You didn't review that
19 policy that's referenced, did you?
20 A. I may have considered it.
21 If it's not listed amongst those that I
22 have noted here, that was not one that I
23 mentioned in the listing.
24 But that's why I say "just

Page 279

1 to mention a few." There could be others
2 that would be one of those others.
3 Q. Well, I'll tell you -- I
4 mean, obviously we can agree CORP-176 is
5 not mentioned in Paragraph 103, right?
6 A. Correct.
7 Q. And I don't see any
8 reference to CORP-0176 in the exhibit
9 materials considered to your report
10 either, do you?
11 A. No, I don't believe that is
12 listed in here. If you say it's not
13 listed in here, I'm just going to go
14 ahead and consult this and see if this is
15 in fact the case.
16 I do not see that SOP listed
17 amongst these that I considered.
18 Q. Okay. So then it's fair to
19 say that CORP-1076 was not relied on or
20 considered by you, right?
21 A. Correct. 176 or 1076?
22 Q. 0176.
23

[REDACTED]

13 BY MR. STANOCH:
14 Q. Sir, I get to ask you what
15 documents you looked at, Mr. Anderson.
16 And my question is, did you do any
17 analysis of what's -- of your own to
18 confirm that the SOPs that you look at
19 and rely on in your report were final,
20 correct versions?
21 A. I asked for the final
22 versions and what was given to me was
23 represented as the final versions.
24 Q. Okay. So you did not do any

Page 286

1 analysis yourself to confirm that,
2 correct?
3 A. I asked for the current
4 version of the SOP and the -- and I was
5 supplied with what the current SOP was.
6 I don't know what you're
7 asking me to do apart from that. I don't
8 have insight into Teva's documents stash
9 or collection of SOPs apart from those
10 that were given to me.
11 I just don't understand how
12 you would expect me to research something
13 like this further, apart from my simple
14 asking for it.
15 Q. Right. And you don't know
16 one way or the other, until this exhibit,
17 in fact, whether there are potential
18 missing important issues or accidental
19 deletions from any of the SOPs that were
20 provided to you, correct?
21 A. This is the first time that
22 I've seen this e-mail, is an exchange
23 about two individuals wondering and
24 coming from one here, saying that he

Page 287

1 didn't -- he thought something pertaining
2 to auditing of third parties ought to be
3 in the latest revision of the SOP, and
4 was it something that was deleted from
5 the SOP.
6 We can go back to the
7 earlier version of the SOP and look at
8 that revision history and see if there's
9 any description of something having to do
10 with third-party sites that was deleted
11 from it.
12 Q. You haven't done that
13 undertaking as you sit here today, right?
14 A. I have not looked for that
15 specific topic, since you did not bring
16 this -- this topic was not brought to my
17 attention until you just brought it to me
18 now.
19 Q. Fair enough. Let's put that
20 one aside.
21 The next one that you cite
22 in this paragraph is CORP-0539, correct?
23 A. CORP-0539?
24 Q. CORP-0539, correct. That's

Page 288

1 the one.
2 A. That is the next one, yeah.
3 MR. STANOCH: Okay.
4 Exhibit 9.

Page 336

1 there?

2 Q. Not yet. I'm happy to turn

3 to one, if you need to. But, you know, I

4 believe you look at FDA inspections of

5 Jerusalem from -- what is it, 2011 to

6 2018; is that right?

7 A. Let me confirm dates that

8 FDA inspections occurred.

9 I comment on those that

10 occurred during the time that valsartan

11 was being marketed, so that would not

12 include 2011, as far as the inspection

13 itself concerned.

14 Q. I can help you out. I think

15 it's starting on Page 42, you have a

16 heading, "Findings From Audits Conducted

17 At Teva Companies By FDA." Is that

18 helpful?

19 A. It is. Thank you.

20 Q. Great. And it looks like

21 you discuss two FDA inspections at the

22 Malta facility, one in 2014 and one in

23 2017, right?

24 A. Correct.

Page 335

[REDACTED]

16 Q. Okay. Put that aside.

17 MR. STANOCH: Stand by.

18 BY MR. STANOCH:

19 Q. In your report you have a

20 discussion about the FDA inspection of

21 Teva's Jerusalem and Malta facilities,

22 right?

23 A. I comment on that. Is there

24 a specific paragraph you're going to

Page 337

1 Q. And then you discuss two FDA

2 inspections of the Teva Jerusalem

3 facility, one in 2013 and one in 2015; is

4 that right?

5 A. That is correct.

6 Q. Are you aware that the FDA

7 inspected Teva's Jerusalem facility in

8 2019, sir?

9 A. They may have inspected in

10 2019; however, that was at a time that

11 was outside of the time that valsartan

12 was being manufactured and distributed.

13 So I did not make it a point to review to

14 any depth, to the point of commenting,

15 any inspections that occurred at Teva in

16 2019.

17 Q. Are you aware that the FDA's

18 inspection of Teva's Jerusalem facility

19 in 2019 focused on valsartan among other

20 things?

21 A. I don't recall that.

22 Q. Would that be pertinent to

23 your analysis of FDA inspections of

24 Teva's Jerusalem facility if the 2019

Page 338

1 inspection focused on the valsartan
2 issues prior to the recalls?
3 A. I -- prior to the recall
4 would mean that was in 2018 or before.
5 So an audit took place in 2019, while it
6 may have mentioned valsartan that was
7 manufactured prior to the recall, that is
8 informational, as far as my report is
9 concerned.
10 So I only focused on audits
11 which occurred during the time that Teva
12 was marketing valsartan products.
13 Q. It's not unusual in your
14 experience, is it, sir, for an FDA
15 inspection to look retrospectively at
16 things that have happened in the past?
17 A. That is common.
18 Q. Right. So it wouldn't
19 necessarily be surprising to you, if the
20 FDA, in 2019, just a few months after all
21 the recalls began, inspected Teva's
22 Jerusalem facility and focused on the
23 situation concerning the recalls of
24 valsartan the year earlier, correct?

Page 339

1 A. That would not be odd for
2 them to take into the history of what the
3 OSD facility made and when.
4 MR. STANOCH: I'll mark as
5 Exhibit 17.

18 Q. You're not offering any
19 opinion in your report whatsoever on the
20 outcome of the FDA's 2019 inspection of
21 Teva's Jerusalem facility, are you?
22 A. I am not offering an opinion
23 apart from what I'm reading here on the
24 e-mail trail that you supplied me.

<p>Page 350</p> <p>1 Q. In your report, you're not 2 offering any opinions whatsoever on the 3 FDA inspection of the Teva Jerusalem site 4 in 2019, correct? 5 A. No, I am not. 6 Q. And are you aware that the 7 Teva Jerusalem site that had made 8 valsartan was shut down? 9 A. I'm aware of that, yes. 10 Q. All right. Do you know 11 when? 12 A. I don't recall the exact 13 date. 14 Q. Do you know the precise -- 15 A. I had no reason to ask -- 16 Q. Do you know the precise 17 reasons why it was shut down? 18 MR. HARKINS: Object to 19 form. Foundation. Scope. 20 Speculation. 21 THE WITNESS: I don't know 22 everything that informed Teva with 23 respect to the decision to shut 24 down the OSD facility.</p> <p>Page 351</p> <p>1 BY MR. STANOCH: 2 Q. Right. You have no idea 3 what the reasons were for why Teva shut 4 down the Jerusalem facility, right? 5 A. I don't have knowledge of 6 specific reasons why that occurred. 7 Q. And then in terms of the 8 Malta facility, you are aware, are you 9 not, that Teva shifted production of 10 valsartan away from the Malta facility to 11 a different one? 12 A. I believe I recall seeing 13 that somewhere. 14 Q. Where did it shift the 15 production to? 16 A. I don't recall where that 17 was either. 18 Q. Why did Teva do that? 19 MR. HARKINS: Objection to 20 form. Foundation. Speculation. 21 THE WITNESS: I do not know. 22 BY MR. STANOCH: 23 Q. All right. So you have no 24 idea one way or the other of whether Teva</p>	<p>Page 352</p> <p>1 switched production away from the Malta 2 facility because of issues relating to 3 valsartan or not, correct? 4 MR. HARKINS: Object to 5 form. Foundation. Speculation. 6 Scope. 7 THE WITNESS: I don't know 8 why the valsartan product was 9 moved to another facility. 10 BY MR. STANOCH: 11 Q. Right. And similarly with 12 the Teva Jerusalem facility, you don't 13 know one way or the other about whether 14 the valsartan situation was a factor in 15 the closure of that facility, correct? 16 MR. HARKINS: Form. Same. 17 THE WITNESS: The closure of 18 these facilities, again, happened 19 after Teva ceased manufacturing 20 and marketing the drug product. 21 So I limited my commentary 22 as it pertained to inspections and 23 things having to do with those 24 inspections to times when</p> <p>Page 353</p> <p>1 valsartan was being marketed. 2 So the reasons why those 3 plants shut down was not something 4 that I deemed it necessary to take 5 into consideration. 6 BY MR. STANOCH: 7 Q. Are you aware of anything 8 that suggests that Teva was aware that 9 Mylan was using a third-party vendor, 10 Lantech, to manage the solvent recovery 11 process for the manufacture of valsartan 12 API? 13 A. Please rephrase that 14 question again. 15 Q. Sure. 16 MR. HARKINS: And, Dave, I 17 don't know if you're getting to a 18 new topic. We're about an hour 19 and a half on. So we'd like a 20 quick break whenever you find a 21 good time. 22 MR. STANOCH: If he wants a 23 quick break now, that's fine. 24</p>
--	---

Page 354

1 BY MR. STANOCH:
2 Q. Do you want a quick break,
3 Mr. Anderson?
4 A. Let's have a quick break.
5 MR. STANOCH: Okay.
6 THE VIDEOGRAPHER: The time
7 right now is 5:01 p.m. We are off
8 the record.
9 (Short break.)
10 THE VIDEOGRAPHER: The time
11 right now is 5:08 p.m. We're back
12 on the record.
13 BY MR. STANOCH:
14 Q. Welcome back, Mr. Anderson.
15 Did you talk to anybody besides your
16 counsel during the break?
17 A. Nobody else.
18 Q. Did you look at any
19 documents?
20 A. No, I did not.
21 Q. You didn't e-mail or text
22 anybody, did you?
23 A. No, I did not.
24 Q. Okay. And you're aware, are

Page 355

1 you not that Mylan was using a
2 third-party vendor, Lantech, to manage
3 the solvent recovery process for its
4 manufacture of valsartan API, correct?
5 A. I learned that that was the
6 case.
7 Q. You don't opine anywhere in
8 your report, do you, that Teva was aware
9 of that fact?
10 A. I do not opine in that
11 context, no.
12 Q. And is it correct that you
13 are not aware of any facts suggesting
14 that Teva was aware that Mylan was using
15 a third-party vendor, Lantech, to manage
16 the solvent recovery process for the
17 manufacture of valsartan API?
18 A. I don't recall any document
19 where Teva was found knowledgeable prior
20 to discontinuing the production of
21 valsartan.
22 Q. Do you agree that whether an
23 API supplier is using recovered solvents
24 is potentially pertinent from a cGMP

Page 356

1 quality standpoint?
2 A. Not necessarily.
3 Q. You disagree with that?
4 A. I said not necessarily.
5 Q. Well, Teva knew that ZHP
6 used recovered solvents in some of its
7 API processes, right?
8 A. I know that from
9 investigations that Teva undertook and
10 information that they learned from Mylan
11 at times after the marketing of valsartan
12 ceased.
13 Q. I want to make sure you
14 understood. I was talking about ZHP.
15 Were you aware that Teva
16 knew that ZHP used recovered solvents in
17 some of ZHP's API processes?
18 A. That is not something that
19 I'm aware of. I've not seen any
20 documents to suggest that Teva did know
21 this.
22 MR. STANOCH: Okay. Well,
23 why don't you pull up -- stand by.

■ [REDACTED]

9 BY MR. STANOCH:

10 Q. You agree --

11 A. It mentioned, as I recall,

12 that they even went out to other third

13 parties to have this done.

14 Q. You agree that Teva did not

15 know prior to summer of 2018 that Mylan

16 was using recovered solvents in the

17 manufacture of valsartan API being sold

18 to Teva, right?

19 MR. HARKINS: Form. Scope.

20 THE WITNESS: By ZHP? Or by

21 Mylan?

22 BY MR. STANOCH:

23 Q. No, sir.

24 Do you agree that Teva did

Page 363

1 not know prior to the summer of 2018 that

2 Mylan was using recovered solvents in the

3 manufacture of valsartan API being sold

4 to Teva?

5 MR. HARKINS: Objection to

6 form. Scope.

7 THE WITNESS: I'm recalling

8 one of the audits reports that I

9 just described where there was

10 blending of same solvents with

11 other lots of solvents that were

12 on hand.

13 I don't recall directly from

14 memory whether that involved

15 recovered solvents or just simply

16 solvents that were on hand.

17 But in any case, they were

18 qualified for further use in

19 production at Mylan. That is what

20 I believe I recall.

21 BY MR. STANOCH:

22 Q. What Teva audit report of

23 Mylan do you believe makes any mention of

24 the use of recovered solvents in the

Page 364

1 manufacture of valsartan API?

2 A. I don't recall which audit

3 report that was. There were a couple

4 audit reports. I do not recall which one

5 that was.

6 Q. And you're not sure one way

7 or the other whether they mentioned

8 recovered solvents specifically, correct?

9 A. I'm not recalling

10 immediately, no. I do know they -- I

11 have a reasonable belief that I recall

12 that they blended same solvents together,

13 new and those that were on hand, in order

14 to have enough solvent to be able to

15 proceed to production.

16 Q. And you're implying there

17 that you think it might have been a fresh

18 barrel -- an unopened barrel of solvent

19 and maybe one that had already been half

20 used to get the full amount that they

21 needed; you're not suggesting that it was

22 saying some of that was recovered or

23 recycled, are you?

24 A. What I'm saying is I don't

Page 365

1 recall it. I'm recalling that there was

2 a blending and a certification.

3 I'm not recalling if it said

4 specifically that it was recovered

5 solvents that would be blended with new

6 solvents. I am reasonably certain that

7 it was solvents which were on hand.

8 Q. You are not opining anywhere

9 in your report, are you, that Teva knew

10 that Mylan was using recovered solvents

11 in the manufacture of valsartan API, are

12 you?

13 A. I have commented on what

14 John Quick said as it pertains to

15 recovered solvents.

16 Again, if this was something

17 that showed up in the inspection report

18 for Mylan, and it was mentioned that

19 recovered solvents were those that were

20 blended -- but I don't happen to have an

21 immediate recollection of that -- Teva

22 then would have known at that time that

23 Mylan was using recovered solvents as

24 well as fresh solvents.

Page 366

1 Q. I'm asking about your
2 report, sir. Okay. Are you with me,
3 Mr. Anderson?
4 A. Yeah.
5 Q. In your report, where do you
6 opine that Teva knew that Mylan was using
7 recovered solvents in the manufacture of
8 valsartan API?
9 A. I'm not recalling that
10 citation at this moment.
11 But I've described to you
12 what I'm recalling from the audit reports
13 themselves.
14 Q. Did you look at any of the
15 FDA inspection reports of Lantech, the
16 third party vendor that Mylan was using
17 to manage the solvent recovery process?
18 A. No, I did not.
19 Q. Don't you think it would be
20 important from a cGMP standpoint to
21 understand what the FDA said about the
22 vendor that was managing the solvents
23 that were found to be the potential root
24 cause of the NDEA contamination in

Page 367

1 Mylan's valsartan API?
2 MR. HARKINS: Form. Vague.
3 THE WITNESS: What FDA had
4 to say about that processing
5 facility was something that was
6 related at a time after valsartan
7 was being manufactured and
8 distributed by Teva with API that
9 was sourced from Mylan.
10 So there was an inspection
11 that did take place afterward, and
12 FDA had comments about that.
13 BY MR. STANOCH:
14 Q. If Teva did not know --
15 strike that.
16 As Teva did not know that
17 Mylan was using Lantech to manage the
18 recovered solvents process, Teva would
19 not even know to ask questions about
20 Lantech's cGMP compliance, correct?
21 A. If Teva didn't know that
22 Lantech specifically was being used as a
23 vendor, Teva would not have reason to ask
24 questions about Lantech.

Page 368

[REDACTED]

Page 369

[REDACTED]

Page 370

[REDACTED]

Page 372

[REDACTED]

Page 371

[REDACTED]

Page 373

[REDACTED]

12 BY MR. STANOCH:

13 Q. Mm-hmm. And you make it a

14 point in Paragraph 142 of your report to

15 suggest that Teva had no vendor agreement

16 with Lantech, so it was in no position to

17 require Lantech to let it audit or manage

18 the solvent recovery process, right?

19 A. That's correct. Teva was

20 not Lantech's direct customer. So there

21 were not supplier agreements because they

22 were not a direct supplier to Teva. They

23 were a supplier of a service to Mylan.

24 And it would have been an

<p>Page 374</p> <p>1 agreement with Mylan that would have been 2 operative for managing the quality 3 aspects of the recovered solvents that 4 Mylan was subsequently then used to 5 manufacture API. 6 Q. Mylan, though, was a direct 7 customer of Teva, correct? 8 A. That's correct. 9 Q. And Teva had the authority, 10 did it not, to require Mylan to ensure 11 that any of Mylan's own subcontracted 12 vendors were taking adequate cGMP quality 13 assurance steps, correct? 14 MR. HARKINS: Object to 15 form. Vague. 16 THE WITNESS: That is not 17 something that is in every single 18 agreement that I've ever seen. It 19 is just that suppliers, as I've 20 seen such contracts making 21 reference to other parties here, 22 just that it would be the 23 responsibility of that primary 24 vendor, in this case, Mylan, to</p>	<p>Page 376</p> <p>1 as to the reason why NDEA arose and was 2 evident in Mylan's API. 3 So whether they had a 4 quality agreement or not in place, that 5 did not prohibit what was necessary 6 dialogue that had to transpire between 7 Teva and Mylan on topics having to do 8 with cGMP compliance and conforming to 9 specifications that were agreed to with 10 Mylan contractually as a supplier of API 11 to Teva and the ability of Teva to be 12 able to perform quality audits on a 13 schedule negotiated with Teva -- 14 negotiated with Mylan. 15 Q. You don't cite anywhere in 16 your report any dialogue between Teva and 17 Mylan about the cGMP compliance issues 18 with respect to the recovered solvent 19 process for the manufacture of valsartan 20 API, do you? 21 A. I do not speak to any 22 dialogue that Mylan had with Lantech 23 about which they informed Teva, no. I 24 don't speak of that.</p>
<p>Page 375</p> <p>1 support drug substance that 2 conforms to cGMP, and that it 3 managed its own quality system. 4 And by extension, that would 5 mean managing its relationship 6 with those who furnish services to 7 them to support their quality 8 system, in this case, Lantech. 9 BY MR. STANOCH: 10 Q. Well, in here, we don't have 11 any agreement between Teva and Mylan, 12 right? 13 A. We do not have a quality 14 agreement. No, we do not. But -- 15 Q. In fact -- go ahead. 16 A. But that -- as of the 17 revelation of NDEA by Mylan, ultimately 18 by way of Swissmedic information and the 19 identification of Mylan as supplier of 20 API, it did not prevent Teva from 21 maintaining a relationship that involved 22 necessary dialogue as it pertained to the 23 control of NDEA in Mylan's API, and/or 24 getting to the investigation conclusion</p>	<p>Page 377</p> <p>1 Q. And you don't cite anywhere 2 any dialogue between Teva and Mylan about 3 the recovered solvent process at all, do 4 you? 5 A. Again, only what I recalled 6 from what was cited in the report as a 7 matter-of-fact point that older solvents 8 are blended with newer solvents, and that 9 may, although I don't recall it 10 immediately, that may have also included 11 recovered solvents. 12 Q. You're not sure sitting 13 here -- 14 A. The source of recovered -- 15 Q. I'm sorry. Go ahead. 16 A. Yeah, the source of the 17 recovered solvents were not something 18 that was at issue. 19 Q. Okay. So why you say there 20 was not preventing Teva and Mylan having 21 a dialogue in the absence of a quality 22 agreement, you don't cite any evidence 23 that there was any such dialogue with 24 respect to the recovered solvent process</p>

Page 378

1 for valsartan API manufacturing, do you?
2 MR. HARKINS: Objection to
3 form. Vague.
4 THE WITNESS: There was
5 dialogue that transpired after
6 Teva ceased marketing valsartan.
7 I do know that they were in
8 contact with and in dialogue with
9 Mylan certainly at that time.
10 I don't know what the level
11 of dialogue was that Teva had with
12 Mylan on the subject of NDEA prior
13 to December of 2018.
14 BY MR. STANOCH:
15 Q. Do you cite in your report,
16 sir, any evidence of any dialogue between
17 Teva and Mylan prior to the summer of
18 2018 about the use of recovered solvents
19 in the manufacture of valsartan API?
20 MR. HARKINS: Same
21 objection.
22 THE WITNESS: Again, as I
23 pointed out what my recollection
24 of the audit report -- one of the

Page 379

1 audit reports at least, if not
2 both, mentioning the blending of
3 solvents on hand with new solvents
4 that were coming in and having
5 them qualified for suitability for
6 use in further production.
7 I do not recall immediately
8 whether they mentioned recovered
9 solvents in that description, but
10 I do recall a blending of solvents
11 in this way.
12 So is that dialogue? I
13 would say that's dialogue.
14 BY MR. STANOCH:
15 Q. Well, you don't know whether
16 it was recovered solvents or not, do you?
17 A. I am telling you that I
18 don't recall exactly whether it said it
19 was recovered solvents or not. I would
20 have to review the -- review the reports
21 there.
22 I don't recall that there
23 was a deficiency that Teva lodged with
24 Mylan about the fact that they were using

Page 380

1 recovered solvents, because as a
2 practice, utilization of recovered
3 solvents in production is not a -- is
4 commonly not an issue in drug substance
5 manufacturing.
6 Q. Well, if Teva didn't know,
7 then they wouldn't be able to lodge an
8 objection or observation about it, could
9 they?
10 A. What I'm saying, again, is,
11 it is possible that they did know. And
12 the reference that I'm making that,
13 again, I am trying to recall from memory
14 if it included recovered solvents or just
15 old solvents.
16 But they were confident that
17 those solvents -- Teva was confident that
18 those solvents were suitable for use
19 because they met specifications for their
20 continued use in production with metrics
21 that Mylan had set up, governed by its
22 quality system to be able to proceed in
23 manufacturing with solvents that were
24 combined in this fashion.

Page 381

1 Q. Are you saying that Teva
2 might have known and said it was okay to
3 keep using recycled solvents in Mylan's
4 manufacture of valsartan API?
5 MR. HARKINS: Objection to
6 form. Misstates testimony.
7 THE WITNESS: What I'm
8 saying is there was possibly a
9 reference of recovered solvent
10 every bit as much as there was a
11 mention of recovered solvent in
12 the ZHP audit report.
13 This was -- the use of
14 recovered solvents was not a --
15 something that raised a concern by
16 Teva of ZHP. And the fact that
17 ZHP recovered solvent was not, to
18 my recollection, one of the
19 reasons why NDMA was found in
20 ZHP's API.
21 We're talking about NDEA in
22 the context of -- in the context
23 of Mylan and that it was
24 attributable, upon further

Page 382

1 evaluation, to something having to
2 do with recovered solvents in the
3 way that they were recovered at
4 Lantech and subsequently utilized
5 in purification processes at
6 Mylan.
7 BY MR. STANOCH:
8 Q. Tell me as specifically as
9 possible where you think this reference
10 to recycled solvents in the manufacture
11 of valsartan API at Mylan appears in Teva
12 audit reports?
13 A. I don't recall which of the
14 audit reports I thought it was in. But I
15 believe that I recall this residing in
16 one of those reports having to do with
17 older solvents, whether they were
18 recovered or just solvents on hand
19 blended with newer lots of solvents, and
20 then tested and qualified according to
21 specifications set for them at that time
22 for further use in API production.
23 Q. Right. You don't know if
24 that reference that you think you might

Page 383

1 recall, and can't tell me where it is,
2 whether it was just older solvents being
3 blended or recycled and new solvents
4 being blended, right?
5 A. Right. I don't recall
6 exactly.
7 Q. That's fine. That's fair.
8 Sir, in your appendix you
9 have a number of charts that you have
10 regarding observations from government or
11 Teva audits and responses and whether the
12 observations or responses suggest
13 presence of NDMA or NDEA; is that right?
14 A. That none of the responses
15 indicated that NDMA or NDEA were present
16 or even suggested it.
17 Q. And you can pull that up. I
18 think it's an attachment to your report,
19 which you should have in front of you,
20 right?
21 A. Yes, I do. I'm starting
22 here on the very first page of the
23 appendix.
24 Q. And your column on the

Page 384

1 right, "Observation or response suggest
2 presence of NDMA or NDEA," there you're
3 saying whether the observation was
4 evidence that NDMA or NDEA was present?
5 MR. HARKINS: Object to
6 form.
7 THE WITNESS: That my --
8 that the observation or response
9 suggests that presence of NDMA or
10 NDEA might be present, that is yes
11 or no, and what is the reason for
12 my saying so.
13 BY MR. STANOCH:
14 Q. The actual presence of an
15 impurity is just one potential basis for
16 a drug being adulterated, correct?
17 A. Presence of an impurity
18 beyond a controlled limit specified for
19 it.
20 Q. And we talked about this
21 much earlier today. You agreed that a
22 drug could still be adulterated even in
23 the absence of an impurity if it was not
24 manufactured in conformance with current

Page 385

1 good manufacturing practices, correct?
2 A. That's correct.
3 Q. So just because an
4 observation from a given inspection or
5 finding does not suggest the actual
6 presence of NDMA or NDEA does not mean
7 there was not a potential deviation from
8 cGMP, correct?
9 A. Correct.
10 Q. And in your appendix, you
11 address, among other things, the FDA
12 for-cause inspection of ZHP in 2018,
13 correct?
14 A. I do.
15 Q. And this was the FDA's
16 inspection of ZHP following the news
17 about NDMA in the summer of 2018, right?
18 A. It occurred from July 23rd
19 to August 3rd, 2018. So this for-cause
20 inspection followed on the revelation
21 that NDMA was present.
22 Q. Right, this was after ZHP
23 disclosed to Teva and others about NDMA
24 in June 2018, right?

Page 386

1 A. Correct.

2 Q. And in fact, the very reason

3 for this for-cause inspection was the

4 NDMA contamination of valsartan, right?

5 A. I believe that was one of

6 the topics here. I don't recall

7 necessarily that it was the only topic

8 that was the subject of the for-cause

9 inspection, if I review this just a

10 second to gain some insight on whether

11 there were other products possibly that

12 were reviewed in the for-cause

13 inspection. That's possible.

14 But, that you're focusing on

15 valsartan with respect to this for-cause

16 inspection, is accurate.

17 Q. And you can look through

18 your chart, but I think in your

19 right-most column you say no, that every

20 observation in response did not suggest

21 the presence of NDMA or NDEA, right?

22 A. Correct.

23 Q. Wasn't the FDA for-cause

24 inspection of ZHP the basis for the FDA's

Page 387

1 warning letter to ZHP a few months later?

2 A. It formed certainly some of

3 the basis. Whether it informed all of

4 it, I cannot say.

5 Q. You know that FDA issued a

6 warning letter to ZHP in -- was it late

7 2018, right?

8 A. I believe that was

9 November 29, 2018, yeah.

10 Q. I agree. I appreciate the

11 specificity.

12 And among other things in

13 that letter, the FDA determined that

14 ZHP's valsartan API was adulterated,

15 right?

16 A. As of that date they

17 declared that valsartan manufactured by

18 ZHP, valsartan products are adulterated.

19 Q. And it was adulterated in

20 part because of the issues concerning

21 lack of cGMP compliance with respect to

22 the manufacture of valsartan API, right?

23 A. There were detailed

24 citations in the warning letter that

Page 388

1 formed the basis for that, which included

2 observations as well as testing that FDA

3 had performed on certain valsartan lots.

4 Q. And the observations you

5 reference are the observations made a few

6 months prior during the for-cause FDA

7 inspection in July through August of

8 2018, right?

9 A. Correct.

10 Q. So how could you say that

11 the FDA's inspection of ZHP in the summer

12 of 2018 did not suggest the presence of

13 NDMA and NDEA when just a few months

14 later, the FDA issues a warning letter

15 saying that your product is adulterated

16 because your process is going to result

17 in NDMA?

18 A. What FDA did, as I just

19 mentioned, was take those samples from

20 ZHP and performed analyses of their own.

21 And on the basis of that evidence, it was

22 confirmed that there was presence of NDMA

23 in ZHP's API.

24 So observations were made

Page 389

1 prior to samples being taken and FDA

2 performing their own independent testing

3 thereof.

4 So the warning letter is

5 informed by observations made and on the

6 basis of testing that FDA had performed

7 themselves.

8 Q. So unless an observation

9 was, "We found NDMA in your valsartan API

10 during this inspection," then you would

11 say no, the observation does not suggest

12 the presence of NDMA?

13 MR. HARKINS: Objection to

14 form. Misstates the testimony.

15 Misstates the report.

16 THE WITNESS: There's

17 nothing in the observations that

18 FDA made that suggest or even

19 point to or implicate the presence

20 of NDMA in -- or NDEA in valsartan

21 API at the time of the inspection.

24

Page 394

1 BY MR. STANOCH:
2 Q. Okay. You're not aware of
3 anything that prevented Teva from making
4 its own observation about this inadequate
5 investigation of unknown peaks, say,
6 during the May 2018 Teva audit of ZHP?
7 MR. HARKINS: Form.
8 Speculation.
9 THE WITNESS: Could you
10 rephrase your question, please?
11 BY MR. STANOCH:
12 Q. Sure.
13 You don't opine on anything
14 that prevented Teva from making the same
15 observation about ZHP's inadequate
16 investigation of unknown peaks for the
17 valsartan intermediates that the FDA
18 identifies during Teva's May 2018 audit
19 of ZHP?
20 MR. HARKINS: Same
21 objection.
22 THE WITNESS: We can go back
23 to the 2018 audit and if there is
24 an observation that Teva made in

Page 395

1 May of 2018, that matches this
2 observation that was made by FDA,
3 I would invite you to find it.
4 BY MR. STANOCH:
5 Q. Well, I'm going to invite
6 you, Mr. Anderson, to tell me, did Teva
7 ever review the deviation that the FDA
8 observed in their 2018 investigation
9 itself?
10 A. They may have. But again,
11 this was at a time, in August of 2018,
12 when Teva had ceased to market valsartan.
13 It is possible that the
14 deviation investigation was something
15 that Teva elected to explore on its own
16 to learn more about the nature of the
17 quality of the deviation investigation
18 themselves and develop an opinion about
19 it.
20 But at the time that that
21 was occurring, Teva was not marketing
22 valsartan that was manufactured by ZHP.
23 Q. I'm looking at your appendix
24 about this observation, and the deviation

Page 396

1 was initiated, according to you,
2 October 10, 2017. So that -- that was
3 well prior to Teva's recalls of
4 valsartan, correct?
5 A. The investigation at ZHP was
6 something that was undertaken earlier, by
7 your account.
8 Q. And Teva, to your knowledge,
9 never evaluated ZHP's October 10, 2017
10 investigation into the deviation, which
11 ultimately led to -- in part, to the FDA
12 warning letter of ZHP?
13 A. I don't know what kind of
14 dialogue transpired as it pertained to
15 that deviation.
16 Q. Did you even attempt to map
17 whether, during its audits Teva had the
18 opportunity to look at the same things
19 that the FDA looked at at ZHP in 2018?
20 MR. HARKINS: Form. Vague.
21 THE WITNESS: Are you saying
22 following on any audit that FDA
23 had of ZHP? I'm not understanding
24 your question here.

Page 397

1 BY MR. STANOCH:
2 Q. Sure.
3 The FDA inspection in 2018
4 noted, among other things, a deviation at
5 ZHP dated October 10, 2017, right?
6 A. Okay.
7 Q. And that was one of the
8 things that they cite in the warning
9 letter about failing to do testing and
10 adequate investigation that led to the
11 warning letter, right?
12 A. Respectfully, could you
13 point me to the exact observation? These
14 are numbered in my -- excuse me -- in
15 my -- excuse me. I need water.
16 Q. 3D.
17 A. Let me get there. Okay
18 Observation 3D, did I hear you correctly?
19 Q. Yes, sir.
20 A. Okay. I am at that
21 observation. Your question, please?
22 Q. You see it was initiated
23 October 10, 2017, by ZHP?
24 A. I do.

Page 398

1 Q. You're not aware of any --
2 you're not aware of whether Teva was
3 aware of that deviation at any time prior
4 to the summer of 2018, are you?
5 A. I see that I was also
6 correct that this involved an
7 intermediate valsartan product, the
8 intermediate condensate HCl specifically.
9 A deviation with respect to
10 an intermediate that was being
11 investigated at the time is not something
12 that I necessarily would have expected
13 them to share with -- with Teva. It's
14 possible that this deviation pertained to
15 a lot of valsartan that was not sold to
16 Teva. It could have been sold to another
17 customer.
18 But it does happen to have
19 this amount of detail in it as FDA has
20 cited it.
21 Q. Mr. Anderson, I'm going to
22 ask you to listen to my question. Are
23 you aware of whether Teva knew of this
24 deviation at any time prior to the summer

Page 399

1 of 2018?
2 A. I do not know.
3 Q. Are you aware of anything
4 that prevented Teva from asking ZHP about
5 this deviation prior to the summer of
6 2018?
7 MR. HARKINS: Form. Vague.
8 THE WITNESS: I do not know
9 that Teva had a reason to know
10 about this particular deviation,
11 as it may not have applied to API
12 that they had purchased from ZHP.
13 BY MR. STANOCH:
14 Q. So then you're not aware of
15 anything that prevented Teva from asking
16 ZHP about this deviation prior to the
17 summer of 2018?
18 A. Having knowledge of this
19 deviation is something that would not be
20 expected routinely for a substance that
21 was not incorporated into a Teva product.
22 So there is no reason to expect that ZHP
23 would have to inform Teva regarding an
24 intermediate deviation that was

Page 400

1 accomplished on behalf of -- or in the
2 course of manufacturing API on behalf of
3 another customer.
4 I don't know the detail
5 here. But there is no reason why Teva
6 would necessarily have to be informed of
7 every single deviation that pertains to
8 valsartan manufacture, and particularly
9 those deviations that had nothing to do
10 with API that they had specifically
11 purchased.
12 Q. You don't know one way or
13 the other whether Teva knew about this
14 deviation prior December of 2018,
15 correct?
16 A. I do not know.
17 Q. Did you review any Teva SOP
18 concerning whether a process change
19 should be classified as PAS or CBE?
20 A. I did not review any SOP
21 that Teva had as it pertained to that
22 kind of classification. That type of
23 classification is something that is
24 ultimately decided upon by FDA in their

Page 401

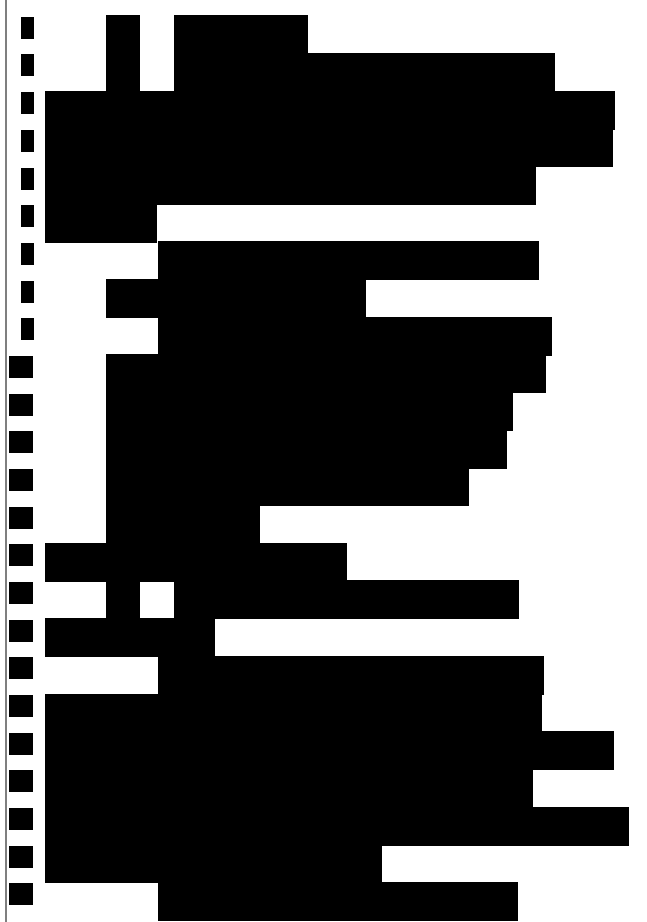

1 opinion, regardless of what the
2 submission that is made by the applicant.
3 For instance, an applicant
4 may submit a Changes Being Effectuated 30,
5 supplemental submission to their ANDA,
6 and describe what the change is in there.
7 And according to their opinion, it is
8 their belief that a CBE-30 filing is
9 appropriate.
10 But FDA may elevate the
11 level of that submission because, in
12 their opinion, they believe the matters
13 that are covered in that submission rise
14 to the level of requiring a preapproval
15 designation for that submission, not
16 merely a CBE-30.
17 Q. Did you review any Actavis
18 policies, procedures, or practices as to
19 whether the company should classify a
20 process change as PAS or CBE?
21 A. I don't recall that I did.
22 MR. STANOCH: Let's go off
23 the record.
24 THE VIDEOGRAPHER: The time

Page 402

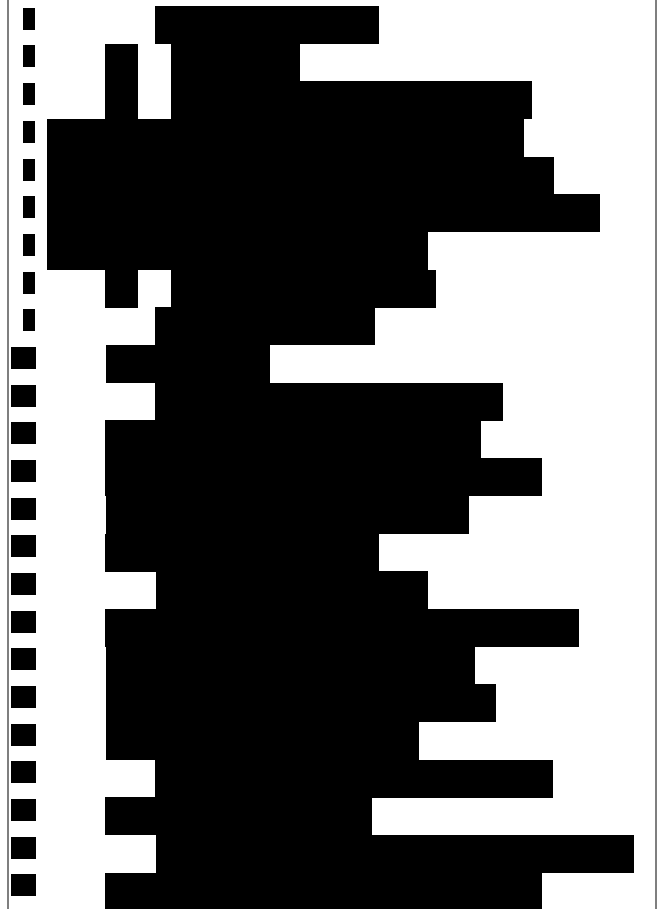

1 right now is 6:00 p.m. We are off
2 the record.
3 (Short break.)
4 THE VIDEOGRAPHER: The time
5 right now is 6:38 p.m. We are
6 off -- we're back on the record.
7 BY MR. STANOCH:
8 Q. Just a few more questions,
9 Mr. Anderson. I want to pull up again
10 the Narendra Vadsola transcript we looked
11 at earlier.
12 Do you recall that
13 transcript?
14 A. I do.

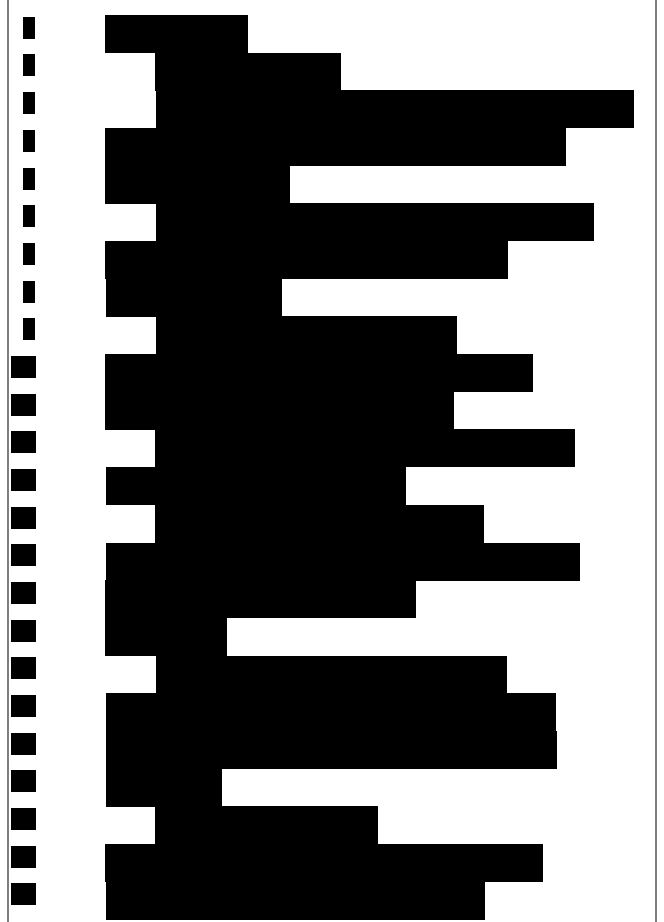

Page 403

Page 404

Page 405

Page 406

[REDACTED]

Page 408

[REDACTED]

23 Q. All right. Put that aside.
24 Sir, did you write your own

Page 407

[REDACTED]

Page 409

1 report here in this case?
2 A. I did.
3 Q. Did you prepare the appendix
4 to your report with the observation
5 chart?
6 A. I did.
7 Q. Did you prepare the
8 materials considered list appended to
9 your report?
10 A. I did.
11 Q. Did you ever do any
12 consulting work for any of the defendants
13 in this litigation prior to this case?
14 A. No, I have not.
15 Q. Actually, earlier you said
16 you don't know who the defendants are, so
17 I guess you're not sure. Is that fair?
18 A. I'll say I read Mr. Quick's
19 report, and to the degree that I was
20 familiar on having read any of those
21 names there, no, I have not consulted for
22 any of those. So I'll leave it at that.
23 Q. Fair enough.
24 MR. STANOCH: I'm going to

Page 410

1 mark Exhibit 45 -- I'm sorry,
2 Exhibit 20.
3 (Document marked for
4 identification as Exhibit
5 Anderson-20.)
6 BY MR. STANOCH:
7 Q. This is a collection of the
8 invoices that we've been provided for
9 your work in this case. Can you see
10 those?
11 A. I'm refreshing. One moment,
12 please.
13 Q. I can try to screen share if
14 that's faster.
15 How's that? Can you see my
16 screen, sir?
17 A. I do see your screen.
18 Q. And you see there is an
19 invoice dated December 31, 2021; an
20 invoice dated January 31, 2022; and a
21 final invoice dated February 28th, 2022.
22 Is it correct that these are
23 all the invoices that have been issued
24 for your work in this case thus far?

Page 411

1 A. As of this time, correct.
2 Q. All right. And ProPharma,
3 that's just a consulting outfit through
4 which you were connected with Teva in
5 this litigation?
6 A. Yes. Actually, my services
7 are being made by way of a subsidiary of
8 ProPharma Group known as NDA Partners.
9 Q. Got it. And then it looks
10 like the amounts invoiced thus far, we
11 see about \$69,000 for your first invoice,
12 \$78,000 for your second invoice, and
13 \$30,000 and change for your most recent
14 February 2022 invoice, correct?
15 A. Correct.
16 Q. It looks like the total
17 is -- you've invoiced approximately
18 \$177,000 for your work to date?
19 A. If you add these numbers up
20 and they come to that amount and it is
21 accurate, I agree with it. I've not
22 added it up that way myself.
23 MR. STANOCH: I have no
24 further questions at this time for

Page 412

1 you, Mr. Anderson.
2 Thank you.
3 THE WITNESS: Thank you.
4 - - -
5 EXAMINATION
6 - - -
7 BY MR. HARKINS:
8 Q. All right. Tim, I will have
9 some questions for you. I figure we
10 should go ahead until the technology
11 gives out on us, which hopefully it
12 won't.
13 Are you good to go right
14 into it?
15 A. Yes.
16 Q. Okay. Good. All right.
17 MR. HARKINS: Dave, correct
18 me if I'm wrong. I don't believe
19 his CV has been introduced,
20 correct?
21 MR. STANOCH: Correct,
22 unless it was part of the report.
23 MR. HARKINS: I don't think
24 the version that you introduced

Page 413

1 had it as an attached exhibit. I
2 just want to confirm so we're not
3 introducing extra stuff.
4 BY MR. HARKINS:
5 Q. All right. Tim, if you go
6 to the DropBox and pull up what should be
7 introduced electronically as Exhibit 21.
8 MR. STANOCH: Sorry,
9 Mr. Harkins, it's also Exhibit A
10 to Exhibit 1, his report.
11 But any way you want to
12 proceed, I'm fine.
13 MR. HARKINS: Sure.
14 Can you pull up Exhibit 21?
15 Just to make sure it's dropped in
16 there correctly.
17 THE WITNESS: It's here,
18 correct.
19 (Document marked for
20 identification as Exhibit
21 Anderson-21.)
22 BY MR. HARKINS:
23 Q. Right. And Tim, if you go
24 down to review it quickly, is this an

<p>Page 414</p> <p>1 updated CV that you have prepared for us?</p> <p>2 A. It is.</p> <p>3 Q. And how can you tell it's</p> <p>4 the updated CV?</p> <p>5 A. Because I see revisions to</p> <p>6 this version of the CV that I made very</p> <p>7 recently and furnished to NDA Partners,</p> <p>8 who subsequently furnished a copy to you</p> <p>9 as an update.</p> <p>10 Q. And just to clarify, what</p> <p>11 are the revisions to your CV from the one</p> <p>12 that was submitted as an attachment to</p> <p>13 your report?</p> <p>14 A. The revisions include a</p> <p>15 heading that at one time on Page 5, read</p> <p>16 "Depositions," which was not entirely</p> <p>17 correct. And I changed the word to say</p> <p>18 "Legal," which in fact is correct.</p> <p>19 The reason it had to be</p> <p>20 corrected is because all of the case work</p> <p>21 that I list here did not necessarily</p> <p>22 include a deposition.</p> <p>23 However, for the assistance</p> <p>24 of anyone who is referring to this here,</p> <p>Page 415</p> <p>1 one can learn what it is in fact that I</p> <p>2 did do with respect to this case work;</p> <p>3 that is, whether I wrote a report only or</p> <p>4 I wrote a report and had a deposition or</p> <p>5 I had written the report, had a</p> <p>6 deposition, had court testimony, or</p> <p>7 possibly testimony as arbitration, or</p> <p>8 whether I just simply provided</p> <p>9 consultative work.</p> <p>10 So each one of these cases,</p> <p>11 in addition to having the dates on</p> <p>12 which -- or the years in the -- and</p> <p>13 states in which the cases were done and</p> <p>14 what type of service I provided to them</p> <p>15 is now much more clear.</p> <p>16 Q. Okay. Just to clarify, did</p> <p>17 you add any new matters to that section</p> <p>18 that you revised?</p> <p>19 A. No, I did not.</p> <p>20 Q. Other than changing the</p> <p>21 heading and clarifying some of the</p> <p>22 descriptions, did you make any other</p> <p>23 changes to that section?</p> <p>24 A. No other changes.</p>	<p>Page 416</p> <p>1 Q. Did you make any other</p> <p>2 changes to any other part of the CV?</p> <p>3 A. No, I did not.</p> <p>4 Q. Okay. And just for the</p> <p>5 benefit of the jury, just generally and</p> <p>6 briefly, give us a little description of</p> <p>7 your background, please.</p> <p>8 A. I celebrate my 40th career</p> <p>9 year this year. And I began right out of</p> <p>10 school with a technical temporary</p> <p>11 employment firm by the name of Clinton</p> <p>12 Research Consultants where I did three</p> <p>13 different assignments in a variety of</p> <p>14 technical veins, none of which were</p> <p>15 pharmaceutical.</p> <p>16 In 1984, I had my first job</p> <p>17 in the pharmaceutical industry in -- as</p> <p>18 an experimental formulations chemist,</p> <p>19 developing and validating methods, having</p> <p>20 to do with bioanalytical methods</p> <p>21 predominately for new formulations that</p> <p>22 were being developed at the Purdue</p> <p>23 Frederick research center.</p> <p>24 I went on for -- after that,</p> <p>Page 417</p> <p>1 after three years being there, I went on</p> <p>2 for another job which I took at Bayer</p> <p>3 Pharmaceuticals where I was in quality</p> <p>4 control and quality assurance for a total</p> <p>5 of five years.</p> <p>6 I joined the FDA after</p> <p>7 leaving Bayer and stayed with FDA's</p> <p>8 Office of Generic Drugs, where I served</p> <p>9 as a review chemist and was there for</p> <p>10 slightly more than two years.</p> <p>11 But then went back into</p> <p>12 industry and was hired by Sandoz</p> <p>13 Pharmaceuticals Corporation, where I was</p> <p>14 hired to build brand protection</p> <p>15 strategies for what were Sandoz flagship</p> <p>16 products at the time.</p> <p>17 These were clozapine,</p> <p>18 cyclosporine, bromocriptine,</p> <p>19 predominately at that time. And</p> <p>20 strategies that we were developing were</p> <p>21 related predominately to not only</p> <p>22 excellence in filing, but also in terms</p> <p>23 of bioequivalence development as well.</p> <p>24 The whole intention being</p>
--	--

<p>Page 418</p> <p>1 that we would have the files ultimately 2 by which the generic industry would be 3 measured according to quality and 4 requirements for their submissions. 5 I left Novartis -- or 6 actually Sandoz, which when they merged 7 with Ciba Geigy, it became Novartis. I 8 left Novartis in February of 1996. 9 And 26 years ago, in 10 February, I formed my own consulting firm 11 which is specialized predominately in 12 chemistry and manufacturing controls 13 issues. 14 Q. And specifically, in what 15 context in your professional experience 16 have you worked with cGMPs and conducted 17 cGMP inspections? 18 A. I've conducted many cGMP 19 inspections in the context of mock 20 preapproval inspections, in terms of 21 preparing sites that were anticipating 22 FDA's visits and preparing them for that, 23 and in one particular instance, 24 accompanying that -- the clients at the</p> <p>Page 419</p> <p>1 time that the FDA was present to do their 2 inspection. 3 Also happened to be present 4 on another occasion where FDA just 5 happened to show up while I was doing my 6 inspection. 7 But those, in addition to 8 also performing such cGMP evaluations on 9 behalf of firms which are engaged in 10 merger and acquisition efforts to 11 evaluate certain aspects that have a cGMP 12 compliance component to them for purposes 13 of informing their investment decisions. 14 Q. And during your time prior 15 to your consulting work, did you also 16 work on issues related to cGMPs? 17 A. I did. 18 Q. Please explain. 19 A. Specifically, when I was at 20 Bayer. For instance, this was my first 21 introduction to the meaningful 22 significance of cGMP compliance in the 23 marketed product world. 24 As I said, I was there for</p>	<p>Page 420</p> <p>1 five years and was performing analytical 2 assays and overseeing the work of others 3 who were also performing analytical 4 assays for what were approved and in some 5 cases products which were also in 6 development. 7 Q. In addition to your work 8 with cGMPs and cGMP inspections, have you 9 reviewed any FDA cGMP inspections? 10 A. I have reviewed FDA cGMP 11 inspections in the form of FDA Form 483s 12 that have been issued. 13 Q. What's an initial 14 observation? 15 A. An initial observation is, 16 as the name suggests, a first 17 observation, a first statement that is 18 communicated that -- in the context of an 19 FDA inspection, it is the very first 20 observation that is made. 21 Typically on a 483 FDA, 22 arranges their observations in a manner, 23 in a descending sequence of priority. 24 Q. In your experience, how</p> <p>Page 421</p> <p>1 common is it for an initial observation 2 about a facility to occur during an 3 inspection? 4 MR. STANOCH: Objection to 5 form. 6 THE WITNESS: It is -- 7 MR. STANOCH: Beyond the 8 scope. 9 Go ahead. 10 BY MR. HARKINS: 11 Q. You can answer. 12 A. An initial observation 13 occurs frequently at facilities which are 14 inspected by FDA. 15 Q. In your experience how 16 common is it for an initial observation 17 about a facility to relate in some way to 18 cGMP compliance? 19 A. It is -- the observations 20 are made on the basis of evaluation of 21 cGMP compliance. 22 Q. Does such an observation 23 always lead to a recall? 24 A. No, it does not.</p>
---	--

Page 422

1 Q. Does such an observation
2 always lead to product being put on hold
3 at that facility?
4 A. No.
5 Q. How, if at all, does such an
6 observation impact other products
7 manufactured at that facility?
8 MR. STANOCH: Objection.
9 THE WITNESS: It does not
10 necessarily impact the facility.
11 BY MR. HARKINS:
12 Q. Does an observation related
13 to cGMPs always cause FDA to determine
14 that all product at a facility is
15 adulterated?
16 MR. STANOCH: Objection to
17 form.
18 THE WITNESS: No.
19 BY MR. HARKINS:
20 Q. Would an observation -- I'm
21 sorry.
22 Does an observation related
23 to cGMPs always cause FDA to determine
24 that a specific product impacted by the

Page 423

1 observation is adulterated?
2 A. It may.
3 Q. What would be the
4 implication of Mr. Quick's opinion that
5 all products manufactured at a facility
6 where any cGMP observation occurs is
7 adulterated under the FD&C Act?
8 MR. STANOCH: Objection --
9 objection to form. Misstates
10 testimony and opinion.
11 Go ahead.
12 THE WITNESS: As the former
13 corporate vice president of
14 manufacturing quality of Baxter, I
15 would expect Mr. Quick to know
16 better.
17 BY MR. HARKINS:
18 Q. What do you mean by that?
19 MR. STANOCH: Same
20 objection.
21 THE WITNESS: Mr. Quick was
22 present at the time that a warning
23 letter was awarded to Baxter in
24 the year 2000, in an event that

Page 424

1 when asked under deposition, he
2 didn't seem to recall any detail
3 about, although the warning letter
4 that was issued was very specific
5 with respect to one product, and
6 did not indicate anywhere on the
7 warning letter that any other
8 products were affected by it.
9 BY MR. HARKINS:
10 Q. Turning to something else, I
11 remember -- during your testimony today,
12 do you recall being discussed about your
13 knowledge of the legal claims made by
14 plaintiffs in this case?
15 A. I recall being asked about
16 those.
17 Q. Okay. Do you have any
18 knowledge of the specific legal claims
19 made by the class plaintiffs in this
20 case?
21 A. I am not a legal expert. I
22 don't pretend to be a legal expert. I
23 have no knowledge of that; hence, no
24 opinion.

Page 425

1 Q. Okay. And you've not been
2 asked to provide any opinions about
3 specific legal theories at issue on this
4 case?
5 A. Not in my report, no.
6 Q. Aside from specific legal
7 theories, do you have a general
8 understanding of the types of harm that
9 are alleged by the class plaintiffs?
10 MR. STANOCH: Objection.
11 Asked and answered.
12 THE WITNESS: So there
13 are -- there are plaintiffs that
14 are alleging injury who are in --
15 as I understand it, seeking a
16 restitution of some kind.
17 BY MR. HARKINS:
18 Q. So does the specific type of
19 harm alleged by the class plaintiffs
20 factor at all to your opinions in this
21 case?
22 A. No, not at all.
23 Q. You spent some time today
24 discussing the Teva and Actavis SOPs that

Page 426

1 you reviewed and chose to include at some
2 point as citations in your report.
3 Do you recall that?
4 A. I do.
5 Q. What was your purpose in
6 including those Teva SOPs and Actavis
7 SOPs in your expert report?
8 A. John Quick made reference to
9 the type of matters that form a quality
10 system in a firm, and there -- it stands
11 as a fact that there are standard
12 operating procedures that a company must
13 have in place that govern those
14 meaningful quality system aspects. He
15 mentioned names, as I said, very
16 specifically.
17 And what I thought to do was
18 to request those SOPs from Teva that
19 addressed the same points that Mr. Quick
20 did, though acknowledging, even as he
21 did, this was not intended to be a
22 comprehensive representation of all SOPs
23 that Teva had that govern all these
24 system matters.

Page 427

1 Q. You reviewed Mr. Quick's
2 deposition, correct?
3 A. I did.
4 Q. What did he describe insofar
5 as he attempted to review and analyze
6 Teva SOPs in place?
7 MR. STANOCH: Objection.
8 Hold on. Hold on.
9 Objection to form. Outside
10 the scope of the opinions this
11 expert is offering in this case.
12 Go ahead.
13 THE WITNESS: He made the
14 admission in deposition that he
15 did not review SOPs himself. He
16 may have casually passed by
17 documents that involved the topic
18 that are the subject of the SOPs
19 that are cited and the elements of
20 quality systems that he cited, but
21 he said that he didn't review
22 SOPs.
23 BY MR. HARKINS:
24 Q. And just to be

Page 428

1 comprehensive, is that the same thing
2 that you saw with respect to Actavis
3 SOPs?
4 A. That is correct.
5 MR. STANOCH: Same
6 objection. Go ahead.
7 (Whereupon, a discussion was
8 held off the record.)
9 (Whereupon, the court
10 reporter read back the requested
11 portions of the transcript.)
12 MR. STANOCH: Same
13 objection.
14 THE WITNESS: Yes.
15 BY MR. HARKINS:
16 Q. Yeah, and Tim, as we go,
17 just try and give him a pause, because
18 he's -- with our incredible technology
19 setup here, you have to give him a moment
20 to make an objection.
21 A. Very well.
22 Q. Given what you saw insofar
23 as Mr. Quick did not analyze Teva or
24 Actavis SOPs, did you feel it was

Page 429

1 necessary to do a fulsome review of those
2 policies to prepare your opinion in this
3 case?
4 MR. STANOCH: Objection to
5 form.
6 THE WITNESS: I reviewed the
7 SOPs to the degree that I needed
8 to make certain that the SOPs were
9 ones that pertained to Teva's
10 quality systems, and they were, by
11 virtue of their identification,
12 ones which would be relevant to my
13 opinion.
14 BY MR. HARKINS:
15 Q. Do you feel that you had
16 sufficient access to Teva's SOPs, and
17 that includes Actavis SOPs, to respond to
18 the statements about quality systems that
19 you saw in Mr. Quick's report?
20 MR. STANOCH: Objection to
21 form.
22 THE WITNESS: Yes.
23 Yes.
24 BY MR. HARKINS:

Page 430

1 Q. Turning to a couple of the
2 exhibits that were introduced.
3 Can you go ahead and pull up
4 Exhibit 3 in the DropBox previously
5 introduced.
6 A. Yeah.
7 Q. And this is the "Facts About
8 Current Good Manufacturing Practices"
9 document.
10 A. One moment, please.
11 All right. I have it on the
12 display now.
13 Q. And you said that you are
14 familiar with this document?
15 A. I am.
16 Q. Do you recall being asked if
17 John Quick accurately quoted a line from
18 that document?
19 A. I recall that.
20 Q. And then you testified that
21 that quote did not include what you
22 thought was necessary context; is that
23 accurate?
24 A. That is accurate.

Page 431

1 Q. Looking at this exhibit,
2 what is the context in this exhibit that
3 you felt was important?
4 MR. STANOCH: Objection.
5 THE WITNESS: In the section
6 which Mr. Quick cited, the title
7 of the section, "If a manufacturer
8 is not following cGMPs, are drug
9 products safe for use?"
10 Mr. Quick only quoted the
11 very first sentence in this
12 section.
13 But further into this
14 section, there is a context that
15 is relevant for this -- relevant
16 for this understanding here.
17 And if I may read from it, I
18 will quote what that section is
19 here.
20 And that starts at the
21 sentence which reads, "Regulatory
22 actions against companies with
23 poor cGMPs are often intended to
24 prevent the possibility of unsafe

Page 432

1 and ineffective drugs.
2 "In rare cases, FDA
3 regulatory action is intended to
4 stop the distribution or
5 manufacturing of violative
6 product.
7 "The impact of cGMP
8 violations depends on the nature
9 of those violations and on the
10 specific drugs involved."
11 BY MR. HARKINS:
12 Q. Without that context which
13 you just now described, how would you
14 describe Mr. Quick's quotation of and use
15 of that single statement that he included
16 in his report?
17 MR. STANOCH: Objection to
18 form.
19 THE WITNESS: It is not
20 true. It is not true because it
21 is not made in context.
22 BY MR. HARKINS:
23 Q. Mr. Anderson, you were asked
24 early on today about a specific statement

Page 433

1 in your report where you stated that the
2 cGMP issues identified did not prevent
3 Teva from identifying NDMA or NDEA in the
4 valsartan medication.
5 Do you recall that?
6 A. I do.
7 Q. Do you recall where that
8 statement is in your report?
9 A. I recall the fact that it is
10 in my report. I don't have the immediate
11 knowledge of which paragraph that appears
12 in.
13 Q. Let's go ahead and pull
14 that -- pull your report up.
15 A. Okay.
16 Q. And go to Paragraph 25,
17 where we were discussing this.
18 A. I'm there.
19 Q. Do you see that statement --
20 do you recall discussing this portion of
21 your report, specifically the first
22 clause, which was then combined with the
23 third clause of that sentence during your
24 testimony today?

Page 434

1 MR. STANOCH: Objection to
 2 form.
 3 THE WITNESS: We discussed
 4 the entire -- we discussed the
 5 entirety of this paragraph.
 6 BY MR. HARKINS:
 7 Q. What do you mean by the
 8 statement in this paragraph?
 9 A. What I mean by the statement
 10 is that NDMA and NDEA were not substances
 11 that were either anticipated or predicted
 12 by those who were manufacturers of
 13 valsartan at the time. They were not
 14 predicted by manufacturers of valsartan
 15 drug products at the time.
 16 And FDA readily admits that
 17 NDMA and NDEA were unexpected, by their
 18 telling of it. And in fact, there was --
 19 FDA went so far as to make the statement
 20 that even cGMP evaluations of facilities
 21 would likely not have picked up on NDMA
 22 or NDEA.
 23 Q. And specifically, when you
 24 say that none of the observations by the

Page 435

1 FDA nor Teva's own observations prevented
 2 Teva from identifying the NDMA or NDEA
 3 impurities at issue, can you explain that
 4 statement?
 5 MR. STANOCH: Objection.
 6 THE WITNESS: That is a
 7 statement which is -- sorry.
 8 That statement is true on
 9 its face as it appears in my
 10 report. But the context in which
 11 we are speaking here is the global
 12 lack of knowledge and lack of
 13 anticipation that the industry, as
 14 well as regulatory authorities,
 15 had with regard to detection of
 16 NDMA and NDEA.
 17 BY MR. HARKINS:
 18 Q. Regardless of the existence
 19 or nonexistence of any of the
 20 observations identified in Paragraph 25
 21 of your report, what is your opinion
 22 about whether Teva could have identified
 23 NDMA or NDEA impurities in valsartan
 24 medication prior to June 2018?

Page 436

1 A. I show in --
 2 MR. STANOCH: Objection to
 3 form.
 4 Go ahead.
 5 THE WITNESS: I show in the
 6 exhaustive exhibit that is part of
 7 this report that there were no
 8 observations that were made,
 9 either by Teva inspectors of
 10 Mylan, Teva inspectors of ZHP,
 11 FDA's inspections of either Mylan
 12 or ZHP, or other health
 13 authorities, namely, the
 14 authorities in the island nation
 15 of Malta, none of the observations
 16 were ones which gave any
 17 indication, spoke of, or any hint
 18 of the presence or potential
 19 presence of either NDMA or NDEA.
 20 BY MR. HARKINS:
 21 Q. And you specifically
 22 mentioned that even FDA had recognized
 23 that it was unlikely cGMP issues -- I'm
 24 sorry -- cGMP inspections would identify

Page 437

1 the presence of these impurities?
 2 A. That is correct. I
 3 believe --
 4 MR. STANOCH: Objection to
 5 form.
 6 THE WITNESS: That's
 7 correct. I believe -- I believe
 8 they uttered that opinion soon
 9 after they had set interim
 10 specifications for NDMA and NDEA
 11 presence. I believe it was in
 12 January 2019.
 13 BY MR. HARKINS:
 14 Q. Go ahead and turn to Page 5,
 15 actually of your amended reliance list.
 16 I just want to make sure that I'm talking
 17 about the right document.
 18 MR. STANOCH: Are we talking
 19 about Exhibit 2, Mr. Harkins?
 20 MR. HARKINS: Yeah, and I
 21 want to make sure it's the right
 22 one.
 23 MR. STANOCH: I'm going to
 24 object to this as the reliance

<p>Page 438</p> <p>1 list, because there's a lot of 2 ambiguity on that, which we'll 3 follow up on. But I understand 4 Exhibit 2. 5 MR. HARKINS: It's 6 Exhibit 2, the materials 7 considered. 8 BY MR. HARKINS: 9 Q. Do you see on the bottom of 10 Page 5 the January 2019 statement that 11 you just discussed? 12 A. Page 1, Page 2, Page 3, 13 Page 4, Page 5. And you say that it's at 14 the bottom of Page 5? 15 Q. Fingers crossed. 16 MR. STANOCH: I mean, 17 they're not numbered, and the one 18 on my Page 5 is letter from Malta 19 Medicines. 20 MR. HARKINS: It's middle of 21 Page 6. 22 THE WITNESS: There we are. 23 Entitled "FDA Statement 24 1/25/2019." This is Teva Bates</p> <p>Page 439</p> <p>1 number TEVA-MDL2875-00065839. 2 BY MR. HARKINS: 3 Q. Mr. Anderson, if you can go 4 to the exhibit share and refresh, and 5 pull up what's just been introduced as 6 the most recent exhibit. I believe it's 7 22. 8 (Document marked for 9 identification as Exhibit 10 Anderson-22.) 11 THE WITNESS: I'm there. 12 BY MR. HARKINS: 13 Q. Is this the document that 14 you just identified on the list of 15 materials considered? 16 A. This is the document. 17 Q. Can you identify in this 18 document the statement that you're 19 referring to in our discussion of FDA 20 statements on cGMP inspections and their 21 ability to locate impurities? 22 A. Give me a moment to locate 23 this, please. 24 I have found the paragraph.</p>	<p>Page 440</p> <p>1 It is on the second page of this six-page 2 document. The statement in the -- one, 3 two, three -- third full paragraph on 4 this page at the bottom states, and I 5 quote, "It's unlikely that the subtle 6 problem causing these impurities could 7 have been found on a routine current good 8 manufacturing practice inspection." 9 Q. Thank you, Mr. Anderson. 10 I'd like to turn to another 11 one of the exhibits that was previously 12 introduced. Can you go ahead and, in the 13 exhibit DropBox, reopen Exhibit 4. 14 A. It's open. 15 Q. And this is the e-mail from 16 Mr. Nassall to some folks at ZHP. You 17 recall discussing this e-mail, correct? 18 A. I do. 19 Q. Why do you discuss this 20 document in your report? 21 A. I discuss this document only 22 because it was something that was -- a 23 situation that was referenced in John 24 Quick's report, and the characterizations</p> <p>Page 441</p> <p>1 and what I felt were unfair implications 2 that Mr. Quick was making about the 3 dialogue with respect to ZHP's 4 cooperation with an inquiry that was 5 being made by Teva. 6 Q. I -- to confirm, you don't 7 have any opinion or knowledge about 8 whether this is the first time anyone at 9 Teva learned of this document? I believe 10 you testified to that. 11 MR. STANOCH: Objection to 12 form. 13 THE WITNESS: I testified 14 that I did not -- I'm sorry. 15 I testified that I did not 16 know necessarily that this was the 17 first notification that Teva as a 18 company had. 19 BY MR. HARKINS: 20 Q. You didn't have any basis to 21 confirm or deny that, right? 22 A. Correct. 23 Q. That would be outside the 24 scope of the expert report and opinion</p>
--	--

Page 442

1 that you were asked to provide in this
2 case?
3 A. I agree.
4 Q. Turn back to the list of
5 materials considered for just a moment.
6 Did you review all of the
7 certificates of analysis that are
8 identified on your list of materials
9 considered?
10 A. I reviewed them --
11 MR. STANOCH: Objection.
12 Asked and answered.
13 Go ahead.
14 THE WITNESS: I reviewed and
15 considered them.
16 BY MR. HARKINS:
17 Q. What did you review and how
18 did your review and consideration of
19 those factor into your opinions in this
20 case?
21 A. The certificates of analysis
22 that I reviewed had no evidence that any
23 testing was done in the context of NDMA
24 or NDEA for information purposes or

Page 443

1 against a specification of any kind
2 appearing on the certificates.
3 Q. What in those certificates
4 of analysis did you feel it was necessary
5 to affirmatively cite to in your expert
6 report?
7 A. The fact that the --
8 MR. STANOCH: Objection to
9 form. Asked and answered.
10 Go ahead.
11 THE WITNESS: The fact that
12 the certificates of analysis
13 contained data on them that shows
14 that they conform to
15 specifications that were present
16 on the certificates of analysis.
17 BY MR. HARKINS:
18 Q. Do you feel it was necessary
19 to include specific citations to each of
20 these certificates of analysis in your
21 expert report?
22 MR. STANOCH: Objection.
23 THE WITNESS: I do not.
24 BY MR. HARKINS:

Page 444

1 Q. You were also asked just a
2 little while ago, technical issues
3 notwithstanding, about the 2019
4 inspection by the FDA of Teva's OSD
5 facility in Jerusalem.
6 Do you recall that?
7 A. I do recall that.
8 Q. Do you recall being told
9 that that inspection was about valsartan?
10 MR. STANOCH: Objection to
11 form.
12 THE WITNESS: I recall that.
13 BY MR. HARKINS:
14 Q. Do you recall the questions
15 about why you didn't consider this
16 inspection report in forming your opinion
17 in this case?
18 A. I recall being questioned
19 about that.
20 Q. Do you recall being asked
21 whether you reviewed the results of the
22 inspection that purportedly related to
23 valsartan?
24 A. I recall being asked that.

Page 445

1 Q. Were you shown the
2 inspection report during that
3 questioning?
4 A. I was not shown it.
5 Q. You were just shown notes
6 about the inspection, which it does have
7 a mention of valsartan being discussed,
8 right?
9 A. The notes mentioned
10 valsartan being discussed.
11 Q. Please reload the DropBox
12 and open what is introduced as Exhibit
13 Number 23.
14 (Document marked for
15 identification as Exhibit
16 Anderson-23.)
17 THE WITNESS: I'm there.
18 BY MR. HARKINS:
19 Q. Scroll down past the first
20 page. And take a look at this document.
21 Take as long as you need.
22 Have you seen this document
23 before?
24 A. No, I have not.

<p style="text-align: right;">Page 446</p> <p>1 Q. And again, take as long as 2 you need to familiarize, understanding 3 that. 4 What is this document? 5 A. This document is a Form 483 6 that was issued in accordance with an 7 inspection that occurred in Israel at 8 Teva Pharmaceuticals Industry in 9 Jerusalem on the dates of July 28th 10 through August 1st, 2019. 11 Q. And again, take as long as 12 you need to familiarize yourself with 13 this document. 14 Does this appear to be the 15 483 that the FDA sent in connection with 16 the 2019 inspection that you were asked 17 about by plaintiffs' counsel? 18 A. Let me just have a look at 19 it from top to bottom. 20 There are four observations 21 which appear here, and I've made familiar 22 with the fact that there were four 23 observations which proceeded from this 24 inspection from the document that</p>	<p style="text-align: right;">Page 448</p> <p>1 second page, and I'd like you to identify 2 for me what drug substances are discussed 3 on the second page of this 483? 4 A. Give me a moment to review. 5 The products that are named 6 in Observation 2 are imatinib mesylate, 7 clonazepam, clozapine, divalproex sodium, 8 and atorvastatin. 9 Q. And is there any mention on 10 this page about valsartan or any other 11 sartan products? 12 A. The word "valsartan" does 13 not appear anywhere in Observation 2. 14 Q. Is there any discussion on 15 this page of the 483 of NDMA, NDEA, or 16 any nitrosamines whatsoever? 17 A. Not at all. 18 Q. Go to the next page. And 19 again, sir, I'm just going to ask you to 20 review this, again looking for the 21 products that are identified and any 22 mention of nitrosamines, and let me know 23 whenever you're finished. 24 A. I do not see the word</p>
<p style="text-align: right;">Page 447</p> <p>1 Mr. Stanoch provided. 2 Q. Okay. Does this appear to 3 be the 483 that relates to that 4 inspection? 5 A. It does. 6 Q. Go ahead and look at just 7 the first substantive page on this 483. 8 And understanding that you have not seen 9 this document before, I'd like you to go 10 ahead and review it and identify on the 11 first page where it mentions valsartan? 12 A. Give me a moment. I've read 13 Observation 1. I do not see the word 14 "valsartan" anywhere in it. 15 Q. Do you see a mention of any 16 other sartan medication? 17 A. I do not. 18 Q. Do you see any mention of 19 NDMA, NDEA, or any nitrosamines? 20 A. Those abbreviations do not 21 appear in this observation. 22 Q. Please go to the second 23 page. 24 Go ahead and review the</p>	<p style="text-align: right;">Page 449</p> <p>1 "valsartan" anywhere in Observation 3. I 2 see no mention of anything having to do 3 with detection of NDMA or NDEA. 4 Q. Go to the next page of the 5 document. Take your time to review it 6 since you're seeing it for the first 7 time. 8 Let me know if you see any 9 mention of valsartan or any other sartan 10 medication or nitrosamines. 11 A. Okay. To be clear, the top 12 of this page is a continuation of the 13 third observation. 14 So I'm going to comment 15 first on the context of Observation 3, 16 and will continue on to observation four, 17 which also itself continues on to the 18 following page. So I'll separate my 19 observation in that context. 20 Q. Sure. 21 A. Finishing my comment with 22 respect to Observation 3, again, there is 23 no mention of valsartan or of anything 24 having to do with NDMA or NDEA.</p>

Page 450

1 Continuing now onto
2 Observation 4. It begins on this page.
3 I will comment on the whole observation,
4 once I have completed reading it.
5 Q. Sure.
6 Let me know when you're done
7 reading this part of it and we'll turn to
8 the next page, and then I'll ask you
9 question. Okay?
10 A. Very well.
11 On this first portion of
12 Observation 4 which appears on Page 5 of
13 7 in this document, but named as Page 4
14 of 5 on the 483, there is no mention of
15 the word "valsartan" or anything having
16 to do with NDMA or NDEA.
17 Q. And then turning to the
18 final page, once again, I'll just ask you
19 to review, take as much time as you need.
20 And ask you do you see any
21 reference on this final page at the end
22 of Observation 4 with respect to
23 valsartan, any other sartan medication,
24 or NDMA, NDEA, or nitrosamines?

Page 451

1 A. There is no mention of
2 valsartan on this page, nor is there any
3 mention of NDMA or NDEA in the final
4 observations for Observation Number 4.
5 Q. And just scroll down to the
6 last page, which appears to be some sort
7 of boilerplate language, but I just want
8 to confirm.
9 The same applies with
10 respect to this nonsubstantive page?
11 A. This is nonsubstantive and
12 is something which is a part of every 483
13 as it refers to various sections of the
14 FD&C and the U.S.C.
15 Q. Mr. Anderson, did you see
16 anything in this 483 that pertains to
17 valsartan or any other sartan medication?
18 A. Not a thing.
19 Q. Do you see anything in this
20 Form 483 that pertains to NDMA, NDEA, or
21 any other nitrosamine?
22 A. Not a thing.
23 Q. Is there anything in this
24 document that would change your opinions

Page 452

1 in this case that you rendered in your
2 expert report on January 12th?
3 A. Not at all.
4 Q. Do you find anything in this
5 document to be relevant to the opinions
6 that you rendered in your expert report
7 submitted on January 12th?
8 A. Not relevant at all, the
9 reason being, this 483 not only does not
10 contain anything having to do with the
11 topic of valsartan or the NDMA/NDEA
12 impurity matter, but it is also something
13 that was issued at a time long past the
14 time that Teva ceased to be marketing
15 valsartan products.
16 Q. And just to confirm, because
17 I don't know that we really squarely
18 addressed it yet today, what is your
19 conclusion from your review of material
20 that you looked at to prepare your expert
21 report in this case as to whether any of
22 Teva's valsartan or valsartan-containing
23 products was adulterated under the terms
24 of the FD&C Act?

Page 453

1 MR. STANOCH: Objection to
2 form.
3 THE WITNESS: The valsartan
4 products, as they were made, were
5 declared -- or the APIs
6 declared -- was declared as
7 adulterated as of November 29,
8 1918 and not a time before that.
9 BY MR. HARKINS:
10 Q. Sorry about that. 2018?
11 A. I'm sorry. Forgive me.
12 Scratch that year. More correctly, it's
13 2018. Yes.
14 Q. You reviewed a significant
15 number of documents, both in preparing
16 your report and in preparing to come in
17 and take your deposition today?
18 A. Yes. And among those
19 documents were included the actual
20 inspection reports that were prepared by
21 Teva auditors as well as the 483s which
22 were issued by FDA or by the Maltese
23 inspection authority.
24 Q. And those -- that's the

Page 454

1 material that you discuss, not only in
2 the body of your report but in your
3 detailed appendix?
4 A. I discuss this extensively
5 in the detailed appendix, which captures
6 all of the observations that were made in
7 all of these inspections and with
8 responses that were prepared by the -- by
9 Mylan or by ZHP or by Teva, depending on
10 what the nature of the audit or
11 inspection was.
12 Q. Have you seen anything
13 during your review of materials in
14 preparation to coming for your deposition
15 today that's caused you to change your
16 opinions as set forth in your January 12,
17 2022 report?
18 MR. STANOCH: Objection to
19 form.
20 THE WITNESS: Not a thing.
21 BY MR. HARKINS:
22 Q. Have you been shown anything
23 by plaintiffs' counsel during the
24 deposition today that has caused you to

Page 455

1 change any of your opinions set forth in
2 your January 12, 2022 expert report?
3 MR. STANOCH: Same
4 objection.
5 THE WITNESS: Not a thing.
6 MR. HARKINS: Thank you,
7 Tim.
8 Those are all the questions
9 I have.
10 THE WITNESS: Thank you all
11 for your time.
12 MR. HARKINS: He may have
13 more for you.
14 MR. STANOCH: I do not. No
15 questions. We're done.
16 MR. HARKINS: Anything from
17 anyone else?
18 All right. Thanks everyone,
19 and sincere apologies. Let's go
20 off the record.
21 THE VIDEOGRAPHER: The time
22 is 7:41 p.m. We are off the
23 record.

supervision of the certifying reporter.)

Page 458

INSTRUCTIONS TO WITNESS

Please read your deposition over carefully and make any necessary corrections. You should state the reason in the appropriate space on the errata sheet for any corrections that are made.

After doing so, please sign the errata sheet and date it.

You are signing same subject to the changes you have noted on the errata sheet, which will be attached to your deposition.

It is imperative that you return the original errata sheet to the deposing attorney within thirty (30) days of receipt of the deposition transcript by you. If you fail to do so, the deposition transcript may be deemed to be accurate and may be used in court.

<p style="text-align: right;">Page 10</p> <p>1 VIDEOGRAPHER: 2 We are now on the record. 3 My name is Jeff Fleming. I'm a 4 videographer for Golkow Litigation Services. 5 Today's date is March 23rd, 2022. Time 6 is 9:09 a.m. 7 This remote video deposition is being 8 held in the matter of Valsartan, Losartan, and 9 Irbesartan Products Liability litigation, in the 10 United States District Court, District of New 11 Jersey. 12 The deponent is Dr. Steven Baertschi. 13 All parties to this deposition are 14 appearing remotely and have agreed to the witness 15 being sworn in remotely. Due to the nature of 16 remote reporting, please pause briefly before 17 speaking to ensure all parties are heard 18 completely. 19 Appearances will be noted on the 20 stenographic record. 21 The court reporter is Lois Robinson, 22 who will now swear in the witness. 23 STEVEN BAERTSCHI, Ph.D., 24 the witness, after having first been</p>	<p style="text-align: right;">Page 12</p> <p>1 What cases? 2 A Um, I don't have that committed to 3 memory, but they were all patent disputes between 4 two pharmaceutical companies. 5 Q And over what -- do you remember what 6 party hired you for those cases? 7 A Can I look at my CV to remember? 8 Q Sure. 9 MR. HARKINS: 10 He has a copy of the original report. 11 It also has a CV attached as an exhibit. 12 So, Doctor, you can look at that. 13 A One -- the most recent one was for 14 Exel- -- for Eton Pharmaceuticals versus Exela. 15 A previous one, that was not a 16 deposition, so I'll skip that. 17 Then there -- 18 Well, no. There was -- so that was 19 Mylan versus Teva. 20 MS. BOGDAN: 21 Q Okay. And, Doctor, could you tell me 22 what part of your CV you're looking at to refresh 23 your recollection with regard to my question? 24 A The very end. The very last page on my</p>
<p style="text-align: right;">Page 11</p> <p>1 duly sworn to tell the truth, the whole truth, 2 and nothing but the truth, was examined and 3 testified as follows: 4 EXAMINATION 5 BY MS. BOGDAN: 6 Q Good morning, Dr. Baertschi. Did I 7 pronounce your name correctly? 8 A It's Baertschi, like bear and cheese. 9 Yes. 10 Q Okay. Good morning. My name is 11 Rosemarie Bogdan, and I'm a member of the 12 Plaintiffs' Steering Committee in this 13 litigation. I'm going to be asking you some 14 questions today. And my first question for you 15 is have you ever been deposed before? 16 A Yes. 17 Q Okay. And how many times have you been 18 deposed? 19 A Three or four. I think it's three, but 20 it might be four. 21 Q And how many of those were in a 22 litigation context? 23 A All of them. 24 Q And what matters were you deposed on?</p>	<p style="text-align: right;">Page 13</p> <p>1 CV. 2 Q And when you said -- you first spoke of 3 the Exela versus Eton Pharmaceutical case. 4 A Yes. 5 Q Which party were you hired by? 6 A Eton. 7 Q And then I believe you just referenced 8 a Mylan versus Teva case? 9 A Yeah, and I -- yes. 10 Q Which -- 11 A But I actually don't think -- I don't 12 think I was deposed in that record. 13 MR. HARKINS: 14 Let her finish her question. Okay? 15 MS. BOGDAN: 16 Q And which party did you represent or 17 you were retained by in that case? 18 A Mylan. 19 Q Okay. And the last matter? 20 A Last matter was a number of companies. 21 There were eleven companies represented by eleven 22 legal firms. I think I was originally hired by 23 Mylan in that case versus Takeda and AstraZeneca. 24 Q Now, prior to being hired as an expert</p>

<p style="text-align: right;">Page 14</p> <p>1 by Mylan in the two litigations that you've 2 testified that you were retained, had you worked 3 for Mylan as a consultant? 4 A No. 5 Q Prior to being retained in this 6 litigation, have you worked for Teva as a 7 consultant? 8 A No. 9 Q Now, with regard to the Exela Pharma 10 versus Eton Pharmaceutical case, that's one that 11 you recently testified in; correct? 12 A Yes. 13 Q Okay. And that was -- 14 Okay. And when did you testify in that 15 case? 16 A Last Tuesday. Last week. 17 Q And did you testify more than once in 18 that case? 19 A I was deposed twice, and I testified 20 once. 21 Q So when you say "deposed," you mean at 22 a deposition? 23 A Yes. 24 Q When you say "testified," do you mean</p>	<p style="text-align: right;">Page 16</p> <p>1 posing, that you please let me know that so I 2 have an opportunity to rephrase it for you. Is 3 that acceptable to you? 4 A That is acceptable. 5 Q If you answer a question, I'm gonna 6 assume that you understand what I'm asking. 7 Okay? 8 A Okay. 9 Q And because we're doing this remotely, 10 it becomes particularly important -- and I 11 believe the stenographer reminded both of us -- 12 if we don't talk over each other. So sometimes 13 there's a little bit of a delay on the video, 14 et cetera. 15 So if -- I'm going to try to make sure 16 that you're done with your answer before I start 17 my next question. And if you could just wait a 18 little bit to make sure I'm done with my question 19 before you start to answer. Okay? 20 A Okay. 21 Q Now, have you met -- 22 Sorry. There was a little glitch here 23 on the audio. 24 What did you do to prepare for your</p>
<p style="text-align: right;">Page 15</p> <p>1 in a court proceeding? 2 A Yes. 3 Q Now, in that case, wasn't your 4 testimony precluded with regard to your 5 noninfringement positions by court order? 6 A It was -- there was a preclusion of 7 part of what I testified about due to a legal 8 dispute on the interpretation of the law between 9 the two legal firms, which the judge made a 10 ruling on just prior to trial. So one small part 11 of my testimony was precluded, yes. 12 Q When you say "precluded," that meant 13 that the Court would not allow you to testify 14 about that particular part of your opinion at the 15 trial of the matter; correct? 16 MR. HARKINS: 17 Objection to the extent it calls for a 18 legal conclusion. 19 You can answer. 20 A As I understand it, yes. 21 MS. BOGDAN: 22 Q I'm going to be asking you questions 23 today, and what I would like to ask of you is if 24 you don't understand the question that I'm</p>	<p style="text-align: right;">Page 17</p> <p>1 deposition today? 2 A Can I ask this question? Can I change 3 my display so it doesn't flip like we have it so 4 I don't see the large screen of whoever's 5 speaking? I'd just rather see the gallery, 6 because it's disruptive to me in my thinking when 7 the -- when the feed flips pictures. 8 Q Why don't we just go off the record so 9 they can make that adjustment for you in the 10 room. I don't think it's something that the 11 videographer or I can do. So let's just go off 12 the record, and maybe Mr. Harkins can help you 13 with that setting. 14 VIDEOGRAPHER: 15 Off record, 9:19 a.m. 16 (OFF THE RECORD.) 17 VIDEOGRAPHER: 18 On record, 9:23 a.m. 19 MS. BOGDAN: 20 Q Dr. Baertschi, I believe before we went 21 off the record to deal with that technical issue, 22 my question that I asked you was what did you do 23 to prepare for your deposition here today? 24 A Yes. I reviewed my expert report, some</p>

<p style="text-align: right;">Page 18</p> <p>1 of the references -- on my own I did this -- some 2 of the references that I refer to in the expert 3 report. I had a preparative meeting with Steve 4 Harkins on Friday for a couple of hours. I had 5 another preparative meeting for a couple of 6 hours -- 7 Wait. On Friday, yes. 8 And then I had another preparative 9 meeting on Monday for a couple of hours with 10 Steve Harkins, and then I spent all day or about 11 eight hours yesterday with both Steve Harkins and 12 Tori Langton. 13 Q So you mentioned a bunch of different 14 preparatory meetings. How many hours did you 15 spend in preparatory meetings? 16 A Twelve to 15. 17 Q And as far as your document review, you 18 said you reviewed your report? 19 A Yes. 20 Q Did you review any other specific 21 documents? 22 A Yes. I went through some of the 23 documents to refresh my memory. I can't remember 24 all of them. But, more explicitly, the ones that</p>	<p style="text-align: right;">Page 20</p> <p>1 references that I specifically quote or 2 specifically call out versus I might have some 3 references where there's one, two, three, four, 4 five, six references to a particular statement I 5 make. I didn't necessarily go look at all of 6 those. 7 MS. BOGDAN: 8 Q And was it that review that prompted 9 the corrected report that I received yesterday, 10 which was March 22nd? 11 A Yes. 12 Q And did you substantively change 13 anything in the report with regard to your 14 opinions in this matter? 15 A No. 16 Q Just changed reference cites, 17 essentially? 18 A I changed errors that I had made in 19 referencing the wrong article, and I also had a 20 couple of numbers that I had copied wrong when I 21 made a grammatical -- not a grammatical -- 22 copy/paste error looking at -- 23 I mean, if you want to go through each 24 one, I can specifically tell you. But it was</p>
<p style="text-align: right;">Page 19</p> <p>1 were cited in my report where I quoted from them, 2 I kind of went back to those reports and took a 3 look to refresh my memory. 4 Q So you reviewed the documents that are 5 actually cited as references in your report? 6 A Yes. 7 Q That you specifically have in your 8 report on pages 25, 26, and 27? 9 MR. HARKINS: 10 And, just for clarity, Rosemarie, is 11 this the original report or the corrected report? 12 MS. BOGDAN: 13 I don't believe it makes a difference, 14 actually, but the corrected report. 15 MR. HARKINS: 16 So, Dr. Baertschi, the 3-22 date on it, 17 just to make sure your pages are exact. 18 A Yes. I'm looking at 25, 26, and 27, 19 and it looks like a list of references 1 through 20 32. I'm not saying that I went through all of 21 those references. I looked at them all, the 22 reference, just like on this page, and decided 23 which ones to kind of go actually pull up and 24 reread. And that was partially guided by</p>	<p style="text-align: right;">Page 21</p> <p>1 reference error, like I lost track of which 2 reference I was -- 3 And then I -- I found that when I went 4 in to look at the articles that, oh, I have got 5 now the wrong reference for the quotation, and I 6 copied the wrong number for a threshold. 7 Q One of the changes you made was with 8 regard to the number of peer-reviewed articles 9 you authored? 10 A Yes. I think when I had submitted the 11 CV, there was one article that was in press -- 12 not in press. It was -- I expected it to be 13 submitted before -- 14 This was a while ago. And I just never 15 paid attention to -- 16 It hasn't still yet been submitted. 17 And when I testified last week, they asked me the 18 question how many peer-reviewed, and I had just 19 looked at it, and I remembered 58. And then when 20 I looked in my CV -- not my CV -- I looked at 21 this expert report and it said 59, and I said 22 it's 58. And I looked and confirmed. So I had 23 made a -- an error on the numbers that I counted. 24 Q So you counted one of the articles that</p>

<p style="text-align: right;">Page 22</p> <p>1 you authored as a peer-reviewed article that had 2 not yet been peer-reviewed; correct? 3 A Correct. 4 Q With regard to the citation corrections 5 that you made, did you add any new citations to 6 the report? 7 A No. 8 Q So it was a matter of actually 9 assigning the right article to the right quote? 10 A Yes. That's my recollection. That's 11 what I -- yes. 12 Q Did you bring any documents with you 13 today? 14 A No. There's -- the only documents I 15 have are what's been provided by Steve Harkins. 16 Q Okay. And what documents are those 17 that you have? Do you have documents sitting in 18 front of you? I'm not in the room, so I can't -- 19 I can't see. 20 A Yes. I have my expert report and my 21 corrected expert -- the pre-corrected expert 22 report, along with my CV and my corrected expert 23 report, and I have a list of materials 24 considered. I don't know if you need me to hold</p>	<p style="text-align: right;">Page 24</p> <p>1 Q Okay. And in the room with you today, 2 is there anyone in the room with you today other 3 than Attorney Harkins and Attorney Langton? 4 A No. 5 Q If we could please pull up the notice 6 to take the videotaped oral deposition as an 7 exhibit, please. 8 MR. HARKINS: 9 And, Dr. Baertschi, just so you're used 10 to this now, in a moment you're gonna refresh 11 that just to make sure the Dropbox is working 12 appropriately for you. But you can review it on 13 the hard copy or electronic copy. 14 THE WITNESS: 15 Okay. I can see it on this screen. 16 I'm not seeing anything here. It says no file. 17 Should I say download all files? 18 MR. HARKINS: 19 Rosemarie, is that being introduced 20 or -- 21 MS. BOGDAN: 22 I'm gonna mark it. I'm going to 23 introduce it. If the doctor can see it on the 24 computer screen right in front of him --</p>
<p style="text-align: right;">Page 23</p> <p>1 these up. 2 I have a notice to take videotaped oral 3 deposition, and I have a defendant's responses 4 and objections to plaintiffs' notice. 5 Q Okay. Do you have anything else other 6 than what you've just listed off? 7 A I have a cell phone that I have turned 8 off or silenced. I have a pen, and I have a pad 9 of paper that's empty. 10 Q I meant documents. 11 A Oh. No. 12 Q Like -- I'll ask you about electronic 13 devices. Now, I'm assuming you're speaking to me 14 through some type of computer or, you know, 15 audiovisual system. On that computer, is there 16 any email or direct message or chat that you're 17 using? 18 A No. 19 Q All right. So all applications right 20 now are off and will remain off during the course 21 of the deposition? 22 A Yes. And I don't have -- it's not my 23 computer. It's a loaner computer from Greenberg 24 Traurig, so that it's clean.</p>	<p style="text-align: right;">Page 25</p> <p>1 THE WITNESS: 2 I've got it up now on both screens, but 3 it's -- 4 MS. BOGDAN: 5 Q Okay. Yeah. 6 A -- it's clearer on this screen. 7 Q Okay. I believe the way this is 8 supposed to work is they should match at all 9 times. If they don't match, you definitely let 10 us know. Okay? 11 A Okay. 12 Q If we could mark the notice to take 13 videotaped deposition as exhibit -- 14 Are we going to use numbers today? 15 One. 16 MR. HARKINS: 17 That sounds good to me. 18 (DEPOSITION EXHIBIT NUMBER 1 19 WAS MARKED FOR IDENTIFICATION.) 20 MS. BOGDAN: 21 Q All right. Doctor, is this the notice 22 that you referred to having with you today in the 23 room? 24 MR. HARKINS:</p>

<p style="text-align: right;">Page 26</p> <p>1 The notice, not the objections.</p> <p>2 A Yes.</p> <p>3 MS. BOGDAN:</p> <p>4 Q Okay. Do you see the document requests</p> <p>5 that are a part of that notice on the third page?</p> <p>6 A Yes.</p> <p>7 Q Were you provided that list of document</p> <p>8 requests?</p> <p>9 A Yes.</p> <p>10 Q Did you go about assembling responses</p> <p>11 to those requests?</p> <p>12 A Yes. I -- I had a con- -- conversation</p> <p>13 with Steve, and we went through all of these, and</p> <p>14 I provided everything that I could that was</p> <p>15 related that -- based on advice of counsel.</p> <p>16 MS. BOGDAN:</p> <p>17 If we could mark the defendant's</p> <p>18 responses and objections to plaintiffs' notice.</p> <p>19 A Yes. I'm sorry. Could you repeat</p> <p>20 that? Did you say do you mark?</p> <p>21 Q No. I'm sorry. I was asking the court</p> <p>22 reporter to bring up the next exhibit, please,</p> <p>23 and please mark this as Exhibit 2.</p> <p>24 (DEPOSITION EXHIBIT NUMBER 2</p>	<p style="text-align: right;">Page 28</p> <p>1 A I really don't know. I -- I might</p> <p>2 know, but I'm uncertain with the question and</p> <p>3 uncertain with...</p> <p>4 MS. BOGDAN:</p> <p>5 Q Did you see a copy of the file for you</p> <p>6 that was produced in this litigation?</p> <p>7 A Probably. But it's escaping my memory</p> <p>8 right now. But I was probably made aware of</p> <p>9 that.</p> <p>10 Q There was a file produced for you in</p> <p>11 litigation on Monday of this week. Were you</p> <p>12 provided a copy of that file?</p> <p>13 A I'm pretty sure I was. I think I was.</p> <p>14 MR. HARKINS:</p> <p>15 Don't -- don't assume if you're unsure.</p> <p>16 A I'm unsure. I really don't know for</p> <p>17 sure.</p> <p>18 MS. BOGDAN:</p> <p>19 Q So you don't know if you have received</p> <p>20 a copy of the documents that were produced on</p> <p>21 your behalf in prep- -- two days ago --</p> <p>22 A Yeah.</p> <p>23 Q -- in response to this notice that was</p> <p>24 marked as Exhibit 1?</p>
<p style="text-align: right;">Page 27</p> <p>1 WAS MARKED FOR IDENTIFICATION.)</p> <p>2 MS. BOGDAN:</p> <p>3 Q And, Dr. Baertschi, is what's been</p> <p>4 marked as Exhibit 2 the defendant's responses and</p> <p>5 objections to the plaintiffs' notice that you</p> <p>6 mentioned that you have with you today?</p> <p>7 A Yes. Yes.</p> <p>8 Q And have you read that document?</p> <p>9 A Yes.</p> <p>10 Q And, to your knowledge, did you provide</p> <p>11 to counsel all of the documentation that you had</p> <p>12 that was responsive to the demands?</p> <p>13 A Well, I responded with everything that</p> <p>14 counsel suggested or discussed with me that I</p> <p>15 should provide, based on his objections or the</p> <p>16 company's objections and what's appropriate to</p> <p>17 provide.</p> <p>18 Q And were all those things that were</p> <p>19 appropriate to provide included in your file that</p> <p>20 was produced?</p> <p>21 MR. HARKINS:</p> <p>22 Object to form. Calls for a legal</p> <p>23 conclusion.</p> <p>24 You can answer, to the extent you know.</p>	<p style="text-align: right;">Page 29</p> <p>1 A I'm sorry. My memory is so full from</p> <p>2 going over so much material, and I don't recall</p> <p>3 for sure whether I received an email notice</p> <p>4 with -- with the information, the response. I</p> <p>5 have -- I was explained -- it was -- I -- I did</p> <p>6 discuss what materials --</p> <p>7 MR. HARKINS:</p> <p>8 Just -- do not discuss anything that</p> <p>9 reflects conversations that you had with me or</p> <p>10 any other counsel. But you can answer, again, to</p> <p>11 the extent you understand, what, if anything, was</p> <p>12 produced.</p> <p>13 A I'm not sure what -- if I got a notice</p> <p>14 or not.</p> <p>15 MS. BOGDAN:</p> <p>16 Q Well, as you sit here today, you can't</p> <p>17 tell me if the documents that were produced</p> <p>18 included all of the documents that you provided</p> <p>19 to counsel that were responsive to the demands?</p> <p>20 A As I sit here today, I cannot remember</p> <p>21 if I was sent a notification via email of that.</p> <p>22 Q Do you have any notes in front of you</p> <p>23 today?</p> <p>24 A No.</p>

<p style="text-align: right;">Page 30</p> <p>1 MS. BOGDAN:</p> <p>2 If we could please mark the first</p> <p>3 expert report with exhibits that was produced by</p> <p>4 the doctor.</p> <p>5 (DEPOSITION EXHIBIT NUMBER 3</p> <p>6 WAS MARKED FOR IDENTIFICATION.)</p> <p>7 MS. BOGDAN:</p> <p>8 Q Has that been marked as Exhibit 3?</p> <p>9 TRIAL TECH:</p> <p>10 Yes.</p> <p>11 MS. BOGDAN:</p> <p>12 Q Doctor, can you see what's been marked</p> <p>13 as Exhibit 3?</p> <p>14 A I can see it on this screen, and now I</p> <p>15 can see it on a big screen. So, yes.</p> <p>16 Q Is that your first expert report with</p> <p>17 exhibits that was produced in this litigation?</p> <p>18 A I will have to find where -- I will</p> <p>19 have to go to where one of those changes were</p> <p>20 made to -- to figure out whether or not --</p> <p>21 Okay. It looks like it, because I see</p> <p>22 that I reference 59 peer-reviewed articles. So</p> <p>23 it must not be the corrected version. So it must</p> <p>24 be the first version.</p>	<p style="text-align: right;">Page 32</p> <p>1 If we could please pull up as Exhibit 5</p> <p>2 and mark the amended list of materials</p> <p>3 considered.</p> <p>4 (DEPOSITION EXHIBIT NUMBER 5</p> <p>5 WAS MARKED FOR IDENTIFICATION.)</p> <p>6 A I see it.</p> <p>7 MS. BOGDAN:</p> <p>8 Q And, Doctor, is this a copy of your</p> <p>9 amended list of materials considered that was</p> <p>10 served on March 21st, 2022?</p> <p>11 A Yes.</p> <p>12 Q What did you amend regarding your</p> <p>13 materials considered list between the original</p> <p>14 one that was served and this one?</p> <p>15 A There were some depositions I know that</p> <p>16 were added that weren't available at the time.</p> <p>17 And I don't remember everything that was amended.</p> <p>18 Q So you remember that depositions in</p> <p>19 general were added that weren't available at the</p> <p>20 time of your original list of materials</p> <p>21 considered?</p> <p>22 A That's my memory, yes.</p> <p>23 Q Did you add any research articles or</p> <p>24 studies to this amended list of materials</p>
<p style="text-align: right;">Page 31</p> <p>1 MS. BOGDAN:</p> <p>2 All right. And, then, if we could</p> <p>3 please pull up the corrected expert report and</p> <p>4 mark that as the next exhibit, Exhibit 4.</p> <p>5 (DEPOSITION EXHIBIT NUMBER 4</p> <p>6 WAS MARKED FOR IDENTIFICATION.)</p> <p>7 A Is there a question?</p> <p>8 MS. BOGDAN:</p> <p>9 Q And, Doctor, can you see Exhibit 4 now</p> <p>10 on your screen? And my question would be: Is</p> <p>11 that a copy of your corrected report that was</p> <p>12 served March 22nd, 2022?</p> <p>13 A I can see it. I'm check- -- I'm</p> <p>14 scrolling down to the point where I see I have</p> <p>15 authored 58 peer-reviewed articles, which</p> <p>16 suggests to me that this is the revised expert</p> <p>17 report.</p> <p>18 Q And on the first page of that exhibit,</p> <p>19 it actually has the date of March 22nd, 2022.</p> <p>20 A I see that.</p> <p>21 Q Okay. And does that also indicate it's</p> <p>22 your corrected expert report?</p> <p>23 A Yes.</p> <p>24 MS. BOGDAN:</p>	<p style="text-align: right;">Page 33</p> <p>1 considered?</p> <p>2 A I do not believe so. I --</p> <p>3 Can I correct that? I see two articles</p> <p>4 that I co-authored at the bottom of -- well, it's</p> <p>5 at the bottom of page 10 that I don't think were</p> <p>6 in the original list but are -- are in this list.</p> <p>7 So I think there are maybe -- there's at least</p> <p>8 those two articles that were added.</p> <p>9 Q Which two articles are those?</p> <p>10 A The last two on page 10. They're 2018</p> <p>11 and 2013.</p> <p>12 Q The -- I believe if you could --</p> <p>13 A I believe --</p> <p>14 I'm sorry.</p> <p>15 MS. BOGDAN:</p> <p>16 If we could just highlight those.</p> <p>17 Q "The Artificial Degradation of</p> <p>18 Secondary Amine," that article?</p> <p>19 A Yes. I think these were added, to the</p> <p>20 best of my recollection.</p> <p>21 Q Okay. However, both of those were</p> <p>22 authored before you issued your first report in</p> <p>23 this litigation; correct?</p> <p>24 A Yes. I -- I added them as a -- when I</p>

<p style="text-align: right;">Page 34</p> <p>1 was looking at the request for materials to 2 provide, and I believe it requested any articles 3 that I had authored that touch on, or some such 4 phrasing, nitrosamines. And these two articles 5 do, and so it occurred to me that I should 6 provide them. I don't think I provided them 7 before. 8 MS. BOGDAN: 9 Okay. If we could take that down, 10 please. 11 Q Current employment? 12 A I'm sorry. Could you repeat that? It 13 cut off for a second. 14 Q What is your current employment? 15 A My current employment is a consultant 16 with Baertschi Consulting, LLC. 17 Q And how many employees does Baertschi 18 Consulting, LLC, have? 19 A One. 20 Q And how long have you been working for 21 Baertschi Consulting, LLC? 22 A Seven years, one month, and a week or 23 two. 24 Q And when you said there's one employee,</p>	<p style="text-align: right;">Page 36</p> <p>1 biotech, are you referring to pharmaceutical 2 companies that manufacture drugs? 3 A Some do. Some do not. Because some 4 are small companies or companies that have never 5 launched a product. So it -- if they haven't 6 launched a product, they're not a manufacturer. 7 A lot of companies I -- some of the 8 companies I consult with are virtual, and so 9 they're trying to bring a drug to market and 10 they're not a manufacturer themselves but they 11 contract it out. So there's a wide variety. 12 Some are -- do manufacture their own drugs. 13 Q And who are your clients that have 14 hired you for consulting purposes with regard to 15 nitrosamine impurities? 16 MR. HARKINS: 17 Object to the extent it calls for any 18 confidential information. 19 To the extent you're comfortable and 20 able to talk about that, you can answer. 21 A I can't provide you with the companies' 22 names, but I can say that because of the 23 confidentiality agreement I have with companies 24 is that I won't disclose their name without</p>
<p style="text-align: right;">Page 35</p> <p>1 I'm assuming that's you? 2 A Yes, ma'am. 3 Q Okay. Are you also a officer with the 4 LLC? 5 A I -- I don't think with an LLC we have 6 to designate officers, but if we do, I am. I -- 7 I think that was -- when I was looking to set it 8 up, I think that was a different type of 9 organization. 10 Q Are there any other principals in the 11 organization other than yourself? 12 A I do not believe so. 13 Q What is the business of Baertschi 14 Consulting, LLC? 15 A Providing consulting to any company 16 that would need but primarily to pharmaceutical 17 biotech, occasionally agrochemicals and 18 packaging, or sometimes instrumentation companies 19 related to my expertise, which is in impurities, 20 impurities identification, mutagenic impurities, 21 chemical drug degradation, formulation stability, 22 those sort -- photostability, photo safety, those 23 sorts of things. 24 Q And when you say to pharmaceutical</p>	<p style="text-align: right;">Page 37</p> <p>1 getting permission. But I -- there are a couple 2 of companies that I can't -- one company I can 3 disclose the name of. Well, I'd better not 4 because I'm not completely sure of that. 5 So I'm gonna say it's about four or 6 five companies that I have consulted with regard 7 to primarily risk assessments of nitrosamine 8 formation on stability. 9 MS. BOGDAN: 10 Q Have you been hired by any of the 11 defendants in this case to act as a consultant 12 with regard to nitrosamine impurities? 13 A No. 14 Can I ask a question? I've reviewed a 15 number of companies, and I think I've seen ten or 16 twelve and -- I don't know -- maybe even more 17 than that with some of the Rite Aid and CVS and 18 Walgreens. But I did not see any companies that 19 I have consulted with on the list, that I can 20 recall, with regard to nitrosamines. I'm pretty 21 sure of that. 22 Q Have you done work for any of the 23 companies in the past? 24 A On the broad list.</p>

<p style="text-align: right;">Page 38</p> <p>1 Have I done work for any companies on 2 the complete list of defendants? 3 Q Yes. 4 A I don't know that I know the complete 5 list of defendants. But, to my knowledge, the 6 ones I have looked at, I have not provided any 7 consulting to them. 8 Q Have you done any consulting work for 9 ZHP, Solco, or Prinston? 10 A No. 11 Q Have you done any consulting work for 12 Aurobindo, Mylan, or Teva? 13 A No. 14 Q Have you done any consulting work for 15 Torrent? 16 A No. 17 I'm starting to get uncomfortable in 18 that you could continue to list companies, and 19 then if you hit one that I have -- been a client 20 of mine, now I'm revealing that. So I'm starting 21 to get uncomfortable about whether or not you go 22 through a list of 20 or 30 companies and I -- 23 Because I've contracted with over 60 24 companies in the last 70 years -- seven years.</p>	<p style="text-align: right;">Page 40</p> <p>1 pharma companies? 2 A No. 3 Q What other type of companies do you do 4 work for? 5 A Agrochemical, animal health, and 6 instrument providers, instrumentation providers 7 that -- that make mass spectrometers or -- well, 8 mass spectrometers. 9 For example, I published a paper with 10 ACD/Labs. They're a software provider. So 11 the -- the article is a non-peer-reviewed 12 publication, so it's not privileged that I could 13 say that I worked with ACD/Labs. That's an 14 example of the kind of non-pharmaceutical 15 company. 16 Q What percentage of your business is 17 working for pharmaceutical companies? 18 A I don't have an accurate number from 19 calculating it, but I would estimate it at 90 20 percent. 21 Q And what is the other 10 percent? 22 A Other companies, non-pharmaceutical, or 23 litigation. 24 Q What percent of your work is</p>
<p style="text-align: right;">Page 39</p> <p>1 Q Well, part of serving as a consulting 2 expert in this litigation, I am absolutely 3 entitled to ask you if you have worked for any of 4 the defendants in the litigation in the past. 5 A Okay. If that's the legal standard, 6 then I'll answer any -- any questions. 7 MR. HARKINS: 8 Wait for a question. 9 MS. BOGDAN: 10 Q And, so, just so we can move on and 11 then we can maybe, you know, circle back to this, 12 with regard to the defendant list and the 13 documents you've reviewed, are there any of the 14 defendants that you know of as you sit here right 15 now that you have done work for in the past? 16 A No. 17 Q And when you say you've been hired by 18 60 companies in the past seven years, I'm 19 assuming you have a list of those 60 companies? 20 A I have -- I don't have a single list of 21 the companies, but I have records of all 22 consulting that I've done with companies. I mean 23 individual, not a combined list. 24 Q And are they all either biotech or</p>	<p style="text-align: right;">Page 41</p> <p>1 litigation-related? 2 A From -- in what time frame? Because 3 it's only been recently that I've had a few cases 4 in litigation. 5 Q Well, let's say in 2021. 6 A I would estimate 15 percent. 7 Q And the other non-pharmaceutical 8 companies that you do consulting work for, are 9 those companies somehow related to biotech or the 10 pharmaceutical industry? 11 A Related to -- 12 Q Meaning they provide instruments or 13 equipment that are used in biotech or the 14 pharmaceutical industry? 15 A Yes. They would be commercial vendors 16 that provide -- that sell instruments to not just 17 pharmaceuticals but the chemical industry, to 18 other related industries that use that kind of 19 advanced technology. 20 Q Like bioanalytical laboratories or that 21 kind of business? 22 A Exactly. Yes. 23 MS. BOGDAN: 24 If we could please pull up as an</p>

<p style="text-align: right;">Page 42</p> <p>1 exhibit the Baertschi Consulting, LLC, service 2 overview. It will be one of the last documents 3 loaded into the repository, if that's helpful. 4 (DEPOSITION EXHIBIT NUMBER 6 5 WAS MARKED FOR IDENTIFICATION.) 6 MS. BOGDAN: 7 Q Dr. Baertschi, can you see the exhibit? 8 A Yes. 9 Q And are we now on Exhibit 6 for 10 identification? 11 TRIAL TECH: 12 Correct. 13 MS. BOGDAN: 14 Q Do you recognize that exhibit? 15 A I do recognize it. 16 Q And under new expanded services, can 17 you read the section that begins "N-nitroso"? 18 A "N-nitroso/N-nitrosamine impurities and 19 risk assessments for the formulated product." 20 Q And what is involved with that type of 21 service? 22 A That type of service involves helping a 23 company do a risk assessment per the guidance 24 provided by EMA and maybe FDA as to what you</p>	<p style="text-align: right;">Page 44</p> <p>1 Eli Lilly. Is that my understanding? 2 A That is correct. 3 Q Okay. And your roles at Eli Lilly were 4 that of senior chemist and senior research 5 fellow? 6 A That's -- my starting position was 7 labeled as a senior chemist, and my ending 8 position was labeled -- the title is a senior 9 research fellow. 10 Q And what did your job responsibilities 11 entail in those positions with Eli Lilly? 12 A A wide -- it -- 13 Most of my responsibility focused on 14 helping assess stability, both predictive and 15 actual stability, and all the processes 16 associated with that. So that -- that has to do 17 with force degradation studies, also known as 18 stress testing studies, the degradation of drug 19 substances and drug products, the formulation and 20 how formulations might stabilize or 21 destabilize -- and that's both chemical and 22 physical stability -- and photo safety, 23 photostability studies and impurity isolation and 24 identification mechanistic understanding.</p>
<p style="text-align: right;">Page 43</p> <p>1 should do to carry out a risk assessment related 2 to the formation of nitrosamines as degradation 3 products, degradation-related impurities in the 4 formulated product. 5 So I don't -- I don't focus on 6 nitrosamine formation in synthetic routes or the 7 process impurity, the synthetic process as 8 process impurities. I focus on -- my -- my 9 expertise is on the potential formation 10 of N-nitroso compounds upon aging of a formulated 11 product. 12 Q When you say that your expertise is on 13 the potential formation of N-nitroso compounds 14 upon aging of a formulated product, you're 15 talking about nitrosamines forming as a result of 16 degradation? 17 A Yes. It would be classified as 18 degradation, yes. 19 Q Do you serve as a consultant with 20 regard to doing a risk assessment of the 21 synthetic process that is used to manufacture the 22 drug? 23 A I have not. 24 Q Now, you previously worked for</p>	<p style="text-align: right;">Page 45</p> <p>1 And I also, by the time I was done, was 2 mentoring a wide variety of other scientists, 3 and -- and part of my responsibilities were to 4 mentor the next generation of scientists. 5 Q So, from that response, I gather that 6 your work at Eli Lilly also pertained to studying 7 degradation of drug substances and products and 8 studying what can happen to them after they're 9 produced but before they would be taken by the 10 patient? 11 MR. HARKINS: 12 Object to form. Compound. Vague. 13 You can answer. 14 A Yes. I would agree with that 15 statement, that I -- the statement is that I 16 would -- my expertise focused on helping 17 understand what degradation products could and do 18 form prior to the exposure to the patient. 19 MS. BOGDAN: 20 Q Would an analysis of the chemical 21 synthesis route that was used to create the drug 22 be important to understand as an initial matter 23 when looking at potential degradation pathways? 24 MR. HARKINS:</p>

<p style="text-align: right;">Page 46</p> <p>1 Object to form. Speculation. Vague.</p> <p>2 A Looking at the synthetic route and</p> <p>3 understanding the potential impurities and the</p> <p>4 chemistry associated with forming the drug</p> <p>5 substance can be of use in some circumstances</p> <p>6 because sometimes the molecule can fall apart in</p> <p>7 a same -- one step or two in the same manner it</p> <p>8 was put together. Sometimes that's not possible.</p> <p>9 But the process impurities that result</p> <p>10 from that are oftentimes used as a starting point</p> <p>11 for the analytical method development to -- to</p> <p>12 generate a stability-indicating method. So you</p> <p>13 have the -- the process impurities method as a</p> <p>14 starting point, and then you need to develop a</p> <p>15 stability-indicating analytical method, which</p> <p>16 means it would detect any and all degradation</p> <p>17 products that might form and do form.</p> <p>18 MS. BOGDAN:</p> <p>19 Q So understanding that process</p> <p>20 impurities method would be part of what you did</p> <p>21 when you were looking at potential degradation</p> <p>22 products in your role at Eli Lilly?</p> <p>23 A As a starting point, we would look at</p> <p>24 the process impurities and the methods that had</p>	<p style="text-align: right;">Page 48</p> <p>1 forced degradation studies, also known as stress</p> <p>2 testing studies, to process impurity discovery,</p> <p>3 structure elucidation and mechanistic chemistry,</p> <p>4 and to analytical method development.</p> <p>5 Q Okay. So when you refer to design and</p> <p>6 development of analytical methods, what do you</p> <p>7 mean by analytical method?</p> <p>8 A I mean a method that will enable the</p> <p>9 separation of the -- the parent drug from any</p> <p>10 associated impurities and a detection of the</p> <p>11 other impurities with some form of quantitation,</p> <p>12 quantification.</p> <p>13 Q So that would be assisting as -- with</p> <p>14 developing the appropriate test in order to</p> <p>15 identify an impurity and then be able to quantify</p> <p>16 it?</p> <p>17 A Yes.</p> <p>18 Q And depending on what impurity is in a</p> <p>19 drug, that governs what test is appropriate to</p> <p>20 detect it and then quantify it; correct?</p> <p>21 A Um, could you repeat that question?</p> <p>22 Q And I can -- I can rephrase it for you.</p> <p>23 When determining what test is</p> <p>24 appropriate to detect an impurity and quantify</p>
<p style="text-align: right;">Page 47</p> <p>1 been developed to date as the starting point for</p> <p>2 analytical method development for stability. So</p> <p>3 I'm -- I believe I'm agreeing with your</p> <p>4 statement.</p> <p>5 MS. BOGDAN:</p> <p>6 If you could please pull back up</p> <p>7 Exhibit 6. If we could go to the second page.</p> <p>8 Q Doctor, do you see the box that is</p> <p>9 entitled "analytical and mutagenic impurity</p> <p>10 control strategies"?</p> <p>11 A I do see that box.</p> <p>12 Q Okay. And what services are you</p> <p>13 advertising that are available through your</p> <p>14 company with regard to that...</p> <p>15 A Did you finish your question?</p> <p>16 Q With regard to that -- with regard to</p> <p>17 analytical mutagenic impurity control strategies?</p> <p>18 A I'm advertising that -- that I can</p> <p>19 assist with or provide consulting related to the</p> <p>20 design and development of analytical methods for</p> <p>21 ordinary impurities as well as for mutagenic</p> <p>22 impurities, that I can provide services related</p> <p>23 to troubleshooting of analytical methods, to</p> <p>24 solving analytical artifact issues, to leveraging</p>	<p style="text-align: right;">Page 49</p> <p>1 it, it is important to know what the impurity is;</p> <p>2 correct?</p> <p>3 A Yes. You -- you -- it's not always</p> <p>4 universally that situation, but, in general, yes.</p> <p>5 Q You help develop analytical methods and</p> <p>6 tasks in order to find and quantify impurities;</p> <p>7 correct?</p> <p>8 A Yes.</p> <p>9 Q Now, you mentioned two different types</p> <p>10 of impurities. You mentioned ordinary</p> <p>11 impurities. Can you please describe what you</p> <p>12 mean by ordinary impurities?</p> <p>13 A Traditionally -- historically, I should</p> <p>14 say, that is a term coined by USP to describe</p> <p>15 related substances. Ordinary impurities might be</p> <p>16 anything that is related to the synthesis or the</p> <p>17 degradation of a drug substance, and the ordinary</p> <p>18 part of it implies that it's not particularly</p> <p>19 toxic.</p> <p>20 Q Then you have another category of</p> <p>21 genotoxic mutagenic impurities. What do you mean</p> <p>22 by that?</p> <p>23 A There -- the -- the terminology</p> <p>24 there -- mutagenic is a subset of genotoxic</p>

<p style="text-align: right;">Page 50</p> <p>1 impurities, and mutagenic impurities are the 2 subset of potentially toxic impurities that have 3 been identified by ICH M7, a particular guidance 4 document to characterize molecules that might 5 react with DNA. 6 And, so, they have the potential for 7 reacting with DNA and causing a mutation. 8 Q And why did you bullet-point these two 9 types of impurities as opposed to just saying 10 impurities as one category? 11 A Because the challenges associated with 12 detecting and quantifying mutagenic impurities 13 are somewhat -- they're somewhat unique, more 14 difficult because of the low levels for -- when 15 you have identified a mutagenic or genotoxic 16 impurity for controlling or -- or measuring. 17 So it's -- you don't typically apply 18 the same analytical techniques because you need 19 more sensitivity. And -- 20 Q Why are -- 21 I'm sorry. 22 A And there's certain expertise in -- in 23 that process of assessing and doing a mutagenic 24 risk assessment and trying to carry through that</p>	<p style="text-align: right;">Page 52</p> <p>1 MR. HARKINS: 2 Object to form. Scope. Vague. 3 A Yeah. I'm struggling with that 4 question, why is it important. I feel like I 5 just answered why it's important, but maybe I 6 spoke too technically. 7 MS. BOGDAN: 8 Q Why are genotoxic and mutagenic 9 impurities a concern? 10 MR. HARKINS: 11 Same objection. 12 A They're a concern because a mutagen has 13 potential and it has to do with whether or not 14 it's -- 15 I won't go too far, but if you want to 16 go to talk about this further, we can. It's 17 because mutagens can react potentially with DNA. 18 And if a mutagen reacts with DNA and it's 19 ingested by an animal or a person, it can then 20 react with DNA. Reactions with DNA can be the 21 initiating start of -- of cancer. 22 MS. BOGDAN: 23 Q The next service that you indicate in 24 that part of your website is troubleshooting</p>
<p style="text-align: right;">Page 51</p> <p>1 process as outlined by ICH M7. 2 Q Why are genotoxic and mutagenic 3 impurities controlled at low levels? 4 A Well, I'm struggling with the word 5 "controlled at low levels." The thresholds for 6 when you need to -- where -- the thresholds for 7 controlling them are much lower than the 8 thresholds for controlling ordinary impurities, 9 and that's because they're much more potentially 10 toxic. 11 Q And why are they much more potentially 12 toxic? 13 MR. HARKINS: 14 Object to form. Scope. 15 A They're much more potentially toxic 16 because they specifically react or they can 17 specifically react with DNA to form a mutation. 18 So that's different from the general 19 concern of toxicity, which would not be 20 associated with DNA reaction. 21 MS. BOGDAN: 22 Q And why is it significant that 23 genotoxic and mutagenic impurities can react with 24 DNA to form mutations?</p>	<p style="text-align: right;">Page 53</p> <p>1 analytical methods. What do you mean by that? 2 A I mean sometimes companies will have an 3 analytical method, and then they're -- they start 4 to see -- have problems with it, like all of us. 5 They might be having a problem with variation of 6 peak size or with peaks moving in a relative 7 retention or with anomalous peaks that show up, 8 artifactual peaks, or with a method that they're 9 unsure -- they can't seem to figure out how to 10 sharpen up a peak because it's broad, it's 11 double-peaked, things like that. 12 And, so, you -- you -- I can provide 13 help in doing chromatographic troubleshooting to 14 sharpen up the peaks, to elude all the peaks. 15 You know, there are ways to tweak an analytical 16 method to make it perform better. 17 Q I was gonna ask you -- you started to 18 talk about peaks. And what are peaks, the peaks 19 that you're referring to? Are you talking about 20 peaks on chromatograms or some other type of 21 test? 22 A I am talking about peaks in a 23 chromatogram. So that's kind of jargon for those 24 in the field. The way you separate impurities</p>

<p style="text-align: right;">Page 54</p> <p>1 is -- one example of a way you separate 2 impurities by HPLC is where the solution is 3 injected into a column, it goes through the 4 column at a certain rate because the solvent 5 pushes it along, and different compounds migrate 6 through that column at different rates. 7 And when they come out of the column, 8 they're detected by a detector, they're sensed by 9 a detector, and that detector gives a response 10 per the amount there or per some feature of that 11 molecule, and it will give a time-based 12 chromatogram where the peaks are associated with 13 some kind of impurity or non- -- process related, 14 degradation related, or extraneous leachable type 15 of material. 16 Q And, so, you provide services reviewing 17 analytical methods, and specifically 18 chromatograms, in an effort to help refine the 19 process and make those testing methods better? 20 A That would not comprehens- -- not 21 comprehensibly describe it, but that is 22 certainly -- I agree with the way you 23 characterized it. 24 Q And is this limited to HPLC or does it</p>	<p style="text-align: right;">Page 56</p> <p>1 extensive. And, again, I have a lot of tips and 2 tricks and things that I've learned along the 3 way. So depending on how you define expert, you 4 might consider -- I might hold myself out as an 5 expert. 6 But I just know of people who work -- 7 have worked for 20, 30, 40 years exclusively on 8 mass -- on mass spectrometry, and they have more 9 expertise than me. So on a relative basis, I 10 wouldn't hold myself as that kind of an expert. 11 A user functional expert, I have -- I have -- I 12 am comfortable with that topic. 13 MS. BOGDAN: 14 Q But you would refer [sic] to those 15 people that have 20, 30, or 40 years of work with 16 mass spectrometry if there was an issue with 17 regard to troubleshooting a mass spectrometry 18 analytical method? 19 A It seems like that question was 20 incomplete. You said I would refer to these 21 people -- 22 Q You would defer. I'm sorry. 23 A Defer. Defer. I -- I would engage 24 and -- yes. I think defer means that if we had</p>
<p style="text-align: right;">Page 55</p> <p>1 also involve chromatograms from other types of 2 analytical testing? 3 A Primarily focused on HPLC, but I have 4 expertise beyond HPLC. So it could involve other 5 type of separation methods and techniques. 6 Q And what other type of separation 7 methods and techniques are you referring to? 8 A The -- the most obvious one, the first 9 one would be gas chromatography. 10 Q Do you also consult with regard to mass 11 spectrometry? 12 A Yes. But I no longer can hold myself 13 out as a mass spectrometry expert. I consider 14 myself well versed in mass spectrometry, and, 15 yes, I can help in those issues. But I -- it's 16 not a typical consulting topic that I am -- am 17 asked about. 18 Q So you consider yourself an expert with 19 regard to HPLC and GC but not MS? 20 MR. HARKINS: 21 Object to form. Misstates testimony. 22 You can answer. 23 A I believe that my expertise in mass 24 spectrometry is pretty broad and pretty</p>	<p style="text-align: right;">Page 57</p> <p>1 a -- 2 Generally, those kind of people are 3 gonna have more insight into troubleshooting than 4 I would. 5 Q And, just so the record is clear, I 6 started to use some acronyms there, and I'm sure 7 we're gonna use them going forward, but let me 8 ask you for the record. When you say HPLC, what 9 are you referring to? 10 A High performance liquid chromatography. 11 Q And when you say GC, what are you 12 referring to? 13 A Gas chromatography. 14 Q And when you say MS, what are you 15 referring to? 16 A Mass spectrometry. 17 Q Now, the next service that you 18 advertise is solving analytical artifact issues. 19 What is meant by that description of the service 20 that you provide? 21 A It -- in general, artifacts have to do 22 with peaks that show up that sometimes are 23 spurious, sometimes are variable. Sometimes 24 they're not spurious or variable, but they're not</p>

<p style="text-align: right;">Page 58</p> <p>1 associated with anything to do with what was in 2 the solution that you're analyzing but are a 3 phenomenon of something else, such as on-column 4 degradation. So if a -- or on-column reaction. 5 So as a compound proceeds through the 6 separation column, sometimes it can do reactions 7 with things in the column, with trace metals, 8 with other things, and can produce an artifactual 9 impurity that's not part of the original 10 solution, so it's an artifact from the analytical 11 preparation workup or separation or analysis. 12 Q You used a couple different terms in 13 that response. One was "spurious." Can you 14 please define what you mean by that term, 15 "spurious"? Spurious? 16 A Unpredictably showing up. It occurs 17 occasionally in an unpredictable way. 18 Q And then you also referred to artifacts 19 as being variable. What did you mean by the term 20 "variable"? And how does that differ from 21 spurious? 22 A Variable would, to me -- I was implying 23 that maybe an artifact peak might go up and down 24 in size, might sometimes split into two peaks and</p>	<p style="text-align: right;">Page 60</p> <p>1 what's the source of the artifact, and because I 2 have worked for a long time in that area and 3 published on it, it's -- it's fairly frequent 4 that I have experienced that particular type of 5 artifact that they're seeing and can troubleshoot 6 it by providing them with, okay, try this change 7 and see what happens to the peak, add this to the 8 mobile phase of the -- of the system and see how 9 that affects the peak shape or eliminates it. 10 So there are some commonalities and 11 repeated motifs that happen with artifacts, and 12 I'm familiar with, you know, more than a dozen of 13 those kinds of issues and how to track it down 14 and identify the root cause and solve it. 15 Q Is it prudent for a company, if they're 16 having artifact issues, to do an analysis to 17 determine the cause of those artifacts that 18 they're seeing when using chromatography? 19 MR. HARKINS: 20 Object to form. Vague. Scope. 21 A So I'm hearing the question as is it 22 prudent for a company to investigate and -- and 23 try to understand or solve artifact peak problems 24 that they are seeing. I would say it is prudent</p>
<p style="text-align: right;">Page 59</p> <p>1 sometimes not. So spurious would mean it shows 2 up in your chromatogram unexpectedly sometimes, 3 and you don't know why at the start. 4 And, to me, the -- I use the term 5 "variable" means it's showing up regularly but 6 it's varying in how it appears in the 7 chromatogram in either level or shape. 8 Q Is it showing up at the same retention 9 time if you're using the term "variable"? 10 A You know, that's an imprecise term. 11 There's no clear definition. So it -- 12 Variable could -- could involve moving 13 a retention time as well. I'm not trying to be 14 restrictive. I'm trying to emphasize that there 15 is a variation, and sometimes it's predictable -- 16 or sometimes it's more -- when it -- when you 17 don't see one and you see a peak versus the peak 18 shows up somewhat regular -- pretty regularly but 19 it varies in appearance or retention time or 20 shape. 21 Q And what services do you provide in 22 order to help solve these spurious or variable 23 peaks with regard to chromatogram? 24 A I help companies figure out first</p>	<p style="text-align: right;">Page 61</p> <p>1 for that to occur. It may not always be 2 necessary, depending on the type of artifact 3 occurring, but it's -- it's prudent to be able to 4 investigate, understand the issue, because -- 5 because it can affect your analytical results. 6 MS. BOGDAN: 7 Q And you actually are hired by companies 8 to investigate and understand artifact peaks that 9 they are seeing in chromatograms; correct? 10 A Yes. But when -- just to make sure you 11 understand what "hired" means, doesn't mean I 12 conduct any laboratory work, because I have no 13 laboratory. I am only providing intellectual 14 input. So I come up with ideas, suggestions, 15 experiments. I can help them, as they carry them 16 out, interpret the results and point them to the 17 underlying chemistry issue, as my background in 18 organic chemistry, my Ph.D. provide me -- and 19 experience provide me with that chemistry 20 background that oftentimes helps solve and 21 uncover the root cause of these kinds of artifact 22 issues. 23 Q Using the term "root cause," can you 24 describe what you mean by that?</p>

<p style="text-align: right;">Page 62</p> <p>1 A Yeah. Another term could be "trigger," 2 but I think root cause is a better term. Root -- 3 the root cause might be what's the underlying 4 phenomenon that -- that is the source of whatever 5 problem you're dealing with. 6 So if you're having an artifact 7 associated with a particular root cause, if you 8 can say, oh, it is because you're operating at a 9 high pH, your mobile phase is at a high pH and 10 you're using a metal frit and that metal is 11 ablating off the frit and it's depositing on the 12 head of the column and, as the compound passed 13 by, that transition -- one of the transition 14 metals is catalyzing on column degradation, so 15 that's an example of if you understand the root 16 cause, then you can say, oh, we can solve that by 17 replacing with a plastic frit, or we can change 18 the pH of the HPLC separation so that it no 19 longer ablates metal off the metal frit. 20 So I'm not trying -- I'm just trying to 21 give one example of how that plays out, the root 22 cause investigation. 23 Q I appreciate that. 24 So it's important to determine what the</p>	<p style="text-align: right;">Page 64</p> <p>1 understanding as long as you know that your 2 control is robust. 3 MS. BOGDAN: 4 Q The next service that you mentioned is 5 leveraging forced degradation studies. Would 6 that pertain to stress testing, for example? 7 A Yes, it would. Forced degradation and 8 stress testing are sometimes used colloquially as 9 jargon as the same term. 10 Q The next service that you advertise is 11 process impurity discovery, structure 12 elucidation, and mechanistic chemistry. What 13 services is that bullet point describing? 14 A That's describing -- it's analogous to 15 if you're looking at -- at new peaks on a 16 stability sample that come up that you know 17 are -- are degradation-related in your synthetic 18 process if you have peaks beside your -- your API 19 or beside your intended step product that 20 elute -- you -- you can -- it can be helpful to 21 determine the structure of those impurities that 22 occur during the process, during the synthetic 23 process and, therefore, called process 24 impurities. It can be useful to --</p>
<p style="text-align: right;">Page 63</p> <p>1 underlying phenomenon is that's causing a peak in 2 a chromatogram? 3 MR. HARKINS: 4 Object to form. Scope. Vague. 5 A Yeah. We were talk- -- we're in the 6 context of artifact issues, and it would relate 7 to the size of the peak. So if a peak is an 8 artifact but it doesn't affect the quantitation, 9 like it's so small that it doesn't affect, you 10 can ignore things that are very small. 11 So there are examples when you wouldn't 12 need to solve or prevent or understand a root 13 cause, and there's often times when there's 14 unknowns at levels where you don't need to 15 investigate. 16 But for -- for things that are 17 affecting your analytical results or changing how 18 you would process the integration of a sample, 19 yeah, those artifact issues would be important to 20 under- -- to understand and control -- understand 21 at least to the point of control. The 22 understanding that you need is guided by the -- 23 the desire to control it. So you can sometimes 24 control things without having a full root cause</p>	<p style="text-align: right;">Page 65</p> <p>1 You don't always have to do those. It 2 depends on the levels and the amounts and whether 3 or not there's mechanistic help, like if you're 4 getting low yields and you're trying to 5 understand how to increase your yields. But 6 that's how I would frame it. 7 Q Okay. And when you say "process 8 impurity discovery," that would be impurities 9 that are created by the synthetic process itself; 10 correct? 11 A Yes. 12 Q And when you say "structure 13 elucidation," what are you referring to? 14 A I'm referring to determining the 15 molecular structure of the impurity itself. 16 Q When you say "the molecular structure," 17 is that actually identifying what the impurity 18 is? 19 A Yeah. It doesn't identify -- 20 Yes. It identifies what it is at a -- 21 at a fairly fundamental level, what the -- how 22 the atoms are arranged together in space that 23 comprise that compound. 24 Q And why would you want to know that</p>

<p style="text-align: right;">Page 66</p> <p>1 information?</p> <p>2 A Um, because if you understand the</p> <p>3 structure of an impurity, it can help you</p> <p>4 postulate or figure out how it's forming. And</p> <p>5 sometimes that information can be useful in</p> <p>6 tweaking or changing the synthetic step to avoid</p> <p>7 the impurity, to decrease in an area and to</p> <p>8 increase the yield of the desired intermediate or</p> <p>9 API that you're synthesizing.</p> <p>10 Q And how do you determine the molecular</p> <p>11 structure of the impurity?</p> <p>12 A Usually that would involve a</p> <p>13 combination of mass spectrometry, and there's</p> <p>14 various ways -- there's high resolution. There's</p> <p>15 fragmentation studies. So you use the general</p> <p>16 technique of mass spectrometry coupled with NMR,</p> <p>17 nuclear magnetic resonance, to definitively prove</p> <p>18 a structure.</p> <p>19 Q And those are analytical tests that are</p> <p>20 typically used in the pharmaceutical industry to</p> <p>21 determine what a structure is; correct?</p> <p>22 A I would not say they are analytical</p> <p>23 tests. I would say they are spectroscopic</p> <p>24 techniques that are used to elu- -- to determine</p>	<p style="text-align: right;">Page 68</p> <p>1 I'm trying not to get into, like, a</p> <p>2 professorial mode and start talking chemistry and</p> <p>3 losing everyone more than I already do, because,</p> <p>4 as my wife tells me, it can be pretty boring.</p> <p>5 MR. HARKINS:</p> <p>6 You're doing just fine.</p> <p>7 MS. BOGDAN:</p> <p>8 Q I am following you, so...</p> <p>9 And when you're talking about the</p> <p>10 mechanistic chemistry, again, you're talking</p> <p>11 about an analysis of the chemical synthesis</p> <p>12 process that is used to make the drug?</p> <p>13 A It's -- it's almost like a subset of an</p> <p>14 analysis of the chemical synthesis. It's -- it's</p> <p>15 more like how does this molecule get formed</p> <p>16 with -- under what conditions with -- with what</p> <p>17 precursors? What is attacking what? What is</p> <p>18 leaving what?</p> <p>19 And, so, it's -- it's kind of like</p> <p>20 the -- the detailed -- the nauseating details of</p> <p>21 the chemical reaction that's occurring.</p> <p>22 Sometimes that mechanistic insight is very useful</p> <p>23 for control strategies or for ways to avoid or</p> <p>24 maximize the formation of something, and</p>
<p style="text-align: right;">Page 67</p> <p>1 the structure of compounds.</p> <p>2 Q Those are spectroscopic techniques that</p> <p>3 are typically used in the pharmaceutical industry</p> <p>4 to determine the identity of a structure?</p> <p>5 A I missed the very first part. You cut</p> <p>6 out. Can you repeat the question?</p> <p>7 Q So mass spectrometry and NMR are</p> <p>8 spectroscopic techniques that are typically used</p> <p>9 in the pharmaceutical industry to determine the</p> <p>10 identity of a structure?</p> <p>11 A Yes, I would agree with that.</p> <p>12 Q Now, you specifically mention</p> <p>13 mechanistic chemistry. How does mechanistic</p> <p>14 chemistry relate to process impurity discovery</p> <p>15 and structure elucidation?</p> <p>16 A I -- I would say mechanistic chemistry</p> <p>17 is kind of a fancy way of saying understanding</p> <p>18 the root cause in a chemistry environment. So</p> <p>19 mechanistic would involve understanding the</p> <p>20 chemistry. I -- I think, in a general sense, it</p> <p>21 helps you identify the -- the sort of way some --</p> <p>22 the process by which something is formed at a</p> <p>23 molecular level such that it gives you insight</p> <p>24 into the root cause.</p>	<p style="text-align: right;">Page 69</p> <p>1 sometimes the mechanistic insight gives you no</p> <p>2 handles to play with, to -- to optimize or</p> <p>3 divert.</p> <p>4 So it's kind of like your son coming</p> <p>5 home and he has a black eye and you're trying to</p> <p>6 figure out what was the mechanism. Okay. A kid</p> <p>7 punched him, but was he falling into him because</p> <p>8 he tripped over a rock?</p> <p>9 And so you're looking at the specifics</p> <p>10 of how the chemistry -- how the two molecules</p> <p>11 came together to form a reaction, and it's --</p> <p>12 it -- it's a form of root cause investigation,</p> <p>13 you could say.</p> <p>14 Q And that's actually sort of a</p> <p>15 theoretical assessment; right? It's done on</p> <p>16 paper?</p> <p>17 A It's done on paper, but the -- it can</p> <p>18 be tested. So based on the mechanistic insight</p> <p>19 that you get, you can test the mechanism by</p> <p>20 saying if this is the mechanism, then if we</p> <p>21 change this, something different will happen.</p> <p>22 Then you can do experiments to change</p> <p>23 conditions and tests to prove your mechanism</p> <p>24 further, because mechanisms can never be</p>

<p>Page 70</p> <p>1 unequivocally proven, but they can be a consent 2 upon or they can be pretty strong such that 3 they're -- they would be agreed upon and useful 4 for manipulating the reactions. 5 Q So you would develop a theory of the 6 mechanistic chemistry but then design testing to 7 see if the theory is correct? 8 A Yes. I would say that is -- you can do 9 that. You don't have to do that when you come up 10 with the mechanism. But, yes, that's what a 11 mechanism would enable you to do. And sometimes 12 the mechanism doesn't enable you to test it very 13 well because it can be very complex. 14 But some mechanism -- many mechanisms 15 are amenable to design of new tests to help 16 understand further and further control or modify. 17 Q And the last service that you advertise 18 in that section is analytical method development. 19 What is meant by that? 20 A It's -- it's kind of like what happens 21 before you're troubleshooting an analytical 22 method. So if you have a -- if you need to 23 separate and detect all of the -- the degradation 24 products that occur for a product on stability,</p>	<p>Page 72</p> <p>1 can carry it out? How linear is the response 2 to -- of the detector to differences in levels of 3 impurities or the API of the drug substance 4 itself? 5 So it's -- it's sort of confirming that 6 the method can perform up to the -- up to the 7 needs that are -- are required to ensure that the 8 method performs well. 9 Q So is testing the analytical method 10 used to determine if the testing method is 11 accurate? 12 A Yeah. There's an accuracy component 13 of -- of the method. There -- yes. There's an 14 accuracy component to it. 15 MS. BOGDAN: 16 We can take that exhibit down. 17 MR. HARKINS: 18 Hey, Rosemarie, if you're moving on to 19 something else, we've been going for about an 20 hour and a half. I just wanted to check if the 21 doctor needs a break. 22 THE WITNESS: 23 Yeah, that would probably be a good 24 idea to take a short break.</p>
<p>Page 71</p> <p>1 you -- you -- you need to be able to anticipate 2 what would happen in two, three, sometimes five 3 years, and you can't wait five years for that to 4 happen, so you have to figure out how do we come 5 up with those compounds and how do we -- how do 6 we provide an analytical method that's likely to 7 detect the compounds based on what we can do in a 8 shorter time? 9 So it's -- it's, from the ground up, 10 what method, what separation method should we 11 use, what -- and -- and then how do we put meat 12 on the bones? How do we, you know, make certain 13 choices that we can with an analytical method 14 that's most likely to succeed, and then how do we 15 test it and continue to develop it until it's 16 comprehensive and accurate? 17 Q Why is testing the analytical method 18 important? 19 A To make sure you understand if it's 20 robust, if you can transfer it from one lab to 21 another. If -- if you're doing a method every 22 day, how does it vary day to day? How does it 23 vary as a function of the person carrying it out? 24 How well is it described so that different people</p>	<p>Page 73</p> <p>1 MR. HARKINS: 2 Want to say five minutes? 3 MS. BOGDAN: 4 Just five minutes? If we could limit 5 the break to five minutes, that would be good. 6 MR. HARKINS: 7 Would that be good for you, Doctor? 8 THE WITNESS: 9 Yes. Can we make it six? Can we make 10 it seven? 11 MS. BOGDAN: 12 Yes, we can make it seven. I don't 13 know how long the walk is for you. Because 14 lawyers tend to like to take lots and lots of 15 breaks, so I'm trying to -- 16 THE WITNESS: 17 I'm not a lawyer. 18 MS. BOGDAN: 19 I know. I like to avoid taking so many 20 breaks that we end up having the deposition go 21 three more hours than it needs to. That's all. 22 But certainly if you as the witness 23 needs a break at any time, please let me know. 24 And we always can accommodate everybody, so --</p>

<p>Page 74</p> <p>1 THE WITNESS: 2 Okay. Great. 3 MR. HARKINS: 4 Can we go off the record? 5 VIDEOGRAPHER: 6 Off record, 10:40 a.m. 7 (OFF THE RECORD.) 8 VIDEOGRAPHER: 9 On record, 10:48 a.m. 10 MS. BOGDAN: 11 Okay. If we could please pull up the 12 doctor's invoices. 13 (DEPOSITION EXHIBIT NUMBER 7 14 WAS MARKED FOR IDENTIFICATION.) 15 MS. BOGDAN: 16 Q Now, my first question, Dr. Baertschi, 17 is did you have a separate retainer agreement 18 with Greenberg Traurig? 19 A No. 20 Q There is no -- there is no retainer 21 agreement? 22 A Correct. 23 MS. BOGDAN: 24 Now, is this marked as Exhibit 7?</p> <p>Page 75</p> <p>1 Where are we with exhibits? 2 MR. HARKINS: 3 I think it's 7. 4 MS. BOGDAN: 5 Q Take a look at this exhibit and tell me 6 if these are your complete invoices for the work 7 that you've done on this matter. 8 A Yes, they are. It is a little 9 embarrassing when I make invoices to think that 10 it's going to be displayed to a bunch of people. 11 I'm not that diligent in how I record my time. 12 But, anyway, you can see what I did. 13 Q And when you say you're not that 14 diligent in how you record your time, what do you 15 mean by that? 16 A I mean the -- the line describing what 17 I did isn't always comprehensive, and sometimes 18 it's -- it's too -- sometimes it's too detailed. 19 But it's just helping me document that I was 20 doing something and how long I did it. The 21 amount of time is accurate. 22 Q Okay. 23 A It's a general note to say this is the 24 kind of stuff I was doing in that time period.</p>	<p>Page 76</p> <p>1 Q So for these invoices, when I total 2 them all up, it looks like you did about 77 hours 3 of work on this case through the time -- through 4 the date of your last invoice. 5 A Okay. 6 Q Does that sound about right to you? 7 A That -- yeah. I haven't done the math, 8 but that sounds reasonable, yes. 9 Q And that was the -- through the invoice 10 that you served January 3rd of 2022, which is the 11 last invoice in this series in Exhibit 7. 12 A Okay. 13 Q How many hours have you spent on this 14 matter since your last invoice? 15 A I don't know off the top of my head, 16 but let me see if I can kind of come up with a 17 rough ballpark-ish. 40? 30? I -- I'm... 18 Q Thirty to 40 more hours? 19 A Well, I don't want to say that it's 20 definitely in that range. 21 Q Okay. 22 A But 50, in that kind of range, that's a 23 ballpark-ish range that sounds right to me. 24 Q When you have in your invoices the</p> <p>Page 77</p> <p>1 letters ER, is that referring to expert report? 2 A Yes. 3 Q And then you have a reference on 4 December 29th, 2021, to work on getting UV 5 information for NDMA and for valsartan related to 6 relative response factor. 7 A Yes. 8 Q Can you describe what UV information is 9 for NDMA? 10 A I was trying to understand if -- if 11 NDMA absorbed radiation in the wavelength range 12 where the method -- the analytical method for 13 impurities was centering on, which is, I believe, 14 if I recollect correctly, 230 nanometers. 15 So I was looking for information on the 16 UV spectrum of NDMA and valsartan and looking at 17 how much absorbance occurs out in that region. 18 Q What did you learn from your 19 investigation? 20 A I did not get definitive information, 21 but I was -- what I -- what I got was enough to 22 know that NDMA does appear to have some 23 absorbance out in the 230 nanometer region, if I 24 remember correctly, but it would likely be --</p>
--	--

<p style="text-align: right;">Page 78</p> <p>1 have a lower response factor than valsartan. 2 So it would -- which means if -- if you 3 had a .1 percent peak of -- 4 It means you have less sensitivity to 5 be able to detect NDMA using a UV detector. It 6 would be more difficult than the same amount of 7 valsartan. 8 Q When you say -- 9 A This also -- 10 Q I'm sorry. 11 A This also potentially relates to 12 something I saw in the Najafi deposition where he 13 said that nitrosamines have no absorbance in the 14 UV and you wouldn't detect them at all in a UV, 15 in a UV detector. And I don't agree with that. 16 Q So you found that NDMA does have some 17 absorbance in the 230 nanometer region? 18 A That's what I recollect. The reason -- 19 and I'm a little leery of saying definitively 20 because that absorbance is dependent on the 21 solvent. And I -- I was looking for general 22 information to see if it was really worth 23 exploring, and I kind of, after looking for a 24 while, I decided it wasn't really worth</p>	<p style="text-align: right;">Page 80</p> <p>1 Q Did you do any type of testing of NDMA 2 or ask for testing to be done of NDMA to see if 3 it had absorbance at 230 nanometers? 4 A No, I did not. 5 Q So you didn't do anything independently 6 to verify this one way or the other? 7 A Correct. 8 Q What reference source were you 9 consulting with regard to whether NDMA has 10 absorbance at 230 nanometers? 11 A I believe I was doing searches on 12 either Google Scholar or SciFinder, looking for 13 NDMA, NDEA, and other related compounds, small 14 N-nitroso compounds, and UV response, UV 15 spectrums, a variety of terms like that, and then 16 looking at the abstracts of papers and deducing 17 what I could, to the best of my recollection. 18 Q Did any of these resources that you 19 found and read make it into your references for 20 this report? 21 A I don't think so, because I don't think 22 I commented on NDMA relative response factor in 23 my expert report. 24 Q Did any of these resources make it into</p>
<p style="text-align: right;">Page 79</p> <p>1 continuing to explore because I didn't think it 2 was a -- a -- a big factor. 3 So, for example, if NDMA had a really 4 huge response, then -- at 230 nanometers, then 5 you might be able to detect very low levels of it 6 with a method at 230 nanometers. But I didn't 7 find that, so I kind of abandoned that 8 investigational route. And I don't exactly 9 remember such that I'm willing to say in a 10 deposition under oath that it does not have or it 11 does have absorbance at 230. That's to the best 12 of my recollection. 13 Q So you did not get definitive 14 information on whether NDMA has absorbance at the 15 230 nanometer region that would allow you to give 16 an opinion in this regard? 17 A I would say I would need to review that 18 in order to -- 19 I -- I can't recall confidently, 20 definitively here as I sit. I -- I don't -- so I 21 would have to refresh my memory to make sure. 22 But I believe my best recollection is, more 23 likely than not, yes, it does have some 24 absorbance at 230 nanometer.</p>	<p style="text-align: right;">Page 81</p> <p>1 your materials considered list? 2 A I don't think so, because I don't think 3 I actually downloaded articles and digested them 4 thoroughly and verified the -- the pictures that 5 I was seeing. 6 Q As you sit here today, can you say with 7 a reasonable degree of scientific certainty 8 whether NDMA has absorbance at 230 nanometers? 9 A No. 10 Q As you sit here today, can you say with 11 a reasonable degree of scientific certainty 12 whether NDMA will appear on an HPLC test? 13 A That's an incomplete sort of question, 14 but I think you mean will an HPLC tested with UV 15 protection presumably at the wavelength that 16 they're using in the compendial methods, which I 17 believe is 230 nanometers. 18 I cannot say for sure that if you had a 19 high enough level of NDMA that you would detect 20 it at that wavelength. I concluded tentatively 21 in my research that it would, but I didn't 22 actually do enough work to -- to make -- to nail 23 that down, as you said, so where I could sit here 24 today and stand by that or sit by it.</p>

<p style="text-align: right;">Page 82</p> <p>1 Q And when you're talking about the 2 compendial standard, are you talking about the 3 USP monograph or are you referring to some other 4 standard? 5 A Yes. I would be referring to the USP 6 monographs and/or the analytical methods that I 7 reviewed that were being used, for example, by 8 Teva for impurities in valsartan. 9 Q And was Teva using the impurity method 10 that is set forth in the USP monograph for 11 valsartan? 12 A I believe that the method was either 13 the same or very close, but I'm not -- I'm -- I'm 14 relying on memory. And if I wanted to make a 15 definitive statement, I'd want to look at those 16 two things side by side. But that's the way I 17 would say. 18 Q When you did your review, did you find 19 any difference in the methods that you wanted to 20 further investigate? 21 MR. HARKINS: 22 Object to form. Vague. 23 A No. There wasn't -- I did not notice 24 anything that seemed significant to me. Did not</p>	<p style="text-align: right;">Page 84</p> <p>1 whole question. Sorry about that. There's a 2 little delay. 3 MS. BOGDAN: 4 Q Sure. I'll repeat the question. 5 Is there part of the expert report 6 where you compare the Teva HPLC impurity method 7 to the USP impurity method? 8 A I -- I don't remember for positive 9 because I know I've thought about this, but I 10 don't want to confuse what's in my brain that I 11 thought about it versus what I actually recorded 12 in the expert report. Is there something you 13 could point me to that might be associated with 14 that? 15 Because I did make a comparison to the 16 sensitivity of the methods. And, so, I'd like to 17 see the exact -- where I said what methods I was 18 referring to and what -- how I -- how I framed 19 the sensitivity issue. 20 MR. HARKINS: 21 Take a moment to look at your report. 22 Okay? 23 THE WITNESS: 24 Okay. I'm looking through my report</p>
<p style="text-align: right;">Page 83</p> <p>1 notice any differences that seemed significant to 2 me. I don't recall any. 3 MS. BOGDAN: 4 Q Did you take any notes of any 5 differences that you discovered when looking at 6 the Teva impurity HPLC method versus the USP 7 impurity HPLC method? 8 MR. HARKINS: 9 Object to form. Vague. 10 A Did I take any notes? I think -- I 11 can't remember. Did I address this in the expert 12 report? I -- I feel like maybe I did. But I -- 13 I don't know if I took notes on any -- anything. 14 Can you -- can you reask the question 15 so I'm accurate? I may want to look at my expert 16 report to kind of make sure. 17 MS. BOGDAN: 18 Q ...expert report where you compare the 19 Teva HPLC impurity method to the USP impurity 20 method? 21 MR. HARKINS: 22 Rosemarie, looked like you were 23 speaking for a bit before we got the audio coming 24 through. I just want to make sure we have the</p>	<p style="text-align: right;">Page 85</p> <p>1 briefly here. I think I might be able to find 2 it. 3 MS. BOGDAN: 4 Q Well, my question would be, which, 5 Dr. Baertschi, looking at your report would allow 6 you to answer, is there a part of your report 7 where you evaluate the HPLC method of Teva as it 8 compares to the USP monograph method? 9 A I -- I don't think I have a direct 10 comparison of Teva to USP, the analytical methods 11 for those, in my expert report. I hope I'm not 12 wrong, but I'm not seeing anything that is like a 13 direct comparison. 14 Q When offering your opinions with regard 15 to what impurities HPLC testing would identify, 16 were you looking at the Teva HPLC testing method 17 or the USP HP- -- 18 A I looked at -- 19 Q -- -LC impurity testing method? 20 A I looked at both, and the -- the 21 wavelength of detection, the limit of disregard, 22 the limit of detection, the reporting levels were 23 very comparable. And my comparison was to try to 24 assess could these methods have detected the --</p>

<p style="text-align: right;">Page 86</p> <p>1 the levels of -- levels of NDMA or NDEA at the PM 2 levels being discussed. And that was the point 3 of my assessment. 4 And my determination was they're -- 5 they're pretty comparable and they have pretty 6 similar specifications for the methods. 7 But I'm not seeing that I did a direct 8 comparison in my expert report. It didn't seem 9 worthy of that. I didn't think there was a 10 contention around whether or not the method could 11 have detected low levels of NDMA or NDEA. 12 I'm -- I'm looking now at a -- 13 MR. HARKINS: 14 Wait for a question, unless you're -- 15 A I'm still continuing my answer, since 16 she paused for a long time. I'm finding 17 something now. 18 Paragraph 32, I'm looking at far -- I 19 did a compar- -- similar conclusions about the 20 ability of -- in paragraph 32, about the ability 21 of compendial impurity methods to detect low 22 levels of NDMA or NDEA can be made by looking at 23 the pharmacopeial methods listed in USP for 24 valsartan tablets, valsartan amlodipine tablets,</p>	<p style="text-align: right;">Page 88</p> <p>1 Q Did you do an analysis of the Teva HPLC 2 impurity method that was being used to evaluate 3 impurities in the valsartan finished dose 4 product? 5 MR. HARKINS: 6 Objection. Asked and answered. 7 A Yes. 8 MS. BOGDAN: 9 Q And you didn't discuss it in your 10 report? 11 MR. HARKINS: 12 Objection. Asked and answered. 13 A Apparently, I've already answered. 14 MR. HARKINS: 15 You have to answer again. 16 A Oh, I have to answer again. 17 I don't think so. I -- I already made 18 one mistake in remembering what was in there. I 19 hope I'm not making another one. But I don't see 20 it, so I don't -- I don't think I made a direct 21 commentary on the -- the Teva method in here. 22 MS. BOGDAN: 23 Q Now, for your work in this litigation, 24 you were retained by the Teva defendant; correct?</p>
<p style="text-align: right;">Page 87</p> <p>1 et cetera. 2 These analytical methods for impurities 3 utilize HPLC with UV detection for tablets, 4 valsartan tablets, with a level of -- with a 5 disregard for any peaks less than -- 6 So the answer to your question is yes, 7 I do do a comparison. It's in paragraph 32. 8 MS. BOGDAN: 9 Q And paragraph 32 is referring to the 10 USP method? 11 A Yes. I believe so. Because it says in 12 the last sentence, it says "it is clear that 13 these compendial methods are not appropriate for 14 detecting -- detecting and reporting of levels of 15 NDMA or NDEA at levels below 1,000 ppm, or .1 16 percent." 17 Q And is it in paragraph 32, then, you 18 discuss the HPLC method used by Teva? 19 A I don't know. I don't see any 20 specific reference to the method used by Teva in 21 my expert report, in that paragraph, and I'm not 22 seeing it anywhere else. I don't think that 23 changes my conclusions at all, and I think the 24 conclusions will hold.</p>	<p style="text-align: right;">Page 89</p> <p>1 A Correct. 2 Q And you're not working on behalf of any 3 of the other defendants; correct? 4 A Correct. 5 Q And, so, you're not offering any of 6 your opinions on behalf of the other defendants 7 in this litigation, are you? 8 MR. HARKINS: 9 Object to the form to the extent it 10 calls for a legal conclusion. 11 You can answer. 12 A I don't know the extent to which my 13 testimony will be used. I -- I don't understand. 14 MS. BOGDAN: 15 Q I'm not asking about it being used. 16 I'm being -- as far as you offering opinions in 17 this case, you're offering those opinions on 18 behalf of Teva; correct? 19 A Correct. 20 Q And do your opinions apply to all the 21 plaintiffs in this litigation? 22 MR. HARKINS: 23 Object to the form of the question. 24 You can answer if you know.</p>

<p style="text-align: right;">Page 90</p> <p>1 A Can you repeat the question?</p> <p>2 MS. BOGDAN:</p> <p>3 Q Do your opinions apply to all of the</p> <p>4 plaintiffs in this litigation?</p> <p>5 MR. HARKINS:</p> <p>6 Same objection, to the extent it calls</p> <p>7 for a legal conclusion.</p> <p>8 You can answer.</p> <p>9 A I -- I don't know. I don't know the</p> <p>10 details -- I didn't review all of the defendants'</p> <p>11 materials or methods, or -- so I -- I don't know</p> <p>12 what is applicable and what is usable --</p> <p>13 MS. BOGDAN:</p> <p>14 Q Okay.</p> <p>15 A -- and how -- how extensive that goes.</p> <p>16 Q Do your opinions apply to all potential</p> <p>17 class members?</p> <p>18 MR. HARKINS:</p> <p>19 Objection to the extent it calls for a</p> <p>20 legal conclusion.</p> <p>21 You can answer.</p> <p>22 A I would -- I would say the same kind of</p> <p>23 answer. I don't know legally what -- where the</p> <p>24 limits of my testimony are useful for or can be</p>	<p style="text-align: right;">Page 92</p> <p>1 length of time to see if they ever develop any</p> <p>2 kind of diseases associated with their ingestion</p> <p>3 of valsartan.</p> <p>4 Q Do your opinions vary depending on</p> <p>5 which type of plaintiff?</p> <p>6 MR. HARKINS:</p> <p>7 Objection to the extent it calls for a</p> <p>8 legal conclusion.</p> <p>9 A My opinions are -- I don't want to use</p> <p>10 the word "agnostic" to those, but it's sort of</p> <p>11 independent. It's not affected by any of those</p> <p>12 classes.</p> <p>13 MS. BOGDAN:</p> <p>14 Q So your opinions don't vary depending</p> <p>15 on how much valsartan a potential class member</p> <p>16 paid for?</p> <p>17 MR. HARKINS:</p> <p>18 Object to form. Facts not in evidence.</p> <p>19 You can answer if you know.</p> <p>20 A No, they don't. It's independent.</p> <p>21 They don't seem to be over -- my opinions don't</p> <p>22 seem to have a dependence on that information you</p> <p>23 just specified.</p> <p>24 MS. BOGDAN:</p>
<p style="text-align: right;">Page 91</p> <p>1 applied against.</p> <p>2 MS. BOGDAN:</p> <p>3 Q Do you have an understanding of the</p> <p>4 proposed class or classes that the plaintiffs</p> <p>5 seek to certify in this litigation?</p> <p>6 MR. HARKINS:</p> <p>7 Objection to the extent it calls for a</p> <p>8 legal question. You can answer to your</p> <p>9 understanding.</p> <p>10 A I have a recollection of a layman's</p> <p>11 understanding of there being three classes of</p> <p>12 plaintiffs.</p> <p>13 MS. BOGDAN:</p> <p>14 Q And what is your understanding of those</p> <p>15 classes?</p> <p>16 A As I recall, there's one that maybe are</p> <p>17 seeking their money back for the product because</p> <p>18 they feel it wasn't effective, maybe. I think</p> <p>19 there was a second maybe seeking damages for</p> <p>20 cancers or diseases that have incurred</p> <p>21 potentially as a result of their taking of</p> <p>22 valsartan, and I believe there was a third that</p> <p>23 had to do with paying -- getting their medical</p> <p>24 monitoring for the rest of their life or some</p>	<p style="text-align: right;">Page 93</p> <p>1 Q So you would agree that your opinions</p> <p>2 apply equally to all the different types of</p> <p>3 plaintiffs?</p> <p>4 MR. HARKINS:</p> <p>5 Object to the form to the extent it</p> <p>6 calls for a legal conclusion.</p> <p>7 A I -- I feel like my opinions are not</p> <p>8 dependent on, not derived from, not overlapping</p> <p>9 with the claims. So I don't feel that there's</p> <p>10 any variation as a function of what one of --</p> <p>11 Either of these three claims doesn't</p> <p>12 affect my expert report or my opinions.</p> <p>13 MS. BOGDAN:</p> <p>14 Q Okay. Did counsel ask you to make any</p> <p>15 assumptions for purposes of your report?</p> <p>16 A Not that I can recall. Assumptions,</p> <p>17 you know, no. I can't think of any.</p> <p>18 Q Did they ask you to rely on the</p> <p>19 opinions of any other expert for purposes of your</p> <p>20 report?</p> <p>21 A No. Well --</p> <p>22 MR. HARKINS:</p> <p>23 Just -- just to the extent that your</p> <p>24 answer would reflect any discussions with</p>

<p style="text-align: right;">Page 94</p> <p>1 counsel, I'm going to instruct you not to answer. 2 But -- 3 THE WITNESS: 4 Yeah. 5 MS. BOGDAN: 6 Q Let me ask you this question. I'll ask 7 it in a different way just to avoid the 8 objection. 9 Do you rely on the opinions of any 10 other experts for purposes of rendering your 11 opinions in this case? 12 A No. When you said "experts," I was 13 thinking -- you're probably thinking about 14 experts that have been in this case. I'm 15 thinking about a lot of experts that I've cited 16 in my literature that I consider experts in the 17 field. And, so, I've cited -- the literature I 18 cited and the experts that I have cited in my 19 expert report are -- definitely have influenced 20 my opinions as I've derived from the referee 21 literature. But I don't -- I don't think there's 22 any expert opinions that have affected my expert 23 report conclusions or opinions. 24 Q You're right. The question I was</p>	<p style="text-align: right;">Page 96</p> <p>1 makes it a nitrosamine; correct? 2 A Yes. N-nitrosamine. There are 3 nitrosamines that are not attached to nitrogen. 4 So it's N-nitrosamine, to be completely correct. 5 Q And what type of bond is formed between 6 the nitrogen and the oxygen in an N-nitrosamine? 7 A Wow. This is getting, like, organic 8 chemistry test, which is good. I love it. 9 It's a double bond, but it has single 10 bond characters. So it's -- it's N, single bond, 11 N, double bond, O. But there's double bond 12 character in the NN bond and there's single bond 13 character, which means you can have rotation 14 about the NN bond, and it can be inhibited 15 because of the partial double bond character in 16 it and the partial single bond character in the 17 oxygen. 18 So you can get two atropisomers, which 19 means inhibition due to rotation about a single 20 bond. And I learned that back in 1986 from 21 Stephen Hecht at a presentation at Vanderbilt 22 University. 23 Q And that structure is what's in common 24 with all N-nitrosamines; correct?</p>
<p style="text-align: right;">Page 95</p> <p>1 asking is whether or not, for your opinions in 2 this litigation, you were relying on the opinions 3 of any other experts that have been retained in 4 this litigation. 5 A No. 6 Q ...nitrosamines? 7 A We only caught "nitrosamines." 8 Q Sorry. What are nitrosamines, in an 9 organic chemistry sense? 10 A This is too much fun for an organic 11 chemist, but I'll take it anyway. 12 Nitrosamines are compounds that have a 13 functional group on them of nitrogen connected to 14 a nitrogen connected to an oxygen. And there can 15 be anything -- any things coming off the nitrogen 16 that's connected to a nitrogen that's connected 17 to an oxygen. So in the case of NDMA, it's 18 dimethyl. 19 But you can have any kind of 20 substituent, so there can be a huge diversity of 21 N-nitrosamines as long as there's that one 22 subgroup or functional group attached to the 23 molecule. 24 Q And it is that functional group that</p>	<p style="text-align: right;">Page 97</p> <p>1 A Yes. Although that cis-trans, that 2 different orientation, the relative amounts of 3 the sister trans of the two orientations can vary 4 as a function of what's on the rest of the 5 molecule. But I'm being nauseatingly detailed 6 there. So the answer is yes. 7 Q And you mentioned attending a 8 presentation or lecture by Dr. Hecht back in 9 1986, roughly? 10 A Roughly. It was when I was in graduate 11 school, so I'm guessing on the year. I just know 12 the rough -- rough years. I think it was '86. 13 Q And, so, nitrosamines were being 14 studied in the '80s; correct? 15 A Yes. He was studying it in smoke, as I 16 recall, if I'm recalling correctly, what smokers 17 inhaled. 18 Q ...nitrosamines formed? 19 A You cut out, so I only heard 20 "nitrosamines formed." 21 Q How are nitrosamines formed? 22 A They're usually -- there is a variety 23 of ways. You can form them from oxidation of -- 24 of an azide, but -- but from the meaningful to</p>

<p style="text-align: right;">Page 98</p> <p>1 this case and to most pharmaceutical concerns --</p> <p>2 most, I would say -- is that they form as a</p> <p>3 result of a nitrosating reagent reacting with,</p> <p>4 typically, a secondary amine.</p> <p>5 But it can also happen with a tertiary</p> <p>6 amine. It can also happen with some other</p> <p>7 amines. But it's primarily secondary amines and</p> <p>8 a nitrosating reagent.</p> <p>9 Q It's recognized that it can also happen</p> <p>10 with interaction with a tertiary amine or other</p> <p>11 amines; correct?</p> <p>12 A Yes. Just typically much slower, and</p> <p>13 they're oftentimes, depending on the</p> <p>14 circumstance, much less stable.</p> <p>15 Q Do you agree that nitrosamines are</p> <p>16 mutagenic?</p> <p>17 A Not all nitrosamines are mutagenic.</p> <p>18 Q Do you agree that NDMA is mutagenic?</p> <p>19 A Yes. Mutagenic being defined by Ames</p> <p>20 positive result in the Ames test, Ames</p> <p>21 mutagenicity test, yes.</p> <p>22 Q Do you agree that NDMA is genotoxic?</p> <p>23 MR. HARKINS:</p> <p>24 Object to form. Scope.</p>	<p style="text-align: right;">Page 100</p> <p>1 human carcinogen?</p> <p>2 A I believe that's the classification</p> <p>3 that they use for NDMA. That sounds correct.</p> <p>4 Q Do you agree that NDEA is a probable</p> <p>5 human carcinogen?</p> <p>6 A Can I say "same answer" and that be</p> <p>7 good enough?</p> <p>8 Q I'll ask -- I'll ask you the question</p> <p>9 again.</p> <p>10 Do you agree that NDEA is a probable</p> <p>11 human carcinogen?</p> <p>12 A I believe that's the -- the</p> <p>13 classification that goes with NDEA. That sounds</p> <p>14 correct.</p> <p>15 Q Do you agree with the classifications</p> <p>16 of probable human carcinogens for NDMA and NDEA?</p> <p>17 MR. HARKINS:</p> <p>18 Object to form. Scope.</p> <p>19 A I have no reason to dispute it, and I'm</p> <p>20 not a trained toxicologist to be able to dispute</p> <p>21 it. So I have no disagreement with that.</p> <p>22 MS. BOGDAN:</p> <p>23 Q Are you familiar with IARC?</p> <p>24 A Infrared?</p>
<p style="text-align: right;">Page 99</p> <p>1 You can answer.</p> <p>2 A Yes. Genotoxic is a -- mutagenic is a</p> <p>3 subset of genotoxic. So if something is</p> <p>4 mutagenic, it's also genotoxic. But there are</p> <p>5 genotoxic compounds that are not mutagenic. So,</p> <p>6 yes, it's also genotoxic.</p> <p>7 MS. BOGDAN:</p> <p>8 Q Do you agree that NDEA is genotoxic?</p> <p>9 MR. HARKINS:</p> <p>10 Same objection.</p> <p>11 A The same answers that I gave for NDMA</p> <p>12 would apply to NDEA.</p> <p>13 MS. BOGDAN:</p> <p>14 Q Oh, you agree that NDEA is genotoxic?</p> <p>15 A Yes. But when you said -- yes. From a</p> <p>16 technical classification, yes.</p> <p>17 Q Okay. And you agree that NDEA is</p> <p>18 mutagenic?</p> <p>19 A Yes. In the general term, yes.</p> <p>20 Q Do you agree that NDMA is a carcinogen?</p> <p>21 A Agree that it's a -- a known animal</p> <p>22 carcinogen and speculated or postulated human</p> <p>23 carcinogen.</p> <p>24 Q Do you agree that NDMA is a probable</p>	<p style="text-align: right;">Page 101</p> <p>1 Q IARC.</p> <p>2 A I-A-R-C. I thought you were using an</p> <p>3 abbreviation for infrared. I'm vaguely familiar</p> <p>4 with it, the committee that -- you know, for</p> <p>5 deciding or classifying the toxicology of</p> <p>6 chemicals and maybe classifying them as</p> <p>7 cancer-causing. I'm not exactly sure of the</p> <p>8 charter or what they exactly do, but I have heard</p> <p>9 of it and seen it.</p> <p>10 Q IARC stands for the International</p> <p>11 Agency For Research on Cancer; correct?</p> <p>12 A That sounds correct.</p> <p>13 MS. BOGDAN:</p> <p>14 If we could bring up the IARC</p> <p>15 monograph, 1978.</p> <p>16 (DEPOSITION EXHIBIT NUMBER 8</p> <p>17 WAS MARKED FOR IDENTIFICATION.)</p> <p>18 MR. HARKINS:</p> <p>19 Wait for the question.</p> <p>20 THE WITNESS:</p> <p>21 I see it on the screen, and it's still</p> <p>22 coming up. It's almost up on my big screen.</p> <p>23 MR. HARKINS:</p> <p>24 It's pretty large, but it's coming up.</p>

<p style="text-align: right;">Page 102</p> <p>1 THE WITNESS: 2 Yeah, it is. 314 pages long, and I can 3 see the first page. 4 MS. BOGDAN: 5 Q Okay. Well, let's just wait for it 6 to -- 7 A It's up. 8 Q -- to load. 9 A It's all loaded. It's good. 10 Q You can see it? 11 A Yes. 12 MS. BOGDAN: 13 Okay. If we could go to page 36. And 14 it's numbered in the bottom left corner, for the 15 tech. 16 A Yes. I'm on that page. 17 MS. BOGDAN: 18 Oh, that's 96. 19 A 36, not 96? Is that 96, not 36? 20 MS. BOGDAN: 21 Q The number, page number in the 22 document. There we go. I see it up on my 23 screen. 24 A Okay. So you can tell where I'm at.</p>	<p style="text-align: right;">Page 104</p> <p>1 N-nitrosodimethylamine (Fridman, et al., 1971.) 2 Q Does it say pH yields 3 N-nitrosodimethylamine? 4 A Yes. I believe I said that. 5 MR. HARKINS: 6 What does that mean? 7 THE WITNESS: 8 Oh. N-nitrosodimethylamine. 9 MS. BOGDAN: 10 Q Okay. So do you agree with that 11 sentence? 12 A Yes. And I have no reason to dispute 13 it. 14 Q And, so, you agree that the reaction of 15 dimethylamine hydrochloride with sodium nitrite 16 at an acidic pH yields N-nitrosodimethylamine? 17 A NDMA -- yes. 18 Q And that's well established in 19 chemistry? 20 A Yes. It's been established and -- and 21 I don't know how to classify "well," but I don't 22 think there's any controversy about it. 23 Q If we could go to page 40. It's four 24 ahead of where we are now.</p>
<p style="text-align: right;">Page 103</p> <p>1 That's good. 2 Q "The observation of severe liver 3 disease" is where it starts. 4 A Show me where on the screen. 5 Okay. That's helpful. 6 Q Yep. 7 A Am I on the wrong page? 8 Q It's page 36 in the bottom left-hand 9 corner. 10 A That's where I was. 11 Q Not of the PDF but of the data plate. 12 A Right. That's where I was, on page 36 13 in the bottom left-hand corner, but I'm getting 14 back there. 44... 15 Q And, actually, I'm gonna be asking you 16 about the third paragraph on that page that 17 starts with "It has been known since 1865." 18 A Okay. So I'm -- I'm with you, and I 19 can see both screens. 20 Q Okay. Can you read that first sentence 21 that starts with "It has been known since"? 22 A "It has been known since 1865 that the 23 reaction of dimethylamine hydrochloride with 24 sodium nitrite at an acidic pH yields</p>	<p style="text-align: right;">Page 105</p> <p>1 A I'm there now. 2 Q Okay. And this monograph was published 3 in 1978. But if you could read the first couple 4 sentences of the paragraph that begins with "Most 5 of." 6 A "Most of the chemical and physical 7 properties of the nitrosamines described in these 8 monographs were taken from Druckrey, et al., 9 1967. The principal techniques employed for the 10 analysis of volatile N-nitrosamines have been 11 described in a recent publication, Preussmann, 12 et al., 1978." 13 Q Are you familiar with that Preussmann 14 study? 15 A I have seen it. I wouldn't say I'm 16 familiar with it, but I have seen it. 17 Q Are you familiar with the Ruckrey [sic] 18 study, or Druck- -- if it's pronounced with the 19 D, making it Druckrey study? 20 A I'm not sure I've ever looked at the 21 Druckrey study. 22 Q Would you read the next sentence? 23 A "The relative merits of high and 24 low-resolution mass spectrometry are discussed,</p>

<p style="text-align: right;">Page 106</p> <p>1 since use of mass spectrometry as a confirmatory 2 technique is particularly important." 3 Q Do you agree that the use of mass 4 spectrometry is a confirmatory technique which is 5 important -- 6 MR. HARKINS: 7 Object to form. Vague. 8 MS. BOGDAN: 9 Q -- in evaluating volatile 10 N-nitrosamines? 11 MR. HARKINS: 12 Same objection. 13 A I agree that the use of mass 14 spectrometry as a -- as a confirmatory technique 15 or as a technique is -- is particularly 16 important, yes. 17 MS. BOGDAN: 18 Q Okay. If we could go to page 83, so 19 Dr. Baertschi can orient himself, which is the 20 part of the monograph that talks about 21 N-nitrosodiethylamine. 22 A Yes, I -- I see it. 23 Q Okay. And I'm actually just going to 24 bring you right to --</p>	<p style="text-align: right;">Page 108</p> <p>1 Q Now, you used a term about the 2 molecular weight that was very much a chemistry 3 term, something about the characteristics of the 4 molecule. You said based on how low the 5 molecular weight is and the "blank" 6 characteristics of the molecule. 7 A I think I said aliphatic. 8 Q That's what you said. And I know that 9 the stenographer is gonna have difficulty with 10 that word. Could you -- I don't know if you can 11 spell it, but if you could also then tell us what 12 it means. 13 A Aliphatic is A-L-I-P-H-A-T-I-C, and it 14 has to do with, instead of nitrogen having two 15 hydrogens on it, for example, it has what -- a 16 two-carbon unit -- two two-carbon units coming 17 off of it, and they're saturated, which means 18 they have maximum number of hydrogens. 19 And when you have carbons with a 20 maximum number of hydrogens in a series, they're 21 called aliphatic series, and they tend to -- 22 until you get -- they tend to be volatile. And 23 then as you grow them, liquid, and, then, as you 24 grow them further, then they become semisolid and</p>
<p style="text-align: right;">Page 107</p> <p>1 Well, let me ask you this question. Is 2 N-nitrosodiethylamine a volatile chemical? 3 MR. HARKINS: 4 Object to form. Vague. 5 A It's described here as a yellow 6 volatile liquid with a boiling point of 177 7 degrees C. 8 MS. BOGDAN: 9 Q Do you know it to be a volatile 10 chemical? 11 A I don't know it to be a volatile 12 chemical, but I would presume it was somewhat 13 volatile based on how low the molecular weight is 14 and the aliphatic characteristics of the 15 molecule. But it would be -- 177 degrees boiling 16 point is not particularly volatile from a chemist 17 point of view. 18 Q Would you call it a semivolatile 19 chemical? 20 MR. HARKINS: 21 Object to the form. 22 A I'm okay with the description as yellow 23 volatile liquid. I have no dispute with that. 24 MS. BOGDAN:</p>	<p style="text-align: right;">Page 109</p> <p>1 then eventually solids. 2 But the character -- a chemist can look 3 at that and sort of take a guess at whether it 4 might be volatile or -- or not. It's -- it's an 5 incidental point that I don't see as being 6 important, but you can take it for what it's 7 worth. 8 Q Just wanted to make sure I asked what 9 the word was and what it meant. Okay. 10 A Yeah. 11 Q All right. If we could go to page 107 12 in this N-nitrosodiethylamine section, which 13 brings you down to a summary of the data reported 14 and evaluation. The 107 is in the bottom 15 right-hand corner of the document. 16 A Yeah, I -- I've got it. 17 Q Do you see where it says "summary of 18 data reported and evaluation"? 19 A I do see that. 20 Q Okay. And under experimental data, it 21 says "N-nitrosodiethylamine is carcinogenic in 22 all animal species tested." And then it gives a 23 list of all the different animal species. 24 A Yes, I see that.</p>

<p style="text-align: right;">Page 110</p> <p>1 Q Do you disagree with that statement?</p> <p>2 MR. HARKINS:</p> <p>3 Object to form. Scope.</p> <p>4 A No. I have no reason to disagree with</p> <p>5 it.</p> <p>6 MS. BOGDAN:</p> <p>7 Q Then if we could go to the bottom of</p> <p>8 this page where it says "evaluation," would you</p> <p>9 read the first sentence, please.</p> <p>10 A "There is sufficient evidence of a</p> <p>11 carcinogenic effect of N-nitrosodiethylamine in</p> <p>12 many experimental animal species. Although no</p> <p>13 epidemiological data were available, the</p> <p>14 N-nitrosodiethylamine should be regarded for</p> <p>15 practical purposes as if it were carcinogenic to</p> <p>16 humans."</p> <p>17 Q Do you agree with that statement?</p> <p>18 MR. HARKINS:</p> <p>19 Object to form. Scope.</p> <p>20 A What I agree with, the practical</p> <p>21 purposes means that you should treat it as -- as</p> <p>22 if it were, regardless of whether it's firmly</p> <p>23 established, because you take precautions for</p> <p>24 safety.</p>	<p style="text-align: right;">Page 112</p> <p>1 A NDEA I would describe as a small</p> <p>2 molecule.</p> <p>3 Q Okay. How would you describe NDMA as</p> <p>4 far as its molecular size?</p> <p>5 A Small. Slightly smaller than NDEA.</p> <p>6 Q Okay. And NDMA, is that also a</p> <p>7 volatile chemical?</p> <p>8 MR. HARKINS:</p> <p>9 Object to form. Vague.</p> <p>10 A It says here "yellow oily liquid."</p> <p>11 MS. BOGDAN:</p> <p>12 Q Okay. And, then, under G, volatility,</p> <p>13 what does it say?</p> <p>14 A Can you point me to where it says --</p> <p>15 Oh, volatility, down at the bottom.</p> <p>16 Q The very bottom of the page.</p> <p>17 A Yes, I see now. It was different order</p> <p>18 than NDEA. "Volatile; can be steam-distilled</p> <p>19 quantitatively." So, yes, it's classified as</p> <p>20 volatile. And I note that the boiling point is</p> <p>21 much less than NDEA. At 50 to 52 degrees C, a</p> <p>22 much lower boiling point.</p> <p>23 Q Do you disagree with the description of</p> <p>24 NDMA being volatile?</p>
<p style="text-align: right;">Page 111</p> <p>1 MS. BOGDAN:</p> <p>2 Q Do you agree with that statement?</p> <p>3 MR. HARKINS:</p> <p>4 Same objection.</p> <p>5 A I have no particular reason for --</p> <p>6 From a practical purpose, you would</p> <p>7 regard something as carcinogenic or highly toxic</p> <p>8 in some other fashion. You would treat it the</p> <p>9 same as with extreme care and all that. So, I --</p> <p>10 from a practical point of view, I don't have any</p> <p>11 contention with that sentence.</p> <p>12 MS. BOGDAN:</p> <p>13 Q All right. If we could move to page</p> <p>14 125 of the document, which is the part of the</p> <p>15 monograph that refers to N-nitrosodimethylamine.</p> <p>16 And, Doctor, N-nitrosodimethylamine is NDMA;</p> <p>17 correct?</p> <p>18 A Yes, correct, to my understanding.</p> <p>19 Q And we had just talked about NDEA.</p> <p>20 Would you describe NDEA as a small molecule,</p> <p>21 large molecule, or something else?</p> <p>22 A I'd describe --</p> <p>23 NDMA; right?</p> <p>24 Q NDEA.</p>	<p style="text-align: right;">Page 113</p> <p>1 MR. HARKINS:</p> <p>2 Object to form. Scope. Vague.</p> <p>3 A No. I don't disagree with the</p> <p>4 classification as volatile.</p> <p>5 MS. BOGDAN:</p> <p>6 Q Okay. If we can go to page 151, which</p> <p>7 is the summary of data reported and evaluation</p> <p>8 for NDMA.</p> <p>9 A Sorry. I'm probably doing the wrong</p> <p>10 way, scrolling down, and it's going slower. I'm</p> <p>11 trying to go fast. 147, 48.</p> <p>12 Q I'm directing you to the center of that</p> <p>13 page where it says, again, "summary of data</p> <p>14 reported and evaluation," similar to what we had</p> <p>15 for NDEA.</p> <p>16 A I am there.</p> <p>17 Q Okay. And under "experimental data,"</p> <p>18 do you see where it says "N-nitrosodimethylamine</p> <p>19 is carcinogenic in all animal species tested"?</p> <p>20 A I do see that.</p> <p>21 Q Do you know that to be the case?</p> <p>22 MR. HARKINS:</p> <p>23 Object to form. Scope. Speculation.</p> <p>24 You can answer.</p>

<p style="text-align: right;">Page 114</p> <p>1 A I don't know it personally. I know it 2 from reading it in general knowledge of what's -- 3 what I've seen in the literature over time. 4 MS. BOGDAN: 5 Q Do you, based upon your research and by 6 knowledge in reading in the literature, agree 7 that N-nitrosodimethylamine is carcinogenic in 8 all animal species tested, as far as you know? 9 MR. HARKINS: 10 Object to form. Outside the scope of 11 the expert report. Asked and answered. 12 A Yes. 13 MS. BOGDAN: 14 Q And jumping down to evaluation, which 15 is actually on the next page, page 152, would you 16 read the evaluation for NDMA? 17 A Do you want me to read that whole 18 paragraph or -- 19 Q Yes, please. 20 A Okay. Here -- here we go. 21 "There is sufficient evidence of a 22 carcinogenic effect of N-nitrosodimethylamine in 23 many experimental animal species. Similarities 24 in its metabolism by human and rodent tissues</p>	<p style="text-align: right;">Page 116</p> <p>1 Object to form. Scope. 2 A I don't know what you mean by "group." 3 MS. BOGDAN: 4 Q IARC has a -- a classification where it 5 groups the different chemicals according to 6 different definitions, group 1, group 2, group 7 2A, group 2B, group 3, group 4. 8 Are you aware of those types of 9 classifications for NDMA or NDEA? 10 MR. HARKINS: 11 Object to form. Scope. Foundation. 12 A I -- I have not researched this and I'm 13 not commenting on it in my expert report, and 14 I -- I don't have -- like, I'm not a 15 toxicologist, so I'm not completely aware of how 16 they've classified NDEA and NDMA. But I would 17 think it -- it would be apparent from reading the 18 material if we were looking at it. 19 MS. BOGDAN: 20 Q IARC has classified NDEA and NDMA as 21 group 2A, which is probably carcinogenic to 22 humans. Do you agree with that classification? 23 MR. HARKINS: 24 Object to form. Scope. Foundation.</p>
<p style="text-align: right;">Page 115</p> <p>1 have been demonstrated. Although no 2 epidemiological data were available (and efforts 3 should be directed toward this end), 4 N-nitrosodimethylamine should be regarded for 5 practical purposes as if it were carcinogenic to 6 humans." 7 Q Do you agree with that paragraph? 8 MR. HARKINS: 9 Object to form. Scope. Foundation. 10 A This is the same discussion as we had 11 with NDEA, and my conclusions would be the same, 12 so I hope I state it the same here, that I have 13 no issue with -- with the way it's stated; that 14 for practical purposes for -- to be extremely 15 cautious, that it should be handled as if it 16 were, in the same manner as a known carcinogen 17 would be. 18 MS. BOGDAN: 19 Q Thank you. 20 MS. BOGDAN: 21 If we could take that down, please. 22 Q Do you know what group IARC has 23 classified NDEA or NDMA in? 24 MR. HARKINS:</p>	<p style="text-align: right;">Page 117</p> <p>1 We're way outside anything in his expert report. 2 You can answer if you know. 3 A I don't have any reason to contest what 4 toxicologists and official organization have put 5 together. I've not researched the toxicology and 6 I've not -- not opined on it in my expert report. 7 MS. BOGDAN: 8 Q As part of your investigation into this 9 matter, did you look at the FDA's advice that it 10 gave regarding the valsartan NDMA and NDEA 11 contamination -- 12 MR. HARKINS: 13 Object to form. Scope. 14 MS. BOGDAN: 15 Q -- that was -- that was discovered? 16 A I have reviewed several EMA and FDA 17 documents as part of my general work consulting 18 for N-nitroso compounds and particularly for NDEA 19 and NDMA, and I'm familiar. But I -- I believe I 20 disclosed it in my references or materials 21 considered. But I certainly am aware of it just 22 in my general consulting practice. 23 Q When you say you "disclosed it in my 24 references or materials," what are you speaking</p>

<p style="text-align: right;">Page 118</p> <p>1 of disclosing?</p> <p>2 A Well, I tried to be comprehensive in</p> <p>3 what I disclosed in materials that I considered,</p> <p>4 but I don't know what your question really is</p> <p>5 getting at. So maybe help me.</p> <p>6 Q Okay. What I was asking is is -- I</p> <p>7 asked, as far as your investigation into this</p> <p>8 matter, if you reviewed the FDA's advice that it</p> <p>9 gave with regard to the valsartan NDMA and NDEA</p> <p>10 contamination --</p> <p>11 A Yes.</p> <p>12 Q -- and --</p> <p>13 A Sorry. I thought you were complete.</p> <p>14 Q Yeah, no. That's -- that's the</p> <p>15 question I asked.</p> <p>16 So I think, from your answer, that you</p> <p>17 were saying that you have reviewed it? Or you</p> <p>18 haven't reviewed it in your consulting capacity</p> <p>19 but perhaps reviewed it in your consulting</p> <p>20 capacity for others, not in connection with the</p> <p>21 work that you've done on this case?</p> <p>22 But I'll let you clear the answer up.</p> <p>23 I don't want it to be -- I don't want to</p> <p>24 mischaracterize or misconstrue your response.</p>	<p style="text-align: right;">Page 120</p> <p>1 put it in -- in this document or in citations.</p> <p>2 I don't know for sure. I don't</p> <p>3 remember. I'm not encyclopedic. I'm not an</p> <p>4 encyclopedia. I may have made a mistake, even.</p> <p>5 MS. BOGDAN:</p> <p>6 Let's pull up the FDA general advice</p> <p>7 letter and mark that as an exhibit.</p> <p>8 (DEPOSITION EXHIBIT NUMBER 9</p> <p>9 WAS MARKED FOR IDENTIFICATION.)</p> <p>10 MS. BOGDAN:</p> <p>11 Q And, Dr. Baertschi, you can let me know</p> <p>12 once it's up on your screen.</p> <p>13 A It's up on my screen.</p> <p>14 Q All right. Are you familiar with this</p> <p>15 general advice letter?</p> <p>16 A Yes. I believe I've seen this before.</p> <p>17 Q I'm going to bring you down to the</p> <p>18 third paragraph on the first page. And first</p> <p>19 sentence refers to IARC, which is the monograph</p> <p>20 that we just spoke about; correct?</p> <p>21 A Correct.</p> <p>22 Q Now, the second sentence reads, "In</p> <p>23 fact, N-nitroso compounds are identified as a,"</p> <p>24 quote, "cohort of concern in internationally</p>
<p style="text-align: right;">Page 119</p> <p>1 A When you -- when you say "it," the FDA</p> <p>2 has had more than one "it" come out about</p> <p>3 valsartan and nitrosamines and NDMA and NDEA, as</p> <p>4 has EMA. And, so, they're pretty much</p> <p>5 self-consistent.</p> <p>6 I've seen several things from the FDA</p> <p>7 and several things from EMA, and if there's a</p> <p>8 particular document you want to ask me and show</p> <p>9 me and say have you -- have you reviewed this</p> <p>10 "it," then I'm happy to look at it.</p> <p>11 But I -- I believe I'm pretty</p> <p>12 up to date on FDA disclosures about valsartan and</p> <p>13 others' relation to nitrosamine contamination.</p> <p>14 It's been a big, well-publicized issue in the</p> <p>15 industry.</p> <p>16 Q With regard to the FDA references that</p> <p>17 you're referring to, did you -- did you note the</p> <p>18 ones that you reviewed in your report or in your</p> <p>19 materials considered list if you reviewed them in</p> <p>20 connection with this matter?</p> <p>21 A I can't say for a hundred percent sure.</p> <p>22 I -- there are -- I can't list everything that --</p> <p>23 that I've seen over the last couple of years</p> <p>24 related to nitrosamines and guarantee that I've</p>	<p style="text-align: right;">Page 121</p> <p>1 harmonized guidance."</p> <p>2 Are you familiar with that term,</p> <p>3 "cohort of concern"?</p> <p>4 A Yes, I am.</p> <p>5 Q What does that term mean?</p> <p>6 A It refers to three classes of compounds</p> <p>7 that are known to be associated with particularly</p> <p>8 high mutagenicity responses such that members of</p> <p>9 those classes of compounds, those three classes,</p> <p>10 are considered to be -- the -- the thresholds for</p> <p>11 toxicological concern listed in ICH M7 is not to</p> <p>12 be used directly but only as a starting point to</p> <p>13 think about for the cohorts of concern.</p> <p>14 So the implication is that you would do</p> <p>15 a case by case and it would be lower than the TTC</p> <p>16 for typical mutagens that weren't part of the</p> <p>17 cohort of concern.</p> <p>18 Q When you say "lower," meaning that they</p> <p>19 would have a lower threshold for what would be</p> <p>20 permitted in a drug substance or drug product?</p> <p>21 A Correct.</p> <p>22 Q And when you say "lower threshold,"</p> <p>23 that means less of those particular chemicals</p> <p>24 would be allowed in the drug substance or drug</p>

<p style="text-align: right;">Page 122</p> <p>1 product; correct?</p> <p>2 MR. HARKINS:</p> <p>3 Object to form. Vague. Speculation.</p> <p>4 A Yes.</p> <p>5 MS. BOGDAN:</p> <p>6 Q That's because those compounds are</p> <p>7 associated with particularly high mutagenicity</p> <p>8 responses; correct?</p> <p>9 MR. HARKINS:</p> <p>10 Object to form. Vague.</p> <p>11 A Those classes of compounds, yes.</p> <p>12 There -- there can be individual compounds within</p> <p>13 those classes that aren't even mutagenic. But in</p> <p>14 the absence of that knowledge, you treat them as</p> <p>15 the part of the cohort of concern.</p> <p>16 MS. BOGDAN:</p> <p>17 Q So those compounds in the cohort of</p> <p>18 concern are known to be associated with</p> <p>19 particularly high mutagenicity responses?</p> <p>20 MR. HARKINS:</p> <p>21 Object to form. Vague. Asked and</p> <p>22 answered.</p> <p>23 A I think I just answered that, that</p> <p>24 within a particular class, such as N-nitroso</p>	<p style="text-align: right;">Page 124</p> <p>1 Same objection.</p> <p>2 A Yes. That's my understanding. I don't</p> <p>3 have personal knowledge. I only have knowledge</p> <p>4 I've derived from literature.</p> <p>5 MS. BOGDAN:</p> <p>6 Q And, so, NDMA and NDEA are part of the</p> <p>7 N-nitroso compounds that are identified in the</p> <p>8 cohort of concern; correct?</p> <p>9 A Correct.</p> <p>10 Q And, then, moving further in this</p> <p>11 paragraph, it says "ICH M7 recommends that known</p> <p>12 mutagenic carcinogens such as nitrosamine be</p> <p>13 controlled at or below the acceptable cancer risk</p> <p>14 level."</p> <p>15 Do you agree with that statement?</p> <p>16 MR. HARKINS:</p> <p>17 Object to form. Scope.</p> <p>18 A Well, it's a funny wording, "the</p> <p>19 acceptable cancer risk level," so I'm surprised</p> <p>20 it's in a document from the FDA. But the</p> <p>21 acceptable threshold or risk level, and, so, I --</p> <p>22 as defined by the threshold of toxicological</p> <p>23 concern, the threshold for toxicological concern</p> <p>24 for these two are lower than -- than those that</p>
<p style="text-align: right;">Page 123</p> <p>1 compounds, there are N-nitroso compounds that are</p> <p>2 not mutagenic at all that are in -- that are in</p> <p>3 N-nitroso compounds that are similar to other</p> <p>4 mutagenic compounds in their mutagenicity, and</p> <p>5 then there are some that are more potent than the</p> <p>6 typical mutagenic compounds list in the ICH M7</p> <p>7 class of compounds.</p> <p>8 So I'm just trying to straighten out</p> <p>9 that you said "those compounds," and that can be</p> <p>10 generalized too far, and I wanted to clarify what</p> <p>11 I meant.</p> <p>12 MS. BOGDAN:</p> <p>13 Q Okay. With regard to NDMA</p> <p>14 specifically, is that one of the N-nitroso</p> <p>15 compounds that is associated with particularly</p> <p>16 high mutagenicity response?</p> <p>17 MR. HARKINS:</p> <p>18 Object to form. Vague. Scope.</p> <p>19 A Yes.</p> <p>20 MS. BOGDAN:</p> <p>21 Q When you refer to NDEA, is that one of</p> <p>22 those N-nitroso compounds that is associated with</p> <p>23 a particularly high mutagenicity response?</p> <p>24 MR. HARKINS:</p>	<p style="text-align: right;">Page 125</p> <p>1 are not in the cohort.</p> <p>2 MS. BOGDAN:</p> <p>3 Q Do you agree that known mutagenic</p> <p>4 carcinogens such as nitrosamines should be</p> <p>5 controlled at or below the acceptable cancer risk</p> <p>6 level?</p> <p>7 MR. HARKINS:</p> <p>8 Object to form. Vague. Scope. Asked</p> <p>9 and answered.</p> <p>10 A If the acceptable cancer -- cancer risk</p> <p>11 level is the threshold of toxicological concern</p> <p>12 for these compounds, yes. I don't exactly know</p> <p>13 what they mean by acceptable cancer risk level,</p> <p>14 so that's -- that's my problem. I normally have</p> <p>15 seen toxicological threshold of toxicological</p> <p>16 concern and that that threshold is lower for</p> <p>17 these compounds. Throwing in the cancer risk is</p> <p>18 not what I'm used to seeing in thresholds.</p> <p>19 MS. BOGDAN:</p> <p>20 Q Do you agree that NDMA should be</p> <p>21 controlled in drug substances and drug products</p> <p>22 to be 96 nanograms or less?</p> <p>23 MR. HARKINS:</p> <p>24 Object to form. Scope.</p>

Page 126

1 A I agree that -- that -- that that is
 2 the level that's been set by FDA and EMA, as I
 3 understand it.
 4 MS. BOGDAN:
 5 Q And with regard to NDEA, do you agree
 6 that NDEA should be limited in drug products to
 7 96 or -- excuse me -- to 26.5 nanograms or less?
 8 MR. HARKINS:
 9 Object to form. Vague. Scope.
 10 A The same answer. I agree that that's
 11 the level that's been set by EMA and FDA.
 12 MS. BOGDAN:
 13 Q The next sentence reads, "Due to their
 14 known potent carcinogenic effects and because it
 15 is feasible to limit these impurities by taking
 16 reasonable steps to prevent or eliminate their
 17 presence, FDA has determined that there is no
 18 acceptable specification for nitrosamines in ARB
 19 API and drug product."
 20 Do you see that sentence?
 21 A I see that.
 22 Q Okay. Do you agree that it is feasible
 23 to limit NDMA and NDEA by taking reasonable
 24 steps?

Page 127

1 MR. HARKINS:
 2 Object to form. Vague. Outside the
 3 scope.
 4 A I agree that in the cases I know of,
 5 there -- it is feasible to limit the levels of
 6 those impurities by taking steps to prevent or --
 7 to prevent their presence or reduce.
 8 MS. BOGDAN:
 9 We can take that down.
 10 MR. HARKINS:
 11 Hey, Rosemarie, when you get to a good
 12 spot, we're gonna need a few minutes just to
 13 finalize our lunch plans. We won't take it right
 14 now. We just want to make sure we know when
 15 that's gonna get here so we can plan for around
 16 1:00 probably.
 17 MS. BOGDAN:
 18 I mean, if you want to take it right
 19 now, Steve, that's fine. I just took a document
 20 down. If it's just a few minutes and it will
 21 make things go smoother, that's fine.
 22 MR. HARKINS:
 23 Can we go off the record?
 24 VIDEOGRAPHER:

Page 128

1 Off record, 11:59 a.m.
 2 (OFF THE RECORD.)
 3 VIDEOGRAPHER:
 4 On the record, 12:22 p.m.
 5 MS. BOGDAN:
 6 Q Dr. Baertschi, I see a reference that
 7 you're somehow affiliated with David P. Elder's
 8 laboratory. Is that true?
 9 A Affiliated, no. He's a colleague, a
 10 friend. I don't even know -- I don't think he
 11 has a laboratory. He's a consultant now, as far
 12 as I know. So I do know David Elder.
 13 Q And how do you know him?
 14 A Presenting at conferences over many
 15 years, running into him. And then sort of as you
 16 start to run into multiple times --
 17 And he publishes some of the same
 18 things, and, so, we exchange -- have in the past
 19 exchanged email, you know, conversations and
 20 such.
 21 Q Have you ever worked on a project
 22 together with David Elder?
 23 A I believe I published a paper -- I
 24 don't know if I published two, but I'm pretty

Page 129

1 sure he was a co-author on one article, at least,
 2 that I published.
 3 Q As far as you know, you're not a member
 4 of David Elder's laboratory?
 5 A Correct.
 6 Q And, then, do you know of an entity by
 7 the name of ResearchGate?
 8 A Yes.
 9 Q Okay. And what is that entity?
 10 A That's an Internet site that houses --
 11 hosts referee journal articles for people to then
 12 host their publications in a way that's compliant
 13 with the copyright issues associated with -- so
 14 that you can then view somebody's research,
 15 request a paper if you see one of interest, that
 16 sort of thing.
 17 Q So are you, like, a member of
 18 ResearchGate or...
 19 A Well, in the same way that I'm a member
 20 of, like, Google Docs or --
 21 You know, I mean --
 22 Q Okay.
 23 A -- it's like -- you know, it's just
 24 a -- I have a site or whatever -- an account

Page 130

1 where I have a ResearchGate profile, and my
 2 publications and associated information is on
 3 there.
 4 Q So you participate in that platform.
 5 Is that a good way to summarize it?
 6 A Yes.
 7 Q What did you undertake to investigate
 8 when you were retained as an expert consultant in
 9 this matter?
 10 A I missed the first part of the
 11 question. What did you undertake -- what --
 12 something about --
 13 Q What did you undertake to investigate
 14 when you were retained as an expert consultant in
 15 this matter?
 16 MR. HARKINS:
 17 Object to form. Vague.
 18 A I believe I've stated that in my expert
 19 report. Should we -- should we look at that and
 20 see what it says that I was asked to create an
 21 expert report on? Because that's essentially
 22 what they asked me to do.
 23 In -- I think it says assignment 3 in
 24 my expert report at paragraph 11.

Page 131

1 MS. BOGDAN:
 2 Q Okay. And what's -- you're referring
 3 to the sentence that starts "Specifically"?
 4 A I have been retained by the Teva
 5 defendants.
 6 Q Uh-huh. And then the next sentence
 7 that starts "Specifically," does that give us
 8 information as to what investigation you
 9 undertook with regard to your work on this case?
 10 A Yeah. That's a representation of
 11 what -- what I was requested to do.
 12 Q Okay.
 13 A I don't know if that exact wording
 14 was -- the -- when they first approached me, you
 15 know, to -- to -- as a potential expert witness,
 16 but something along the lines of analytical
 17 expertise for -- for this -- yeah, as an
 18 analytical expertise.
 19 Q And what, with regard to your
 20 analytical --
 21 I'm assuming you're referring to
 22 analytical chemistry.
 23 A Yes.
 24 Q We're in the chemistry field; right?

Page 132

1 Is that where we are? Okay.
 2 A Yes.
 3 Q So with regard to your being retained
 4 as an analytical chemist, what were you asked to
 5 review? Or what did you review?
 6 MR. HARKINS:
 7 Answer to the extent it doesn't reflect
 8 conversations with counsel. But you can discuss
 9 generally.
 10 A Well, they provided me with a link to a
 11 lot of documents associated with this case, some
 12 testimony, some materials. I can't remember all
 13 of it. But, you know, there was some expert
 14 reports, some testimony, some references, some --
 15 the actual -- what do you call them? -- the suits
 16 or the legal documents that would say here's the
 17 suits in question. I don't know how -- the right
 18 word. So that kind of general information.
 19 And they -- they gave me broader ac- --
 20 very broad access and let me kind of go around to
 21 figure out what would be most useful to help. So
 22 in terms of what they provided me with, access to
 23 a lot of information. Folders.
 24 MS. BOGDAN:

Page 133

1 Q And upon you reviewing that information
 2 that you had access to, did you come up with a
 3 suggestion as to what your focus of your expert
 4 report would be?
 5 MR. HARKINS:
 6 Object to form. Vague. Legal
 7 conclusion.
 8 You can answer.
 9 A I don't -- I don't remember exactly how
 10 that transpired. I think it was generally can
 11 you -- I think there was some general request,
 12 some idea of, you know, can I comment as an
 13 expert on the -- the analytical methods used and
 14 the techniques used and -- and their viability
 15 for detection of nitrosamines, et cetera, and
 16 impurities in general.
 17 MS. BOGDAN:
 18 Q And, so, your focus, when reviewing the
 19 documentation, was on the testing methods that
 20 were being employed?
 21 A That was one of my -- yeah. That's
 22 probably my main focus. And -- but also getting
 23 background information on the field and
 24 understanding chemistry and making sure I

<p style="text-align: right;">Page 134</p> <p>1 understood that the -- the current expert reports 2 and -- and testimony that was available at the 3 time. 4 Q And understanding the chemistry was 5 important with regard to investigat- -- your 6 investigation into this case; correct? 7 A "The chemistry" is a vague term, but 8 understanding chemistry is -- is part of 9 understanding how to apply analytical technique. 10 So if you're using an analytical 11 technique that's -- you -- you -- you want to 12 understand the chemistry underneath it so that 13 you can better discern the utility of and 14 limitations of the analytical -- analytical 15 techniques used. 16 Q Now, you referred to your report, 17 paragraph 11, and I'm assuming when you were 18 referring to that paragraph, you actually, in 19 your report, stated what you were asked by 20 counsel to do? 21 A Yeah. It -- it -- it says that 22 clearly, "I was asked by counsel." 23 Q Okay. And could you read that sentence 24 of your report that answers the question as to</p>	<p style="text-align: right;">Page 136</p> <p>1 what site wouldn't affect my opinion. 2 Q When you say it wouldn't -- there 3 wasn't an issue in your mind as to what equipment 4 was available, why wouldn't that be important to 5 determining the testing capabilities available to 6 Teva? 7 A Well, because I -- my understanding 8 was, without definitively -- definitively -- 9 definitively confirming it, was that they -- they 10 would have various levels of instrumentation 11 available, but it wouldn't affect -- the 12 specifics of that wouldn't affect my opinion on 13 the general process for how -- for how you go 14 about releasing drug products that have 15 particular specifications associated with it and 16 when you would proceed to nonroutine 17 investigatory-type approaches, which would then 18 require different instrumentation. 19 Q All right. So if we break that down, 20 when you're talking about releasing drug products 21 that have particular specifications, what 22 instrumentation would be needed with regard to 23 testing that's required by particular 24 specifications, as you referred to? Is that a</p>
<p style="text-align: right;">Page 135</p> <p>1 what you were asked to do in this case as an 2 expert consultant? 3 A Yes. I'll read the sentence. It says 4 "Specifically, I was asked by counsel for Teva to 5 assess testing conducted by and testing 6 capabilities available to Teva during the 7 relevant time period and to review and respond to 8 the opinions presented by plaintiffs' class 9 certification experts." 10 Q And is that sentence accurate as to 11 what you were asked to do as a consultant in this 12 case? 13 A As far as I can recollect, yes, I 14 believe so. 15 Q Did you make inquiry as to what 16 analytical chemistry equipment Teva owned as of 17 the time that it was producing 18 valsartan-containing drugs? 19 A I did not specifically make inquiry as 20 to what they had available. I did see some 21 testimony on it or some documents associated with 22 that, and -- and there was no issue in my mind or 23 particular concern that I had to nail that down 24 to know exactly what equipment was available at</p>	<p style="text-align: right;">Page 137</p> <p>1 PLC impurity testing? 2 MR. HARKINS: 3 Object to form. Vague. 4 A Yes. If we focus on what I think is 5 the most relevant part for -- to discuss, it 6 would be the HPLC impurities testing. There are 7 other specification tests, visual and -- and 8 things that I don't want to go list through 9 listing a bunch of techniques or instruments that 10 you might use in order to deal with the other 11 release specification testing, but if we focus in 12 on the most relevant impurities one, it would be 13 HPLC with UV detection. 14 MS. BOGDAN: 15 Q And, then, in your response, you refer 16 to nonroutine investigation-type instruments. 17 What would those be? 18 MR. HARKINS: 19 Did you hear the full -- I lost the 20 last part of that question. 21 A I -- I -- it did fade out. I don't 22 want to assume because I think I read your lips, 23 but let's maybe repeat so that I didn't. 24 MS. BOGDAN:</p>

<p style="text-align: right;">Page 138</p> <p>1 Q I said: And, then, in your response, 2 you referred to nonroutine investigation-type 3 instruments. What would those be? 4 A Without limiting it or without trying 5 to be comprehensive, the most obvious and 6 relevant one would be HPLC attached to a mass 7 spectrometer with maybe variable capabilities, 8 because there are different type of mass 9 spectrometers. But something that would be 10 aligned with elucidating structures, detecting 11 and elucidating structures of unknowns that are 12 not part of the specifications or that -- 13 I'm sorry. I should have finished. 14 They can be part of the 15 specifications -- like, it could be an unknown 16 peak that crops up -- or it can be something 17 that -- 18 Well, that's what -- that's what it 19 would typically be, is an unknown peak or -- or, 20 for some reason, that triggers a follow-up to 21 investigate further, which you would need some 22 kind of spectroscopic help to nail down the 23 structure. 24 Q And that instrument would be mass</p>	<p style="text-align: right;">Page 140</p> <p>1 Object to form. Scope. Asked and 2 answered. 3 A I didn't make specific inquiry. I 4 presumed that they did, and -- I presumed that 5 they did. 6 MS. BOGDAN: 7 Q In your experience working for 8 pharmaceutical companies, is gas chromatography a 9 typical instrument that pharmaceutical companies 10 have in their arsenal? 11 A Yes. 12 Q In your work for pharmaceutical 13 companies, are mass spectrometers something they 14 usually have in their instrument arsenal? 15 MR. HARKINS: 16 Object to form. Vague to the extent 17 that -- "arsenal." 18 A Yeah. 19 I would -- I think interpreting -- I 20 would agree that, in general, mass -- mass 21 spectrometers, that firms would have -- firms 22 that can -- have laboratories typically would 23 have some kind of access somewhere in their 24 network to a mass spectrometer.</p>
<p style="text-align: right;">Page 139</p> <p>1 spectrometry or a mass spectra instrument? 2 A Yes. Not necessarily limited to, but 3 that's probably the workhorse or the primary tool 4 that you would first go to, typically. 5 Q And did Teva have a mass spec 6 instrument? 7 A I am pretty sure they did. 8 Q Now, you mentioned earlier in your 9 testimony, I believe, NMR testing. 10 A Yes. 11 Q Okay. Did Teva have that instrument 12 available? 13 MR. HARKINS: 14 Object to form. Scope. 15 A I do not know, did not confirm. But I 16 would presume that a typical large firm would 17 have somewhere in its -- a large pharmaceutical 18 firm, that they would have NMR access somewhere 19 in their firm. But I do not know. 20 MS. BOGDAN: 21 Q And what about gas chromatography? Did 22 you make inquiry as to whether Teva had gas 23 chromatography testing capabilities? 24 MR. HARKINS:</p>	<p style="text-align: right;">Page 141</p> <p>1 MS. BOGDAN. 2 Q ...valsartan API suppliers to Teva? 3 A Something cut out at the start. 4 Q Sorry. Who were the valsartan API 5 suppliers to Teva? 6 A I am aware of two: ZHP and Mylan. 7 Q Did Teva have quality agreements with 8 ZHP and Mylan -- 9 MR. HARKINS: 10 Object to form. 11 MS. BOGDAN: 12 Q -- for the API that was being supplied? 13 MR. HARKINS: 14 Object to form. It's outside the scope 15 of his expert report. 16 You can answer. 17 A Yeah. I didn't look into that. I 18 wasn't asked to look into that. I believe there 19 were other expert witnesses that did look into 20 that question. That wasn't the focus of my work 21 or expert report. I don't talk about that. 22 MS. BOGDAN: 23 Q So you aren't offering any opinions 24 with respect to quality agreements between Teva</p>

<p style="text-align: right;">Page 142</p> <p>1 and the API suppliers; correct?</p> <p>2 A I would agree with that. I...</p> <p>3 Q Do you agree that Teva, as the ANDA</p> <p>4 holder, was ultimately responsible for the</p> <p>5 safety, quality, and purity of the finished drug</p> <p>6 product that it sold?</p> <p>7 MR. HARKINS:</p> <p>8 Object to form. Scope of his expert</p> <p>9 report. Calls for a legal conclusion. Vague.</p> <p>10 You can answer if you have an opinion.</p> <p>11 A I don't -- I don't know technically who</p> <p>12 is, from a regulatory or legal point of view, who</p> <p>13 is ultimately responsible for sure. I know that</p> <p>14 there's an API manufacturer and there's a dosage</p> <p>15 form manufacturer, and I think that there are --</p> <p>16 I would think that there would be differences in</p> <p>17 responsibility, but it's -- it's a little bit out</p> <p>18 of my -- I didn't try to review or figure that</p> <p>19 out or nail that down. I didn't look into that</p> <p>20 aspect.</p> <p>21 MS. BOGDAN:</p> <p>22 Q Are you a regulatory expert?</p> <p>23 A I have regulatory expertise in that</p> <p>24 I've worked in the industry and been involved in</p>	<p style="text-align: right;">Page 144</p> <p>1 they -- they do what should be done, what is</p> <p>2 expected to be done for -- to ensure the safety,</p> <p>3 efficacy, and purity of their drug.</p> <p>4 MS. BOGDAN:</p> <p>5 Q Did you review the recall notices for</p> <p>6 the Teva product? And let me be more specific.</p> <p>7 Did you review the recall notices for the Teva</p> <p>8 valsartan-containing drugs?</p> <p>9 A I believe so. I mean, I'm familiar</p> <p>10 with the recalls, and I believe I looked at</p> <p>11 material in the list of things that I looked at</p> <p>12 dealing with that. There's so much discussion of</p> <p>13 it, I don't know what's an official document in</p> <p>14 terms of in my brain versus what -- where it was</p> <p>15 referred to by somebody else.</p> <p>16 I didn't review any documents with the</p> <p>17 idea like I'm a CGMP guy or I'm a -- I'm a</p> <p>18 quality, I'm reviewing. I wasn't reviewing the</p> <p>19 data for CGMP compliance and quality or</p> <p>20 regulatory aspects.</p> <p>21 Q And, so, you're not offering any</p> <p>22 opinions with regard to CGMPs in this case?</p> <p>23 A Well, I think some of my testimony</p> <p>24 overlaps with CGMPs because you're -- you're --</p>
<p style="text-align: right;">Page 143</p> <p>1 many regulatory submissions, NDAs and I&Ds over</p> <p>2 the years, thirty or more than that, but I've</p> <p>3 never worked in regulatory, never been my primary</p> <p>4 responsibility. So while I have some expertise</p> <p>5 and knowledge of it, I don't hold myself out as a</p> <p>6 regulatory expert.</p> <p>7 Q In your experience, based upon your</p> <p>8 years working in the pharmaceutical industry,</p> <p>9 what is your understanding as to the</p> <p>10 finished-dose manufacturer's responsibility for</p> <p>11 the quality of the API that's in their drug</p> <p>12 product?</p> <p>13 MR. HARKINS:</p> <p>14 Same objection. Outside the scope of</p> <p>15 his expert report. Vague. Facts not in</p> <p>16 evidence.</p> <p>17 You can answer.</p> <p>18 A My understanding is that they're</p> <p>19 responsible for ensuring the -- the</p> <p>20 specifications are met and making sure that</p> <p>21 quality has been -- you know, that -- that</p> <p>22 they're manufacturing according to CGMPs, that</p> <p>23 they're compliant with all regulatory agencies,</p> <p>24 that they're -- that they're competent and that</p>	<p style="text-align: right;">Page 145</p> <p>1 I'm looking at the analytical results in context</p> <p>2 of specifications that are part of the CGMP</p> <p>3 process. And, so, I wouldn't classify it as I'm</p> <p>4 not saying anything related to CGMPs and I'm</p> <p>5 not --</p> <p>6 I'm just not trying to look between</p> <p>7 companies, who's responsible for what, what</p> <p>8 quality system agreements were in place, that</p> <p>9 sort of thing.</p> <p>10 Q But to the extent that standards are</p> <p>11 involved with looking at the analytical chemistry</p> <p>12 and the testing that was being done on valsartan,</p> <p>13 then you would be reviewing and commenting on</p> <p>14 things like the USP monograph and potentially</p> <p>15 CGMP; correct?</p> <p>16 MR. HARKINS:</p> <p>17 Object to form. Vague. Compound.</p> <p>18 A It was compound. It sounded -- what</p> <p>19 you said seemed -- sounded pretty good. You</p> <p>20 threw in CGMP in there, and some of those terms</p> <p>21 were loaded. But I think, in general, looking at</p> <p>22 standards and how they made sure that their</p> <p>23 product complied to the standards and how they --</p> <p>24 the scientific and the technical carrying out and</p>

<p>Page 146</p> <p>1 aspect -- the scientific and technical aspects of 2 that, I was looking into. 3 MS. BOGDAN: 4 Q I want to ask the question another way. 5 One of the things that you did look to is to 6 whether or not Teva was complying to the 7 scientific -- scientific and technical 8 standards when manufacturing the finished-dose 9 product; correct? 10 MR. HARKINS: 11 Object to form. Vague. Scope. 12 A I'm a little puzzled by the -- by the 13 question. Maybe you could re- -- 14 MS. BOGDAN: 15 Q Okay. Well, when you were reviewing 16 this matter, were you looking to see if Teva 17 complied with the specifications for impurity 18 testing with the finished-dose product? 19 A Yes. I was. 20 Q And were you looking to see if Teva 21 complied with the other type of testing that 22 would be associated with the finished-dose 23 product? 24 MR. HARKINS:</p> <p>Page 147</p> <p>1 Object to form. Vague. 2 A When you say "other type," I'm 3 presuming you mean the other specification test, 4 the -- the quality attributes that are listed in 5 the specifications. 6 MS. BOGDAN: 7 Q Yes. I am. 8 A In that sense, yes, I -- I agree with 9 your question. 10 Q Did Teva recall all of its drug product 11 that was made with the ZHP API that was not 12 beyond the expiration date? 13 MR. HARKINS: 14 Objection. Scope. 15 A Yeah. I'm not sure I could answer 16 that. I think that there are other people who 17 have looked into that very -- you know, with a -- 18 with close eyes. I may have stumbled across 19 information related to that, but I didn't store 20 it in my brain, and I can't say confidently 21 absolutely. So I can't really -- I can't really 22 answer it. And I don't comment on it in my 23 report. 24 MS. BOGDAN:</p>	<p>Page 148</p> <p>1 Q So you didn't make any determination 2 with regard to the scope of the Teva recall that 3 involved API made with ZHP or made by ZHP? 4 MR. HARKINS: 5 Same objection. 6 A I -- I did not look into it myself. I 7 did read some testimony from Roger Williams, 8 maybe, I believe, that -- that talked about some 9 of that, but I -- again, I was looking through 10 that -- 11 Even that deposition, I was just 12 looking to familiarize myself with -- with what's 13 already known, and I didn't -- I wasn't looking 14 for information to try to store in my head 15 related to the recalls and whether or not they 16 were comprehensive. 17 MS. BOGDAN: 18 Q And would that be true for Mylan as 19 well? Did you make any determination as to 20 whether Teva recalled all of its drug product 21 made with the Mylan API? 22 A I did not make any determination on 23 that topic. 24 Q When the recalls were first announced,</p> <p>Page 149</p> <p>1 was Teva product included in the early recalls? 2 MR. HARKINS: 3 Object to form. Scope. Foundation. 4 A Say that again. Can you -- was Teva -- 5 I need to hear -- 6 MS. BOGDAN: 7 Q Was Teva product included in the early 8 recalls? 9 MR. HARKINS: 10 Same objection. Also vague. 11 A I don't know what "early recalls" means 12 in -- I -- 13 You know, while I've read material 14 related to dates and times of recalls and -- and 15 whether or not certain recalls were related to 16 which manufacturer, but I -- I wasn't -- I wasn't 17 evaluating the information in a way to make a 18 determination or to -- to gather in and -- and 19 hold in my brain and -- and understand related to 20 that. 21 MS. BOGDAN: 22 Q Do you know why Teva product was 23 recalled? 24 MR. HARKINS:</p>
--	---

<p style="text-align: right;">Page 150</p> <p>1 Objection. Scope. Vague.</p> <p>2 A Well, I know that some -- that there</p> <p>3 were general recalls. It was widely published in</p> <p>4 the industry, and I -- I believe I've seen some</p> <p>5 information that -- that related to N-nitrosamine</p> <p>6 contamination or impurities present in -- in API</p> <p>7 material in mixed dosage forms for a variety of</p> <p>8 manufacturers.</p> <p>9 MS. BOGDAN:</p> <p>10 Q Do you know what nitrosamines were</p> <p>11 found in the Teva product that prompted the</p> <p>12 recall?</p> <p>13 A I know there were two separate</p> <p>14 instances or two separate N-nitrosamines. One</p> <p>15 was for NDMA impurities present, and the other</p> <p>16 was for NDEA impurities detected.</p> <p>17 Q And, to your recollection, those were</p> <p>18 two separate recalls?</p> <p>19 A Yes, I believe so. I'm not -- I'm not</p> <p>20 confident in that answer, but...</p> <p>21 Q Did you review the Teva testing</p> <p>22 information to see what the levels of NDMA were</p> <p>23 that were found in the Teva product?</p> <p>24 A Yes, I -- I saw a number of tables</p>	<p style="text-align: right;">Page 152</p> <p>1 weight of finished dose.</p> <p>2 Q Did you calculate the amount of NDMA</p> <p>3 that was found in the tablets?</p> <p>4 A I looked at how they calculated the</p> <p>5 NDMA translating from ppm to -- to weight units,</p> <p>6 and it looked correct. I mean, so that they</p> <p>7 could figure out how many nanograms were in a</p> <p>8 single dose so that they did compare that to --</p> <p>9 well, so that they could just understand the</p> <p>10 total number of nanograms in any given API or</p> <p>11 finished-dose product.</p> <p>12 So I saw that calculation. It looked</p> <p>13 right, and then I -- and I've seen many where</p> <p>14 they were just listing nanograms per gram, I</p> <p>15 believe.</p> <p>16 Q And those levels that you saw, were</p> <p>17 some of them above the acceptable intake level</p> <p>18 that's permitted by the FDA?</p> <p>19 A Yeah. Some -- the acceptable limit</p> <p>20 being 96 nanograms for -- per -- per daily dose.</p> <p>21 So there were, yes, instances of -- of the levels</p> <p>22 of NDMA being above that 96.</p> <p>23 Q And, then, the same question with</p> <p>24 regard to NDEA. Did you review any documents</p>
<p style="text-align: right;">Page 151</p> <p>1 and -- and data on the amounts of both</p> <p>2 nitrosamines in different studies and different</p> <p>3 tests for both the API and the finished-dose</p> <p>4 product.</p> <p>5 Q What was the range of NDMA levels that</p> <p>6 you saw were found in the Teva product?</p> <p>7 A Um, NDMA in Teva. I would say, from</p> <p>8 memory, pretty low, like maybe a tenth of a ppm,</p> <p>9 in that range, up to a few hundred ppm of NDMA in</p> <p>10 the finished-dose product, in general. There</p> <p>11 might have been a couple of outliers higher or</p> <p>12 lower. But, in general, in that .1 ppm to a few</p> <p>13 hundred.</p> <p>14 Q And in order to figure out the amount</p> <p>15 of nanograms of NDMA in a finished dose, from</p> <p>16 knowing the ppm, you would just take the part per</p> <p>17 million number and multiply it by the number of</p> <p>18 milligrams in the tablet to get the amount of</p> <p>19 nanograms in the finished dose?</p> <p>20 A I think nanograms per gram would be</p> <p>21 the, quote -- well, that's parts per billion.</p> <p>22 Nanograms per milligram, I think, would be ppm.</p> <p>23 But you'd translate it from -- you'd put the</p> <p>24 actual units on it, the nanograms per -- per</p>	<p style="text-align: right;">Page 153</p> <p>1 that showed the testing levels for NDEA in the</p> <p>2 Teva finished-dose product?</p> <p>3 A Yes.</p> <p>4 Q And were some of those levels in excess</p> <p>5 of the allowed acceptable daily intake as set</p> <p>6 forth by the FDA?</p> <p>7 A Yes. And I believe that level was 26.5</p> <p>8 nanograms per day, as I recall. And -- for NDEA.</p> <p>9 And the NDEA levels in some of the lots -- I</p> <p>10 believe it was from Mylan for the API and then</p> <p>11 for Teva in the finished-dose product -- were</p> <p>12 above 26.5.</p> <p>13 MS. BOGDAN:</p> <p>14 If we could please pull up the FDA</p> <p>15 notice from July 13th, 2018.</p> <p>16 (DEPOSITION EXHIBIT NUMBER 10</p> <p>17 WAS MARKED FOR IDENTIFICATION.)</p> <p>18 A Is that Exhibit 10?</p> <p>19 MS. BOGDAN:</p> <p>20 I believe we're on Exhibit 10, but I</p> <p>21 would ask the court reporter to just verify that</p> <p>22 for us.</p> <p>23 TRIAL TECH:</p> <p>24 That's correct.</p>

<p>Page 154</p> <p>1 THE WITNESS: 2 Yeah. I've got it up now on my screen 3 and both screens. 4 MS. BOGDAN: 5 Q Have you seen the FDA news release 6 before? 7 A Yes. 8 Q And directing your attention -- 9 And this is dated July 13, 2018; 10 correct? 11 A Correct. 12 Q Directing your attention to the second 13 page, under recalled products, it lists the 14 medicine and the company. 15 A Yes, I see that. 16 Q Does it list Teva Pharmaceuticals for a 17 few of the medicines, and, in particular, two? 18 A Yes. I see it for the third one down 19 and for the bottom one. 20 Q Now, directing your attention to the 21 paragraph, there's a note from Dr. Woodcock. Do 22 you see that quote? 23 A Yes, I do. 24 Q Okay. Were you familiar with</p>	<p>Page 155</p> <p>1 Dr. Woodcock? 2 A She's been a director -- she's been at 3 the FDA for a long time. I'm familiar with her 4 name. I met her a couple times. She -- just 5 in -- she wouldn't know me. 6 Q I was gonna say, have you ever met 7 Dr. Woodcock personally? 8 A Yes, but, like, a three-second 9 handshake with a bunch of other people. 10 Q Okay. 11 A So not really. 12 Q All right. And she says "We have 13 carefully assessed the valsartan-containing 14 medications sold in the United States and we've 15 found that the valsartan sold by these specific 16 companies does not meet our safety standards." 17 And then she goes on to say "This is 18 why we've asked these companies to take immediate 19 action to protect patients." 20 MR. HARKINS: 21 Is there a question? 22 MS. BOGDAN: 23 Q Do you -- is it your understanding that 24 that is why the FDA announced the recall of those</p>	<p>Page 156</p> <p>1 valsartan products? 2 MR. HARKINS: 3 Object to form. Outside the scope of 4 his expert report. 5 A As I read this here, that's, in the 6 context, what it -- what it appears to be saying, 7 that they -- and it's in a recall announcement, 8 and this is their explanation. 9 MS. BOGDAN: 10 If you could please take that down. 11 Q Did you review the specific Teva recall 12 announcements? 13 MR. HARKINS: 14 Object to form. Asked and answered. 15 A I think I've already answered that. 16 MS. BOGDAN: 17 Q Was the answer yes or -- or no or you 18 weren't sure? 19 A I'm not completely sure. I know I've 20 seen a lot of documents that have recall 21 information. So it -- if I had to say, it's 22 likely that I did, yes. I'm not sure. I can't 23 say for sure I've seen a specific document. 24 MS. BOGDAN:</p>	<p>Page 157</p> <p>1 And will you please put up the Teva 2 recall from July 17th, 2018? 3 (DEPOSITION EXHIBIT NUMBER 11 4 WAS MARKED FOR IDENTIFICATION.) 5 MS. BOGDAN: 6 Q Are you familiar with this company 7 announcement, Dr. Baertschi? 8 And if we could mark it. I believe 9 we're on Exhibit 11. 10 A It -- it looks familiar. I can't say. 11 Sometimes documents look familiar and I haven't 12 seen the exact document. But it -- 13 Q Okay. And this document is dated July 14 17th of 2018? 15 A Yes. 16 Q At the top, Teva Pharmaceuticals USA is 17 issuing a voluntary nationwide recall of 18 valsartan and valsartan hydrochlorothiazide 19 tablets. 20 A I see that. 21 Q And bringing you down onto the company 22 announcement, into the first paragraph, it says 23 that the impurity detected in the API is 24 N-nitrosodimethylamine.</p>
--	---	---	--

<p>Page 158</p> <p>1 MR. HARKINS: 2 Is that a question? 3 MS. BOGDAN: 4 Q Is this the recall that you were 5 referring to earlier in your testimony where you 6 said you reviewed one recall that was for NDMA 7 and then another one for NDEA? 8 A Yes. This is apparently the one for 9 NDMA. 10 Q And, then, just directing your 11 attention to pages 2 through 5 of the document, 12 if we could go -- that's 2, page 2, and then page 13 3, and page 4, and page 5, does that list all of 14 the products that were recalled? 15 MR. HARKINS: 16 Object to form. Outside the scope. 17 A Yeah, I didn't -- I didn't look in to 18 verify that that's all the lots. I.. 19 That's, you know, somebody else's 20 responsibility. I think that's -- FDA can be 21 accountable for that. 22 MS. BOGDAN: 23 Q Okay. 24 A Or Teva. I guess Teva's the company</p> <p>Page 159</p> <p>1 announcement. 2 Q Right. 3 MS. BOGDAN: 4 Okay. Let's pull up the Teva recall 5 notice of November 27th, 2018. 6 (DEPOSITION EXHIBIT NUMBER 12 7 WAS MARKED FOR IDENTIFICATION.) 8 A Okay. 9 MS. BOGDAN: 10 Q Dr. Baertschi, can you -- is that up on 11 your screen yet? Okay. 12 A Yes. 13 Q Okay. Now, the reason for this 14 announcement, if you could look under the 15 summary, it says "due to the detection of NDEA." 16 A Yes, I see that. 17 Q Okay. Is this the recall announcement 18 that you were referring to when you said there 19 was one that was for NDEA? 20 A Yes. I don't know if this is the only 21 one that there was for NDEA, but, yeah, it's -- 22 it's a recall for NDEA. 23 Q Then, again, starting on page 3 of this 24 document, it lists the product and lots that are</p>	<p>Page 160</p> <p>1 under the recall; correct? 2 A Yes. 3 Q And it continues to list those until 4 page 5 of the document? 5 A Yeah. It looks -- that looks to be 6 true. I mean, that looks -- I agree with that. 7 Q Okay. 8 MS. BOGDAN: 9 If we could please pull up Teva 10 document that ends with 693423. I believe it's 11 number 14 in the document repository, if that's 12 helpful. 13 (DEPOSITION EXHIBIT NUMBER 13 14 WAS MARKED FOR IDENTIFICATION.) 15 MS. BOGDAN: 16 If we could actually move past the 17 Bates stamp first page to the second page. 18 THE WITNESS: 19 Is this Exhibit 12 or 13? 20 MS. BOGDAN: 21 Court reporter, what -- 22 THE COURT REPORTER: 23 It's number 13. 24 THE WITNESS:</p> <p>Page 161</p> <p>1 It's not come up yet on my screen. 2 MS. BOGDAN: 3 There's a blank page on the first part 4 of the exhibit that just has the Bates number 5 down low. So if you're seeing a blank on your 6 screen, maybe you can scroll down. 7 MR. HARKINS: 8 It's not showing in our exhibit box 9 here that we're refreshing. 10 THE WITNESS: 11 Now it's there. 12 MS. BOGDAN: 13 Okay. 14 THE WITNESS: 15 Okay. Got it. 16 MS. BOGDAN: 17 Q And if you can look at the second page, 18 which is really the first page of the -- of the 19 report. Have you seen this document before? 20 A It looks familiar, yes. I believe so. 21 Q And this is a -- a Teva document that 22 you can see on the top. 23 A Yes. 24 Q And the title of it is "valsartan</p>
---	---

<p style="text-align: right;">Page 162</p> <p>1 analytical drug substance and drug product 2 testing results sourced from" -- and I'm gonna 3 say ZHP. 4 A Yes. 5 Q So if I could direct your attention to 6 table 1 in this document, which has the testing 7 results. And in table 1, it looks like they 8 tested three different lots of valsartan 9 320-milligram tablets. 10 A Yes. 11 Q And directing your attention down to 12 the results section, which is the row that says 13 "NDMA results in sample equivalent to one gram 14 valsartan ppm." 15 A I see that. 16 Q Okay. And what is the ppm acceptable 17 limit established by the FDA for NDMA? 18 MR. HARKINS: 19 Object to form. Scope. 20 You can answer. 21 A If I recall correctly, it's .3 ppm. 22 MS. BOGDAN: 23 Q That would be 0.3? 24 A Yes. But -- but I'm not absolutely 100</p>	<p style="text-align: right;">Page 164</p> <p>1 Q The weight of the tablet, including its 2 event. 3 A Yes. Yeah. 4 Q Now, just if we take the results for 5 the valsartan tablets that are in the third 6 column where it has NDMA results in sample 7 equivalent to one gram valsartan ppm of 61.2 -- 8 A Yes. 9 Q Now, if you take that 61.2 and you 10 multiply it by 320, which is the milligrams, you 11 get 19,584, which would be, when it's rounded, 12 19,600. 13 MR. HARKINS: 14 Object to form in terms of the math. 15 A Yeah. I'm not sure what's -- what's 16 going on -- I mean, what you're doing. I don't 17 perceive -- 18 MS. BOGDAN: 19 Q Let me ask this question. Based on 20 this table, how many nanograms of NDMA did they 21 find in the valsartan tablets that are in the 22 third column on the table? 23 A How many nanograms did they find? 24 MR. HARKINS:</p>
<p style="text-align: right;">Page 163</p> <p>1 percent. I'm calling that from memory. I don't 2 think it's 3. I believe it's .3. If that's 3 important, we should establish it. 4 Q Are all of the values in that column 5 higher than .3? 6 A Yes. 7 Q Now, the next column says "NDMA results 8 per tablet." Do you see that? 9 A Yes. 10 Q And those results are expressed in 11 micrograms? 12 A No. They're expressed in parts per 13 million. 14 Q Okay. So they're expressed in parts 15 per million per tablet? 16 A Yes. 17 Q Okay. And, then, how would you 18 calculate the amount of nanograms in each tablet? 19 A You'd have to know the -- the weight, 20 the total weight of the tablet, which I believe 21 is 320 milligrams. So -- 22 Q You'd have to -- you'd have to know the 23 dose of the API in the tablet; right? 24 A Right.</p>	<p style="text-align: right;">Page 165</p> <p>1 Object to form. Just noting that 2 Dr. Baertschi does not have a calculator. He's 3 being asked to do this math on the blank. 4 If you're comfortable performing that 5 calculation or if you need to ask for anything to 6 aid in it, let us know. 7 A Yeah. So if you'll allow me to think 8 out loud in -- much to my -- 9 I would -- I would say -- 10 So if you have 61.2 parts per million, 11 let's -- part per million per gram, and when you 12 adjust it to what's in a tablet, it's 19.6 parts 13 per million, that would be 19,600 nanograms per 14 gram, which is parts per billion, or 19.6 parts 15 per million compared to .3 parts per million 16 limit. 17 MS. BOGDAN: 18 Q So the 19.6 parts per million is 19 significantly higher than 0.3 parts per million 20 limit; correct? 21 MR. HARKINS: 22 Object to form. Scope. 23 A 19.6 is significantly higher than 0.3, 24 yes.</p>

<p>Page 166</p> <p>1 MS. BOGDAN:</p> <p>2 Q And, in fact, all of the lots tested</p> <p>3 that are shown in table 1 are higher than the 0.3</p> <p>4 parts per million limit; correct?</p> <p>5 A Yeah. I see six results per tablet</p> <p>6 that give it in results, NDMA per tablet, and all</p> <p>7 six of them are above the 0.3.</p> <p>8 Q And if I could direct your attention to</p> <p>9 table 2, which is on the next page of the</p> <p>10 document.</p> <p>11 A Yeah.</p> <p>12 And when I said six results, I was</p> <p>13 looking at tables 1 and 2. So my apologies. I</p> <p>14 was already jumping down to the next table. I</p> <p>15 looked at table 1 and 3 and table 2, and I added</p> <p>16 them together to get all six results are above</p> <p>17 .3.</p> <p>18 Q So the answer that you gave to my</p> <p>19 previous question incorporated the sets of</p> <p>20 results that are shown for the three lots that</p> <p>21 are in table 2 as well?</p> <p>22 A Yes.</p> <p>23 Q And they're also all over the limit;</p> <p>24 correct?</p>	<p>Page 168</p> <p>1 believe is marked as number 13 in the document</p> <p>2 repository, the Bates stamp number that ends with</p> <p>3 48605.</p> <p>4 (DEPOSITION EXHIBIT NUMBER 14</p> <p>5 WAS MARKED FOR IDENTIFICATION.)</p> <p>6 MR. HARKINS:</p> <p>7 This is going to be Exhibit 14 is what</p> <p>8 she's saying.</p> <p>9 MS. BOGDAN:</p> <p>10 If you could please mark this as an</p> <p>11 exhibit as well.</p> <p>12 Q So Exhibit 14 is an email from Claire</p> <p>13 Lyons at Teva. Do you know Claire Lyons?</p> <p>14 A I do not.</p> <p>15 Q Do you know any of the employees of</p> <p>16 Teva?</p> <p>17 A It's possible that I do, but I don't --</p> <p>18 I can't recall anybody that I know personally at</p> <p>19 Teva.</p> <p>20 Q Have you published any studies with a</p> <p>21 co-author who works for Teva?</p> <p>22 A Not that I know of.</p> <p>23 Q Have you published any studies with a</p> <p>24 co-author that works for Mylan?</p>
<p>Page 167</p> <p>1 A Correct.</p> <p>2 Q And if I could direct your attention to</p> <p>3 the conclusion section of this report provided by</p> <p>4 Teva, just to the last sentence in the first</p> <p>5 paragraph, which reads "The API analytical test</p> <p>6 results indicate that the ZHP valsartan API</p> <p>7 manufacturing process in place is expected to</p> <p>8 generate NDMA with levels above the FDA initial</p> <p>9 interim acceptable limit of NMT 0.3 parts per</p> <p>10 million."</p> <p>11 And my question is: Do you have any</p> <p>12 information, based upon your investigation in</p> <p>13 this case, that would result in you having an</p> <p>14 opinion that that sentence is not correct?</p> <p>15 MR. HARKINS:</p> <p>16 Object to form. Outside the scope.</p> <p>17 Vague.</p> <p>18 You can answer.</p> <p>19 A I have no information that would</p> <p>20 suggest that that is incorrect. I don't have --</p> <p>21 yeah. I don't have any information on that. But</p> <p>22 I -- I have no information to challenge it.</p> <p>23 MS. BOGDAN:</p> <p>24 If we could please pull up what I</p>	<p>Page 169</p> <p>1 A Not that I know of.</p> <p>2 Q Have you published any studies with a</p> <p>3 co-author that works for ZHP, Solco, or Princeton?</p> <p>4 A Not that I know of.</p> <p>5 Q In this email, Claire is writing to</p> <p>6 Sofia, and in her first sentence -- sentence she</p> <p>7 references a term "COfA." Do you see that?</p> <p>8 A Yes.</p> <p>9 Q Do you know what COfA stands for?</p> <p>10 A Certificate of analysis, I presume.</p> <p>11 Q And, then, in that same first</p> <p>12 paragraph, she uses a term, "CEP." Do you know</p> <p>13 what CEP means?</p> <p>14 A I'm not recollecting it at the moment,</p> <p>15 what CEP means, stands for.</p> <p>16 Q Now, directing you further down this</p> <p>17 exhibit, which is an email from Sofia Schwartz to</p> <p>18 Claire Lyons, which the one we just looked at is</p> <p>19 responding to, and in that email there is a</p> <p>20 summary of the analytical testing that Teva</p> <p>21 performed on 36 Mylan API batches.</p> <p>22 MR. HARKINS:</p> <p>23 And, Doctor, feel free to look at the</p> <p>24 full email in the Dropbox if that makes it</p>

<p>Page 170</p> <p>1 easier.</p> <p>2 A Yeah. I want to make sure I understand</p> <p>3 the sequence, which email was first, the</p> <p>4 June 2nd -- July 1. Okay. This email that we're</p> <p>5 looking at is July 1st. It predates the one we</p> <p>6 just looked at.</p> <p>7 MS. BOGDAN:</p> <p>8 Q And my understanding -- and please feel</p> <p>9 free to review the document -- but as Teva</p> <p>10 produced these, the most recent email is on the</p> <p>11 top, and then they go in reverse chronological</p> <p>12 order.</p> <p>13 A Okay.</p> <p>14 Q So did you review that analytical</p> <p>15 testing that Teva performed on the Mylan API</p> <p>16 batches?</p> <p>17 A Yes, I believe so. I don't know if</p> <p>18 it's specifically this, you know, these batches,</p> <p>19 but I reviewed a number of analytical results</p> <p>20 from Mylan and Teva, yeah.</p> <p>21 Q Sorry.</p> <p>22 A From --</p> <p>23 Sorry. I wasn't quite finished.</p> <p>24 I've reviewed a number of results that</p>	<p>Page 172</p> <p>1 companies and regulatory agencies have developed</p> <p>2 methods for testing specifically for NDEA or</p> <p>3 NDMA, and some have even combined both or</p> <p>4 multiple N-nitrosamines into a single procedure.</p> <p>5 So I think my answer is yes, but I -- I</p> <p>6 can't necessarily say I can recall a specific</p> <p>7 release of method that FDA granted at one time.</p> <p>8 Seems like they might have done more than one</p> <p>9 release. But...</p> <p>10 Q On the --</p> <p>11 A If you want me to look at the document,</p> <p>12 I'd be happy to.</p> <p>13 Q Did you review the methods that the FDA</p> <p>14 published for determining NDMA and NDEA in</p> <p>15 valsartan --</p> <p>16 MR. HARKINS:</p> <p>17 Object to form. You can answer.</p> <p>18 MS. BOGDAN:</p> <p>19 Q -- when --</p> <p>20 A I believe so.</p> <p>21 Q And did you --</p> <p>22 A I looked at a variety -- I looked at a</p> <p>23 variety of methods that a variety of people</p> <p>24 published, and I believe NDMA is one of -- FDA is</p>
<p>Page 171</p> <p>1 had ZHP results, Mylan results, and Teva results,</p> <p>2 and it's hard for me to keep that perfectly</p> <p>3 straight as -- in my head. But, yes, I believe</p> <p>4 I've reviewed this data.</p> <p>5 Q And the results that you reviewed with</p> <p>6 regard to testing of the Mylan API batches, did</p> <p>7 those results show API batches that were found to</p> <p>8 have NDEA values above the provisional limit of</p> <p>9 0.08 parts per million?</p> <p>10 A As I -- as I recall, yes, to the best</p> <p>11 of my recollection.</p> <p>12 MS. BOGDAN:</p> <p>13 Will you please pull up exhibit --</p> <p>14 I believe it's number 21 in the</p> <p>15 document repository, but...</p> <p>16 (DEPOSITION EXHIBIT NUMBER 15</p> <p>17 WAS MARKED FOR IDENTIFICATION.)</p> <p>18 MS. BOGDAN:</p> <p>19 Q Are you aware, Dr. Baertschi, of the</p> <p>20 testing methods that the FDA published for</p> <p>21 determining levels of NDEA or NDMA in valsartan?</p> <p>22 A I -- I have seen a number of</p> <p>23 publications talking about post-July -- you know,</p> <p>24 2019 and 2020 and 2021, even, where a variety of</p>	<p>Page 173</p> <p>1 one of them, and I believe I've reviewed those.</p> <p>2 Q Did you compare those testing methods</p> <p>3 that the NDMA -- that the FDA published for NDMA</p> <p>4 and NDEA and inquire whether Teva had those</p> <p>5 testing capabilities?</p> <p>6 A It was never a question in my mind</p> <p>7 whether or not Teva would have the testing</p> <p>8 capabilities.</p> <p>9 And let me define testing capabilities.</p> <p>10 By having the instrumentation and even the -- the</p> <p>11 expertise to be able to carry out such a method</p> <p>12 or protocol. So I don't know for sure, but I --</p> <p>13 my presumption is that they would.</p> <p>14 Q And when you say there was never a</p> <p>15 question in your mind whether Teva would have the</p> <p>16 testing capabilities, why wasn't there a question</p> <p>17 in your mind?</p> <p>18 A Because I don't think that the --</p> <p>19 The instrumentation and expertise is</p> <p>20 outside of the norm of a pharmaceutical company</p> <p>21 to have within its -- within its company or</p> <p>22 within -- within -- accessible from a contract</p> <p>23 lab or something.</p> <p>24 The -- the technology itself is not</p>

<p>Page 174</p> <p>1 something that I would be concerned about a 2 typical large company like Teva having access to. 3 MS. BOGDAN: 4 If we could pull up Exhibit 21. Or, 5 actually, I should ask, before you pull that up, 6 Steve, I see we're hitting on 1:30. 7 MR. HARKINS: 8 Yeah. Our lunch is here. 9 Dr. Baertschi, it's up to you. 10 THE WITNESS: 11 Yeah. So let's take a break and eat. 12 MS. BOGDAN: 13 Okay. That's fine. I just wanted to 14 acknowledge that we had reached that time, and I 15 don't -- I don't know if anyone got anything hot, 16 but I wouldn't want the soup to get cold on my 17 account. So do you want to take a -- just, like, 18 can we keep it to about 30 minutes? 19 MR. HARKINS: 20 So let us -- let me check back in in 30 21 minutes. We might need a few more than that. 22 But I'll jump back on at 2:00 and let you guys 23 know how long we'll need. 24 MS. BOGDAN:</p>	<p>Page 176</p> <p>1 valsartan. Have you reviewed these methods that 2 the FDA published? 3 A Yes. I've seen these. 4 Q Okay. With regard to this first 5 method, it says "by GC/MS-Headspace." 6 A Yes. 7 Q Could you tell us what GC/MS-Headspace 8 is? 9 A Yeah. It's a -- it's a hyphenated 10 technique starting with -- the separation occurs 11 in gas -- a gas chromatographic separation using 12 heat to -- to volatilize constituents, and then 13 they go through a column and separate it out 14 based on their vapor pressure and their 15 attraction to the stationary phase on the column, 16 the capillary column, and then they are eluted 17 into a mass spectrometer which detects on the 18 basis of molecular weight. 19 The Headspace part is where you have a 20 sample in a vial, typically, with a solution, and 21 you heat the solution, and it drives off volatile 22 constituents into equilibrium in the headspace, 23 and then you're just sampling the Headspace gas 24 and injecting that headspace gas onto the gas</p>
<p>Page 175</p> <p>1 Okay. I'm just trying to make sure 2 we're not here -- okay. 3 MR. HARKINS: 4 Can we go off the record? 5 MS. BOGDAN: 6 Yes. 7 VIDEOGRAPHER: 8 Off the record. 1:29 p.m. 9 (LUNCH RECESS) 10 VIDEOGRAPHER: 11 On record, 2:21 p.m. 12 MS. BOGDAN: 13 Could you please mark what I believe is 14 in the repository as number 21? 15 MS. BOGDAN: 16 Which are my -- marked, I think, 17 Combined Headspace Method. 18 Q Okay, Doctor. And let me know once 19 you're able to see that. It should be coming up 20 as an FDA document. 21 A I can see it. 22 Q Okay. And, for the record, this 23 exhibit is several publications from the FDA with 24 regard to methods for testing NDMA and NDEA in</p>	<p>Page 177</p> <p>1 chromatograph to separate and then eventually 2 detect. 3 Q And how long has gas chromatography 4 been around? 5 A I could not tell you the very 6 beginning, but '50s or '60 -- 1950s or '60s, 7 maybe before that, '40s, '30s, a long time. But 8 the technology has changed dramatically over the 9 years. 10 Q So the technology has changed over the 11 years, but gas chromatography was first available 12 50 years or so or more ago? 13 A At least that long ago, yes, I believe. 14 Q And what about mass spectrometry? How 15 long has that been around? 16 A That's kind of a loaded question, 17 because some forms of mass spectrometry may have 18 been around for 50, 60, 70, 80 years. I'm not 19 even sure. I used to know that number years ago 20 when I was in graduate school, maybe. But mass 21 spectrometers have continued to evolve over the 22 years and -- and get much more resolution and 23 capability and sensitivity. But they've been 24 around for a long time as a technology or</p>

Page 178

1 instrument.

2 Q If we could go to what I believe is

3 page 8, maybe, of the exhibit.

4 A I'm only seeing six pages, but...

5 Q Oh, okay. They're -- I think that we

6 need to maybe pull up the next exhibit, which is

7 number 22 in the repository, which is entitled

8 "Combined Direct Injection." Do you see that?

9 A I've got it.

10 MS. BOGDAN:

11 What exhibit is this, so we don't lose

12 track?

13 TRIAL TECH:

14 Sixteen.

15 MR. HARKINS:

16 That's for the court reporter.

17 (DEPOSITION EXHIBIT NUMBER 16

18 WAS MARKED FOR IDENTIFICATION.)

19 MS. BOGDAN:

20 Q Now, is this testing method another one

21 that is by GC/MS?

22 A Yes. Says so in the title, by GC/MS.

23 Q And this one does not have the

24 Headspace designation.

Page 179

1 A Yeah. It doesn't say that in the

2 designation. I haven't looked through the method

3 to make sure that it's not using Headspace.

4 Q And is this testing method also using

5 gas chromatography and mass spectrometry?

6 A Yes.

7 Q Gas chromatography is the type of

8 instrument that you would expect most

9 pharmaceutical companies to have?

10 A Yes.

11 Q And mass spectrometry is an instrument

12 that you would expect most pharmaceutical

13 companies to have?

14 A Yeah, I would expect most

15 pharmaceutical companies to have a mass

16 spectrometer in their -- in their company.

17 Q Do you recall --

18 A Not all --

19 Okay. Sorry.

20 Q I'm sorry.

21 Did you familiarize yourself with all

22 of the testing methods that the FDA has published

23 as appropriate for testing for NDMA or NDEA in

24 valsartan products?

Page 180

1 MR. HARKINS:

2 Object to form. Vague.

3 A I didn't spend a lot of time trying to

4 verify whether or not the -- the methods were

5 valid. I would presume, based on the FDA, the

6 reputation of the -- of the -- the focus that

7 this topic has had, that they would have done a

8 very thorough job, and I would believe them, by

9 default, to have put out a method. So there was

10 no question in my mind that I needed to review it

11 for validity.

12 MS. BOGDAN:

13 Q I wasn't asking if you -- that wasn't

14 what I was trying to get to when I asked the

15 question, so I apologize.

16 What I was asking is simply if you did

17 familiarize yourself with the various testing

18 methods that were set forth by the FDA for

19 measuring NDMA or NDEA in valsartan.

20 A I believe I answered that before in

21 that I looked at a lot of the methods that have

22 come out from FDA and other regulatory agencies

23 as well as private companies. I'm not -- I have

24 not -- when you say have you familiarized

Page 181

1 yourself, I've looked at a lot of the different

2 methods. I can't say that I would be ready for a

3 quiz if we were taking a quiz.

4 Q Did you question the validity of any of

5 the methods that the FDA put forth for the ones

6 you reviewed?

7 A I have -- for valsartan, no.

8 MS. BOGDAN:

9 All right. If we could pull up the

10 5-21-2019 FDA method, which is document 26, I

11 believe, in the repository. Please mark that as

12 an exhibit.

13 (DEPOSITION EXHIBIT NUMBER 17

14 WAS MARKED FOR IDENTIFICATION.)

15 MS. BOGDAN:

16 Q Doctor, let me know when you can see

17 that on your screen.

18 A I can see it on my screen.

19 Q Okay. This testing method refers to

20 LC-HRMS; correct?

21 A Correct.

22 Q How does that differ from GC/MS?

23 A Yes, it is distinct from GC/MS.

24 Q And how does it differ?

<p style="text-align: right;">Page 182</p> <p>1 A LCMS -- HP -- LCMS is -- HPLC-MS. So</p> <p>2 we've already talked about HPLC and how it works.</p> <p>3 It's just instead of taking the eluent off the</p> <p>4 detect- -- off the column into a UV detector,</p> <p>5 you're taking it and going into a mass</p> <p>6 spectrometer of some sort. In this case, it's a</p> <p>7 particular type of mass spectrometer that is high</p> <p>8 resolution.</p> <p>9 Q Okay.</p> <p>10 A And that's significant.</p> <p>11 Q All right. So this particular testing</p> <p>12 method has HPLC on the front end?</p> <p>13 A Right.</p> <p>14 Q Okay. And, then, it's using a high</p> <p>15 resolution mass spec on the back end?</p> <p>16 A Yes.</p> <p>17 Q And is the -- the LC in this method, is</p> <p>18 that the same type of instrument that would be</p> <p>19 used for HPLC impurity testing?</p> <p>20 A Yes.</p> <p>21 Q And, then, the mass spectrometry that's</p> <p>22 being used, is that somehow different from the</p> <p>23 mass spectrometry that's noted in the GC/MS</p> <p>24 testing methods that we just looked at, which</p>	<p style="text-align: right;">Page 184</p> <p>1 formula.</p> <p>2 Q And when was that technology invented?</p> <p>3 A That -- well, the invention of it, the</p> <p>4 Q exactive -- I'm not exactly sure, but that's</p> <p>5 probably within the last --</p> <p>6 Combined with the Orbitrap, I don't</p> <p>7 know. It's five or ten years, I would guess.</p> <p>8 I'm not exactly sure. I'm not an instrument --</p> <p>9 You know, instrument vendors would --</p> <p>10 Thermo Fisher could tell you. I'm not exact</p> <p>11 sure. But it certainly wasn't around 20 or 30</p> <p>12 years ago.</p> <p>13 MS. BOGDAN:</p> <p>14 And if we could please pull up as and</p> <p>15 mark as an exhibit the July 24th, 2019,</p> <p>16 RapidFire-MS/MS method.</p> <p>17 (DEPOSITION EXHIBIT NUMBER 18</p> <p>18 WAS MARKED FOR IDENTIFICATION.)</p> <p>19 MS. BOGDAN:</p> <p>20 Q Dr. Baertschi, I can see it, but let me</p> <p>21 know when you can, please.</p> <p>22 A I have it now up.</p> <p>23 Q You see on that exhibit that it talks</p> <p>24 about development and validation of a</p>
<p style="text-align: right;">Page 183</p> <p>1 were alternative FDA methods for testing NDMA and</p> <p>2 NDEA in valsartan?</p> <p>3 A Yes, very significantly different.</p> <p>4 Q Okay. How is HRMS different?</p> <p>5 A Well, if -- if you look in the</p> <p>6 equipment instrument part --</p> <p>7 I don't know what page that is. Looks</p> <p>8 like it's 2 of 12.</p> <p>9 -- they describe the LC equipment --</p> <p>10 the MS equipment. And this is a very kind of</p> <p>11 state-of-the-art -- not kind of. It is a</p> <p>12 state-of-the-art piece of equipment. It has two</p> <p>13 mass spec sectors on it. One's a quadripole,</p> <p>14 which is nominal mass resolution, which means one</p> <p>15 atomic mass unit resolution, and then it's</p> <p>16 combined with an Orbitrap mass spectrometer,</p> <p>17 which is like ion cyclotron resonance mass</p> <p>18 spectrometry, which -- I won't try to explain it.</p> <p>19 But it is -- it is more of a state of the art</p> <p>20 that allows you to measure very high resolution,</p> <p>21 not just one AMU, but you can go to tenths and</p> <p>22 thousandths of an AMU and distinguish between</p> <p>23 isomers or topoisomers, compounds that have same</p> <p>24 molecular weight but a different molecular</p>	<p style="text-align: right;">Page 185</p> <p>1 RapidFire-MS/MS method?</p> <p>2 A Yes, I do.</p> <p>3 MS. BOGDAN:</p> <p>4 God bless you.</p> <p>5 MS. LANGTON:</p> <p>6 Thank you.</p> <p>7 MS. BOGDAN:</p> <p>8 God bless you.</p> <p>9 MS. LANGTON:</p> <p>10 Thank you.</p> <p>11 MS. BOGDAN:</p> <p>12 Q Are you familiar with a RapidFire-MS/MS</p> <p>13 method?</p> <p>14 A I have heard the terminology, and I --</p> <p>15 it's new enough that I haven't -- well, I don't</p> <p>16 know if it's new enough. I am not exactly sure.</p> <p>17 It's a trademark. And I can kind of figure it</p> <p>18 out from looking what's in this document, but I'm</p> <p>19 not, like, intimately familiar with RapidFire</p> <p>20 technology.</p> <p>21 Q Would you consider yourself an expert</p> <p>22 on RapidFire-MS/MS technology?</p> <p>23 A No.</p> <p>24 MR. HARKINS:</p>

<p style="text-align: right;">Page 186</p> <p>1 Object to form to the extent it calls</p> <p>2 for a legal conclusion.</p> <p>3 A I do -- I do not have experience with</p> <p>4 RapidFire. I've seen publications talking about</p> <p>5 it, but I have not studied it.</p> <p>6 MS. BOGDAN:</p> <p>7 Q With regard to the LC-HRMS method that</p> <p>8 we just spoke about with the previous exhibit,</p> <p>9 have you ever run a test like that yourself?</p> <p>10 A For -- have I ever run a test like that</p> <p>11 for nitrosamines?</p> <p>12 Q Or for anything. An LC HRMS.</p> <p>13 A Yes, but -- yes, I have, with</p> <p>14 assistance.</p> <p>15 Q And when you say "with assistance,"</p> <p>16 what do you mean?</p> <p>17 A To -- to getting the setup --</p> <p>18 Oftentimes in industry you'll have a</p> <p>19 mass spec instrumentation guide that will set up</p> <p>20 a variety of instruments for open access for --</p> <p>21 to allow other people to come and use. And, so,</p> <p>22 as a user, you don't have to set up all the</p> <p>23 parameters to -- to exacting precision. It's</p> <p>24 already been done for you. So it's kind of, from</p>	<p style="text-align: right;">Page 188</p> <p>1 type of test before?</p> <p>2 A Yes.</p> <p>3 Q And did you need the assistance of a</p> <p>4 instrumentation specialist to run that test, or</p> <p>5 is that something that you were capable, as the</p> <p>6 instrument operator, of running without</p> <p>7 assistance?</p> <p>8 A I used to do GC/MS routinely every day</p> <p>9 from about 1981 through 1986 or so, and then</p> <p>10 occasionally in the early '90s. I have not</p> <p>11 personally operated a GC/MS since probably</p> <p>12 mid-1990s.</p> <p>13 Q When you operated GC/MS in the 1980s,</p> <p>14 that was in your capacity of working for Eli</p> <p>15 Lilly?</p> <p>16 A That was a previous position that I had</p> <p>17 before graduate school.</p> <p>18 Q What position was that?</p> <p>19 A I think the technical term that I --</p> <p>20 the title was Residues Chemist. I worked at --</p> <p>21 in an environmental analysis laboratory.</p> <p>22 Q Okay. And what type of --</p> <p>23 Was it GC/MS that you were using?</p> <p>24 A Yes.</p>
<p style="text-align: right;">Page 187</p> <p>1 a user point of view, it's easier.</p> <p>2 Q And, so, you were the instrument</p> <p>3 operator, but the instrument was already</p> <p>4 programmed?</p> <p>5 MR. HARKINS:</p> <p>6 Object to form. Vague.</p> <p>7 MS. BOGDAN:</p> <p>8 Q I'm just trying to understand what</p> <p>9 you're explaining.</p> <p>10 A I was the instrument -- instrument</p> <p>11 operator, yes, but I'm not an instrumentation</p> <p>12 specialist. And it is common to have a</p> <p>13 specialist set up instruments to allow other</p> <p>14 chemists to use who only come in and use them</p> <p>15 once in a while and are --</p> <p>16 To save them time from having to set up</p> <p>17 everything themselves, they -- they get</p> <p>18 assistance with the person who's responsible for</p> <p>19 the setup.</p> <p>20 I'm not sure if that's vague or not,</p> <p>21 but it's honest.</p> <p>22 Q No. I -- I understand your -- your</p> <p>23 response. Thank you.</p> <p>24 With regard to GC/MS, have you run that</p>	<p style="text-align: right;">Page 189</p> <p>1 Q What type of machine? Do you remember?</p> <p>2 A It was a Hewlett Packard. Uh-huh. It</p> <p>3 was a quadripole detector, nominal mass. Would</p> <p>4 not have the kind of sensitivity you'd need to be</p> <p>5 able to carry out the N-nitrosamine analysis that</p> <p>6 we're talking about now. Quite a -- quite a</p> <p>7 number of years ago.</p> <p>8 Q Did you review the warning letters</p> <p>9 issued by the FDA to ZHP and Mylan concerning</p> <p>10 their valsartan API?</p> <p>11 A It depends on what you mean by review.</p> <p>12 I've -- I've seen them. I -- I don't -- I can't</p> <p>13 pull them up in my brain as we talk. I'd be</p> <p>14 happy to look at them if you want me to.</p> <p>15 MS. BOGDAN:</p> <p>16 If we could please pull up ZHP warning</p> <p>17 letter, November 29th, 2018.</p> <p>18 (DEPOSITION EXHIBIT NUMBER 19</p> <p>19 WAS MARKED FOR IDENTIFICATION.)</p> <p>20 MS. BOGDAN:</p> <p>21 And please mark it as an exhibit.</p> <p>22 What exhibit number are we on?</p> <p>23 THE COURT REPORTER:</p> <p>24 Nineteen.</p>

Page 190

1 TRIAL TECH:
2 Nineteen.
3 THE COURT REPORTER:
4 I'm sorry. It's 19.
5 MS. BOGDAN:
6 Q It's document 31 in the repository.
7 A Yes, I see it. I have it.
8 Q Okay. Did you review this warning
9 letter as part of your investigation into this
10 case?
11 A Yes. I do -- I do remember this.
12 Q And directing your attention to page 2
13 of the warning letter --
14 Well, first of all, let's just -- this
15 was November 29th, 2018; correct?
16 A Yes.
17 Q All right. And this warning letter is
18 directed to ZHP --
19 A Yes.
20 Q -- over in China.
21 A Right. Yes.
22 Q Correct?
23 And it's directed to a Mr. Du, D-U;
24 correct?

Page 191

1 A Yes.
2 Q Then, on the bottom of this page, it's
3 referring to valsartan API; correct?
4 A Yes.
5 Q And then on page 2 of this letter --
6 Oops. I'm sorry. I think you have to
7 go back to page 1. Thank you.
8 The third paragraph down --
9 A Yes.
10 Q -- where it says "because of your
11 methods" --
12 A Okay. I see that.
13 Q -- "facilities" --
14 Okay. All right. Could you read that
15 sentence, please.
16 [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 [REDACTED]
22 Q And during your research and
23 investigation into this case, did you learn any
24 information that contradicts what's in that

Page 192

1 statement in this letter from the FDA to Mr. Du?
2 MR. HARKINS:
3 Object to form. Outside the scope of
4 his expert opinion and calls for a legal
5 conclusion. Vague.
6 A Yes, I -- I don't quite know. Could
7 you restate the question?
8 MS. BOGDAN:
9 Q Did you learn, during the course of
10 your investigation into this case, any
11 information that would cause you to disagree with
12 that sentence?
13 MR. HARKINS:
14 Same objection. Form. Scope. Calls
15 for a legal conclusion. Vague.
16 A Yeah. I -- I don't know how to define
17 adulterated and -- and how --
18 That's a -- sort of a regulatory term,
19 FDA term, and I've not -- I've not studied that
20 term in what qualifies as adulterated. It's not
21 part of my investigation.
22 MS. BOGDAN:
23 Q So you're not offering, then, any
24 opinions in this case regarding product being

Page 193

1 adulterated or not adulterated?
2 A I -- to my knowledge, yeah, I've not
3 been asked to look at the term "adulterated" or
4 "not adulterated" for my expert report.
5 Q So you are not offering any opinions in
6 this matter with regard to adulteration; correct?
7 MR. HARKINS:
8 Objection. Just qualify it to the
9 extent, "this matter." He's not offering any
10 opinions about them in this report submitted for
11 the class certification phase of this case.
12 You can answer.
13 A To date, I haven't offered, I don't
14 think, any -- any opinion on adulteration, of
15 that term, on how that term plays into this case.
16 MS. BOGDAN:
17 Q Are you --
18 Okay. Are you offering any opinions
19 regarding the value of the drug product
20 manufactured by Teva Pharmaceutical that was
21 recalled?
22 A Do you mean commercial value? What
23 does value mean?
24 Q I mean -- I mean commercial value.

<p style="text-align: right;">Page 194</p> <p>1 A I'm not offering any opinion on a 2 commercial value. 3 Q Are you offering any opinions regarding 4 any other values of the Teva drug product? 5 MR. HARKINS: 6 Object to form. Vague. Outside the 7 scope. 8 You can answer if you can. 9 A I am not offering -- I don't -- I don't 10 think I am offering an opinion as you described 11 it, and I've kind of forgotten what -- what it is 12 that -- 13 You probably need to restate the 14 question for me. 15 MS. BOGDAN: 16 Q I had asked you a question if you were 17 offering any opinions regarding the value of the 18 Teva drug products. And when I meant value, I 19 meant monetary value. And, so, and you said 20 values, what values? So I'm just trying to 21 circle back with regard to that question and ask 22 if you're offering any opinions with regard to 23 the monetary value of the Teva drug products. 24 A I am not offering any opinion related</p>	<p style="text-align: right;">Page 196</p> <p>1 A Sorry. 2 Q So were you familiar with this ICH 3 guideline as it went through its various 4 revisions? 5 A Yes. 6 Q And what is ICH? 7 A ICH is the International Conference on 8 Harmonization. 9 Q And what purpose does it serve? 10 A It was originally put together to try 11 to harmonize Europe, what was then EMEA, FDA, and 12 Japan so that there was one set of consistent 13 guidances that could be used for regulatory 14 submissions instead of separate ones for each 15 region. And, so, it was a tripartite harmonized 16 guidance. That was the intent, as I recall. 17 Q And just so that everyone understands, 18 you're talking about in the pharmaceutical 19 industry or -- or something else? 20 A Pharmaceutical industry. So for INDs, 21 ANDAs -- well, and NDAs. Pharmaceutical 22 products. 23 Q And this particular guideline deals 24 with impurities; correct?</p>
<p style="text-align: right;">Page 195</p> <p>1 to the value of the valsartan drug products or 2 the Teva drug products, however you want to 3 characterize them. 4 MS. BOGDAN: 5 Could we please pull up the ICH Q3 6 guidance, which I believe is number 34? 7 (DEPOSITION EXHIBIT NUMBER 20 8 WAS MARKED FOR IDENTIFICATION.) 9 A I've got it up. 10 MS. BOGDAN: 11 Q Okay. Now, are you familiar with this 12 ICH guidance? 13 A Yes, I am. 14 Q And what date is this guidance, or what 15 date was it issued? 16 A Well, the -- the revision 2 was issued 17 on October 25th, 2006, as it says there. There 18 were previous -- there was an R1 and there was 19 a -- before, there was an R1, and I believe the 20 Q3 goes back to 1993, if I'm remembering 21 correctly off the top of my head. 22 Q If we look at the second page of this 23 guideline, I think it gives a little bit of 24 information regarding the history.</p>	<p style="text-align: right;">Page 197</p> <p>1 A Correct. Impurities -- 2 Q And what is -- 3 A Go ahead. 4 Q What is an impurity? 5 A Well, there's a definition. Can we go 6 to the back of this? It defines impurity. I 7 could vaguely describe it, but it will be a more 8 precise description if we go to the -- to the 9 back of this document and look at the -- 10 Q Sure. I believe the glossary starts on 11 page 6 -- 12 A Yeah. 13 Q -- if that's accessible to you, and 14 goes to page 7. 15 A I'm on page -- yes, on 7. 16 An impurity -- I can read it. "An 17 impurity is any component of the new -- component 18 of the new drug substance that is not a chemical 19 entity defined as the new drug substance." 20 Q Do you agree with that definition? 21 A Yes. 22 Q And what does that mean, in layperson's 23 terms? 24 A In layperson's terms, it would be a</p>

<p style="text-align: right;">Page 198</p> <p>1 variety of ways to think of it. But if you think 2 of a glass of water and there's just a little bit 3 of blue dye in it, you know, you can -- you 4 can -- it's something that's not supposed -- you 5 can see it, you can visually see that there's 6 something in there, even though it might be at a 7 very minuscule level, so it's something that's 8 not part of the -- it's not water. It's 9 something else.</p> <p>10 So in this case, it's not the drug 11 substance. It's not the API. It's something 12 apart from the API that is in the API.</p> <p>13 Q And when you use the term "API," can 14 you define that?</p> <p>15 A Active pharmaceutical ingredient. So 16 sometimes API and drug substance term is used 17 interchangeably. There are some conventions that 18 discriminate how to use it, but typical jargon in 19 the pharmaceutical industry is to use them 20 interchangeably.</p> <p>21 Q So an impurity is something that's in 22 the active pharmaceutical ingredient that is not 23 the actual active pharmaceutical ingredient.</p> <p>24 A Yeah. And maybe it's clearer to say an</p>	<p style="text-align: right;">Page 200</p> <p>1 we're looking at is the 2006 version; correct? 2 But there were versions of this in 2002 as well?</p> <p>3 A Yes.</p> <p>4 Q Okay. And if we go to page 1, which is 5 the next page after document history --</p> <p>6 MS. BOGDAN:</p> <p>7 One more page, please. I'm sorry. Two 8 pages after document history. It starts 9 "impurities in new drug substances." There we 10 go.</p> <p>11 Q Do you see how it, under subsection 2, 12 it has classification of impurities?</p> <p>13 A Yes.</p> <p>14 Q It classifies impurities into three 15 different categories?</p> <p>16 A Yes.</p> <p>17 Pardon me, my throat. Hold on a 18 second.</p> <p>19 MR. HARKINS:</p> <p>20 Would you like a glass of water or 21 something?</p> <p>22 THE WITNESS:</p> <p>23 Yeah, maybe so.</p> <p>24 MS. LANGTON:</p>
<p style="text-align: right;">Page 199</p> <p>1 impurity is something in the drug substance which 2 is -- that is not the active pharmaceutical 3 ingredient.</p> <p>4 Q Now, in that glossary section, it also 5 has a definition for potential impurity. Do you 6 see that? It's -- I believe they're in 7 alphabetical order.</p> <p>8 A I do see it.</p> <p>9 Q What is the definition of potential 10 impurity?</p> <p>11 A An impurity that theoretically can 12 arise during manufacture or storage. It may or 13 may not actually appear in the new drug 14 substance.</p> <p>15 Q Do you agree with that definition of 16 potential impurity?</p> <p>17 A Yes. There's -- the only sticking 18 point is theoretical versus potential. And I 19 think, from a practical point of view, it's a 20 fine definition. It may get revised in the next 21 version of -- revision of ICH Q3A, but it's a 22 fine working definition.</p> <p>23 Q All right. If we could go back to page 24 1 of the guidance. And this version of it that</p>	<p style="text-align: right;">Page 201</p> <p>1 I'll get one.</p> <p>2 A Yes. Pardon me. Now my voice --</p> <p>3 But I see the three classifications, 4 organic, inorganic, and residual solvents.</p> <p>5 MS. BOGDAN:</p> <p>6 Q Okay. Do you agree that impurities can 7 be classified into those three categories?</p> <p>8 A Yes.</p> <p>9 Q And the NDMA and NDEA that was found in 10 valsartan-containing drugs, which type of 11 impurity category would they fall under?</p> <p>12 A Organic impurities.</p> <p>13 Q And the guidance goes on to explain how 14 organic impurities can arise?</p> <p>15 A Yes.</p> <p>16 Q And what does the guidance tell us 17 about how organic impurities can arise?</p> <p>18 A They can arise during the manufacturing 19 process and/or storage of the new drug substance.</p> <p>20 Q And do you agree with that?</p> <p>21 A Yes.</p> <p>22 Q Then the guideline goes on to tell us 23 that the organic impurities can be identified or 24 unidentified, volatile or nonvolatile.</p>

<p style="text-align: right;">Page 202</p> <p>1 Do you agree with that?</p> <p>2 A Yes, I -- I agree with that.</p> <p>3 Q And it tells us that the organic</p> <p>4 impurities -- it reads "they can be identified or</p> <p>5 unidentified, volatile or nonvolatile, and</p> <p>6 include starting materials, byproducts,</p> <p>7 intermediates, degradation products, reagents,</p> <p>8 ligands, and catalysts."</p> <p>9 Do you see that?</p> <p>10 A I do see that.</p> <p>11 Q Do you agree with that statement in the</p> <p>12 guideline?</p> <p>13 A Yes, I agree with that statement.</p> <p>14 Q And when evaluating a manufacturing</p> <p>15 process as a chemist, should one be looking for</p> <p>16 potential impurities that can form?</p> <p>17 MR. HARKINS:</p> <p>18 Object to form. Calls for speculation.</p> <p>19 Vague.</p> <p>20 A Should --</p> <p>21 So I'm gonna restate the question as</p> <p>22 best I answer it. Should -- when you're</p> <p>23 developing a synthetic process, should one be</p> <p>24 looking for potential impurities that could form</p>	<p style="text-align: right;">Page 204</p> <p>1 sound scientific appraisal of the chemical</p> <p>2 reactions involved in the synthesis, impurities</p> <p>3 associated with raw materials that could</p> <p>4 contribute to the impurity profile of the new</p> <p>5 drug substance, and possible degradation</p> <p>6 products."</p> <p>7 Q Do you agree with that statement?</p> <p>8 A Yeah. It's all part of the guidance,</p> <p>9 so, in a way, it doesn't matter if I agree with</p> <p>10 it or not. It is what it is. But I have no</p> <p>11 problem with the wording of this -- what -- of</p> <p>12 what we've highlighted.</p> <p>13 Q As an expert organic chemist that has</p> <p>14 worked in the pharmaceutical industry, do you</p> <p>15 agree that it's good practice to follow the</p> <p>16 guidance, and the applicant should summarize the</p> <p>17 actual and potential impurities most likely to</p> <p>18 arise during the synthesis, purification, and</p> <p>19 storage of the new drug substance?</p> <p>20 A Yes. I agree that that's good</p> <p>21 practice.</p> <p>22 Q And do you agree that it's good</p> <p>23 practice that the summary should be based on</p> <p>24 sound scientific appraisal of the chemical</p>
<p style="text-align: right;">Page 203</p> <p>1 in the synthetic process? I would say yes.</p> <p>2 Q Now, if we go to the next page of the</p> <p>3 ICH guideline, under rationale for the reporting</p> <p>4 and control of impurities, it has a section for</p> <p>5 organic impurities; correct?</p> <p>6 A Yes. Agree.</p> <p>7 Q NDMA and NDEA would be organic</p> <p>8 impurities.</p> <p>9 A Yes. Agreed.</p> <p>10 Q What does the first sentence say under</p> <p>11 that section?</p> <p>12 A "The applicant should summarize the</p> <p>13 actual and potential impurities most likely to</p> <p>14 arise during the synthesis, purification, and</p> <p>15 storage of the new drug substance."</p> <p>16 Q ...that statement?</p> <p>17 A Do -- could you repeat? Something cut</p> <p>18 out.</p> <p>19 Q Sorry. Do you agree with that</p> <p>20 statement?</p> <p>21 A Yes, I do.</p> <p>22 Q Okay. Then if you could read the next</p> <p>23 sentence, please.</p> <p>24 A "This summary should be based upon</p>	<p style="text-align: right;">Page 205</p> <p>1 reactions involved in the synthesis, impurities</p> <p>2 associated with raw materials that contribute to</p> <p>3 the impurity profile of the new drug substance,</p> <p>4 and possible degradation products?</p> <p>5 MR. HARKINS:</p> <p>6 Object to form as to the extent good</p> <p>7 practice means anything different than following</p> <p>8 the guidance.</p> <p>9 You can answer.</p> <p>10 A Yeah, there's -- there doesn't seem to</p> <p>11 be anything controversial there. I think it's</p> <p>12 clear. And I -- I have no -- I take no issues</p> <p>13 with the wording.</p> <p>14 MS. BOGDAN:</p> <p>15 Q If we could go down to the last</p> <p>16 paragraph in that section, which reads</p> <p>17 "identification of impurities present at an</p> <p>18 apparent level of not more than, less than, or</p> <p>19 greater or equal to the identification threshold</p> <p>20 is generally not considered necessary."</p> <p>21 And then it goes on to say, "However,</p> <p>22 analytical procedures should be developed for</p> <p>23 these -- those potential impurities that are</p> <p>24 expected to be unusually potent, producing toxic</p>

<p style="text-align: right;">Page 206</p> <p>1 or pharmacological effects at a level not more 2 than the identification threshold." 3 Are you familiar with that language? 4 A I am familiar with that language. 5 Q What is it referring to when it says 6 analytical procedures should be developed for 7 those potential impurities that are expected to 8 be unusually potent? 9 A It was undefined at the time of ICH 10 Q3A, and other revisions remain undefined. But 11 it has been discussed in numerous literature 12 articles, including some of my own, that that was 13 generally believed to be a placeholder for, at 14 the time, genotoxic impurities and, later, as 15 that was refined, mutagenic impurities. 16 But it would not be limited to, because 17 there could be other toxic -- you could have 18 something that causes convulsions or something 19 that causes some other form of -- of toxic event. 20 So it's not limited to, but it was intended to 21 include mutagenic impurities. 22 Q And, so, it was intended to include 23 mutagenic impurities such as NDMA and NDEA? 24 A Yes. They would be examples of</p>	<p style="text-align: right;">Page 208</p> <p>1 A Yes. 2 Q All right. And, then, the analytical 3 procedure, aside from separating and detecting, 4 can also be developed to actually quantify the 5 amount of the material; correct? 6 A Yes. Yes. That's the implication. 7 There are exceptions to that in terms of 8 quantification. Sometimes there are limit tests. 9 So -- and there are limit tests that could be 10 applicable to certain mutagenic impurity, you 11 know, below or above, pass/fail. But, in 12 general, the way you stated it, I would agree 13 with. 14 Q Now, moving to page 8 of the guidance, 15 which has Attachment 1, Thresholds, and a chart, 16 do you see that? 17 A Yes, I do. 18 Q Okay. And it has different headings on 19 this chart for maximum daily dose, which I assume 20 would be the amount of the medication one would 21 be taking in a day; correct? 22 A Correct. 23 Q And then it has column headings. One 24 is reporting threshold. What is meant by a</p>
<p style="text-align: right;">Page 207</p> <p>1 mutagenic impurities that would be -- yes. 2 Q And when it references analytical 3 procedures that should be developed, would those 4 be analytical methods to test for those potential 5 impurities? 6 A Yeah. It would be analytical 7 procedures to separate, detect, and quantify, as 8 appropriate, those potential impurities. 9 So when you say test, it's a little 10 vague, so I was providing my understanding of the 11 intention is to have -- to separate, detect, and 12 potentially quantify. 13 Q You say "to separate." That would mean 14 to separate them from the active pharmaceutical 15 ingredient; correct? 16 A Typically, yes. There are ways to 17 sep- -- 18 Yes, that's the implication. There are 19 ways to "and devise analytical measures" to where 20 you don't actually separate. So your -- your 21 signal, your detection signal would need to be 22 separate and unique to the impurity of interest. 23 Q Procedures should be developed to 24 detect the impurity.</p>	<p style="text-align: right;">Page 209</p> <p>1 reporting threshold? 2 A It -- it means that if you integrate 3 a -- a -- an impurity below .05 percent, you 4 don't have to integrate and report the presence 5 of that impurity. To report it -- 6 You can, but they're -- they're leaving 7 an expectation -- they're showing an expectation 8 here that if it's .05 percent or above, then you 9 should report it. 10 Q To what -- 11 A By report, it means integrate it, put 12 it in your -- in your records and put it in a 13 regulatory document or wherever -- whatever phase 14 of development is appropriate for the 15 regulatory -- regulatory recording requirements. 16 Q And then there's a separate column for 17 identification threshold. What is meant by an 18 identification threshold? 19 A It means to -- to identify it 20 structurally so that you can identify the 21 chemical molecular structure of the -- of the 22 impurity. 23 Q Okay. And, then, qualification 24 threshold, what is meant by that?</p>

<p style="text-align: right;">Page 210</p> <p>1 A That means that you have --</p> <p>2 qualification is a toxicological safety</p> <p>3 terminology, so that means you qualified it as</p> <p>4 safe through some series of toxicology test at</p> <p>5 that level.</p> <p>6 So if something is present, a -- a</p> <p>7 compound is present at .15 percent or 1 milligram</p> <p>8 per day or above, then you need to have some --</p> <p>9 If it's below, you don't have to do any</p> <p>10 special qualification, any special toxicology</p> <p>11 studies. If it's above, then you would have to</p> <p>12 do some kind -- there's certain specified testing</p> <p>13 to show the safety at that level.</p> <p>14 Q Now, if we could move to page 11 of</p> <p>15 this guideline, and directing you to the notes on</p> <p>16 attachment 3 section. And the attachment 3,</p> <p>17 Dr. Baertschi, is on the page before, just so</p> <p>18 that you have the ability to get to it if you</p> <p>19 want to review it.</p> <p>20 A Yeah. I can see it.</p> <p>21 Q You can see it? Okay.</p> <p>22 A Well, I mean, I have the document, so</p> <p>23 if I want to --</p> <p>24 Q Okay.</p>	<p style="text-align: right;">Page 212</p> <p>1 lower-thresholds-can-be-appropriate category.</p> <p>2 MS. BOGDAN:</p> <p>3 Q And the same question as it pertains to</p> <p>4 NDEA. Do you consider NDEA to be a mutagen that</p> <p>5 falls outside of the ordinary impurities and</p> <p>6 falls into the lower thresholds category?</p> <p>7 A Yes, I do.</p> <p>8 MS. BOGDAN:</p> <p>9 We can put that exhibit down.</p> <p>10 Q That ICH impurities in drug guideline</p> <p>11 that we just looked at -- and the one we looked</p> <p>12 at was from 2006 -- was that the first guidelines</p> <p>13 that were put out with regard to impurities in</p> <p>14 drug products?</p> <p>15 A Well, it's not referring to impurities</p> <p>16 in drug products. That's Q3B. It's referring to</p> <p>17 impurities in drug substances.</p> <p>18 Q Oh, I'm sorry. I misspoke.</p> <p>19 A Well, it's okay. It's easy to</p> <p>20 interchange the two, so there --</p> <p>21 Q I don't -- I don't want to, though, so</p> <p>22 let me -- let me ask the question again.</p> <p>23 The ICH guideline, impurities in new</p> <p>24 drug substances, the Q3A R2, was that the initial</p>
<p style="text-align: right;">Page 211</p> <p>1 A -- go back to 3 --</p> <p>2 Q Perfect.</p> <p>3 It indicates on notes on attachment 3</p> <p>4 that lower thresholds can be appropriate if the</p> <p>5 impurity is unusually toxic. Do you see that?</p> <p>6 A Yes, I see that.</p> <p>7 Q Okay. And does that pertain to</p> <p>8 mutagenic impurities?</p> <p>9 MR. HARKINS:</p> <p>10 Object to form. Vague.</p> <p>11 A I believe that it's generally</p> <p>12 interpreted that that would apply to unusually --</p> <p>13 to mutagenic impurities.</p> <p>14 MS. BOGDAN:</p> <p>15 Q Do you consider NDMA to be unusually</p> <p>16 toxic --</p> <p>17 MR. HARKINS:</p> <p>18 Object to form.</p> <p>19 Q -- as defined in the guideline?</p> <p>20 MR. HARKINS:</p> <p>21 Object to form. Scope.</p> <p>22 A Unusually toxic. I consider it to be a</p> <p>23 mutagen, and it does -- it falls outside of the</p> <p>24 ordinary impurities and falls into the</p>	<p style="text-align: right;">Page 213</p> <p>1 guidelines for impurities in drug substances,</p> <p>2 that you're aware?</p> <p>3 A No. It's a loaded question in this</p> <p>4 sense. It's -- it's my understanding the Q3A</p> <p>5 before revision 2 --</p> <p>6 And we saw the history that was</p> <p>7 included in the -- in the guidance itself.</p> <p>8 -- it -- it was, what, 1995, I believe</p> <p>9 I saw, when it first came out. That's the first</p> <p>10 Q3 -- that's the first ICH guidance. But there</p> <p>11 were individual guidelines from FDA and other</p> <p>12 regulatory agencies around the world prior to</p> <p>13 that.</p> <p>14 So it -- it's loaded in the sense that</p> <p>15 do you mean ICH or are you saying globally?</p> <p>16 Q Well, let's -- we're -- we're in the</p> <p>17 US, so let's talk about the FDA. Did the FDA</p> <p>18 have guidelines regarding impurities in drug</p> <p>19 substances before the Q3A R2?</p> <p>20 A Yes. Well, before -- and they</p> <p>21 implement their guidance based on Q3A. And</p> <p>22 you're going to R2, which didn't come out till</p> <p>23 much later. But if you go before 1995 and you go</p> <p>24 before ICH was in place, FDA had its own</p>

<p style="text-align: right;">Page 214</p> <p>1 guidances. After Q -- ICH came out, they -- they 2 bring out their guidances based on -- so it's 3 harmonized with ICH Q3A and Q3B. But prior to 4 that, they were -- FDA had guidances on 5 impurities that were their own, for the US only. 6 Q So is it fair to say, at least starting 7 in the 1990s, that the pharmaceutical industry 8 recognized that impurities in drug substances 9 should be recognized? 10 MR. HARKINS: 11 Object to the form. Vague. 12 A It's -- it's known that there were 13 guidance for -- for impurities and that there was 14 attention to impurities and the importance of 15 understanding that in -- from guidelines around 16 the world in various countries, including the 17 FDA. 18 MS. BOGDAN: 19 If we could pull up -- I believe it's 20 document 36 in the repository, which is guidance 21 for industry genotoxic and carcinogenic 22 impurities in drug substances and products. 23 (DEPOSITION EXHIBIT NUMBER 21 24 WAS MARKED FOR IDENTIFICATION.)</p>	<p style="text-align: right;">Page 216</p> <p>1 Q Okay. 2 A Do you want me to look it up? 3 Q Did you actually -- was it one of 4 your -- 5 I see a -- 6 A Yeah. May 2015 revised -- yes. It 7 originally -- 8 It's reference 4 in my expert report, 9 May 2015 I have written down for the first draft, 10 for the first nonrevised version. 11 MS. BOGDAN: 12 We can take this down, this document 13 down. 14 Put up, before we go to the 2015, the 15 document that is number 37 in the repository, the 16 2012 guidance for industry. 17 (DEPOSITION EXHIBIT NUMBER 22 18 WAS MARKED FOR IDENTIFICATION.) 19 MS. BOGDAN: 20 Q Are you familiar with this guidance, 21 Dr. Baertschi? 22 A I am aware of it. I would not call 23 myself familiar with it. I don't have the kind 24 of mastery. I've looked through it, but I -- I</p>
<p style="text-align: right;">Page 215</p> <p>1 MS. BOGDAN: 2 Q Dr. Baertschi, do you see this guidance 3 document? 4 A I do see it. 5 Q Is this -- this is a draft guidance, as 6 you can see from the page, the first page of the 7 document. 8 A Is that a question? 9 Q No. This is a draft guidance. My 10 question is: Was this guidance ever taken out of 11 draft form and issued as a guidance? 12 A I -- I am not 100 percent sure on this, 13 but I don't think it ever was. I think they had 14 a draft guidance, and then I think they withdrew 15 that draft guidance once ICH M7 came out. But 16 I'm not a hundred percent sure on that. 17 Q When did ICH M7 first come out? 18 A I believe it was around 2006. But I 19 prefer, if I'm gonna be nailed down to it, let's 20 take a look at it, because it's right in the 21 guidance itself. 22 Q Okay. Did you reference that guidance 23 in your report? 24 A Yes.</p>	<p style="text-align: right;">Page 217</p> <p>1 don't have real good familiarity with it. 2 Q And does this guidance pertain to the 3 field of analytical chemistry in the 4 pharmaceutical field? 5 MR. HARKINS: 6 Object to form. Vague. 7 A Can you rephrase the question? Because 8 you had a couple of terms in there. You had 9 analytical, and -- and I'm kind of getting lost 10 in the connection. 11 MS. BOGDAN: 12 Q You said you weren't -- or I think you 13 said you didn't have really good familiarity 14 with -- with this particular guidance document. 15 Does this guidance document pertain to the work 16 that you do as a pharmaceutical consultant? 17 A It pertains to it, yes. But it is more 18 intended for a toxicologist because it's really 19 talking about how to set up -- design, set up, 20 and interpret toxicology tests and when -- and 21 what kinds of toxicology tests are needed to 22 qualify impurities and to test for genotoxicity. 23 Q And that isn't anything that you do in 24 the course of your work as a consultant; correct?</p>

Page 218	Page 220
<p>1 A I would agree with that. I -- I have 2 not to date consulted on this guidance or, you 3 know, with any kind of -- other than mostly, 4 like, you know, "let's look at this" and then 5 point them to a toxicologist to further the 6 study. So, no, I don't consult on this. 7 Q Directing your attention to page 19 of 8 this guidance, and, in particular, note 5. 9 A I -- I see it, although it -- oh, now 10 it's on the screen. 11 Q And the first sentence of that note 12 talks about structurally alerting molecular 13 entities are recognized as being causally related 14 to the carcinogenic or mutagenic potential of 15 chemicals. 16 A Is there a question? 17 Q Is one of the structurally alerting 18 molecular entities the nitrosamine functional 19 group that you described earlier in your 20 testimony? 21 MR. HARKINS: 22 Object to form. Scope. 23 A N-nitrosamine, yes. 24 MS. BOGDAN:</p>	<p>1 issued, the first version of it? 2 A Can we go to the history? I want to 3 say it's 20- -- 4 Well, I'd rather just get on the record 5 correctly. Does it have the history here listed? 6 It's before this date. 7 Q I believe under the introduction 8 section it references that the guidance was 9 developed with the expert working group for ICH. 10 A Yeah. So it says it was endorsed by 11 the IC steering committee at step 4, which means 12 it's sort of official at that point in June of 13 2014. 14 Q All right. If we could go to page 5. 15 Actually, what is the purpose of this 16 guidance? 17 A You know, let's take a look. Well, 18 there's a scope. You know, in general terms, 19 it's to provide some -- some assistance, some 20 granularity, some instruction as to how to 21 approach the topic of mutagenic impurities 22 when -- when previously it was essentially 23 undefined. 24 Q And, so, the previous version of this</p>
Page 219	Page 221
<p>1 We can take down this exhibit. 2 If we could please pull up the ICH M7 3 2015 guidance document. It's number 38 in the 4 repository. 5 (DEPOSITION EXHIBIT NUMBER 23 6 WAS MARKED FOR IDENTIFICATION.) 7 A Is -- is this Exhibit 23? Can somebody 8 help me? Or is it 24? 9 MS. BOGDAN: 10 Q Yeah. It's not the one, though, I 11 wanted to mark. 12 Actually, you could pull that -- 13 No. Let's go to -- let's try what's 14 been marked in the repository as number 39. 15 I don't know if that's loaded yet for 16 you, but do you see that guidance for industry? 17 A I see it on my screen. It hasn't 18 loaded yet. 19 I think it has loaded now. Yes, I've 20 got it up now. 21 Q Okay. Are you familiar with this 22 guidance? 23 A I am familiar with this guidance. 24 Q Okay. And when was this guidance first</p>	<p>1 had come out in 2014, and both NDMA and NDEA 2 would fall -- follow under the mutagenic 3 impurities that this document is giving guidance 4 regarding; correct? 5 A I agree with that, yes. 6 Q And if we go to the general principles 7 section, which is on page 5, does it tell us 8 right in the general principles section what the 9 focus of the guidance is? 10 A Yes, it does. 11 Q And what does it tell us the focus of 12 the guidance is? 13 A It says that the focus is on DNA 14 reactive substances that have a potential to 15 directly cause DNA damage when present at low 16 levels, leading to mutations and, therefore, 17 potentially causing cancer. 18 Q And NDMA and NDEA would be DNA reactive 19 substances; correct? 20 A Correct. 21 Q And, then, in that same paragraph, it 22 goes on to say "Therefore, to limit a possible 23 human cancer risk associated with the exposure to 24 potentially mutagenic impurities, the bacterial</p>

<p style="text-align: right;">Page 222</p> <p>1 mutagenicity assay is used to assess the 2 mutagenic potential and the need for controls." 3 Do you agree with that statement? 4 MR. HARKINS: 5 Object to form. Scope. 6 A I agree that that statement is -- I'm 7 reading it, and it -- it's -- it says what it 8 says. 9 MS. BOGDAN: 10 Q The next sentence has "structure-based 11 assessments are useful." 12 What is a structure-based assessment? 13 A It's when you look at the molecular 14 structure of a compound and, based on the 15 moieties or the substructures within that 16 chemic- -- that molecular structure and how 17 they're arranged, can be correlated with, 18 associated with bacterial mutagenicity outcomes 19 from previous testing. 20 So it's a correlation or it's a 21 probability-based assessment based on similar 22 substructures in other compounds. 23 Q And would that be -- type of 24 structure-based assessment be looking for a</p>	<p style="text-align: right;">Page 224</p> <p>1 you to use software to, just -- just looking at 2 the structure, say there is this alerting 3 substructure group in this compound. So you can 4 input a chemical structure and have that software 5 do the work. 6 So they compiled a database to sort 7 of -- and that's where I came up with that number 8 of 31, as I recall. 9 MS. BOGDAN: 10 Q And you relied on that Benigni and 11 Bossa study when writing your report? 12 A I did in that I reference it. It's 13 consistent with other assessments of alerting 14 structures, and I think pretty much every 15 alerting structure list I've seen would contain 16 the -- the cohort of concern and a number of 17 others. 18 The number of 31, it could be some -- 19 it could be 19, it could be 26 -- it sort of 20 depends on how they subdivide certain 21 substructures. But I -- I found that to be a 22 useful sort of comprehensive list of alerting 23 structures. So I did rely on it in that sense. 24 I'm not solely relying on that. It's an</p>
<p style="text-align: right;">Page 223</p> <p>1 structure like N-nitroso functional groups? 2 A Yeah. N-nitroso functional groups are 3 one of the 31-plus alerting structures that would 4 be associated with a risk for mutagenicity as 5 part of that structure-based assessment. 6 Q And is there a list of those 31 7 alerting structures in some type of a guidance? 8 A There are a variety of publications 9 that deal with mutagenic or genotoxic alerting 10 structures. The one that lists them as 31, I 11 believe I reference in my report, and I'm now 12 trying to access in my brain what -- where that 13 was. 14 MR. HARKINS: 15 Do you want to review your report? 16 THE WITNESS: 17 Yeah. 18 MR. HARKINS: 19 Paragraph 30 is where you discuss it. 20 That's what it looks like. 21 A Paragraph 30 I'm looking at. It's an 22 article by Benigni and Bossa, and they took some 23 pains to try to compile them into a -- a series 24 of rules that they built into software to allow</p>	<p style="text-align: right;">Page 225</p> <p>1 illustration of what I'm relying on. 2 Q And of the references that you've read 3 and the ones that you cited in your report, the 4 N-nitroso functional group is one of the alerting 5 structures that's mentioned in those various 6 studies that you're speaking of? 7 A Yes. 8 Q Okay. You mentioned cohort of concern. 9 I see that that concept is, again, from in the M7 10 R1 guidance, and it's in the next paragraph down. 11 And it's towards the bottom of that paragraph 12 where it starts "some structural groups were 13 identified to be of such high potency that 14 intakes even below the TTC would theoretically be 15 associated with a potential for a significant 16 carcinogenic risk." 17 And those structural groups that the 18 guidance is referring to, does that include 19 N-nitroso compounds? 20 MR. HARKINS: 21 Object to form. Compound still. 22 A The next sentence indicates that the 23 cohort of concern includes N-nitroso 24 substructure.</p>

<p style="text-align: right;">Page 226</p> <p>1 MS. BOGDAN:</p> <p>2 Q And N-nitroso substructures would</p> <p>3 include NDMA and NDEA; correct?</p> <p>4 A Correct.</p> <p>5 Q So this guidance to industry is</p> <p>6 alerting the industry of the potential concern</p> <p>7 associated with N-nitroso compounds like NDMA and</p> <p>8 NDEA; correct?</p> <p>9 MR. HARKINS:</p> <p>10 Object to form. Scope. Vague.</p> <p>11 Speculation. Compound.</p> <p>12 A Can you repeat the question? Sorry.</p> <p>13 MS. BOGDAN:</p> <p>14 Q Sure.</p> <p>15 So this guidance to industry is</p> <p>16 alerting the industry of the potential concerns</p> <p>17 associated with N-nitroso compounds like NDMA and</p> <p>18 NDEA; correct?</p> <p>19 MR. HARKINS:</p> <p>20 Same objection.</p> <p>21 A It's certainly alerting -- it's</p> <p>22 certainly calling attention to the cohort of</p> <p>23 concern structures, which include N-nitroso, of</p> <p>24 which NDMA and NDEA are a subset.</p>	<p style="text-align: right;">Page 228</p> <p>1 Off record, 3:38 p.m.</p> <p>2 (OFF THE RECORD.)</p> <p>3 VIDEOGRAPHER:</p> <p>4 On record, 3:52 p.m.</p> <p>5 MS. BOGDAN:</p> <p>6 If you could please pull up exhibit 41</p> <p>7 in the document repository, and if you could give</p> <p>8 me what exhibit we're on to mark it, please.</p> <p>9 TRIAL TECH:</p> <p>10 This will be 24.</p> <p>11 (DEPOSITION EXHIBIT NUMBER 24</p> <p>12 WAS MARKED FOR IDENTIFICATION.)</p> <p>13 MS. BOGDAN:</p> <p>14 Q Dr. Baertschi, let me know when that</p> <p>15 loads.</p> <p>16 A Okay. It's there. It's loading --</p> <p>17 it's there.</p> <p>18 Q Do you recognize Chapter 12?</p> <p>19 A I want to be a smart aleck. I hope so.</p> <p>20 Yes, I recognize it.</p> <p>21 Q And are you the first author of that</p> <p>22 chapter?</p> <p>23 A Yes, I am.</p> <p>24 Q Okay. And what does that chapter</p>
<p style="text-align: right;">Page 227</p> <p>1 MS. BOGDAN:</p> <p>2 Q And this guidance, as we've already</p> <p>3 gone through, first came out in 2014 with ICH;</p> <p>4 correct?</p> <p>5 A I believe that's what we said earlier,</p> <p>6 it was 2014, if my short-term memory serves</p> <p>7 correct.</p> <p>8 MS. BOGDAN:</p> <p>9 Do we want to take a little break? I</p> <p>10 didn't know.</p> <p>11 MR. HARKINS:</p> <p>12 Sure. Do you want five minutes,</p> <p>13 Doctor?</p> <p>14 THE WITNESS:</p> <p>15 Yeah. Let's take five minutes.</p> <p>16 MS. BOGDAN:</p> <p>17 Q I just noticed that you were -- so I</p> <p>18 wanted to offer.</p> <p>19 A Well, muscles are getting a little</p> <p>20 tight here.</p> <p>21 Q Yeah. So if you want to go off for</p> <p>22 five minutes and take a break, we can come back,</p> <p>23 since we're between documents.</p> <p>24 VIDEOGRAPHER:</p>	<p style="text-align: right;">Page 229</p> <p>1 appear in?</p> <p>2 A It's a book on -- by -- on</p> <p>3 specifications of impurities, I think. It has --</p> <p>4 it's a book having to do with --</p> <p>5 I don't remember the exact title of the</p> <p>6 book, but it has to do with specifications.</p> <p>7 Q And your coauthor is a B. Olsen?</p> <p>8 A Yes.</p> <p>9 Q Okay. How do you know --</p> <p>10 What is Dr. -- is it a Dr. Olsen?</p> <p>11 A Yes, it is Dr. Olsen.</p> <p>12 Q Okay. What is Dr. Olsen's first name?</p> <p>13 A Bernard.</p> <p>14 Q Bernard?</p> <p>15 And have you worked with Dr. Olsen</p> <p>16 before?</p> <p>17 A Yes. We were colleagues at Eli</p> <p>18 Lilly & Company.</p> <p>19 Q Does he work for your consulting</p> <p>20 company?</p> <p>21 A He has done some contracts -- some</p> <p>22 subcontracting work, but he's not a part of my...</p> <p>23 So there have been a few projects where</p> <p>24 I didn't have capacity or he was better suited</p>

Page 230

1 and I subcontracted that out to him.
2 Q Did you receive any compensation for
3 writing this chapter?
4 A No, unfortunately.
5 Q Who funded the writing of the book?
6 A Who funded? Is that what you asked?
7 Q I did, yes.
8 A The publisher, as far as I know.
9 Q And who was the publisher?
10 A I don't remember. Elsevier, Springer.
11 I can't --
12 MR. HARKINS:
13 Don't guess if you don't know.
14 A I don't remember.
15 MS. BOGDAN:
16 Q I think it's on the bottom. I think
17 you have it right. Else- -- Elsevier?
18 A Elsevier, yes.
19 Q Had you written anything for them in
20 the past?
21 A I'm not completely sure. It's a
22 publishing company. I know I review articles for
23 a --
24 A number of journals are published by

Page 231

1 Elsevier, and I'm a referee, scientific referee
2 for a number of journals that are Elsevier
3 published. So -- but I don't know if I've
4 written anything in an Elsevier -- like another
5 book or another book chapter. It's possible.
6 Q Do you receive compensation when this
7 book is sold?
8 A No. I did get a free electronic copy
9 of the book chapter. Oh, I actually received a
10 hard copy of the book as well.
11 Q Oh, good.
12 A Yeah.
13 Q All right. Other than receiving a hard
14 copy of the book, did you receive any
15 compensation for authoring this chapter?
16 A No.
17 Q If you could go to the introduction
18 section.
19 A Yes.
20 Q And in that introduction section, in
21 the first column, it gives a historical context.
22 A Yes. I see that.
23 Q It goes all the way down to saying when
24 the M7 R1 guideline was finalized in 2014,

Page 232

1 followed by a revision in September of '17. I
2 don't know if the tech could please put the whole
3 column up.
4 Did you write that section?
5 A Bernie and I did. Bernard, he goes by
6 Bernie.
7 Q Okay.
8 A Bernie Olsen and I co-wrote that
9 chapter. Yes.
10 Q Okay. And, so, I'm assuming you agree
11 with the statements that are contained in this
12 historical context section that has been
13 highlighted for you, the first column?
14 A Yes. Unless I captured some -- unless
15 I captured some error accidentally, we tried to
16 be as accurate as possible and to document the
17 history.
18 Q Okay. And you mentioned in the middle
19 of this --
20 Let's just go through it briefly. You
21 mention for historical context the ICH impurity
22 guidelines, the Q3A, which we have already
23 discussed today -- right? -- previously in your
24 testimony?

Page 233

1 A Yes. Correct. I remember that.
2 Q And the Q3A that you're citing there in
3 this textbook chapter that you wrote is referring
4 to, according to your references, the 2006
5 guidance. And then --
6 A No --
7 Oh, sorry. There wasn't a question.
8 Q Go ahead. 2006 guidance.
9 A Okay.
10 Q But --
11 A Oh, sorry. I did it again.
12 Q But there was -- there was an earlier
13 version of the ICH guidance as well; correct?
14 A Correct.
15 Q That goes back into the '90s that we've
16 previously discussed.
17 A Yes.
18 Q And, then, when you're talking about
19 the ICH impurity guidelines, you actually take a
20 quote right out of those guidelines that read
21 "However, analytical procedures should be
22 developed for those potential impurities that are
23 expected to be unusually potent, producing toxic
24 or pharmacological effects at a level not more

<p style="text-align: right;">Page 234</p> <p>1 than the identification threshold."</p> <p>2 Why was that language actually quoted</p> <p>3 out of the ICH guideline in the book chapter that</p> <p>4 you wrote?</p> <p>5 A Because we were trying to put ICH M7 in</p> <p>6 historical perspective.</p> <p>7 Q And that particular quote from ICH</p> <p>8 impurity guidelines relates directly to M7?</p> <p>9 MR. HARKINS:</p> <p>10 Object to form.</p> <p>11 MS. BOGDAN:</p> <p>12 Q You were trying to show the connection</p> <p>13 from one to the other?</p> <p>14 A In that -- in this book chapter, we are</p> <p>15 trying to show the connection and at least</p> <p>16 suggest the connection that was our understanding</p> <p>17 and somewhat widespread in the industry that --</p> <p>18 that that ICH M7 was anticipated by that phrase</p> <p>19 in Q3A and Q3B.</p> <p>20 Q Okay. And that Q3A was addressing</p> <p>21 mutagenic impurities, and ICH M7 followed that</p> <p>22 original guidance; correct?</p> <p>23 A I don't think I -- I don't think you</p> <p>24 said that correctly. Could you repeat the</p>	<p style="text-align: right;">Page 236</p> <p>1 a thorough toxicological evaluation of potential</p> <p>2 and actual impurities to determine if they are</p> <p>3 indeed a concern for mutagenicity."</p> <p>4 What were you trying to convey with</p> <p>5 that sentence?</p> <p>6 A I -- I'm disappointed that the wording</p> <p>7 itself doesn't make that clear, but I'm trying</p> <p>8 to, I think, suggest that it's a good idea for</p> <p>9 scientists to do a thorough evaluation of both</p> <p>10 potential and actual impurities to see if they</p> <p>11 are a risk for mutagenicity.</p> <p>12 Q Now, on this page 324, which I see on</p> <p>13 the right side of my screen, there is a table</p> <p>14 12.1.</p> <p>15 A I see that.</p> <p>16 Q And it has different classes, impurity</p> <p>17 classifications.</p> <p>18 A Yes.</p> <p>19 Q Are those impurity classifications the</p> <p>20 same that are in ICH M7?</p> <p>21 A I believe so.</p> <p>22 Q Okay. And where do NDMA and NDEA fall</p> <p>23 as far as those classifications?</p> <p>24 MR. HARKINS:</p>
<p style="text-align: right;">Page 235</p> <p>1 question? I think there's an error in what you</p> <p>2 said.</p> <p>3 Q Okay. Well, I'm asking with regard to</p> <p>4 your quoting of the ICH impurity guidelines, were</p> <p>5 you trying to show a relationship between those</p> <p>6 guidelines mentioning potential impurities that</p> <p>7 are expected to be unusually potent and relating</p> <p>8 them to the ICH M7 guidelines that came out</p> <p>9 afterwards?</p> <p>10 A I think that's a fair representation of</p> <p>11 what we were trying to do. We were trying to</p> <p>12 call attention to the fact that it -- that there</p> <p>13 was potentially a connection and that this phrase</p> <p>14 sort of served as a placeholder because it was</p> <p>15 too big of a topic for them to tackle at the time</p> <p>16 ICH Q3A and Q3B, both of those guidances, were</p> <p>17 developed.</p> <p>18 Q Now, let's, if we can, move to the next</p> <p>19 page of your book chapter. And I want to direct</p> <p>20 your attention to section 12.1.3 --</p> <p>21 A Yes.</p> <p>22 Q -- and the last sentence on that page</p> <p>23 in that section which reads "drug development</p> <p>24 scientists are well advised, however, to conduct</p>	<p style="text-align: right;">Page 237</p> <p>1 Object to form. Asked and answered</p> <p>2 with the guidance already.</p> <p>3 But you can answer again.</p> <p>4 A I -- I think there's some controversy</p> <p>5 with whether or not they --</p> <p>6 There's -- this has a class 1 and 2,</p> <p>7 and I think there may be some revisions, and I'm</p> <p>8 not completely sure because I'm not a</p> <p>9 toxicologist. But some question as to whether or</p> <p>10 not they're 1 or 2, if there's a 1A and 1B. I've</p> <p>11 seen a text associated with that from</p> <p>12 toxicologists talking about that. But I -- I</p> <p>13 don't recall myself, don't know how it's been</p> <p>14 formally classified. I have seen it written. I</p> <p>15 just don't recall it for sure.</p> <p>16 MS. BOGDAN:</p> <p>17 Q So as you sit here today, you don't</p> <p>18 know if NDMA or NDEA is a Class 1 known mutagenic</p> <p>19 carcinogen?</p> <p>20 MR. HARKINS:</p> <p>21 Object to form. Scope. Asked and</p> <p>22 answered.</p> <p>23 A Um, from a point of view of a chemist</p> <p>24 dealing with control strategies and any process</p>

<p style="text-align: right;">Page 238</p> <p>1 associated with that, Class 1, 2, or 3, you're 2 gonna deal with it essentially the same, so that 3 the process, the -- that you would undergo, the 4 risk assessment process is -- is the same. 5 Well, if it's a known mutagenic 6 carcinogen, you don't have to do it. You don't 7 have to establish -- it's not exactly the same. 8 But there's -- the implications for 1, 2, or 3 9 are the same. 10 Q And under that table in section 12.2.1, 11 where you have API and DP, the chapter reads 12 "After actual and potential impurities have been 13 identified, a mutagenic risk assessment should be 14 conducted." 15 What did you mean by writing that 16 statement? 17 A Once you have structural knowledge of 18 the chemical structure of an impurity, you should 19 conduct, as outlined in ICH M7, a mutagenic risk 20 assessment. 21 And I would add that if you don't know 22 the structure, you -- you can't really do a 23 mutagenic risk assessment. 24 Q To know the structure, you'd have to</p>	<p style="text-align: right;">Page 240</p> <p>1 MR. HARKINS: 2 Object to form. 3 MS. BOGDAN: 4 Q To your knowledge? 5 A I believe that they're current. I 6 believe that that's the current limits or 7 recommended limits. 8 MS. BOGDAN: 9 You can take that down, please. 10 THE COURT REPORTER: 11 Did you want to make that Exhibit 25? 12 MS. BOGDAN: 13 Yes, please. Any exhibit that I pull 14 up, you're not telling me what they're being 15 marked, but I was assuming they're being marked 16 in consecutive order. 17 MR. HARKINS: 18 I believe they are. 19 TRIAL TECH: 20 Yeah. 21 MS. BOGDAN: 22 If you could please pull up document 42 23 in the document repository, which is the Teva 24 webinar recap.</p>
<p style="text-align: right;">Page 239</p> <p>1 identify it; correct? 2 A Yes. 3 MS. BOGDAN: 4 All right. If we could please take 5 down that exhibit and pull up the control 6 nitrosamine impurities in human drugs, which is 7 number 40 in the document repository. 8 (DEPOSITION EXHIBIT NUMBER 25 9 WAS MARKED FOR IDENTIFICATION.) 10 MS. BOGDAN: 11 Q Doctor, you're aware of this guidance 12 that was issued by the FDA? 13 A Yes, I am. 14 Q Okay. And if I can direct your 15 attention to page 10. Do you see the acceptable 16 intake limit section on page 10? 17 A I do. 18 Q Okay. And table 1 that sets forth the 19 AI limits for NDMA, NDEA, and some other chemical 20 compounds? 21 A I see that. 22 Q Okay. Are those the current acceptable 23 intake limits for those compounds in 24 pharmaceuticals?</p>	<p style="text-align: right;">Page 241</p> <p>1 (DEPOSITION EXHIBIT NUMBER 26 2 WAS MARKED FOR IDENTIFICATION.) 3 MS. BOGDAN: 4 Q Doctor, tell me if you -- if it's 5 loaded for you. 6 A It's loaded. 7 Q Can you see that? 8 Okay. So are you familiar with this 9 webinar, "Nitrosamines: A moving target" that 10 was -- 11 MR. HARKINS: 12 Let her complete her -- 13 MS. BOGDAN: 14 Q -- that was sponsored by Teva? 15 A I -- I think I saw it advertised. I 16 did not log into it. I did not see it. I have 17 not looked at the webinar. 18 Q Well, Teva -- Teva is providing this 19 recap, and it says in the middle of this page, 20 "if you missed the live event, here are your 21 highlights." 22 In this recap document, if we go to the 23 next page, it talks about risk mapping for 24 nitrosamines in the center.</p>

<p style="text-align: right;">Page 242</p> <p>1 Are you familiar with the term "risk 2 mapping"?</p> <p>3 A No. I -- that's a new term for me.</p> <p>4 Q Okay. Well, they describe three steps 5 for nitrosamines risk mapping, and the first step 6 they describe is the theoretical risk assessment.</p> <p>7 Are you familiar with the term 8 "theoretical risk assessment"?</p> <p>9 A Yes.</p> <p>10 Q What is a theoretical risk assessment?</p> <p>11 MR. HARKINS:</p> <p>12 Object to form. Objection to 13 foundation. Object to scope and any questions 14 about this document that he hasn't seen and this 15 concept under a heading that he's already stated 16 he's not familiar with.</p> <p>17 You can answer.</p> <p>18 A Theoretical risk assessment, just 19 piecing together the meaning of all three of 20 those words with the commonly --</p> <p>21 I have some familiarity with risk 22 assessment. Theoretical means it's something 23 that you would do in silico or in cerebro. By 24 that I mean in a computer, where you might use</p>	<p style="text-align: right;">Page 244</p> <p>1 nitrosamines have been found." So --</p> <p>2 And the sentence before that says if a 3 risk is found, then you move to confirmatory 4 testing. Can confirmatory testing be testing to 5 see if a nitrosamine has been formed?</p> <p>6 MR. HARKINS:</p> <p>7 Object to form. Scope. Foundation. 8 Compound. Vague. Calls for speculation.</p> <p>9 A The way you worded it, say could it 10 involve? I guess it could. I really don't know 11 what -- because I don't -- I've not seen that 12 term used before in this context.</p> <p>13 Q Okay. The statement reads "if indeed 14 nitrosamines have been found at higher amounts 15 than the limit, you will need to optimize or 16 change the process before submitting this change 17 to the relevant regulatory agencies."</p> <p>18 Do you agree with that statement?</p> <p>19 MR. HARKINS:</p> <p>20 Object to form. Scope. Foundation. 21 Vague.</p> <p>22 A This is pretty far away from what I've 23 opined on in my expert report, and I don't -- 24 I --</p>
<p style="text-align: right;">Page 243</p> <p>1 theory to theoretically assess, or you use 2 your -- in cerebro, use your brain, your chemical 3 knowledge, your -- your human knowledge to assess 4 theoretically what can you imagine might or will 5 happen or could happen.</p> <p>6 MS. BOGDAN:</p> <p>7 Q And then --</p> <p>8 A Go ahead.</p> <p>9 Q Okay. And then the next item they 10 mention is if risk is found, then you move to 11 confirmatory testing.</p> <p>12 What is confirmatory testing, to your 13 knowledge?</p> <p>14 MR. HARKINS:</p> <p>15 Same objection to scope, foundation. 16 You can answer.</p> <p>17 A I don't know what they mean by 18 confirmatory testing here. There's a potential 19 for a pretty broad range of -- of -- of meaning, 20 because it doesn't fit into the normal 21 terminology I've seen associated with mutagenic 22 risk assessment.</p> <p>23 MS. BOGDAN:</p> <p>24 Q The next sentence, they say "if indeed</p>	<p style="text-align: right;">Page 245</p> <p>1 It's -- it involves some assumptions I 2 would have to make, and I'm getting afield from 3 what I want to comment on. So it's outside the 4 scope of my -- what's it called? -- expert report 5 and what I investigated, what I looked into, what 6 I prepared for.</p> <p>7 MS. BOGDAN:</p> <p>8 Q So is it your testimony that you are 9 not offering any opinions with regard to risk 10 mapping?</p> <p>11 MR. HARKINS:</p> <p>12 Object to form. Scope. Calls for a 13 legal opinion. And objection to the extent it's 14 using the risk mapping term, which he's already 15 stated he's not familiar with.</p> <p>16 A I -- I don't know -- without really 17 understanding the risk mapping process --</p> <p>18 It seems like jargon that's been 19 invented by Teva or somebody that I'm not 20 familiar with, and in that it's a term that I'm 21 not -- generally understand, I would worry about 22 what all it entails, what it means before I would 23 make any kind -- before I would do any kind of 24 review and investigation to try to offer comment</p>

<p style="text-align: right;">Page 246</p> <p>1 on. But I'm certainly not offering comment on 2 that in my expert report or now. 3 MS. BOGDAN: 4 Q The next session on -- section -- 5 excuse me -- on this recap is entitled "risk 6 assessment." And the first statement is 7 "theoretical risk assessment should address all 8 root causes as defined by relevant guidelines and 9 can be grouped into three potential sources for 10 risk with nitrosamines." 11 Do you agree with that statement? 12 MR. HARKINS: 13 Object to form. Object to foundation. 14 Object to the mischaracter- -- or, sorry -- the 15 misstatement of risk assessment as opposed to 16 assessment, as it says in the document. 17 You can answer. 18 A I understand that this is their -- 19 their way of expressing a process that you can 20 use to do risk assessment. I'm not sure I 21 understand everything they're saying. But -- 22 So I -- you know, there's -- there's 23 just some words there that are troubling when you 24 say "should address all root causes as defined by</p>	<p style="text-align: right;">Page 248</p> <p>1 secondary amine doesn't have to be present as it 2 is. It could also be sourced from a 3 primary/tertiary/quaternary amine that is used in 4 the process." 5 Do you agree, as an organic chemist, 6 with that statement? 7 MR. HARKINS: 8 Object to form. Scope. Foundation. 9 Calls for speculation. 10 A There are -- secondary amines are not 11 the only type of amines that can react to form 12 nitrosamines, so limiting your assessment to only 13 secondary amines isn't comprehensive. 14 MS. BOGDAN: 15 Q The next sentence reads "secondary 16 amines can also process intermediates of the API 17 itself." 18 Do you agree with that sentence? 19 MR. HARKINS: 20 Object to form. Scope. Foundation. 21 A I don't think there's anything 22 controversial about that. 23 MS. BOGDAN: 24 Q The next sentence, "Similarly, nitrite</p>
<p style="text-align: right;">Page 247</p> <p>1 relevant guidelines." And I don't know 2 guidelines that define all root causes, and I 3 don't know about the -- if -- the limitation of 4 the three potential sources that they list. So 5 I -- it's getting afield from -- from what I'm 6 here to represent, my expert report. 7 MS. BOGDAN: 8 Q The next paragraph states "nitrosamine 9 formation is attributed to a reaction between the 10 secondary amine and nitrite ion." 11 Do you agree with that statement? 12 MR. HARKINS: 13 Object to form. Foundation. Scope. 14 A I agree that nitrosamines can be formed 15 from reactions of secondary amines and nitrite 16 ions in the right chemical environment because 17 it's not nitrite itself that has the nitrosation. 18 It's a different form of the molecule. And 19 there's more than one nitrosating agent beside -- 20 in addition to nitrite, there are other 21 nitrosating reagents. 22 MS. BOGDAN: 23 Q If we go down to the next paragraph, it 24 reads "It is important to recognize that a</p>	<p style="text-align: right;">Page 249</p> <p>1 can be used itself in the process or it could 2 come from other sources, such as hydroxylamine or 3 nitric acid." 4 Do you agree with that statement? 5 MR. HARKINS: 6 Same objection. 7 A I -- I don't disagree with it. 8 MS. BOGDAN: 9 Q Do you agree that process water should 10 also be assessed for the presence of nitrite 11 ions, as they can react with amines used in the 12 process? 13 A I've seen publications on process 14 water. I know the initial -- the -- the general 15 conservative approach is to say process water 16 should be evaluated. I believe that there's 17 literature out there now that would suggest that 18 there are no instances of that ever happening and 19 that any levels in process water that would 20 contain -- any levels of nitrite that could be 21 contained in process water are so low as to not 22 be significant and that process water can 23 generally be assumed to not have nitrite 24 contamination.</p>

<p>Page 250</p> <p>1 But the fact that they're suggesting 2 that it should be assessed, I don't disagree 3 with. I just don't think it's ever been 4 designated or found as a source of nitrosamine 5 formation in pharmaceuticals. 6 MS. BOGDAN: 7 Go to the next page of this exhibit. 8 It should -- 9 I don't see it. Is there a page in 10 between? Be a second page? That's the third. 11 MR. HARKINS: 12 Looks like it doesn't continue cleanly 13 from one sentence to the other, at least on the 14 copy I'm seeing in the Dropbox. 15 MS. BOGDAN: 16 The top of the second page starts with 17 "remember a secondary amine." That's what I see 18 on my screen. 19 Q Do you agree with the statement 20 "another aspect of potential risk could be 21 contaminated starting materials and solvents, 22 such as recycled solvents or materials that we 23 source from a third party"? 24 MR. HARKINS:</p>	<p>Page 252</p> <p>1 was so long. Can you break it up into two or -- 2 MS. BOGDAN: 3 Q Did you -- did you review any 4 questionnaires that were sent by Teva to Mylan or 5 ZHP that asked them about the potential risks 6 associated with their starting materials or 7 solvents? 8 MR. HARKINS: 9 Object to form. Scope. 10 A I do -- I do not recall reviewing any 11 questionnaires like that. 12 MS. BOGDAN: 13 Q Do you know if any such questionnaires 14 exist -- 15 MR. HARKINS: 16 Object to form. 17 MS. BOGDAN: 18 Q -- as it pertains to valsartan? 19 MR. HARKINS: 20 Object to form. Scope. Foundation. 21 Calls for speculation. 22 You can answer if you know. 23 A I do not know. 24 MS. BOGDAN:</p>
<p>Page 251</p> <p>1 Object to form. Scope. Foundation. 2 A I believe it's been published rather 3 widely that recycled solvents played a role in at 4 least one case of ND -- of N-nitroso 5 contamination and -- and the concept that you 6 could have starting materials that contain -- and 7 solvents that con- -- that bring in with them 8 potential risk is noncontroversial to me. 9 MS. BOGDAN: 10 Q And Teva goes on to say "to address 11 this risk at Teva API, we send dedicated 12 questionnaires to all our vendors and, based on 13 their answers, we conclude whether or not there 14 is a potential risk." 15 In this particular case, did you review 16 any questionnaires that were completed by either 17 Mylan or ZHP that were sent to them by Teva 18 asking about the potential risks associated with 19 starting materials or solvents used in their API 20 synthesis process? 21 MR. HARKINS: 22 Object to form. Scope. Foundation. 23 Compound. 24 A I'm confused by the question because it</p>	<p>Page 253</p> <p>1 We can take this exhibit down. 2 Could we please pull up Teva 59150. 3 And if you don't have it -- 4 I don't see it on this list I have. 5 Can we just go off the record so I can have it 6 sent? 7 MR. HARKINS: 8 Sure. We can take a five-minute break 9 for that. 10 VIDEOGRAPHER: 11 Off record. 4:25 p.m. 12 (OFF THE RECORD.) 13 VIDEOGRAPHER: 14 On the record, 4:29 p.m. 15 MS. BOGDAN: 16 If you could pull up document 59150. 17 (DEPOSITION EXHIBIT NUMBER 27 18 WAS MARKED FOR IDENTIFICATION.) 19 MS. BOGDAN: 20 Q And, Dr. Baertschi, do you see this 21 Teva certificate of analysis for valsartan? 22 A I do. 23 Q On the certificate of analysis, does it 24 outline the different specifications --</p>

Page 254

1 A It outlines the --
2 Q -- and tests?
3 Sorry. There's a delay.
4 A Yes. It does outline specification and
5 the associated test for several attributes.
6 Q Okay. And the first tests are called
7 characters?
8 A I see that.

1 [REDACTED]
2 Q And why is gas chromatography good for
3 residual solvent detection?
4 MR. HARKINS:
5 Object to form. Misstates testimony.
6 A Gas chromatography is -- is effective
7 for measuring residual solvents, as a lot of work
8 has been done over the years to develop
9 methodologies to resolve a wide variety of
10 solvents, and solvents are amenable to the
11 separation technique; that is, the
12 volatilization, maintaining themselves in the gas
13 phase while they transverse the column as you
14 heat the column to separate on the basis of
15 certain characteristics and elute off the column
16 of the flame ionization detector or some other
17 detector.
18 MS. BOGDAN:
19 Q So gas chromatography is a good method
20 for detecting volatiles; correct?
21 MR. HARKINS:
22 Object to form. Vague.
23 A Gas chromatography is often used as an
24 effective method to test for volatile compounds.

Page 260

1 Volatile compounds can also be amenable to other
2 techniques, such as HPLC. So it sort of depends
3 on what you need to separate, what you need to --
4 You know, it -- it's effective for this
5 particular application of residual solvents.
6 It's been used in many cases, in many industries
7 for that.
8 MS. BOGDAN:
9 Q And gas chromatography can be used to
10 detect NDMA, can't it?
11 A Yes.
12 Q And gas chromatography can be used to
13 detect NDEA, can't it?
14 MR. HARKINS:
15 Objection --
16 A I'm sorry. I --
17 I'm sorry.
18 MR. HARKINS:
19 Objection. Scope. Objection. Vague.
20 Calls for speculation.
21 A I need to clarify. Gas chromatography
22 doesn't detect anything itself. It only
23 separates things. The detector comes after the
24 separation of the gas chromatograph. So the

Page 261

1 detector is completely different. It's not part
2 of gas chromatography. It's hyphenated GC/FID,
3 GC/MS, GC/specialized detector, nitrogen,
4 phosphorous. There's many GC detectors. I'm
5 just clarifying.
6 So if you want to restate your
7 question, if I didn't answer it, I'm happy to
8 address it.
9 MS. BOGDAN:
10 Q Is gas chromatography an effective
11 technique for separating an NDMA impurity from
12 valsartan?
13 MR. HARKINS:
14 Object to form. Vague.
15 A You can get some specificity because
16 valsartan, I don't believe, volatilizes very
17 easily. So it -- you're -- it -- as a matrix
18 background, it's kind of removed, and you'll
19 typically only see the residual solvents that are
20 present instead of the massive amount of
21 valsartan. So, in that sense, it's -- it's --
22 it's one useful way of separating NDMA or NDEA
23 from valsartan.
24 MS. BOGDAN:

Page 266

1 WAS MARKED FOR IDENTIFICATION.)

2 MS. BOGDAN:

3 Q While they're pulling up that document,

4 Dr. Baertschi, did you review the synthetic route

5 of synthesis process that was being used by the

6 API manufacturers to produce the valsartan API

7 that was being sold in the Teva finished-dose

8 product?

9 A Yes. The term "review it" is

10 potentially loaded because typical process

11 chemists, when they review a synthetic route,

12 they'll look at the actual process, procedure.

13 In this case, the procedure -- the

14 overall process is represented by these

15 illustrations on this figure. And in terms of

16 looking at the figure and thinking about the

17 chemistry that they use to assemble the atoms

18 together and the molecule, yes, I did review it

19 in that sense.

20 But I didn't review it for, you know,

21 for the purposes of trying to understand all the

22 chemistry associated with the synthetic route.

23 Q This synthetic route that is

24 illustrated on the exhibit that's marked --

Page 267

1 MS. BOGDAN:

2 What number is this, please?

3 TRIAL TECH:

4 29.

5 MS. BOGDAN:

6 Q -- that's marked as Exhibit 29 has a

7 crude synthesis step. Do you see that?

8 A I do see that.

9 [REDACTED]

10 [REDACTED]

11 [REDACTED]

12 [REDACTED]

13 Q And is sodium nitrite one of the

14 chemicals that is known to potentially produce

15 nitrosamines?

16 MR. HARKINS:

17 Object to form. Vague. Speculation.

18 A Sodium nitrite is known that in the

19 acidic form, the HONO that nitrous acid form, it

20 can N-nitrosolate amines.

21 MS. BOGDAN:

22 Q And when you say can N-nitrosolate

23 amines, does that mean form nitrosamines?

24 A Yes.

Page 268

1 [REDACTED]

2 [REDACTED]

3 [REDACTED]

4 [REDACTED]

5 [REDACTED]

6 [REDACTED]

7 [REDACTED]

8 [REDACTED]

9 [REDACTED]

10 [REDACTED]

11 [REDACTED]

12 Q And the triethylamine combined with

13 sodium nitrite, is that something, as an organic

14 chemist, alerts you to the possible formation of

15 NDEA?

16 MR. HARKINS:

17 Object to form. Vague.

18 A Well, it's kind of tricky in that

19 you're normally, when you're doing this kind of

20 analysis historically, you're looking at

21 triethylamine and you're thinking about the main

22 component and you're not thinking about trace

23 level impurities in that reagent.

24 Sodium nitrite is a common workup

Page 269

1 procedure for getting rid of excess azide

2 historically. It's been used frequently for

3 that. And now they've discovered that this --

4 this reaction happens and -- and that it's --

5 that surprised everybody, so the -- the -- the --

6 It's not obvious at first glance that

7 you have to think about that a low-level

8 potential impurity reacting with sodium nitrite.

9 In hindsight, now, it's more obvious because

10 there's been all this noise -- all this

11 information in -- in the regulatory system about

12 the formation of nitrosamines that hadn't been

13 observed before.

14 [REDACTED]

15 [REDACTED]

16 [REDACTED]

17 [REDACTED]

18 Q And sodium nitrite, we know from

19 earlier on in the deposition, is known to

20 potentially cause nitrosamine formation; correct?

21 A When -- when it's in the presence of an

22 amine, typically secondary amine, and -- and

23 there are acidic conditions.

24 Q We also know from earlier in the

Page 270

1 deposition that N-nitrosamines can form from
2 secondary amines, tertiary amines, or quad- --
3 quad amines; correct?
4 MR. HARKINS:
5 Object to form. Asked and answered.
6 Compound.
7 A Yes.
8 MS. BOGDAN:
9 If we could please pull up 74773.
10 (DEPOSITION EXHIBIT NUMBER 30
11 WAS MARKED FOR IDENTIFICATION.)
12 MS. BOGDAN:
13 Q Dr. Baertschi, this is the ZHP
14 synthetic route for the zinc chloride process.
15 Have you looked at this?
16 A I have seen this before, and I.
17 Q ...this before?
18 A I'm sorry. I interrupted you. Could
19 you repeat the question?
20 Q Have you seen this before?
21 A Yes, I've seen that synthetic route
22 before. I don't know if I've seen this exact
23 page or this exact representation of it, but I
24 have seen the -- the synthetic route represented

Page 271

1 before.
2 [REDACTED]
3 [REDACTED]
4 [REDACTED]
5 [REDACTED]
6 [REDACTED]
7 [REDACTED]
8 [REDACTED]
9 [REDACTED]
10 [REDACTED]
11 [REDACTED]
12 [REDACTED]
13 A Dimethylformamide.
14 Q And what is that?
15 A A solvent used in organic chemistry a
16 lot to -- tends to be an inert solvent so that
17 you can conduct reactions between molecules where
18 the solvent doesn't generally get involved.
19 Q Isn't it known that DMF can decompose
20 to result in dimethylamine?
21 MR. HARKINS:
22 Object to form. Scope.
23 A There is information in the literature
24 and elsewhere that DMF can have an impurity in it

Page 272

1 and can decompose to dimethylamine under the
2 right --
3 MS. BOGDAN:
4 Q And that --
5 A Sorry.
6 Q And dimethylamine with sodium nitrite
7 can form NDMA; correct?
8 A Yes. In the presence of acidic
9 conditions, that reaction could occur.
10 [REDACTED]
11 [REDACTED]
12 [REDACTED]
13 [REDACTED]
14 [REDACTED]

16 [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 [REDACTED]
22 [REDACTED]
23 [REDACTED]
24 [REDACTED]

Page 273

1 [REDACTED]
2 Q And --
3 A And I -- I would -- I would offer this.
4 I'm not a chemical process -- I'm not a process
5 chemist, and I haven't been asked to assess these
6 synthetic routes for, you know, for this kind of
7 chemistry. I think it's kind of been published
8 widely, globally in the literature, and that's
9 where I first learned about this before I was
10 ever retained in this case. So it's not
11 completely new to me.
12 But I'm not a chemical process -- a
13 process chemist, although I can understand the
14 representations because I do have an organic
15 chemistry background. But I'm also not really
16 opining on that in my expert report.
17 Q Do you know how NDMA was first
18 discovered in valsartan?
19 MR. HARKINS:
20 Object to form. Scope.
21 A My -- I do not know. My -- the hearsay
22 or what I've read in some disclosures maybe
23 inside this case but probably outside this case,
24 that I recall Novartis was the first one to

Page 274

1 discover it or detect it. But I don't know that
2 to be the case.
3 MS. BOGDAN:
4 Q Did counsel provide you with documents
5 from Novartis showing how NDMA was first
6 discovered in valsartan?
7 MR. HARKINS:
8 Object to form. Scope.
9 You can answer to the extent it doesn't
10 reflect discussions you had with counsel.
11 A I don't remember if I've seen a
12 document or if there was a document that
13 disclosed that. It's -- I don't remember if I
14 have. It's possible, but I don't think so.
15 MS. BOGDAN:
16 If we could pull up ZHP4399.
17 (DEPOSITION EXHIBIT NUMBER 31
18 WAS MARKED FOR IDENTIFICATION.)
19 MS. BOGDAN:
20 And if you can't find that one, why
21 don't we pull up ZHP388639, which is number 48,
22 potentially.
23 Could I have a time check?
24 VIDEOGRAPHER:

Page 275

1 Six hours, five minutes.
2 MS. BOGDAN:
3 Q Let me know, doctor, once you see that,
4 if it loads up on your screen.
5 A I think it's Exhibit 31. I think it
6 just loaded up on my screen. I think it's the
7 right one.
8 MR. HARKINS:
9 That's right. It's Exhibit 31. That's
10 what I have.
11 A Yeah. Okay. Looks like I've got it.
12 MS. BOGDAN:
13 Q Do you have it on the screen?
14 Okay. Because we're using this
15 document, we're gonna have to go to a later page
16 in the document. Go to the -- just trying to
17 orient myself here, because the other document
18 wasn't in the box here. Just hold on a second
19 here.
20 [REDACTED]
21 [REDACTED]
22 [REDACTED]
23 [REDACTED]
24 [REDACTED]

Page 276

1 [REDACTED]
2 [REDACTED]
3 MR. HARKINS:
4 Object to form. Scope. Foundation.
5 Calls for speculation.
6 Doctor, please take any time that you
7 need to review the rest of this document,
8 including any of the other emails that are
9 attached, before you answer, to the extent you
10 think it's necessary.
11 A Okay. Are these emails sequentially
12 from the most recent to the oldest, like top
13 down?
14 Oh, there's a lot of them.
15 MS. BOGDAN:
16 Q Yes, I believe so.
17 A Yeah. Are you asking a question
18 unrelated to this entire document? You're asking
19 a question what would --
20 Could you restate the question?
21 Q Sure.
22 What should a scientist that is
23 operating a gas chromatography test on valsartan
24 do if there are unknown peaks?

Page 277

1 MR. HARKINS:
2 Object to form. Scope. Foundation.
3 Incomplete hypothetical. Calls for speculation.
4 A Yeah, I don't --
5 Just having an unknown peak doesn't
6 call for necessarily anything unless that unknown
7 is above a level where it should be reported and
8 unless there is some kind of criteria associated
9 with it being a level of identification threshold
10 or qualification threshold. So it would -- it
11 would depend on more information as to what you
12 would do, what would be the -- a scientist would
13 be expected to do.
14 But there's not a default that anytime
15 you see an unknown in GC or HPLC that you should
16 automatically do something.
17 MS. BOGDAN:
18 Q Okay. Fair enough. Why don't --
19 If we could go to the -- 1, 2, 3 -- I
20 think it's page 7 of this document. And we're
21 going to go to the email on the bottom.
22 When it says "valsartan ESO," do you
23 know what is meant by ESO?
24 MR. HARKINS:

Page 278

1 Object to form. Scope. Foundation.
2 A I'm afraid I do not know what ESO means
3 in this context.
4 MS. BOGDAN:
5 Q If we could go to the next page,
6 [REDACTED]

16 [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 [REDACTED]
22 [REDACTED]
23 [REDACTED]
24 [REDACTED]

Page 279

1 [REDACTED]
2 [REDACTED]
3 [REDACTED]
4 [REDACTED]
5 [REDACTED]
6 MS. BOGDAN:
7 Okay. Could we please pull up document
8 190079.
9 (DEPOSITION EXHIBIT NUMBER 32
10 WAS MARKED FOR IDENTIFICATION.)
11 MS. BOGDAN:
12 Q Dr. Baertschi, do you know what type of
13 testing Novartis was doing when it discovered
14 NDMA in the valsartan API?
15 MR. HARKINS:
16 Object to form. Scope. Foundation.
17 Facts not in evidence. Asked and answered.
18 A I do not know.
19 MS. BOGDAN:
20 Q Did you ask to review documents to
21 figure out what testing was done that resulted in
22 the discovery of NDMA in valsartan API?
23 MR. HARKINS:
24 Object to form. Scope. Foundation.

Page 280

1 You can answer to the extent it doesn't
2 reflect discussions with counsel.
3 A I -- I do not recall asking that
4 question.
5 MS. BOGDAN:
6 Q Would it be important to you when
7 rendering your opinion in this case to know what
8 type of testing was being done that resulted in
9 the discovery of NDMA in valsartan?
10 MR. HARKINS:
11 Object to form. Scope. Vague.
12 Foundation.
13 A Um, you're asking would it be of
14 interest to me to know how it was discovered,
15 what testing was being done by Novartis. It --
16 it doesn't affect -- it -- I don't -- it doesn't
17 affect my opinion in that what I looked at is --
18 is the normal routine of how you -- a
19 finished-dose provider goes about and what
20 information they had this ability to.
21 So could -- could information like that
22 be interesting? I find it -- I would find it
23 interesting as a scientist.
24 MS. BOGDAN:

Page 281

1 Q But you didn't ask for that information
2 when formulating your opinions in this case?
3 MR. HARKINS:
4 Same objection. Also asked and
5 answered.
6 A I don't recall asking that question. I
7 really -- I really do not know -- I did not know
8 how Novartis --
9 The role Novartis played in that was
10 opaque to me.
11 MS. BOGDAN:
12 Q If Novartis discovered the NDMA in
13 valsartan when doing residual solvent testing by
14 gas chromatography and found an unknown peak
15 which they then investigated and determined what
16 that unknown peak was, that would not be of
17 interest to you when forming an opinion with
18 regard to the type of testing that would reveal
19 NDMA in valsartan?
20 MR. HARKINS:
21 Object to form. Scope. Vague.
22 Foundation. Calls for speculation. Assumes
23 facts not evidence. Misstates the witness's
24 testimony.

Page 282

1 A If Novartis discovered NDMA in
2 somebody's lots by doing residual solvent testing
3 and then some follow-up investigation, I would
4 want to know more details, and it would be of
5 interest to me scientifically. I don't know that
6 it would affect my opinions or the relevance to
7 my report.
8 MS. BOGDAN:
9 Q Is it your opinion that finding NDMA or
10 NDEA in valsartan can't be determined by using
11 gas chromatography and mass spectrometry?
12 MR. HARKINS:
13 Object to form. Scope.
14 A Well, there's a problem with, one, when
15 you're doing residual solvents testing, it's
16 typically done with a flame ionization detector,
17 which doesn't give you any structural molecular
18 information, and the peak sizes are generally
19 related with FID, to the number of carbon atoms
20 in there, so it's hard to know what's significant
21 in terms of an amount.
22 If there was a small peak that Novartis
23 decided to go after for some particular reason, I
24 don't know enough information to know if that was

Page 283

1 compelling. It's -- it's -- it's o- -- it's too
2 vague. It's too opaque. I would -- I would need
3 to actually have that laid out for me to -- to
4 understand it.
5 And -- and, further, when you go to
6 GC/MS analysis for NDMA, that's got the same
7 molecular weight as DMF, so you could get
8 confused and just see a peak and say, okay,
9 that's just DMF. So it's -- or you could
10 overestimate because you're -- you're co-eluting,
11 you're -- you're -- you're not -- you're not
12 separating completely out, so you could get
13 convoluted results.
14 So I'm not sure if I've fully answered
15 your question or not. I'm trying to.
16 MS. BOGDAN:
17 Q Right.
18 With regard to Novartis, if this, what
19 I'm questioning you about it, is too vague or too
20 opaque, would it have been less vague if you had
21 been given the documents to show what testing
22 Novartis did that resulted in the discovery of
23 NDMA in valsartan?
24 MR. HARKINS:

Page 284

1 Object to form. Scope. Vague.
2 Assumes facts not in evidence.
3 A Um, it -- it's possible. I don't know
4 because there's so many unknowns. It could be
5 that, say -- I don't know. If I looked at it,
6 it's like I don't know how Novartis decided to
7 investigate an unknown peak or why. But if I
8 did, it would -- I would evaluate it
9 scientifically and as best I could.
10 MS. BOGDAN:
11 Q But as part of you arriving at your
12 opinion in this case, you were not provided with
13 the reports from Novartis showing the testing
14 that they did which resulted in the discovery of
15 NDMA; correct?
16 MR. HARKINS:
17 Object to form. Scope. Facts not in
18 evidence. Asked and answered for the fourth time
19 now.
20 A I'm not sure if I was provided any
21 documents. There was literally more than a
22 hundred, maybe hundreds -- I'm not completely
23 sure -- documents that were made available to me,
24 and they gave me free reign through the

Page 285

1 documents. But I can't -- I can't claim that
2 they were not provided to me. I just don't know.
3 MS. BOGDAN:
4 Q Well, let's look at the exhibit that
5 has been put up on the screen, which is a report

8 MR. HARKINS:

9 Object to form. Scope. Foundation.

10 Again, please review anything you need

11 to answer the question.

12 A Could you restate that question? Could

13 you restate the question?

14 MS. BOGDAN:

15 Q Have you seen this -- this particular

16 report ever before?

17 A I don't know.

18 Q You don't know if you've ever seen

19 this --

20 A I've seen some residual solvent results

21 in the reports. I don't know if it was this one.

22 I don't think so. But I've seen a -- a

23 chromatogram somewhere of residual solvents for

24 valsartan.

Page 289

1 But there is no table on the --

2 question on the table, is there?

3 MR. HARKINS:

4 No. Just wait.

5 MS. BOGDAN:

6 Q No, other than I asked if you've ever

7 seen this.

8 If you could go to the instrument

9 methods that were being used --

10 Do you know who Solvias is? Have you

11 ever worked with that company before?

12 A It's Solvias.

13 I haven't personally worked with them,

14 but I'm familiar with them as a company and what

15 they -- some of the things they offer.

16 Q And what does Solvias --

17 Or "Sol-val-is," did you say?

18 What do they do?

19 A Solvias.

20 I think they're a contract research

21 organization where they do specific types of

22 laboratory analyses as a contract lab. I think

23 they made some fame -- their -- I think they used

24 to be known for polymorph screening, but they --

Page 290

1 they may do a lot more than that.

11 Why is a sample compared to a reference

12 solution when doing a chromatogram?

13 MR. HARKINS:

14 Object to form. Scope. Foundation.

15 Calls for speculation.

16 You can answer.

17 A So there -- typically, when you have

18 a -- a peak you want to -- a compound that you

19 know and you want to establish where it elutes or

20 where it -- the retention time for it, you -- and

21 for the various components, you'll have a -- a

22 sample made up with the various impurities that

23 you're trying to establish so that you can -- at

24 levels that you can detect and see. So you

Page 292

1 establish where they -- where they are in the

2 chromatogram.

<p style="text-align: right;">Page 298</p> <p>1 MR. HARKINS: 2 Object -- 3 THE WITNESS: 4 Sorry. 5 MR. HARKINS: 6 Object to form. Vague. 7 A Familiar -- am I familiar? I am aware 8 of the USP. I have given talks there. I've 9 given a workshop there. I've been on a couple of 10 USP expert committees. 11 MS. BOGDAN: 12 Q So the USP, on their website, with 13 regard to nitrosamine impurities, writes 14 "companies are responsible for understanding 15 their manufacturing processes, which includes 16 identifying and preventing the presence of 17 unacceptable impurities." 18 Do you agree with that statement made 19 by USP? 20 MR. HARKINS: 21 Object to form. Foundation. Vague. 22 You can answer. 23 A I can't -- 24 Company -- what comp- --</p>	<p style="text-align: right;">Page 300</p> <p>1 statement that companies that manufacture drug 2 products are responsible for understanding their 3 manufacturing processes, which include 4 identifying and preventing the presence of 5 unacceptable impurities? 6 MR. HARKINS: 7 Object to form. Outside the scope of 8 his expert report. Foundation. 9 You can answer. 10 A Yeah. It seems to be getting into some 11 regulatory and quality aspects for which I've not 12 formed an -- I've not investigated or been asked 13 to opine on, and I think there are -- 14 Unfortunately, that statement can be 15 expanded to mean something I wouldn't want it to 16 mean, so I'm uncomfortable with agreeing with it. 17 MS. BOGDAN: 18 Q The next sentence that the USP has is 19 "this involves developing new predictive 20 approaches along with using suitable methods to 21 detect and control these impurities, as well as 22 others that may arise when making changes to the 23 manufacturing process." 24 Do you agree with that statement made</p>
<p style="text-align: right;">Page 299</p> <p>1 To the extent if you were to define 2 companies, there's something implied there that's 3 not specifically stated, and I -- I -- I don't 4 want to speculate on what they're implying. But 5 company A and company B and company Z are not 6 equally responsible. So Google is not 7 responsible for something that company A in some 8 other country did in a different field. So it 9 depends on what kind of company you're talking 10 about the relationship. So in that -- to that 11 extent, I think there's some vagarity there. But 12 certainly it's an important thing to understand 13 manufacturing processes, which includes 14 identifying and preventing presence of -- 15 preventing or minimizing -- 16 I don't like "preventing" because 17 they're not always preventable. 18 -- presence of -- 19 "Unacceptable," that's another vague 20 term. 21 -- impurities. So they're kind of 22 using loaded jargon there. 23 Q Well, if we say companies that 24 manufacture drug products, do you agree with the</p>	<p style="text-align: right;">Page 301</p> <p>1 by the USP? 2 MR. HARKINS: 3 Object to form. Scope. Foundation. 4 Vague. 5 A That sentence seems to be aspirational 6 in its nature and encouraging the industry to 7 innovate to -- to do things to ensure safety and 8 to ensure purity. It's -- it's not a legal 9 statement, and it's more of a -- a statement to 10 have encouraged to, to -- to encourage companies 11 to innovate and to develop and to consider. 12 MS. BOGDAN: 13 Q Well, you relied on the USP 14 monograph -- correct? -- when providing your 15 opinion in this case? 16 A Yes. USP monographs are carefully 17 reviewed and -- peer-reviewed. This is a 18 statement on their website that doesn't to me -- 19 I'm not a lawyer, but it doesn't have 20 sort of -- 21 It's just general jargon that you can 22 interpret in multiple -- multiple ways. For 23 example, it involves developing new predictive 24 approaches. That's kind of all aspirational and</p>

<p style="text-align: right;">Page 302</p> <p>1 vague and difficult to say what that means. 2 So do I agree with new predictive 3 approaches can help manufacturers control 4 impurities? Absolutely. 5 Q Do you agree that manufacturers of 6 drugs should have suitable methods to detect and 7 control NDMA and NDEA in their drug products? 8 MR. HARKINS: 9 Object to form. Outside the scope of 10 his expert report. Foundation. Vague. 11 A What you're suggesting is that all 12 manufacturers of all drugs should have an 13 analytical method to test for NDMA and NDEA, 14 whether or not it's been established it's even 15 vaguely relevant. And if you're gonna do that 16 for NDEA and NDMA, you're gonna need to do it for 17 all the other cohort-of-concern compounds and all 18 the other compounds in -- in the alerting 19 structures, those 31 groups, because you -- you 20 would be like fishing for -- you'd have to have 21 methods for everything. So you can't just have 22 methods for -- 23 I've established this well in my 24 report, that to have the expectation that no</p>	<p style="text-align: right;">Page 304</p> <p>1 the synthetic route. 2 So to say that a specific NDMA after -- 3 post-2018 retrospectively, in hindsight, looking 4 back, it's kind of easy to point at that being 5 something that -- that should be done. But to 6 predictively anticipate that would mean that the 7 rest of the world -- the world wouldn't have -- 8 it would have been expected. 9 And it's clear that the entire world, 10 all the regulatory agencies, every company, 11 this -- this occurrence was a surprise to them. 12 And now it seems like we're trying to frame that 13 as that it -- it was, in the case of Teva, 14 everybody else -- 15 They're the -- they're the ones that 16 should have figured it out and never let it 17 happen. Is it a surprise? How could it be 18 unexpected if it's not a surprise? 19 So, in hindsight, we've learned 20 something as an industry. But if we go back to 21 2018 and before, it was -- it was not sur- -- it 22 was unexpected. It was a surprise. 23 MS. BOGDAN: 24 Q If a company knew that NDMA or NDEA</p>
<p style="text-align: right;">Page 303</p> <p>1 mutagenic impurity can escape detection in any 2 synthetic route is -- is not realistic for any 3 manufacturer that's ever manufactured drugs on 4 the earth or now. 5 So I do not agree that all 6 manufacturers should have a method for NDMA and 7 NDEA for all of their drug products. 8 MS. BOGDAN: 9 Q Sodium nitrite is being used in the 10 chemical synthesis process to create the drug. 11 Should a manufacturer have developed a method to 12 detect whether NDMA or NDEA has been formed in 13 that chemical synthesis process? 14 MR. HARKINS: 15 Object to form. Scope. Incomplete 16 hypothetical. Calls for speculation. Vague. 17 A That -- that is kind of a loaded 18 question that has all the assumptions built into 19 it. It's -- it's easy -- 20 And nit- -- and sodium nitrite doesn't 21 just have the potential for creating NDMA and 22 NDEA. It has the potential for creating a vast 23 assortment of N-nitroso compounds depending on 24 any amine that might be present at any level in</p>	<p style="text-align: right;">Page 305</p> <p>1 could form in valsartan, then, under those 2 circumstances, would you agree that they should 3 have had a method to detect NDMA and NDEA? 4 MR. HARKINS: 5 Object to form. Outside the scope of 6 his expert report in the class certification 7 phase of the case. Vague. Incomplete 8 hypothetical. Calls for speculation. 9 A Yeah. It seems to be getting far 10 afield. I'm, like, being pulled into some kind 11 of a synthetic expert that can do a comprehensive 12 process risk assessment and make a pronouncement 13 when I haven't been asked to look into that, and 14 I don't offer that as a consulting service 15 myself. 16 And I think when you have some 17 suspicion that a nitrosamine might be formed, it 18 should be considered as part of your due 19 diligence risk assessment for the formation of 20 nitrosamines, and that process should lead you to 21 decide whether or not a method is needed. And it 22 may very well be that at times it could be needed 23 or will be needed, but not in -- not in every 24 case. Not as a blanket statement.</p>

<p>Page 306</p> <p>1 MS. BOGDAN: 2 Will you please pull up document 58? 3 Or -- excuse me -- 57, the valsartan USP 4 monograph. 5 (DEPOSITION EXHIBIT NUMBER 34 6 WAS MARKED FOR IDENTIFICATION.) 7 MR. HARKINS: 8 Do you have it in your exhibit box? 9 THE WITNESS: 10 No. Is it 33, 34? 11 MR. HARKINS: 12 I think it will be 34. 13 THE WITNESS: 14 Yes. It just came up, and it's now up. 15 MS. BOGDAN: 16 Q Are you familiar with the USP monograph 17 for valsartan? 18 A Yes. I have looked at this -- I have 19 looked at this and considered it. 20 Q And this is the current USP monograph 21 for valsartan; correct? 22 A It says, on the top, "official status," 23 currently official as of January 28th. So I 24 would presume -- they don't change those very</p> <p>Page 307</p> <p>1 often, so I presume that that's official as of 2 now. 3 Q And with your review of the document, 4 it's the monograph that you're familiar with? It 5 looks familiar to you? 6 A It looks familiar. I don't know 7 what -- 8 What I viewed was the current -- 9 Let's see. When was this updated? 10 Official date as of May 2020. So this has been 11 revised since -- 12 This is -- this is official as of May 13 2020, which implies that there was a different 14 monograph in place as of 2018. 15 Q But this -- even though it is now 16 common knowledge in the industry that NDMA and 17 NDEA were found in valsartan, the monograph still 18 does not address those mutagenic impurities, does 19 it? 20 A I don't see any reference to 21 nitrosamines, NDMA -- any nitrosamine referenced 22 as I skim through it. 23 Q And this was published after the 24 recalls of valsartan, when it was known that NDMA</p>	<p>Page 308</p> <p>1 and NDEA were found in the drugs; correct? 2 A Yes. It was published May 1st, 2020. 3 So that's after. 4 Q And the FDA has said that valsartan 5 cannot be sold if it has more than 96 nanograms 6 of NDMA in it; correct? 7 A I believe that's the implication of 8 their limit. I don't actually know the legal 9 aspect of what they can or can't sell or, if they 10 could sell it, they'd be at risk. I'm not 11 exactly sure of the legal implication. But that 12 appears to me to be what is -- what they want by 13 having that limit. 14 Q And this monograph does not -- by 15 complying with this monograph, it doesn't relieve 16 a manufacturer of having to also comply with the 17 acceptable intake limit set by the FDA for NDMA 18 or NDEA, does it? 19 MR. HARKINS: 20 Object to form. Scope. 21 A This -- this -- this monograph would 22 not supersede or cut out the responsibility of -- 23 you could not ignore the NDMA, NDEA requirements 24 because they're not listed in this updated</p> <p>Page 309</p> <p>1 monograph. 2 MS. BOGDAN: 3 Can I have a time check, please? 4 VIDEOGRAPHER: 5 Six hours, 50 minutes. 6 MS. BOGDAN: 7 Can we just take a short break, five 8 minutes? 9 MR. HARKINS: 10 Sure. How much more do you think you 11 have? 12 MS. BOGDAN: 13 Not much. I just want to review my 14 notes. 15 MR. HARKINS: 16 Sure. 17 VIDEOGRAPHER: 18 Off record, 5:46 p.m. 19 (OFF THE RECORD.) 20 VIDEOGRAPHER: 21 On record, 6 p.m. 22 (DEPOSITION EXHIBIT NUMBER 35 23 WAS MARKED FOR IDENTIFICATION.) 24 MS. BOGDAN:</p>
---	---

Page 310

1 Q Dr. Baertschi, I want to show you what
2 I believe is being marked as Exhibit 35 for
3 identification.

⁴ A It's not shown up in the Dropbox yet,
⁵ but...

⁶ Q Well, let me ask you this question in
⁷ the meantime, while the document is being loaded.

8 Did you rely, when formulating your
9 opinions in this case, on all the materials
10 listed in your amended materials considered list?

11 A It -- it depends on your definition of
12 "rely," because all of the materials listed, I --
13 I tried to go through them all, and they were
14 certainly accessible to me. There were a number
15 of documents where I'm looking through and I'm
16 saying, eh, there's nothing here that really
17 informs me to my opinion. So I can't say that
18 all of them informed me. So in that sense of
19 relying, that's how I would classify it.

20 Q Meaning some of them you did not rely
21 on.

22 MR. HARKINS:

23 Object to form to the extent it calls
24 for a legal conclusion.

Page 311

¹ You can --

2 A I -- I sort of want to stand by the way
3 I framed it, is that not all the documents were
4 informative, and, so, I -- so I didn't --

5 The ones that weren't informative, if
6 you call that relying? I would call it it didn't
7 affect my opinion or my opining.

8 I don't know what you mean by "rely,"
9 so --

10 So I'm not trying to be evasive. I'm
11 trying to protect myself from saying something
12 incorrect. I tried to be as comprehensive as I
13 could with the documents provided me, which were
14 extensive, and the materials that we've cited,
15 which are comprehensive.

¹⁶ MS. BOGDAN:

17 Q Turning your attention to what's been
18 marked as Exhibit 35 for identification, which is

Page 318

1 A Oh, yes.
2 Q Did you seek to get answers to your
3 questions?
4 A How do you seek --
5 MR. HARKINS:
6 Object to form. Vague.
7 You can answer.
8 A No. I don't have any way to get
9 answers to my questions.
10 MS. BOGDAN:
11 Q Did you ask for any further documents
12 that would be surrounding this document to answer
13 [REDACTED]
14 [REDACTED]
15 [REDACTED]
16 MR. HARKINS:
17 Object to form. Scope. Foundation.
18 You can answer to the extent it doesn't
19 reflect conversations with counsel.
20 A I -- I have not asked for any documents
21 associated with this.
22 MS. BOGDAN:
23 Q You are aware, as an expert in this
24 case, that Novartis discovered NDMA in valsartan

Page 319

1 API; correct?
2 MR. HARKINS:
3 Object to form. Asked and answered.
4 Can I get a time check?
5 VIDEOGRAPHER:
6 I have seven hours and one minute.
7 MR. HARKINS:
8 You can answer the question, Doctor.
9 A Repeat the question, please. I'm
10 sorry.
11 MS. BOGDAN:
12 Q Sure.
13 ...as an expert in this case, that
14 Novartis discovered NDMA in valsartan API;
15 correct?
16 MR. HARKINS:
17 Same objection. Asked and answered.
18 A That is my understanding, that Novartis
19 discovered NDMA in valsartan. But I don't know
20 that to be a fact, but that's my understanding.
21 MS. BOGDAN:
22 Q And it's your opinion --
23 MR. HARKINS:
24 Rosemarie, we don't have a question

Page 320

1 pending. We're over the 7-hour time limit. We
2 are way outside the scope, and we're doing things
3 that he's asked and answered multiple times
4 today.
5 We'll be back in about ten minutes,
6 because I will have a redirect.
7 Doctor, you can put your camera on
8 mute.
9 VIDEOGRAPHER:
10 Off record, 6:12 p.m.
11 (OFF THE RECORD.)
12 VIDEOGRAPHER:
13 On record, 6:42 p.m.
14 EXAMINATION
15 BY MR. HARKINS:
16 Q All right. Dr. Baertschi, I am going
17 to ask you some questions now. If you'd go ahead
18 and --
19 You have your expert report with you;
20 right?
21 A Yeah.
22 Q Okay. I just want to make sure you
23 have that in front of you.
24 First of all, though, to touch on

Page 321

1 something that you were just asked by plaintiffs'
2 counsel, do you remember being asked earlier
3 today about some specific language in the 1978
4 IARC monograph?
5 A Yes.
6 Q Do you remember being asked about some
7 specific statements in that document on the
8 potential carcinogenicity and toxicity of NDMA
9 and NDEA?
10 A Yes.
11 Q And I just want to clarify. For
12 purposes of your report that you've provided in
13 this case, were you asked to provide any opinions
14 on the carcinogenicity or toxicity of NDMA or
15 NDEA?
16 A No.
17 Q Do you have any independent opinions on
18 whether NDMA or NDEA are a probable human
19 carcinogen or not?
20 A No. I'm not...
21 Q You're not here to opine --
22 A I'm not here to opine on that.
23 Q Would you defer to a toxicologist on
24 any of those questions?

<p style="text-align: right;">Page 322</p> <p>1 A Yes.</p> <p>2 Q You were also asked some questions</p> <p>3 about the daily acceptable intake limits that are</p> <p>4 currently in place by the FDA for NDMA and NDEA.</p> <p>5 Do you recall that?</p> <p>6 A Yes.</p> <p>7 Q Are you offering any opinions today or</p> <p>8 in your report about whether those levels are</p> <p>9 appropriate?</p> <p>10 A No.</p> <p>11 Q Do you have any opinions or are you</p> <p>12 intending to offer any opinions about --</p> <p>13 whatsoever on those levels or how they were</p> <p>14 calculated?</p> <p>15 A No.</p> <p>16 Q There was a discussion earlier on about</p> <p>17 a recent case where you served as an expert</p> <p>18 witness and some of your testimony was limited.</p> <p>19 Do you recall that?</p> <p>20 A I do recall that.</p> <p>21 Q That's the case where just last week</p> <p>22 you testified as an expert witness; right?</p> <p>23 A Yes, just last week.</p> <p>24 Q What's your understanding of the basis</p>	<p style="text-align: right;">Page 324</p> <p>1 A Yeah. That it was a legal issue as to</p> <p>2 whether or not it should be admitted and</p> <p>3 relevant.</p> <p>4 Q Did the limitation, to your</p> <p>5 understanding, have anything to do with the</p> <p>6 scientific analysis that you performed?</p> <p>7 A It did not have anything to do with</p> <p>8 scientific relevance.</p> <p>9 Q So here --</p> <p>10 And, actually, we're gonna finally turn</p> <p>11 to the opinions that you provided in the expert</p> <p>12 report that you prepared, and specifically</p> <p>13 looking at the corrected expert report that I</p> <p>14 believe you have a hard copy of in front of you</p> <p>15 and can refer to a specific exhibit in the</p> <p>16 folder, but I just want to confirm which that is.</p> <p>17 One second. I just want to make sure it's --</p> <p>18 So this will be Exhibit 4, previously</p> <p>19 introduced in the electronic Dropbox.</p> <p>20 Do you have a hard copy of this report</p> <p>21 in front of you, Dr. Baertschi?</p> <p>22 A I do.</p> <p>23 Q Turning to the conclusions section,</p> <p>24 subheading 6, and starting with paragraph 36,</p>
<p style="text-align: right;">Page 323</p> <p>1 for the limitation of your testimony in that</p> <p>2 case?</p> <p>3 MS. BOGDAN:</p> <p>4 Objection. Calls for a legal</p> <p>5 conclusion.</p> <p>6 MR. HARKINS:</p> <p>7 Q You can answer.</p> <p>8 A There was a -- a legal relevance</p> <p>9 dispute between the two sides and that relevance</p> <p>10 of some of the content in one of my expert</p> <p>11 reports. And the judge was asked to rule on it</p> <p>12 by the other counsel, and she ruled in favor of</p> <p>13 the other counsel, which then she said I'm</p> <p>14 forbidden or restricted from testifying as to the</p> <p>15 content around that particular issue as to the</p> <p>16 legal -- legal relevance of the -- of the data at</p> <p>17 issue.</p> <p>18 MR. HARKINS:</p> <p>19 Q And, just to clarify, you don't have a</p> <p>20 legal opinion on that ruling or that decision;</p> <p>21 right?</p> <p>22 A No.</p> <p>23 Q That's just your lay understanding of</p> <p>24 why your opinion was limited?</p>	<p style="text-align: right;">Page 325</p> <p>1 just for the benefit so that we actually can talk</p> <p>2 about this today, can you please summarize for</p> <p>3 maybe a potential jury the opinions and</p> <p>4 conclusions that you provided in your report?</p> <p>5 A Yes.</p> <p>6 I had opinions that can be lumped into</p> <p>7 three main areas, the first one being that it's</p> <p>8 inherently difficult to analyze low levels such</p> <p>9 as ND- -- such as the NDMA and NDEA found in</p> <p>10 valsartan medication- -- medications and that the</p> <p>11 identification of those structures and the</p> <p>12 quantification, when you combine those two, of</p> <p>13 these impurities requires specialized analytical</p> <p>14 testing methods that are well outside the scope</p> <p>15 of standard impurities testing and screening for</p> <p>16 impurities generally and for mutagenic</p> <p>17 carcinogenic impurities specifically.</p> <p>18 And those levels, more specifically,</p> <p>19 are thousands of times smaller than would be seen</p> <p>20 in valsartan time -- that would be seen in</p> <p>21 valsartan products here, and they -- thousands of</p> <p>22 time or hundreds of times lower than would be</p> <p>23 identified by ordinary or detected by ordinary</p> <p>24 methods for impurities.</p>

<p style="text-align: right;">Page 326</p> <p>1 And I -- I describe in that how many 2 times less, how much more sensitive screening you 3 would need, and -- and I say that the trace 4 levels of NDMA and NDEA impurities as defined by 5 the limits recommended by FDA would be 333 times 6 and 1220 times too low to be detected by these 7 methods for NDMA and NDEA, respectively. So -- 8 Q Would that be the first sort of main 9 focus of your report? 10 A Yeah. So the first main focus can be 11 summarized it's inherently difficult to analyze 12 for low levels of impurities such as these levels 13 that we're talking about. And then I detail -- I 14 detail about that more. 15 The second main area is that drug 16 manufacturers do not and cannot test for every 17 conceivable impurity or every conceivable 18 alerting structure that might be out there. 19 There is a wide variety and a huge number of 20 classes of potential mutagenic, carcinogenic 21 impurities that would make specialized testing 22 for impurities at the trace levels to detect all 23 of those or to be able to detect all of tho- -- 24 all of those impractical -- or impossible from a</p>	<p style="text-align: right;">Page 328</p> <p>1 that Teva had on hand at any particular site. Is 2 that right? 3 A That's correct. 4 Q You didn't inquire at all about 5 whether -- where any of the testing 6 instrumentation was located; right? 7 A Correct. 8 Q Why not? 9 A Because I didn't think it was relevant 10 to the issue at hand. It's not the presence of 11 specialized instrumentation, a mass spectrometer 12 or -- or a GC/MS. It's whether or not you have a 13 reason to go into doing specialized testing in 14 order to look for, hunt or fish for a low-level 15 impurity. And without reason to do that, you do 16 not do -- you -- that does not occur in -- in any 17 drug manufacturer. 18 So just having the instrumentation is 19 not -- does not affect what -- what my opinion 20 was as to whether or not -- 21 And I -- I -- I assumed that they would 22 have, and I -- and I -- and I can just assume 23 that the manufacturer had relevant 24 instrumentation that would be capable of -- of</p>
<p style="text-align: right;">Page 327</p> <p>1 practical point of view. And, accordingly, 2 regulators do not routinely or expect or require 3 such testing as I described in my report. 4 Q And what's the third main opinion that 5 you provided? 6 A The third main opinion is that the 7 specification testing for valsartan medications 8 in place prior to July 2018 did not include 9 testing that was capable of detecting NDMA and 10 NDEA at the levels ultimately detected in the 11 products, the valsartan products, and that the 12 testing that Teva did was -- was appropriate and 13 reasonable as -- as it analyzed its finished-dose 14 products in connection with the process change 15 that ZHP implemented in 2014. 16 Q Thank you, Doctor. 17 You were also asked some questions 18 about the testing instrumentation that Teva had 19 on hand during the relevant time period. Do you 20 recall that? 21 A I do recall that. 22 Q And I believe you testified that you 23 did not specifically inquire or seek more 24 information about the testing instrumentation</p>	<p style="text-align: right;">Page 329</p> <p>1 being put together and used. 2 Q Is the difficulty of analyzing for 3 low-level impurities like those seen in the 4 valsartan medication here addressed pretty 5 extensively as part of the first bucket in 6 conclusions in your expert report? 7 A Yes. I think it's addressed pretty -- 8 pretty clearly and relevantly. 9 Q And, just to clarify, does possession 10 of testing equipment alone determine whether Teva 11 had the ability to detect NDMA or NDEA at the 12 levels seen in valsartan medication? 13 A No. Just having instrumentation 14 doesn't mean that you're -- you -- you can test 15 it. You have to implement that instrumentation. 16 You have to configure it. You have to develop a 17 method for the matrix involved, and you have to 18 know what you're looking for, and you have to 19 have motivation to look for something of that 20 level. It just doesn't happen spontaneously. 21 Q All right. Dr. Baertschi, as reflected 22 on your amended list of materials considered, you 23 have received and reviewed some additional 24 materials since January 12th, 2022, when you</p>

<p style="text-align: right;">Page 330</p> <p>1 submitted your expert report in this case; right?</p> <p>2 A Yes.</p> <p>3 Q What kinds of materials have you seen?</p> <p>4 A Some depositions from expert witnesses,</p> <p>5 maybe an expert report or two, and -- and some</p> <p>6 other documents that maybe weren't --</p> <p>7 I don't -- basically, those are the --</p> <p>8 those are the things that come to mind is there</p> <p>9 were some depositions and expert reports that</p> <p>10 weren't available or that I reviewed, again, more</p> <p>11 thoroughly, or for the first time more</p> <p>12 thoroughly.</p> <p>13 Q Did you review any materials, either</p> <p>14 the deposition transcript or the exhibits, for</p> <p>15 Tim Anderson's deposition?</p> <p>16 A Yes.</p> <p>17 Q Who is Tim Anderson, to your</p> <p>18 understanding?</p> <p>19 A I believe he's the CGMP witness for</p> <p>20 Teva, but I kind of don't exactly know. I don't</p> <p>21 know Tim Anderson. I know Roger Willings better</p> <p>22 than Tim Anderson.</p> <p>23 Q Was one of the exhibits to Tim</p> <p>24 Anderson's deposition that you reviewed in</p>	<p style="text-align: right;">Page 332</p> <p>1 was not on the document that you were shown</p> <p>2 today.</p> <p>3 A Yes. It's redacted, blacked out.</p> <p>4 Q Did that information provide</p> <p>5 additional -- did that unredacted document</p> <p>6 provide additional information about the chemical</p> <p>7 structure and otherwise inform your opinions</p> <p>8 about that document?</p> <p>9 A It certainly did.</p> <p>10 Q Regardless, do you have any -- is any</p> <p>11 portion of your expert report, your opinions,</p> <p>12 reliant on that document that you reviewed or the</p> <p>13 document that you were shown today by plaintiffs'</p> <p>14 counsel?</p> <p>15 A Not at all.</p> <p>16 Q You've reviewed a lot of documents,</p> <p>17 both since you submitted your expert report and</p> <p>18 preparing for your deposition today; right?</p> <p>19 A Yes.</p> <p>20 Q Have you seen anything during that</p> <p>21 preparation or during your deposition today that</p> <p>22 causes you to change any of the opinions set</p> <p>23 forth in your January 12th, 2022, expert report?</p> <p>24 A No.</p>
<p style="text-align: right;">Page 331</p> <p>1 preparation for your deposition a version of the</p> <p>2 ZHP internal document that you were shown at the</p> <p>3 end of plaintiffs' counsel's questioning today?</p> <p>4 A Yes.</p> <p>5 Q Did you review that in preparation for</p> <p>6 your deposition?</p> <p>7 A Yes.</p> <p>8 Q Was that document redacted differently,</p> <p>9 the version that was introduced at Tim Anderson's</p> <p>10 deposition and the version that you were shown by</p> <p>11 plaintiffs' counsel today?</p> <p>12 A Yes. I don't believe it was redacted</p> <p>13 at all.</p> <p>14 Q You were asked some questions by</p> <p>15 plaintiffs' counsel about whether, looking at the</p> <p>16 document that you were shown today, you had</p> <p>17 questions or wanted to obtain more information</p> <p>18 about that document. Do you recall that?</p> <p>19 A Yes, I do.</p> <p>20 Q Did the version that you reviewed that</p> <p>21 was introduced at Mr. Anderson's deposition</p> <p>22 contain additional information?</p> <p>23 A Yes, it did.</p> <p>24 Q And, just to clarify, that information</p>	<p style="text-align: right;">Page 333</p> <p>1 Q I have no further questions for you,</p> <p>2 Dr. Baertschi. Thank you very much. It's been a</p> <p>3 long day.</p> <p>4 Can we go off the record?</p> <p>5 MS. BOGDAN:</p> <p>6 I have two questions on redirect.</p> <p>7 MR. HARKINS:</p> <p>8 I'm gonna have to ask what the scope</p> <p>9 is, considering you have no time left.</p> <p>10 MS. BOGDAN:</p> <p>11 Well, first of all, your objections</p> <p>12 have taken a lot of time on the record. I have</p> <p>13 two questions left, and I would like to ask them,</p> <p>14 and they're within -- within the scope of what</p> <p>15 you just questioned him on.</p> <p>16 MR. HARKINS:</p> <p>17 Dr. Baertschi, do you have a couple</p> <p>18 more minutes?</p> <p>19 THE WITNESS:</p> <p>20 I do. I've already missed my flight.</p> <p>21 MR. HARKINS:</p> <p>22 Okay. We have time for two.</p> <p>23</p> <p>24</p>

<p>Page 334</p> <p>1 EXAMINATION</p> <p>2 BY MS. BOGDAN:</p> <p>3 Q What is your understanding of how your</p> <p>4 opinions contribute to the defense of the class</p> <p>5 case?</p> <p>6 MR. HARKINS:</p> <p>7 Object to form to the extent it calls</p> <p>8 for a legal conclusion.</p> <p>9 But you can answer.</p> <p>10 A I don't have a -- that's a puzzling</p> <p>11 question. I don't have an opinion. I don't</p> <p>12 understand. I don't have an opinion on how it</p> <p>13 affects the class certification. That's a legal</p> <p>14 process I don't really understand.</p> <p>15 MS. BOGDAN:</p> <p>16 Q And is it your testimony and opinion in</p> <p>17 this case that while Novartis found NDMA in</p> <p>18 valsartan API, Teva could not?</p> <p>19 MR. HARKINS:</p> <p>20 Object to form. Scope. Foundation.</p> <p>21 You can answer.</p> <p>22 A Yeah, can -- can you rephrase it?</p> <p>23 Because the beginning of that question had some</p> <p>24 qualifiers that I want to make sure I understand.</p> <p>Page 335</p>	<p>Page 336</p> <p>1 MS. BOGDAN:</p> <p>2 I don't have any further questions.</p> <p>3 MR. HARKINS:</p> <p>4 Can we go off the record?</p> <p>5 VIDEOGRAPHER:</p> <p>6 Off record, 6:57 p.m.</p> <p>7 (Deposition concluded at 6:57 p.m. EST)</p> <p>8</p> <p>9</p> <p>10</p> <p>11</p> <p>12</p> <p>13</p> <p>14</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p>
<p>1 MS. BOGDAN:</p> <p>2 Q Is it your opinion that while Novartis</p> <p>3 found NDMA in valsartan API, that Teva could not?</p> <p>4 MR. HARKINS:</p> <p>5 Object to form. Scope. Foundation.</p> <p>6 Clearly not within the scope of his expert report</p> <p>7 or my redirect, which actually did address</p> <p>8 questions that he's answered in his expert</p> <p>9 report.</p> <p>10 But, Dr. Baertschi, if you have a</p> <p>11 question -- if you have an answer.</p> <p>12 A When you say Teva could not, I would --</p> <p>13 I would not agree with that, that Teva could not.</p> <p>14 Novartis detected it before anybody else.</p> <p>15 Teva and nobody else detected it up to that</p> <p>16 point. And I -- I don't even know if they're</p> <p>17 relevant products but, you know, lots or</p> <p>18 materials. Just as a -- my understanding of the</p> <p>19 facts is that Novartis was the first of anybody</p> <p>20 in the world to detect NDMA in a valsartan</p> <p>21 product. I don't know that to be true, but it's</p> <p>22 my understanding.</p> <p>23 MR. HARKINS:</p> <p>24 Thank you.</p>	<p>Page 337</p> <p>1 C E R T I F I C A T E</p> <p>2</p> <p>3 I do hereby certify that the above and</p> <p>4 foregoing transcript of proceedings in the matter</p> <p>5 aforementioned was taken down by me in machine</p> <p>6 shorthand, and the questions and answers thereto</p> <p>7 were reduced to writing under my personal</p> <p>8 supervision, and that the foregoing represents a</p> <p>9 true and correct transcript of the proceedings</p> <p>10 given by said witness upon said hearing.</p> <p>11 I further certify that I am neither of</p> <p>12 counsel nor of kin to the parties to the action,</p> <p>13 nor am I in anywise interested in the result of</p> <p>14 said cause.</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19 LOIS ANNE ROBINSON, RPR, RMR</p> <p>20 REGISTERED DIPLOMATE REPORTER</p> <p>21 CERTIFIED REALTIME REPORTER</p> <p>22</p> <p>23</p> <p>24</p>

VIDEO TECHNICIAN: Good morning. We are now on the record. My name is Chris Clee, I'm a videographer for Golkow Litigation Services. Today's date is March 21st, 2022, and the time is 9:35 a.m. Eastern Standard Time.

This remote video deposition is being held in the matter of valsartan, Losartan and Irbesartan Products Liability Litigation, MDL Number 2875. The deponent is Eric Sheinin.

All parties to this

Page 10

1 deposition are appearing remotely
2 and have agreed to the witness
3 being sworn in remotely.
4 Due to the nature of remote
5 reporting, please pause briefly
6 before speaking to ensure all
7 parties are heard.
8 Counsel will be noted on the
9 stenographic record. The court
10 reporter is Amanda Miller, who
11 will now swear in the witness.
12 - - -
13 ERIC SHEININ, Ph.D., after
14 having been duly sworn, was
15 examined and testified as follows:
16 - - -
17 EXAMINATION
18 - - -
19 BY MR. DAVIS:
20 Q. Good morning, Dr. Sheinin.
21 My name is John Davis, I'm at the law
22 firm of Slack Davis Sanger down here in
23 Austin, Texas.
24 How are you doing this

Page 11

1 morning?
2 A. Okay, John. I'm doing all
3 right, thank you. How are you?
4 Q. Good. Not too bad. We're
5 braving some tornado warnings and severe
6 hail threats here, so hopefully we'll
7 keep power throughout this entire thing.
8 A. Okay. Good.
9 Q. Well, let me start by asking
10 you, have you ever given testimony under
11 oath before?
12 A. Yes, I have.
13 Q. Okay. About how many times?
14 A. Five or six, I think.
15 Q. Would that have been in the
16 capacity of an expert witness each of
17 those times?
18 A. I guess so. One of the
19 times I was still at FDA, and I was --
20 what I was asked to talk about, it was a
21 device/drug combination. And I had to
22 talk about the -- one of the chemicals in
23 the -- in the device/drug combination.
24 And I guess -- I wasn't

Page 12

1 necessarily called an expert witness, but
2 I was doing it as part of my job at FDA.
3 Q. Okay. Would that have been
4 in a court proceeding or some kind of
5 regulatory --
6 A. It was a deposition.
7 Q. -- proceeding?
8 A. It was a deposition.
9 Q. Okay. The underlying sort
10 of proceeding that the deposition
11 occurred in, would that have been a court
12 case or some kind of regulatory action?
13 A. I think it was regulatory.
14 I don't believe it was in a court action.
15 Q. Do you recall what the
16 device/drug combo was?
17 A. I'm not sure that I'm at
18 liberty to say.
19 Q. And then the other -- I
20 think you said five to six times total,
21 once in this FDA proceeding.
22 The other -- each of the
23 other times would have been as an expert
24 witness?

Page 13

1 A. Yes.
2 Q. Can you tell me what those
3 instances of you serving as an expert
4 witness in litigation, minus the FDA
5 proceeding, related to?
6 A. I can tell you that one of
7 them involved a court case in Canada
8 where I -- I did not give a deposition,
9 but I did appear at trial. And that
10 involved how FDA would look at a pure
11 enantiomer, if the original application
12 was for a racemate, what would be
13 expected from the chemistry perspective.
14 MR. REEFER: John is an
15 expert on that subject, aren't
16 you, John?
17 BY MR. DAVIS:
18 Q. I think I'm going to defer
19 to you on all those chemistry terms and
20 just say, that was a -- mostly a
21 scientific-based expert opinion as a
22 process chemist?
23 A. Not as a process chemist,
24 just as a review chemist and how -- how

<p>Page 14</p> <p>1 FDA would -- what FDA would want in the 2 application if it was a single enantiomer 3 versus what was -- what was already 4 approved as a racemate. 5 Q. Okay. 6 A. It didn't have anything to 7 do with the process. 8 Q. Well, sure. I guess let 9 me -- 10 A. The regulatory process. Let 11 me say that, yeah. 12 Q. Right. And that was going 13 to be my question. 14 The opinion you gave in that 15 was -- was a chemistry-related opinion, 16 not anything really focused on regulatory 17 affairs or anything like that, right? 18 A. Correct. 19 Q. Okay. 20 MR. REEFER: Eric -- can I 21 interject just to help us all out? 22 Eric, if you could give a 23 second-or-two pause before 24 answering, that would be helpful</p> <p>Page 15</p> <p>1 for everybody involved, okay? 2 THE WITNESS: Okay. 3 BY MR. DAVIS: 4 Q. Okay. So I think you 5 mentioned there might be a couple of 6 other times you served as an expert 7 witness. 8 Can you give me a brief 9 description of those instances as well? 10 A. One that I'll -- I should 11 wait. 12 One that I recall was -- it 13 involved a company that received approval 14 for an ANDA, and there was basically a 15 Phase IV commitment that FDA wanted them 16 to do, and there was also litigation that 17 caused the approval to be delayed because 18 of the litigation. 19 And what I testified to 20 involved a timeline that the company, for 21 whatever reason, delayed doing the work 22 that FDA wanted because they knew there 23 was a litigation and they would not be 24 able to launch the product until a</p>	<p>Page 16</p> <p>1 certain point in time. And so they 2 basically took their time responding to 3 FDA. 4 And my part of the -- what I 5 was asked to opine on was what if the 6 company had gone forward and done the 7 work immediately, what would FDA -- how 8 would FDA have looked at the final 9 approval, whether it would have speeded 10 up the -- getting the approval, which, of 11 course, would have been -- the company 12 would have been able to launch sooner. 13 So it was basically 14 something like that. 15 Q. And so that, the litigation, 16 underlying litigation, would have been a 17 patent litigation, I suppose? 18 A. Pardon me? 19 Q. Was this an instance of what 20 we call delayed generic entry litigation? 21 MR. REEFER: Object to form. 22 Go ahead, if you can. 23 THE WITNESS: I don't know 24 what that -- what that means. But</p> <p>Page 17</p> <p>1 the litigation ended sooner than 2 the company expected, so they 3 could have presumably launched 4 sooner if they had done the work 5 sooner. 6 BY MR. DAVIS: 7 Q. Who did you represent in 8 that case -- or, sorry, and by 9 "represent," I mean on whose behalf did 10 you submit an expert report? 11 A. You know, I don't recall 12 which company it was. 13 Q. Was it a follow-on generic 14 company, like, not the first-file ANDA 15 but a follow-on generic company? 16 A. I believe it was a first 17 generic. 18 Q. That company wasn't Mylan, 19 was it? 20 A. No. 21 Q. Do you know if it was any of 22 the manufacturer defendants in this 23 valsartan MDL litigation? 24 A. It was not.</p>
--	---

<p style="text-align: right;">Page 18</p> <p>1 Q. Okay. Any other instances 2 of serving as an expert witness? 3 A. Yeah. I recall one, 4 actually, it was a functional food. And 5 my part involved evaluating work that the 6 other side's contract lab had performed, 7 trying to quantify the amount of an 8 impurity that was in the functional food 9 ingredient. 10 Q. Okay. Any other instances? 11 A. I believe -- I know there 12 were a couple of others. I can't recall 13 what the specifics were, but it involved 14 chemistry. 15 Q. What about a Fresenius 16 dialysis product? Did you ever give 17 expert testimony in that -- for Fresenius 18 in that case? 19 A. I don't believe I ever did 20 anything for Fresenius. 21 Q. Okay. You don't recall a 22 litigation versus Fresenius in the 23 Northern District of Illinois, Case 24 Number 16-cv-651?</p>	<p style="text-align: right;">Page 20</p> <p>1 A. I'm not sure all the -- 2 represent -- how it all came about. 3 But it's, basically, I'm 4 doing work through NDA Partners. And NDA 5 Partners has merged a couple of times. 6 So I still look at everything I'm doing 7 as through NDA Partners. So I guess 8 ProPharma is maybe now the parent. 9 Q. Does either ProPharma or NDA 10 Partners take a cut of your expert 11 witness fees? 12 A. Yes, they do. 13 Q. What is that percentage? 14 A. I don't know what the 15 percentage is, but I get \$400 an hour. 16 Q. Okay. Just to get a little 17 background on you, Dr. Sheinin, can you 18 give me a brief rundown of your 19 professional career as relates to FDA, 20 USP, and then your work in the consulting 21 industry? 22 A. Sure. I received a Ph.D. 23 from the University of Illinois, College 24 of Pharmacy, in organic chemistry in</p>
<p style="text-align: right;">Page 19</p> <p>1 A. I don't recall. I know I 2 did do a deposition on a case in Chicago, 3 so it might be related to that. But I 4 don't -- I don't recall that -- that I 5 was involved with Fresenius. 6 Q. In each of those instances 7 of serving as an expert witness, were 8 your reports and opinions tendered on 9 behalf of pharmaceutical manufacturers or 10 device manufacturers in each of those 11 instances, aside from the FDA one? 12 A. Pharmaceutical 13 manufacturers. 14 Q. When were you engaged by 15 Mylan for this case? 16 A. I believe it was late 2021. 17 Q. By "late 2021," can you give 18 a month? 19 A. November or December. 20 Q. I noticed on a couple of 21 your invoices that the invoices were 22 submitted from an entity called ProPharma 23 Group. 24 Who are they?</p>	<p style="text-align: right;">Page 21</p> <p>1 1971. 2 And I worked for FDA 3 beginning in February of 1971, in the 4 division of drug chemistry. I was a 5 research chemist. I was doing work on 6 nuclear magnetic resonance to identify 7 unknown samples and to develop analytical 8 methods to quantify the content of 9 pharmaceutical products. 10 Within a couple of years of 11 joining FDA, we bought our first mass 12 spectrometer on the drug side, and I 13 helped to run that instrument along with 14 another chemist who had come from a 15 different agency who was a mass 16 spectrometrists. 17 And between the two of us, 18 we published a number of papers, both 19 using NMR and using mass spec. We were 20 able to couple a gas chromatograph to the 21 mass spectrometer, and we did do research 22 and -- trying to identify unknown 23 materials that FDA field labs were not 24 able to handle.</p>

Page 22	Page 24
<p>1 Around 1978 or so, we had 2 four branches in the division of drug 3 chemistry. And one of the branch chiefs 4 passed away. I competed for that 5 position and was selected to become a 6 branch chief.</p> <p>7 And during that -- my time 8 in that position, I was responsible for 9 supervising a group of chemists who, 10 quote/unquote, performed method 11 validation for analytical methods that 12 companies had submitted in their new drug 13 applications to make sure that a 14 competent FDA analyst could run the 15 procedures and come up with results that 16 were comparable to what the company had 17 provided.</p> <p>18 We also had somebody in my 19 group who was doing powder -- x-ray 20 powder diffraction studies.</p> <p>21 Around 1985 or so, FDA 22 merged the Bureau of Drugs and the Bureau 23 of Biologics. They were called bureaus 24 in those days. And biologics was in</p>	<p>1 for all the drugs within the division. 2 So I took over the oncology drugs and the 3 radiopharmaceuticals, which included 4 other imaging agents as well.</p> <p>5 The bureau -- well, this was 6 now, then, the Center of Drug Evaluation 7 and Research. And there was a 8 reorganization that took place, and what 9 was created was the Office of 10 Pharmaceutical Science.</p> <p>11 And within the Office of 12 Pharmaceutical Science, there were four 13 smaller offices. One was the Office of 14 New Drug Chemistry. And I competed for 15 one of the three branches -- or one of 16 the three divisions within that office. 17 The Office of New Drug Chemistry had 18 three divisions. And I was selected as 19 one of the division directors, the 20 Division of New Drug Chemistry 3.</p> <p>21 And within that office, 22 then, Roger Williams, who was the head of 23 the office of -- Office of Pharmaceutical 24 Science, was also acting as director of</p>
Page 23	Page 25
<p>1 charge of the combined bureau, and they 2 made the decision, at one point in time, 3 to move some people to the review area, 4 chemists to the review area, because 5 there was a big backlog of new drug 6 applications that were pending chemistry 7 review.</p> <p>8 And as it turned out, they 9 closed the entire division of drug 10 chemistry and offered everybody in the 11 division a position in headquarters. And 12 some people took the position, some 13 people retired, and some people took 14 other positions within the government.</p> <p>15 I moved to the review area 16 as a supervisory chemist, and I had 17 responsibility, initially, for chemists 18 who were reviewing anti-inflammatory drug 19 applications on the new-drug side. This 20 was in the division of oncology and 21 radiopharmaceuticals.</p> <p>22 It was the first division 23 that had two supervisory chemists, and 24 eventually the responsibility ended up</p>	<p>1 the Office of New Drug Chemistry.</p> <p>2 The three division 3 directors -- as I mentioned, there were 4 three divisions. The three of us 5 competed for the permanent position of 6 director of the Office of New Drug 7 Chemistry, along with approximately 8 80-some people from the outside.</p> <p>9 I was selected to lead the 10 division of -- the Office of New Drug 11 Chemistry. And I worked in that position 12 for approximately two years, and then I 13 moved up to be the deputy director in the 14 Office of Pharmaceutical Science, which 15 was what was termed a super office versus 16 the smaller offices. I stayed in that 17 position for approximately one year.</p> <p>18 When I reached 30 years at 19 FDA, I was able to retire with a full -- 20 a full pension, and I decided to move to 21 USP.</p> <p>22 My boss at FDA, Roger 23 Williams, had left the year prior to my 24 retirement, and he went to USP as the</p>

Page 26	Page 28
<p>1 chief executive officer, executive vice 2 president. And he recruited me to move 3 to USP as a vice president. 4 And I had responsibility for 5 the scientists at USP who were 6 responsible for creating content of USP 7 and NF, working with expert -- volunteers 8 on expert committees as well as the 9 pharmaceutical industry and, at times, 10 academia. 11 USP had a program to verify 12 the quality of dietary supplement 13 ingredients, and eventually they moved 14 into dietary supplement products. And 15 Roger Williams wanted to start a program 16 to evaluate the quality of active 17 pharmaceutical ingredients or drug 18 substances. 19 And I moved to that area, 20 and I worked on trying to recruit 21 companies to submit their DMFs or just 22 their procedures for their drug 23 substances. 24 And after working for about</p>	<p>1 any of the other defense experts who have 2 submitted opinions in this litigation? 3 A. I have not. 4 Q. You mentioned a -- and so 5 just a clarification on a few dates. 6 I think you said you retired 7 from FDA after 30 years, but you didn't 8 give a date. I assumed that means 2001, 9 if you started in 1971? 10 A. Yes. The end of February 11 2000 -- 2001. 12 Q. Okay. And then when did 13 you -- so you went to USP in 2001 as 14 well? 15 A. Yes. March of 2001. I 16 think I had two weeks -- 17 Q. And then -- 18 A. -- two weeks in between. 19 Q. Got you. 20 And then you retired from 21 USP around 2007-ish? 22 A. Yes. 23 Q. You mentioned trying to 24 recruit companies to submit their DMFs or</p>
Page 27	Page 29
<p>1 a year on that side, I felt, if I was 2 ever going to go into consulting, which 3 was something I had thought about when I 4 retired from FDA, that now was the time, 5 I was still young enough. And I went 6 into consulting. 7 And that's kind of a 8 nutshell of what my career has been. 9 I've been consulting since March of 2007. 10 Q. Okay. Thank you for that. 11 And I'll take a few questions just in 12 order. 13 You mentioned Roger 14 Williams, who was your former boss at 15 FDA, right? 16 A. Yes. 17 Q. Are you aware that he's 18 submitted an expert report in this case? 19 A. I'm not aware. 20 Q. So you would not have talked 21 to him or e-mailed with him about that at 22 all? 23 A. No, I have not. 24 Q. Have you communicated with</p>	<p>1 drug substance manufacturing procedures 2 to USP. 3 Would that be for 4 pharmaceutical drugs, or was that in the 5 context of dietary supplements? 6 A. No, this was pharmaceutical 7 ingredients. For the most part, 8 companies were reluctant to get into it 9 because FDA was the legal authority. 10 There was a -- the European 11 Pharmacopoeia, through the European 12 Directorate for the Quality of Medicines, 13 had a program that actually was required, 14 through EMA, to -- for companies to 15 submit their active ingredients for 16 evaluation. 17 And I believe Roger was 18 interested in getting into the same type 19 of -- same type of program. But I don't 20 believe that FDA would ever have given up 21 the responsibility for evaluating the 22 chemistry of the -- of active 23 pharmaceutical ingredients or drug 24 substances.</p>

Page 30

1 Q. In your consulting work
2 since 2007, have you -- have you always
3 consulted for industry?
4 MR. REEFER: Object to form.
5 THE WITNESS: I have given
6 some advice, a couple of times, to
7 academia. And I also did some
8 training for USP. I did some
9 training courses that USP offered.
10 BY MR. DAVIS:
11 Q. What percentage would you
12 say, of your consulting work since 2007,
13 has been for industry?
14 A. Probably 98 percent or more.
15 MR. DAVIS: I'm going to
16 mark your report, Dr. Sheinin.
17 That's Tab 1, Jason, in the
18 box, if he doesn't have a copy.
19 MR. REEFER: John, I'm going
20 to stand up, and I'm going to be
21 off camera for a moment.
22 MR. DAVIS: Sure.
23 MR. REEFER: Actually, just
24 give me one second, okay?

Page 31

1 For purposes of formality,
2 John, you see me now?
3 MR. DAVIS: Yes.
4 MR. REEFER: I just wanted
5 you to see that we have not yet
6 opened the box. So just give me
7 one moment, okay? I have
8 scissors.
9 MR. DAVIS: Not a problem.
10 MR. REEFER: Tape must have
11 been on sale at Costco when you
12 packaged this.
13 Tab 1, John?
14 MR. DAVIS: Tab 1.
15 - - -
16 (Whereupon, Exhibit
17 Sheinin-1, No Bates, Expert Report
18 of Eric Sheinin, Ph.D., was marked
19 for identification.)
20 - - -
21 BY MR. DAVIS:
22 Q. Dr. Sheinin, do you
23 recognize what's been handed to you as
24 Exhibit-1 -- that I've now marked as

Page 32

1 Exhibit-1 as your expert report in this
2 case?
3 A. Yes.
4 Q. In coming up with your
5 expert report, did you review at all
6 Federal Rule of Civil Procedure 26, which
7 governs the disclosure of expert reports
8 in federal court litigation?
9 A. No, I have never seen that.
10 Q. Well, I'll just tell you
11 that that rule states that, and I'm
12 quoting, The report must contain a
13 complete statement of all opinions the
14 witness will express and the basis and
15 reasons for them.
16 Did you -- did you hear that
17 sentence well?
18 A. Yes.
19 Q. Okay. Do you feel that your
20 expert report that you've submitted in
21 this case complies with what that rule
22 requires, namely, a complete statement of
23 all your opinions and the basis and
24 reasons for them?

Page 33

1 MR. REEFER: Object to form.
2 Calls for a legal conclusion.
3 THE WITNESS: Yes.
4 BY MR. DAVIS:
5 Q. So, in other words, there's
6 no opinions in your -- that aren't in
7 your report that you would be seeking to
8 express in this litigation, correct?
9 MR. REEFER: Object to form.
10 THE WITNESS: Yes.
11 BY MR. DAVIS:
12 Q. "Yes" meaning that there are
13 no other opinions that you're trying to
14 assert in this litigation that you have
15 not put in your expert report?
16 MR. REEFER: Object to form.
17 THE WITNESS: That's
18 correct.
19 BY MR. DAVIS:
20 Q. Turn, if you would, to the
21 second page of your report at Paragraph
22 8.
23 You state there, I offer the
24 opinions set forth in this report to a

<p>Page 34</p> <p>1 reasonable degree of scientific certainty 2 based on my education, experience, 3 training, expertise and referenced 4 resources. 5 Do you see that? 6 A. Yes. 7 Q. I just want to get some 8 clarification of what you mean by 9 "referenced resources." 10 What are you referring to 11 there? 12 A. I actually copied this 13 beginning from another expert report, and 14 I did not think about what referenced 15 resources I was -- what referenced 16 resources this referred to. 17 But I would assume it would 18 be things like the USP, the NF, FDA 19 guidances, ICH guidances, documents like 20 that. 21 Q. Did you write this report 22 with a degree of care, Dr. Sheinin? 23 A. Yes. 24 MR. REEFER: Object to form.</p> <p>Page 35</p> <p>1 THE WITNESS: A lot of care. 2 BY MR. DAVIS: 3 Q. But what you're telling me 4 is that you're not sure what you mean by 5 "referenced resources" there because you 6 copied it from another expert report of 7 yours? 8 MR. REEFER: Object to form. 9 Mischaracterizes testimony. 10 THE WITNESS: I tried to 11 explain what I would consider 12 referenced resources. And I would 13 still say the same thing. 14 I would consider these 15 referenced resources things such 16 as USP, the NF, FDA guidances. I 17 might add FDA policies and 18 procedures, ICH guidances. 19 That -- to me, that's what 20 referenced resources would be. 21 BY MR. DAVIS: 22 Q. Okay. Well, referenced 23 resources means resources that are 24 referenced, right?</p>	<p>Page 36</p> <p>1 Are there any resources that 2 you relied on that aren't -- are not 3 referenced in your report somewhere, 4 either in a footnote or your materials 5 considered list, I believe which is 6 Exhibit B, as you state in Paragraph 7? 7 A. I don't believe there are 8 any others. 9 Q. So would I be correct in 10 making the assumption that if there's 11 something that's not referred to 12 somewhere in your report, that you didn't 13 consider it in coming to your opinions? 14 MR. REEFER: Object to form. 15 Mischaracterizes testimony. 16 THE WITNESS: Can you repeat 17 the question? 18 BY MR. DAVIS: 19 Q. Sure. 20 Would I be correct -- what 21 I'm trying to do, Dr. Sheinin, is sort 22 of, you know, capture the view of 23 everything you reviewed for your expert 24 report in this case. And normally that's</p> <p>Page 37</p> <p>1 through either footnoting it as citations 2 in the body of your report or discussing 3 it explicitly in your report or 4 referencing a list of materials that you 5 considered or looked at in the process of 6 writing it. 7 And so what I'm trying to do 8 is clarify whether what's in the report 9 is the complete -- you know, wherever it 10 is in your report, that that's a complete 11 list of everything you looked at in 12 writing your report. 13 Do you follow? 14 MR. REEFER: Object to form. 15 THE WITNESS: I follow. And 16 I believe that's the situation. 17 BY MR. DAVIS: 18 Q. I just referenced Paragraph 19 7. You write there that, A list of 20 materials provided for my consideration 21 is attached as Exhibit B. 22 Do you see that? 23 A. Yes. 24 Q. Were those materials</p>
--	---

Page 38

1 provided by counsel?
2 A. Yes.
3 Q. Did you ask for them
4 specifically or was it just a package
5 that was given to you?
6 A. I believe it was a package
7 that was given to me.
8 Q. Did you ask counsel or make
9 any inquiries as to whether there was
10 anything additional that you might want
11 to look at?
12 A. I don't recall asking for
13 other things.
14 Q. So you just trusted that
15 what was given to you by Mylan's counsel
16 was a complete picture of the relevant
17 information that you might want to look
18 at?
19 MR. REEFER: Object to form.
20 THE WITNESS: I was asked to
21 opine on how USP functions and
22 what drug master files are.
23 Anything that I looked at that
24 counsel provided was to get a

Page 39

1 background for the overall
2 picture.
3 But I used my background and
4 my expertise and experience at USP
5 and at FDA to create my report.
6 BY MR. DAVIS:
7 Q. Well, my question was
8 whether you trusted that what was given
9 to you was a complete picture, including
10 for those topical areas you just
11 referenced, such as USP and drug master
12 files.
13 Is that --
14 MR. REEFER: Object to form.
15 Asked -- sorry, John.
16 BY MR. DAVIS:
17 Q. Did you trust that what was
18 given to you by Mylan's counsel painted a
19 complete and accurate picture for you?
20 MR. REEFER: Object to form.
21 Asked and answered.
22 THE WITNESS: What -- my
23 background, I believe, was
24 sufficient for me to give my

Page 40

1 opinion on USP and FDA's
2 consideration of drug master
3 files.
4 Anything that I looked at
5 that counsel had provided, as I
6 mentioned, was to provide a
7 background understanding of --
8 basic understanding of the issue.
9 It was nothing that I considered
10 in -- that I would have
11 incorporated into my report.
12 I would have to venture to
13 say that I would -- I would think
14 that the amount of material that I
15 received from counsel is a very,
16 very, very small proportion of the
17 documents that might have been
18 used to fully explain the
19 situation.
20 I just can't imagine that
21 if -- if counsel had provided me
22 everything that is included in the
23 court proceedings, it probably
24 would have more than filled up my

Page 41

1 office.
2 So I just don't understand
3 what -- what the question is
4 getting at.
5 BY MR. DAVIS:
6 Q. Well, sure, let me ask it, I
7 suppose, in a different way, then, which
8 is, did you -- upon receiving the
9 information that is listed at Exhibit B
10 of your report, upon reviewing that, did
11 you ever go back to counsel and ask for
12 anything else?
13 A. I'm turning the page.
14 Actually, I may have asked
15 for the response -- Mylan's response to
16 the warning letter. I can't recall for
17 definite whether that was included in the
18 original group.
19 Q. Did you ask -- sorry. Go
20 ahead, Dr. Sheinin. I didn't mean to cut
21 you off there.
22 A. I think I may have asked for
23 that response to the warning letter.
24 Q. Why would you have asked for

<p style="text-align: right;">Page 42</p> <p>1 that?</p> <p>2 A. Just to get an overall</p> <p>3 picture of how Mylan responded.</p> <p>4 Q. And by "warning letter,"</p> <p>5 you're referring to the November 2019</p> <p>6 warning letter issued to Unit 8?</p> <p>7 A. Yes.</p> <p>8 Q. While we're discussing that,</p> <p>9 real fast, and we may come back to it,</p> <p>10 but what's your understanding of how the</p> <p>11 FDA received Mylan's response to the</p> <p>12 warning letter?</p> <p>13 MR. REEFER: Object to form.</p> <p>14 Beyond the scope. Lack of</p> <p>15 foundation.</p> <p>16 THE WITNESS: I am -- I</p> <p>17 can't say how FDA responded. I</p> <p>18 have not seen anything in writing</p> <p>19 from FDA about the response.</p> <p>20 But I do know that Mylan --</p> <p>21 Mylan's valsartan products are</p> <p>22 back on the market, so I would</p> <p>23 have to assume that the -- that</p> <p>24 FDA was satisfied with their</p>	<p style="text-align: right;">Page 44</p> <p>1 response.</p> <p>2 It doesn't form the basis</p> <p>3 for anything that's in my report.</p> <p>4 BY MR. DAVIS:</p> <p>5 Q. Did you ask counsel to see a</p> <p>6 copy of the FDA's close-out letter for</p> <p>7 Mylan's warning letter?</p> <p>8 A. I don't believe I did.</p> <p>9 Q. Do you know if one exists?</p> <p>10 A. I do not know.</p> <p>11 Q. So you wouldn't know if that</p> <p>12 warning letter remains unresolved to this</p> <p>13 day?</p> <p>14 MR. REEFER: Object to form.</p> <p>15 Beyond the scope. Lack of</p> <p>16 foundation.</p> <p>17 THE WITNESS: I have no way</p> <p>18 of knowing whether it still exists</p> <p>19 or not.</p> <p>20 BY MR. DAVIS:</p> <p>21 Q. Okay. And you mentioned</p> <p>22 Mylan having a -- bringing valsartan back</p> <p>23 to the market, correct?</p> <p>24 A. As far as I know,</p>
<p style="text-align: right;">Page 43</p> <p>1 response, and that's how -- that's</p> <p>2 why the products are on the market</p> <p>3 again.</p> <p>4 BY MR. DAVIS:</p> <p>5 Q. Well, do you understand that</p> <p>6 the warning letter had to do, for Unit 8,</p> <p>7 in part, with Mylan's practices around</p> <p>8 recovered solvents and --</p> <p>9 MR. REEFER: Object to form</p> <p>10 as beyond the scope.</p> <p>11 BY MR. DAVIS:</p> <p>12 Q. -- as well as the issue of</p> <p>13 the nitrosamine contamination in the</p> <p>14 first place?</p> <p>15 MR. REEFER: Object to form.</p> <p>16 Beyond the scope. Compound. And</p> <p>17 mischaracterizes the document.</p> <p>18 THE WITNESS: That is the --</p> <p>19 the response from Mylan to FDA is</p> <p>20 not the basis of my report.</p> <p>21 So I consider that to be --</p> <p>22 it was irrelevant as to whether --</p> <p>23 is irrelevant in terms of how FDA</p> <p>24 might have responded to Mylan's</p>	<p style="text-align: right;">Page 45</p> <p>1 valsartan -- Mylan's valsartan products</p> <p>2 are on the market.</p> <p>3 Q. Do you know if Mylan had to</p> <p>4 commit to the FDA not to use recovered</p> <p>5 solvents until they could ensure that</p> <p>6 they were safely used and that --</p> <p>7 MR. REEFER: Object to form.</p> <p>8 I'm sorry, John.</p> <p>9 BY MR. DAVIS:</p> <p>10 Q. Sorry. Let me start that</p> <p>11 question over, Dr. Sheinin.</p> <p>12 Do you know if -- let me</p> <p>13 break it down into bits.</p> <p>14 Do you know if Mylan's</p> <p>15 valsartan product that's back on the</p> <p>16 market today is manufactured using</p> <p>17 recovered solvents?</p> <p>18 MR. REEFER: Object to form.</p> <p>19 Beyond the scope. Lack of</p> <p>20 foundation.</p> <p>21 THE WITNESS: That's</p> <p>22 something I don't have knowledge</p> <p>23 of. It's -- again, it's not</p> <p>24 something that I used to create my</p>

<p style="text-align: right;">Page 46</p> <p>1 report. Whether or not they're 2 using recovered solvents, I can't 3 tell you that. I don't know. 4 BY MR. DAVIS: 5 Q. Okay. Do you know if Mylan 6 had to change the process chemistry of 7 its valsartan API to bring it back to the 8 market? 9 MR. REEFER: Object to form. 10 Beyond the scope. Lack of 11 foundation. 12 THE WITNESS: I'm not a 13 process chemist, so it's very hard 14 for me to answer that question. 15 It's a very specialized area. 16 I've never worked in the 17 pharmaceutical industry, never 18 worked in developing a process for 19 manufacturing of a drug substance. 20 And it's not something that I can 21 opine on. 22 BY MR. DAVIS: 23 Q. Okay. But you're not -- 24 you're not aware, for example, of whether</p>	<p style="text-align: right;">Page 48</p> <p>1 nothing. It's beyond my 2 expertise. 3 BY MR. DAVIS: 4 Q. Well, sure, and I'm only 5 asking this because you brought up the 6 fact that Mylan has a valsartan product 7 back on the market. 8 And my question is, are you 9 familiar at all with the circumstances by 10 which Mylan was able to bring a valsartan 11 product back to the market? 12 MR. REEFER: Same objection. 13 THE WITNESS: Again, I'm not 14 a process chemist. And it's just 15 beyond what my expertise is. I 16 did not use any of that type of 17 information to form the basis for 18 my report. 19 BY MR. DAVIS: 20 Q. Okay. So is the answer no, 21 you're not familiar with the 22 circumstances by which Mylan was able to 23 bring a valsartan product back to the 24 market?</p>
<p style="text-align: right;">Page 47</p> <p>1 Mylan had to remove its use of 2 triethylamine and substitute it with 3 sodium bicarbonate in an effort to avoid 4 NDEA or other nitrosamine contamination 5 in order to bring valsartan back to the 6 market? 7 MR. REEFER: Object to form. 8 Compound. Beyond the scope. Lack 9 of foundation. 10 THE WITNESS: Again, I'm not 11 a process chemist, and I would not 12 attempt to try to interpret or 13 understand what processes Mylan 14 used. 15 I did not consider whether 16 or not there was a change in the 17 manufacturing process to form the 18 basis for my report. And 19 that's -- I use my experience at 20 USP and at FDA to create the 21 report. 22 So it's beyond my 23 understanding of process 24 chemistry, which is essentially</p>	<p style="text-align: right;">Page 49</p> <p>1 A. It's -- I'm not a process 2 chemist, and understanding the -- what 3 would go into changing, if that's what 4 occurred, changing the manufacturing 5 procedures is not something that I'm 6 qualified to evaluate. 7 And I'm going to have to 8 stand on that, that it's nothing that I 9 used in my report. 10 Q. Well, my question isn't, you 11 know, calling for any kind of process 12 chemistry. I'm just asking what you 13 reviewed. 14 And my question is, did you 15 review any documents or anything related 16 to how Mylan was able to bring a 17 valsartan product back to the market? 18 A. My -- again, I'm not a 19 process chemist. So I -- as to what was 20 involved and how much work was involved, 21 I can't really opine on that. 22 Q. What about concessions to 23 the regulator, are you familiar with any 24 concessions Mylan had to make to the</p>

Page 50	Page 52
<p>1 regulator, the FDA, in order to bring a 2 valsartan product back on the market? 3 MR. REEFER: Object to form. 4 Vague. Beyond the scope. Lack of 5 foundation. 6 THE WITNESS: I am -- I 7 am -- let me start over. 8 I am -- I don't know what -- 9 I'm not a process chemist, and I 10 just feel that whatever Mylan did 11 to get on the market is beyond 12 what I was asked to look at and 13 what I was asked to opine on. 14 I used my expertise and my 15 background at USP and FDA to 16 create my report. Anything else 17 was immaterial to providing my 18 opinions that are in my report. 19 BY MR. DAVIS: 20 Q. Okay. Well, let me ask it 21 this way, then: Is the fact that Mylan 22 is back on the market with a valsartan 23 product, under circumstances that you 24 don't know or understand, that's not</p>	<p>1 least the portions of the requirements in 2 the ANDA for the drug substance made 3 reference to the drug master file. 4 So there was very little 5 information in the ANDA itself, and I did 6 not pursue asking counsel to provide me 7 the DMF because I felt it was irrelevant 8 to what my part of the -- creating my 9 report was. 10 I was just -- the ANDAs were 11 there and I thought I probably ought to 12 take a look at them, but there was really 13 nothing for me to understand. And I just 14 said, I don't need that information to 15 create my report on how USP operates and 16 what a drug master file is. So I did not 17 pursue it. 18 Q. Well, that's my -- you kind 19 of touched on my next question, which is, 20 you told me your assignment was to opine 21 on USP and drug master files. 22 But you didn't think to ask 23 Mylan for the drug master file that's at 24 issue in this case?</p>
Page 51	Page 53
<p>1 relevant to any of the opinions in your 2 report, is it? 3 A. I don't believe so. 4 Q. Okay. Thank you. 5 You list the ANDAs in 6 Exhibit B to your report, do you not? 7 A. Yes, I do list them. 8 Q. Do you understand that those 9 ANDA applications all made reference to a 10 drug master file? 11 A. Yes. 12 Q. Did you review the full drug 13 master file? 14 A. I didn't review any part of 15 the drug master file. 16 Q. Okay. So that was my 17 question. 18 So you reviewed the ANDA 19 applications but not the underlying drug 20 master file that those ANDAs made 21 reference to? 22 A. I glanced at one of the 23 ANDAs. I did not review all three of 24 them. And what I saw was mostly -- at</p>	<p>1 A. I did not because I was 2 giving, in my expert report, a general 3 overview of drug master files. I was not 4 asked to opine on the quality or the 5 content of Mylan's drug master file, so 6 it was irrelevant. 7 Q. Okay. That -- let me 8 clarify exactly what your assignment was 9 in this case, then, because it's nowhere 10 written in your report what your 11 assignment was. 12 And to be honest, I'm a 13 little confused, because you're telling 14 me your assignment was to opine on drug 15 master files generally but not to opine 16 on Mylan's drug master file in any way in 17 this case; is that right? 18 A. That's correct. I was not 19 asked to opine on the quality of Mylan's 20 drug master file. 21 Q. And you did not, in fact, 22 opine on the quality of Mylan's drug 23 master file in your report, did you? 24 A. I couldn't. Because, one, I</p>

Page 54

1 wasn't asked to; and, two, I never saw
2 the drug master file.
3 Q. So since it's written
4 nowhere in your report, can you tell me
5 exactly what your assignment was in this
6 case?
7 A. My assignment was to -- the
8 basic part of my assignment, the bulk of
9 it, was to talk about USP and the
10 background of USP, in terms of how USP is
11 organized, USP's recognition in the Food,
12 Drug and Cosmetic Act, and to give a
13 brief description, discussion of drug
14 master files and why -- why there are
15 drug master -- I talked about why there
16 are drug master files, types of drug
17 master files and so on.
18 I was also asked to comment
19 on Dr. Najafi's expert report.
20 Q. Were you asked to comment on
21 John Quick's expert report?
22 A. I was asked if I -- if I --
23 if I wanted to comment on John Quick's,
24 as well as Najafi, but I felt that

Page 55

1 Quick's was more involved with GMPs and,
2 that was not my area of expertise at FDA.
3 So commenting on Najafi was more in line
4 with the function of my report and the
5 expertise that I have.
6 Q. Okay.
7 MR. DAVIS: I'm going to
8 mark Tab 2 as Exhibit-2, Jason.
9 - - -
10 (Whereupon, Exhibit
11 Sheinin-2, No Bates, 1/12/22
12 Letter, Trischler to Counsel, was
13 marked for identification.)
14 - - -
15 MR. REEFER: Okay.
16 BY MR. DAVIS:
17 Q. Dr. Sheinin, this was a
18 letter from Jason's law firm that
19 accompanied the disclosure of your expert
20 report.
21 Do you understand that?
22 MR. REEFER: Object to form.
23 Why don't you start by asking if
24 he's seen it before?

Page 56

1 BY MR. DAVIS:
2 Q. Have you seen this letter
3 before?
4 A. I've not seen this letter
5 before, and I have never seen a letter
6 that looks like this.
7 Q. Well, yeah, let me just
8 represent to you, then, that this was a
9 letter from Jason's law firm that was
10 delivered to us accompanying your expert
11 report.
12 Do you see that your name is
13 referenced in there and it's addressed to
14 a number of plaintiffs' counsel in this
15 case?
16 MR. REEFER: Object to form.
17 Lack of foundation.
18 THE WITNESS: I see that my
19 name is on here, yes. And it's --
20 BY MR. DAVIS:
21 Q. Okay.
22 A. -- talking about my expert
23 report is also enclosed.
24 Q. If you look down at

Page 57

1 Paragraph 2, it says that your report is,
2 For purposes of rendering opinions as to
3 class certification issues and rebutting
4 the class certification opinions of the
5 class certification experts disclosed by
6 the plaintiffs' executive committee.
7 Do you see that?
8 A. I see it.
9 Q. Do you know what class
10 certification issues you address in your
11 report?
12 MR. REEFER: Object to form.
13 Beyond the scope. Calls for a
14 legal conclusion.
15 THE WITNESS: I don't know
16 what "class certification" means.
17 BY MR. DAVIS:
18 Q. And the second part of that
19 is to rebut the reports of the
20 plaintiffs' experts.
21 In your case, that's only
22 Dr. Najafi; is that right? Is that your
23 testimony?
24 MR. REEFER: Object to form.

<p>Page 58</p> <p>1 Mischaracterizes testimony. 2 THE WITNESS: I discuss 3 Dr. Najafi's report in my report, 4 yes. 5 BY MR. DAVIS: 6 Q. And there's no other 7 plaintiffs' expert report that you both 8 reviewed and intend to rebut in your 9 report, is there? 10 MR. REEFER: Object to form. 11 Foundation. 12 Go ahead, Doctor. 13 THE WITNESS: That's 14 correct. 15 BY MR. DAVIS: 16 Q. You mentioned, Dr. Sheinin, 17 that your educational background is that 18 you have a Ph.D. in organic chemistry; is 19 that right? 20 A. That's correct. 21 Q. Can you, at a very broad 22 level, speaking to a -- most certainly a 23 non-expert like me and Jason -- 24 MR. REEFER: That's right.</p> <p>Page 59</p> <p>1 BY MR. DAVIS: 2 Q. -- tell us -- tell us what 3 organic chemistry is? 4 A. Organic chemistry is, in the 5 briefest of statements, is the chemistry 6 of carbon compounds. That's probably the 7 easiest way to explain it. 8 There's different classes of 9 chemicals that are considered organic. 10 There's various functional groups. 11 I can't say 100 percent that 12 every organic chemical contains carbon, 13 but, for the most part, that's -- that's 14 true. And it's -- involves reactions 15 using other organic chemicals as well as 16 non-organic chemicals to manufacture or 17 synthesize a second organic chemical and 18 sometimes maybe a third and a fourth. 19 That's what my -- my Ph.D. 20 thesis involved synthesizing a number of 21 compounds that were subsequently sent to 22 the National Cancer Institute for testing 23 for activity against -- against cancer. 24 And, unfortunately, none of the chemicals</p>	<p>Page 60</p> <p>1 I manu -- I synthesized had any activity. 2 I always felt that I was 3 going to get a job working for somebody 4 who is doing organic chemistry. That 5 turned out not to be the case. When I 6 joined FDA, we had an organic chemist in 7 our group, and he actually worked as a 8 functioning organic chemist. I have 9 never worked as a functioning organic 10 chemist. 11 So it's -- I think it's 12 something that is fairly common, 13 certainly it is among people that I knew 14 who went to graduate school with me, they 15 don't necessarily end up working in what 16 your major was. 17 So I'm more of an analytical 18 chemist with knowledge of regulatory. 19 But I've never worked as an organic 20 chemist. 21 Q. Right. In fact, I think, 22 you know, in your brief FDA history you 23 gave me, your work with mass spec and 24 GC -- you know, coupling it with a GC in</p> <p>Page 61</p> <p>1 the early '70s, that's more analytical 2 chemistry, right? 3 A. Yes. 4 Q. So harkening back to your 5 dissertation thesis days when you 6 synthesized a few compounds with the 7 hopes that they might have an effect on 8 cancer, did you work in the lab at all 9 in, you know, synthesizing those -- 10 creating those chemical reactions to 11 synthesize those compounds? 12 A. Oh, yeah. I mean, that's 13 how I got the compounds. 14 Q. So in working with -- would 15 you have worked with, like, reagents, 16 catalysts, solvents, all that business, 17 in order to create those chemical 18 reactions that would ultimately yield the 19 compound you wanted to create? 20 MR. REEFER: Object to form. 21 THE WITNESS: Yes. I did 22 the synthesis myself. 23 BY MR. DAVIS: 24 Q. So how would you know, in</p>
---	---

<p>Page 62</p> <p>1 doing that, what to avoid mixing together 2 to create a dangerous reaction? What 3 kind of materials would you look at, 4 aside from just your own educational 5 knowledge of how these substances 6 interact? 7 MR. REEFER: Object to form. 8 Beyond the scope. 9 THE WITNESS: I relied on my 10 advisor to give me advice on if 11 there was any danger or any 12 possible reactions that he 13 considered to be dangerous. 14 BY MR. DAVIS: 15 Q. Did you rely on any kind of 16 written materials in addition to just 17 what your advisor told you? 18 MR. REEFER: Object to form. 19 Beyond the scope. 20 THE WITNESS: You know, 21 that's over 50 years ago, and I 22 can't remember if there was 23 anything written or not. But I 24 relied on my advisor.</p> <p>Page 63</p> <p>1 BY MR. DAVIS: 2 Q. Okay. Do you know what an 3 MSDS is? 4 A. Yes, I do. 5 Q. Like a safety data sheet for 6 a particular substance? 7 A. Yes. 8 Q. Okay. Is that something 9 that -- would those have existed at that 10 timeframe? 11 A. As far as I can remember, I 12 don't believe there were safety data 13 sheets at that time. 14 Q. If you were doing that kind 15 of organic chemistry today, is that 16 something you might want to look at, the 17 safety data sheets or MSDS? 18 MR. REEFER: Objection. 19 Form. Incomplete hypothetical. 20 Beyond the scope. 21 THE WITNESS: I mean, if I 22 was doing organic chemistry today, 23 I would want to know if there was 24 any safety issues with the</p>	<p>Page 64</p> <p>1 materials that I'm working with. 2 It's something that did not exist 3 in those days. 4 BY MR. DAVIS: 5 Q. And if you were doing that 6 today, one of the most prominent 7 resources you could -- you could consult 8 would be the safety data sheet, or MSDS, 9 that accompanies whatever reagent or 10 catalyst it is that you're working with, 11 right? 12 MR. REEFER: Object to form. 13 Beyond the scope. Incomplete 14 hypothetical. 15 THE WITNESS: I would have 16 to assume that I would look at 17 those, at least once, for any 18 chemical that I work with. I 19 wouldn't have to keep going back 20 to look at them. 21 BY MR. DAVIS: 22 Q. Okay. 23 MR. REEFER: Hey, John, this 24 is Jason. I had a venti coffee</p> <p>Page 65</p> <p>1 this morning. We've been going 2 about an hour and 20 minutes. 3 Would you mind just taking a 4 five-minute bathroom break? 5 MR. DAVIS: Sure. Not a 6 problem. 7 Dr. Sheinin, do you need 8 five minutes or ten minutes? Up 9 to you. 10 We can go off the record, by 11 the way. 12 VIDEO TECHNICIAN: Going off 13 the record. The time is 14 10:50 a.m. 15 - - - 16 (Whereupon, a brief recess 17 was taken.) 18 - - - 19 VIDEO TECHNICIAN: We are 20 back on the record. The time is 21 11:00 a.m. 22 BY MR. DAVIS: 23 Q. Just one clean-up question, 24 Dr. Sheinin, before I move on.</p>
--	---

<p style="text-align: right;">Page 66</p> <p>1 Do you recall telling me</p> <p>2 that you're not a CGMP expert?</p> <p>3 A. Yeah, I recall.</p> <p>4 Q. Okay. So would I take that</p> <p>5 to mean that you're not offering any</p> <p>6 opinion in this litigation that Mylan</p> <p>7 was, in fact, in compliance with CGMPs?</p> <p>8 A. I'm not offering an opinion</p> <p>9 directly on whether they're in compliance</p> <p>10 with GMPs. I know that their product is</p> <p>11 on the market. I know that FDA has</p> <p>12 inspected their facilities. And I know</p> <p>13 there was a warning letter, and I know</p> <p>14 that they're back on the market.</p> <p>15 That's pretty much beyond</p> <p>16 what I know about Mylan and their GMPs.</p> <p>17 Q. But just to clarify, you're</p> <p>18 not offering any kind of expert opinion</p> <p>19 in this litigation that Mylan was in</p> <p>20 compliance with CGMPs, despite stuff</p> <p>21 that's tangential to that that you've</p> <p>22 reviewed, correct?</p> <p>23 A. My expert report is</p> <p>24 discussing drug master files and USP. It</p>	<p style="text-align: right;">Page 68</p> <p>1 asking -- well, hang on, Jason,</p> <p>2 I'm not asking him to speculate.</p> <p>3 I'm just asking if he saw that</p> <p>4 statement in the letter that he</p> <p>5 reviewed.</p> <p>6 BY MR. DAVIS:</p> <p>7 Q. Do you recall seeing that</p> <p>8 statement in the letter that you -- in</p> <p>9 the warning letter, Dr. Sheinin?</p> <p>10 A. I recall the warning letter.</p> <p>11 Can you put it up on the screen?</p> <p>12 Q. Sure.</p> <p>13 A. So I can see the exact</p> <p>14 language. Or do we have it in our -- in</p> <p>15 our package?</p> <p>16 Q. Just a second, I'll bring it</p> <p>17 up.</p> <p>18 MR. REEFER: Do you have it</p> <p>19 as an exhibit, John?</p> <p>20 MR. DAVIS: Yes. That would</p> <p>21 be Tab 15.</p> <p>22 MR. REEFER: One moment,</p> <p>23 okay?</p> <p>24 MR. DAVIS: Yep.</p>
<p style="text-align: right;">Page 67</p> <p>1 does not discuss GMPs. I'm not a -- I'm</p> <p>2 not -- as I said and you agreed, I'm not</p> <p>3 an expert in GMPs, and I'm not offering</p> <p>4 to opine on it.</p> <p>5 Q. So, for example, you said</p> <p>6 you reviewed the FDA warning letter</p> <p>7 issued to Mylan Unit 8, which</p> <p>8 manufactured valsartan API; isn't that</p> <p>9 right?</p> <p>10 A. I looked at it. I wouldn't</p> <p>11 necessarily say -- I did not review it</p> <p>12 in depth. It was not something that I</p> <p>13 needed for forming my opinions in my</p> <p>14 expert report. But I did look at it.</p> <p>15 Q. Right. And would you have</p> <p>16 seen the statement at the beginning of</p> <p>17 that letter that the FDA observed CGMP</p> <p>18 deviations at that facility, which was</p> <p>19 the -- you know, the reason they were</p> <p>20 sending the warning letter?</p> <p>21 MR. REEFER: Object to the</p> <p>22 form. Calls for speculation.</p> <p>23 Go ahead --</p> <p>24 MR. DAVIS: Well, I'm not</p>	<p style="text-align: right;">Page 69</p> <p>1 - - -</p> <p>2 (Whereupon, Exhibit</p> <p>3 Sheinin-3, MYLAN-MDL2875-003457,</p> <p>4 11/5/19 FDA Warning Letter, was</p> <p>5 marked for identification.)</p> <p>6 - - -</p> <p>7 MR. DAVIS: I'm marking that</p> <p>8 as Exhibit-3.</p> <p>9 MR. REEFER: John, I'm not</p> <p>10 sure if there's a question</p> <p>11 pending. I'm sorry.</p> <p>12 MR. DAVIS: Sure.</p> <p>13 BY MR. DAVIS:</p> <p>14 Q. Do you have the letter in</p> <p>15 front of you, Dr. Sheinin?</p> <p>16 A. I do.</p> <p>17 Q. Do you recognize that to be</p> <p>18 a copy of the November 5th, 2019, Unit 8</p> <p>19 warning letter that you reference in</p> <p>20 Exhibit B to your report?</p> <p>21 A. Yes.</p> <p>22 Q. And do you see the third</p> <p>23 paragraph -- second and third paragraph</p> <p>24 down, This warning letter summarizes</p>

<p>Page 70</p> <p>1 significant deviations from CGMP for 2 APIs. And, Because your methods and 3 facilities and controls for manufacturing 4 processing, packing or holding do not 5 conform to CGMP, your API are 6 adulterated.</p> <p>7 Do you see those statements?</p> <p>8 A. I see them.</p> <p>9 Q. And because you're not 10 offering any kind of opinion that Mylan 11 was, in fact, in GMP compliance, you 12 don't take any issue with what the FDA 13 says here, do you?</p> <p>14 MR. REEFER: Object to form.</p> <p>15 Mischaracterizes testimony.</p> <p>16 THE WITNESS: This -- this 17 Paragraph 2 and Paragraph 3, I 18 would say probably Paragraph 4, 19 with different dates is pretty 20 much standard boilerplate language 21 that's in every warning letter.</p> <p>22 Mylan's valsartan product is 23 on the market, it's in conformance 24 with the requirements of the USP</p> <p>Page 71</p> <p>1 monograph for the API, as well as 2 for the tablets. And the fact 3 that this language is in here, 4 it's in every warning letter that 5 I've seen.</p> <p>6 BY MR. DAVIS:</p> <p>7 Q. Well, just like with your 8 report, Dr. Sheinin, you have some stock 9 language, for example, that we went over 10 this morning.</p> <p>11 It doesn't make it any less 12 true, right? It doesn't mean that the -- 13 just because it's in every FDA warning 14 letter doesn't mean that this one issued 15 to Mylan, the FDA doesn't mean it when 16 they say that Mylan was not in GMP 17 compliance at Unit 8, correct?</p> <p>18 A. This is -- again, it's 19 boilerplate language that's in every 20 letter, every warning letter. The fact 21 that FDA has allowed Mylan to come back 22 on the market, has not withheld anything 23 from Mylan, there are no import alerts 24 that -- over Mylan, and the fact that</p>	<p>Page 72</p> <p>1 this is -- again, like in my report, this 2 is boilerplate language. It's nothing 3 that forms the basis for my report.</p> <p>4 Q. So should I -- should I 5 give, for example, the boilerplate 6 language in your report less stock 7 somehow, or should I take that to 8 actually be language in your report?</p> <p>9 MR. REEFER: Object to form.</p> <p>10 Compound. Vague.</p> <p>11 THE WITNESS: You can -- you 12 can use that language in my report 13 in any way you like. It's --</p> <p>14 BY MR. DAVIS:</p> <p>15 Q. Well, I'm asking -- I'm 16 asking your opinion, Dr. Sheinin.</p> <p>17 Are you telling me that the 18 language that you cribbed from an old 19 report, I should put less stock into 20 simply because you --</p> <p>21 MR. REEFER: Object to form.</p> <p>22 BY MR. DAVIS:</p> <p>23 Q. -- simply because it's 24 boilerplate?</p> <p>Page 73</p> <p>1 MR. REEFER: Object to form.</p> <p>2 Argumentative. Mischaracterizes 3 the testimony.</p> <p>4 THE WITNESS: Again, 5 that's -- it's typical language. 6 It's -- and the boilerplate 7 language here is just boilerplate 8 language.</p> <p>9 It's -- the fact that FDA 10 let -- has let Mylan back on the 11 market says to me that whatever 12 deviations there were from current 13 good manufacturing practices are 14 such that FDA feels comfortable 15 with Mylan marketing the valsartan 16 products.</p> <p>17 BY MR. DAVIS:</p> <p>18 Q. But that's just pure 19 speculation on your part.</p> <p>20 You told me, Dr. Sheinin, 21 that you haven't looked at any follow-up 22 on this warning letter to see if it's 23 been closed out; and you told me you have 24 no idea what circumstances Mylan was</p>
--	---

<p style="text-align: right;">Page 74</p> <p>1 allowed back on the market, right?</p> <p>2 MR. REEFER: Object to form.</p> <p>3 John, you asked him questions</p> <p>4 about this warning letter and now</p> <p>5 you're yelling at him for trying</p> <p>6 to answer them.</p> <p>7 MR. DAVIS: Well, no. He's</p> <p>8 told me, Jason, that he's not a</p> <p>9 CGMP expert. And I'm just trying</p> <p>10 to elucidate what he means by that</p> <p>11 with an example.</p> <p>12 And my example here --</p> <p>13 MR. REEFER: Right.</p> <p>14 MR. DAVIS: -- is in this</p> <p>15 warning letter that FDA issued to</p> <p>16 Mylan, the FDA says that there's</p> <p>17 significant CGMP deviations.</p> <p>18 BY MR. DAVIS:</p> <p>19 Q. My question to you,</p> <p>20 Dr. Sheinin, is, are you offering any</p> <p>21 opinion that Mylan, in fact, during this</p> <p>22 timeframe, was in CGMP compliance,</p> <p>23 contrary to what the FDA says in this</p> <p>24 warning letter?</p>	<p style="text-align: right;">Page 76</p> <p>1 Go ahead.</p> <p>2 A. But the first time I heard</p> <p>3 about any issues with nitrosamines was in</p> <p>4 2018.</p> <p>5 Q. Well, my question was</p> <p>6 actually the more basic one, which is</p> <p>7 when you first learned what a nitrosamine</p> <p>8 compound was, not whether there were any</p> <p>9 issues in medications.</p> <p>10 And it sounds like the</p> <p>11 answer is at some point in graduate</p> <p>12 school for organic chemistry?</p> <p>13 A. Yeah, I mean, I -- that's a</p> <p>14 functional group, and it's -- a</p> <p>15 nitrosamine, you have to have an amine,</p> <p>16 and it's -- so that's included in</p> <p>17 functional groups in organic chemistry.</p> <p>18 Q. Right.</p> <p>19 A. It's nothing that I worried</p> <p>20 about as a graduate student.</p> <p>21 Q. Right. You would have to</p> <p>22 have --</p> <p>23 A. It was just a functional</p> <p>24 group.</p>
<p style="text-align: right;">Page 75</p> <p>1 MR. REEFER: Object to form.</p> <p>2 Asked and answered.</p> <p>3 THE WITNESS: I'm not</p> <p>4 offering any opinion, because I'm</p> <p>5 not a GMP expert.</p> <p>6 BY MR. DAVIS:</p> <p>7 Q. Okay. Thank you. Thank</p> <p>8 you.</p> <p>9 When did you first learn</p> <p>10 anything about nitrosamines, Dr. Sheinin?</p> <p>11 A. I would have to say probably</p> <p>12 in 2018 when I heard about the reports of</p> <p>13 nitrosamines being in certain products,</p> <p>14 FDA announcements.</p> <p>15 I would think that's the</p> <p>16 first time that I heard -- well, I</p> <p>17 probably heard about them in graduate</p> <p>18 school, but that's -- that's neither here</p> <p>19 nor there.</p> <p>20 Q. Well, that's actually --</p> <p>21 A. I knew what a nitrosamine</p> <p>22 was.</p> <p>23 Q. Sorry, I didn't mean to cut</p> <p>24 you off there.</p>	<p style="text-align: right;">Page 77</p> <p>1 Q. Sorry.</p> <p>2 You would have to have an</p> <p>3 amine and a nitrosating agent under</p> <p>4 acidic conditions, right?</p> <p>5 A. That's nothing that I</p> <p>6 studied in graduate school. I knew what</p> <p>7 a nitrosamine was. I didn't know how</p> <p>8 they formed or what reactions it would</p> <p>9 take.</p> <p>10 Q. Do you know who Dr. Edwin</p> <p>11 Gump is at USP?</p> <p>12 A. The name is not familiar.</p> <p>13 I've been gone for over 15 years, so he</p> <p>14 must be new or --</p> <p>15 Q. If that --</p> <p>16 A. -- since I left.</p> <p>17 Q. Sorry.</p> <p>18 Well, he's stated that</p> <p>19 nitrosamines can be formed, quote, Very</p> <p>20 simply through really simple chemistries.</p> <p>21 Do you have any reason to</p> <p>22 disagree with that statement about how</p> <p>23 nitrosamines are formed?</p> <p>24 MR. REEFER: Object to form.</p>

<p style="text-align: right;">Page 78</p> <p>1 Beyond the scope. 2 THE WITNESS: I'd have to 3 see what document -- what's his 4 name, Gump, Dr. Gump that 5 you're -- 6 BY MR. DAVIS: 7 Q. Dr. Edwin Gump. 8 A. -- referring to? I'd want 9 to try to see his documents and evaluate 10 it for myself. 11 Q. Okay. 12 MR. DAVIS: Let's mark Tab 13 9, Jason, as Exhibit-4. 14 - - - 15 (Whereupon, Exhibit 16 Sheinin-4, No Bates, USP Announces 17 Approval of Chapter on 18 Nitrosamines Impurities, was 19 marked for identification.) 20 - - - 21 BY MR. DAVIS: 22 Q. And I apologize, 23 Dr. Sheinin, it appears that when I 24 printed this to PDF that part of the</p>	<p style="text-align: right;">Page 80</p> <p>1 Beyond the scope. 2 THE WITNESS: His statement 3 is nothing that I use in my report 4 to offer my opinion in this case. 5 I'm not sure that it's 6 really that simple. I would -- 7 well, I'm going to leave it at 8 that. It may be simple, it may 9 not be quite so simple. 10 BY MR. DAVIS: 11 Q. And in writing your report 12 in this case, did you refresh yourself on 13 the chemistry by which nitrosamines are 14 formed, specifically NDMA and NDEA? 15 A. I may have looked at 16 whatever documents were provided and -- 17 but I did not use any information as to 18 how nitrosamines form, to form the basis 19 for my opinion that's in my written 20 report. It's not something that I was 21 concerned with. 22 Q. Did you -- in preparing your 23 report, did you look to see how NDEA 24 specifically was formed in Mylan's</p>
<p style="text-align: right;">Page 79</p> <p>1 article's title was cut off. 2 It reads, USP Announces 3 Approval of Chapter on Nitrosamines 4 Impurities, dated December 3rd, 2021. 5 Do you see that? 6 A. Yes, I do. 7 Q. And then do -- you'll see in 8 the third paragraph, there's a quote 9 attributed to Edwin Gump, Ph.D., vice 10 president of the Small Molecules 11 Department at USP? 12 A. Yes. 13 Q. And he says that, One of the 14 things that makes nitrosamines really 15 tricky is that they actually can be 16 formed very simply through really simple 17 chemistries. 18 Do you see that? 19 A. Yes. 20 Q. You don't have any reason 21 to -- you know, putting on your organic 22 chemistry hat, do you disagree with that 23 statement in any way? 24 MR. REEFER: Object to form.</p>	<p style="text-align: right;">Page 81</p> <p>1 valsartan API? 2 A. I did not specifically look 3 to see how NDEA was formed in Mylan's 4 product. 5 Q. Do you have -- do you have 6 an idea of how NDEA was formed in Mylan's 7 product? 8 MR. REEFER: Objection. 9 Beyond the scope. Calls for 10 speculation. 11 THE WITNESS: I'm not a 12 process chemist, so I am not 13 equipped to make a determination 14 on how NDEA was formed. 15 And it just did not have any 16 influence or input into the basis 17 of my report. So it's beyond what 18 I was asked to opine on. 19 BY MR. DAVIS: 20 Q. I think I know the answer to 21 this question. 22 But you're not asserting any 23 kind of opinion, one way or the other, 24 regarding the genotoxic -- genotoxicity</p>

<p style="text-align: right;">Page 82</p> <p>1 of NDMA or NDEA, are you?</p> <p>2 A. I may be a lot of things,</p> <p>3 but I'm not a toxicologist. And the --</p> <p>4 whether or not it's a potential genotoxic</p> <p>5 impurity or not is beyond my expertise.</p> <p>6 Q. Are you familiar with -- and</p> <p>7 I think you have already mentioned it</p> <p>8 just in passing today, but you're</p> <p>9 familiar with ICH guidelines, correct?</p> <p>10 A. I'm very familiar, well,</p> <p>11 with at least some of the ICH quality</p> <p>12 guidelines.</p> <p>13 Q. Those would be the ones that</p> <p>14 are ICHQ? That start with ICHQ?</p> <p>15 A. That's correct.</p> <p>16 Q. Are you familiar with</p> <p>17 ICH M7?</p> <p>18 A. I know what M7 is. I would</p> <p>19 not say that I'm really familiar with it.</p> <p>20 Q. Did you look at it in</p> <p>21 preparing your expert report in this</p> <p>22 case?</p> <p>23 A. I did not.</p> <p>24 MR. DAVIS: Let me mark that</p>	<p style="text-align: right;">Page 84</p> <p>1 Q. If you'd flip to Page 5,</p> <p>2 Dr. Sheinin, there's a header titled,</p> <p>3 General Principles.</p> <p>4 A. Okay.</p> <p>5 Q. Take a few moments, if you</p> <p>6 would, to read that section, that's</p> <p>7 Subsection 3, General Principles, and</p> <p>8 it's on Page 5 and then goes down to</p> <p>9 the -- about the middle of Page 6.</p> <p>10 And let me know when you're</p> <p>11 ready to discuss.</p> <p>12 A. Okay.</p> <p>13 Okay. I finished reading</p> <p>14 it.</p> <p>15 Q. Let me start with a -- do</p> <p>16 you see that this guidance refers</p> <p>17 specifically to nitrosamines?</p> <p>18 MR. REEFER: Object to form.</p> <p>19 Beyond the scope. Lack of</p> <p>20 foundation.</p> <p>21 THE WITNESS: I see that it</p> <p>22 mentions N-nitroso compounds,</p> <p>23 among others.</p> <p>24 BY MR. DAVIS:</p>
<p style="text-align: right;">Page 83</p> <p>1 as Tab 7 -- sorry, that's Tab 7,</p> <p>2 Jason. I'm going to mark that as</p> <p>3 Exhibit-5.</p> <p>4 - - -</p> <p>5 (Whereupon, Exhibit</p> <p>6 Sheinin-5, No Bates, M7(R1)</p> <p>7 Assessment and Control of DNA</p> <p>8 Reactive (Mutagenic) Impurities in</p> <p>9 Pharmaceuticals to Limit Potential</p> <p>10 Carcinogenic Risk, Guidance for</p> <p>11 Industry, was marked for</p> <p>12 identification.)</p> <p>13 - - -</p> <p>14 BY MR. DAVIS:</p> <p>15 Q. Do you have that in front of</p> <p>16 you, Dr. Sheinin?</p> <p>17 A. Yes, I do.</p> <p>18 Q. Okay. The title of -- the</p> <p>19 specific title of the guidance is,</p> <p>20 Assessment and Control of DNA Reactive</p> <p>21 (Mutagenic) Impurities in Pharmaceuticals</p> <p>22 to Limit Potential Carcinogenic Risk.</p> <p>23 Do you see that?</p> <p>24 A. I see it.</p>	<p style="text-align: right;">Page 85</p> <p>1 Q. And it refers to that group</p> <p>2 that includes N-nitroso compounds as the</p> <p>3 cohort of concern of high-potency</p> <p>4 mutagenic carcinogens.</p> <p>5 Do you see that?</p> <p>6 MR. REEFER: Object to form.</p> <p>7 Beyond the scope. Lack of</p> <p>8 foundation.</p> <p>9 THE WITNESS: I see it, but</p> <p>10 it's not -- I'm not a</p> <p>11 toxicologist, so I can't evaluate</p> <p>12 how much the concern is. It's --</p> <p>13 I can see the words on the paper,</p> <p>14 but I'm not in a position to be</p> <p>15 able to judge whether they're a</p> <p>16 risk or not.</p> <p>17 BY MR. DAVIS:</p> <p>18 Q. And I'm not asking you to,</p> <p>19 Dr. Sheinin.</p> <p>20 The only purpose of this is</p> <p>21 I just want to ask you to confirm that,</p> <p>22 on its face, nitrosamines, N-nitroso</p> <p>23 compounds are subject to this guidance?</p> <p>24 MR. REEFER: Object to form.</p>

Page 86	Page 88
<p>1 Beyond the scope. Lack of 2 foundation. 3 THE WITNESS: I'm not a 4 toxicologist, but I can see the 5 words on this paper -- on this 6 page. It says, N-nitroso 7 compounds. 8 BY MR. DAVIS: 9 Q. Right. And on its face, 10 that means that N-nitroso compounds are 11 subject to what's set forth in this ICH 12 M7 guidance, correct? 13 MR. REEFER: Objection. 14 Same objections. 15 THE WITNESS: I can see on 16 this page that, yes, it says 17 N-nitroso compounds. So N-nitroso 18 compounds are included in this 19 guidance. 20 But that's all I can say. 21 I'm not in a position to be able 22 to evaluate anything involved with 23 N-nitroso compounds. 24 BY MR. DAVIS:</p>	<p>1 Mylan did or did not do what you think 2 that they should have done in terms of 3 N-nitroso compounds. It's not anything 4 that I used in my report, and it's beyond 5 my expertise. 6 Q. Okay. You can put that 7 away. We'll move on. 8 You mentioned at the FDA 9 that you acquired a mass spec instrument 10 in the early 1970s, right? 11 A. Yes. 12 Q. And then -- and then you 13 coupled that with a gas chromatography 14 system? 15 A. The instrument 16 manufacturers, Varian, is the one who 17 coupled it. It's nothing that I would be 18 capable of doing. 19 But, yes, the company did 20 couple the GC with the mass spectrometer. 21 Q. So were you telling me, 22 then, that the FDA acquired a GC-MS that 23 was coupled in the early '70s as well? 24 A. No. They -- we had gas</p>
Page 87	Page 89
<p>1 Q. Right. But you would agree 2 that this guidance does require 3 manufacturers to do that evaluation, 4 correct? 5 MR. REEFER: Object to form. 6 Beyond the scope. Foundation. 7 Go ahead, if you know. 8 THE WITNESS: Again, I'm not 9 a toxicologist, so what would need 10 to be done in terms of N-nitroso 11 compounds is beyond my expertise. 12 And it does not form the basis for 13 anything that's in my report. 14 BY MR. DAVIS: 15 Q. The title of the guidance 16 is, Assessment and Control of DNA 17 Reactive Impurities. 18 Do you have any opinion, one 19 way or the other, as to whether Mylan 20 appropriately assessed or controlled for 21 potential nitrosamine impurities in its 22 valsartan? 23 A. I'm not a toxicologist, so I 24 really can't offer an opinion on whether</p>	<p>1 chromatographs already. We bought the 2 mass spectrometer. And I don't recall if 3 it was a package to get the gas 4 chromatograph, but I'm thinking we got 5 the mass spectrometer first and then 6 Varian came out with a mechanism to 7 couple a gas chromatograph to a mass 8 spectrometer. 9 And the mass spectrometer 10 that we had operated in -- you had to 11 have a vacuum, and trying to take the 12 effluent from a gas chromatograph and 13 putting it into a mass spectrometer was 14 not something that we would have been 15 able to do. And it was something that 16 eventually the instrument manufacturers 17 were able to do. 18 I don't believe that when we 19 got our mass spectrometer initially that 20 we had the capability to couple it to a 21 gas chromatograph. 22 Q. But that was done a little 23 bit later in the 1970s, it sounds like? 24 A. Yeah. Yeah.</p>

<p>Page 90</p> <p>1 Q. Is the sensitivity -- was</p> <p>2 the sensitivity of the mass spectrometer</p> <p>3 back then substantially different from</p> <p>4 what it is today?</p> <p>5 A. I don't know, but I would</p> <p>6 expect that advances have been made in</p> <p>7 mass spectrometry as well as in other</p> <p>8 types of detectors for gas</p> <p>9 chromatography.</p> <p>10 It's just the nature of the</p> <p>11 advancement in science that sensitivity</p> <p>12 is always being improved.</p> <p>13 Q. Well, at least one area</p> <p>14 that's developed is -- are you familiar</p> <p>15 with, like, predictive modeling, where</p> <p>16 you can run a chemical structure through</p> <p>17 a database and it will flag -- flag it as</p> <p>18 potentially mutagenic or genotoxic?</p> <p>19 MR. REEFER: Object to form.</p> <p>20 Beyond the scope. Lack of</p> <p>21 foundation.</p> <p>22 THE WITNESS: I'm not</p> <p>23 familiar with that type of</p> <p>24 database.</p> <p>Page 91</p> <p>1 BY MR. DAVIS:</p> <p>2 Q. Okay. Have you ever heard</p> <p>3 of Derek Nexus?</p> <p>4 A. I've heard of it. I'm not</p> <p>5 familiar with it.</p> <p>6 Q. What about QSAR generally?</p> <p>7 A. What about what?</p> <p>8 Q. Quantitative</p> <p>9 structural-activity relationships, QSAR.</p> <p>10 A. Oh. I've heard of it. I</p> <p>11 really don't know anything about it.</p> <p>12 Again, I'm not a</p> <p>13 toxicologist, so I -- I've heard of it.</p> <p>14 I don't know how it works, and I don't</p> <p>15 know how to use it.</p> <p>16 Q. You would agree, wouldn't</p> <p>17 you, that the GC and mass machines that</p> <p>18 have existed since they were coupled in</p> <p>19 the '70s, or even before then, that those</p> <p>20 were capable of detecting nitrosamines,</p> <p>21 correct?</p> <p>22 MR. REEFER: Object to form.</p> <p>23 Beyond the scope. Incomplete</p> <p>24 hypothetical.</p>	<p>Page 92</p> <p>1 THE WITNESS: I would have</p> <p>2 to know how much of any given</p> <p>3 ingredient or chemical we're</p> <p>4 talking about, in terms of whether</p> <p>5 it could be detected or not.</p> <p>6 It would -- a lot would</p> <p>7 depend on what's in the column</p> <p>8 that's in your gas chromatograph,</p> <p>9 is it going to come off? It's</p> <p>10 very hypothetical, and I really</p> <p>11 can't give you an opinion one way</p> <p>12 or the other.</p> <p>13 BY MR. DAVIS:</p> <p>14 Q. That's not something you</p> <p>15 evaluated in this case, whether GC-MS</p> <p>16 machines were capable of identifying</p> <p>17 NDEA, NDMA in Mylan's valsartan in the</p> <p>18 quantities they were present therein?</p> <p>19 MR. REEFER: Same objection.</p> <p>20 THE WITNESS: That's</p> <p>21 correct, it's nothing that I used</p> <p>22 to form my opinions in my report.</p> <p>23 MR. DAVIS: I'm going to</p> <p>24 mark Tab 11, Jason, as Exhibit-6.</p> <p>Page 93</p> <p>1 - - -</p> <p>2 (Whereupon, Exhibit</p> <p>3 Sheinin-6, No Bates, Valsartan</p> <p>4 Guidance, was marked for</p> <p>5 identification.)</p> <p>6 - - -</p> <p>7 MR. REEFER: He has it,</p> <p>8 John. He's just reviewing it.</p> <p>9 MR. DAVIS: Okay. Sure.</p> <p>10 BY MR. DAVIS:</p> <p>11 Q. Do you recognize this,</p> <p>12 Dr. Sheinin, as the 2020 version of the</p> <p>13 USP standard for valsartan?</p> <p>14 A. I see that it's the</p> <p>15 monograph, official as of May 1st of</p> <p>16 2020, USP, yes.</p> <p>17 Q. Is this the USP that's</p> <p>18 currently effective?</p> <p>19 A. I don't know if this is the</p> <p>20 one that's currently effective. I'd have</p> <p>21 to go online to the current -- to the USP</p> <p>22 online to see if there was a new version</p> <p>23 since May 1st of 2020. I can't say yes</p> <p>24 or no.</p>
--	--

<p style="text-align: right;">Page 94</p> <p>1 Q. Do you see at the top there, 2 there's an official status that says, 3 Currently official on 28 January 2022? 4 A. Yes. 5 Q. Okay. Does that suggest to 6 you that, at least as of that date, that 7 that was the current USP monograph for 8 valsartan? 9 A. Yes. 10 Q. Is there any place in this 11 2020 monograph that mentions anything 12 about nitrosamines at all? 13 A. No. 14 Q. It's not your opinion, is 15 it, then, Dr. Sheinin, that nitrosamines 16 for this monograph only need to be 17 controlled at not more than .1 percent, 18 is it? 19 MR. REEFER: Objection to 20 form. I think it's a double 21 negative. 22 But go on, if you 23 understood. 24 THE WITNESS: Can you repeat</p>	<p style="text-align: right;">Page 96</p> <p>1 toxicologist and I don't know at what 2 level those nitrosamines would have to be 3 controlled. 4 Q. They would be -- in other 5 words, what you're telling -- let me 6 crystallize what you're telling me. 7 I think what you're telling 8 me is that, aside from this USP 9 monograph, there would be other -- other 10 regulatory items, so to speak, that would 11 set different limits for nitrosamines, 12 correct? 13 A. There's always requirements 14 in an NDA or an ANDA application, in the 15 specification, that has tests that are 16 not included in the USP monograph. So 17 it's entirely possible that there could 18 be additional information in what's filed 19 at FDA than what's in a USP monograph. 20 Q. Right. And, I guess, just 21 to tag a general point on that, the USP 22 monograph is not the end-all, be-all in 23 terms of tests that are required to be 24 done on a -- in this case, an API for</p>
<p style="text-align: right;">Page 95</p> <p>1 your question? 2 BY MR. DAVIS: 3 Q. Okay. It's not your 4 opinion, is it, Dr. Sheinin, that 5 nitrosamines only need to be controlled 6 at point -- not more than .1 percent, is 7 it? 8 MR. REEFER: Object to form. 9 Do you mean per the monograph or 10 in general? 11 MR. DAVIS: I'm asking -- 12 I'm asking him generally. 13 BY MR. DAVIS: 14 Q. My question is, you've told 15 me that nitrosamines aren't mentioned 16 anywhere in this monograph. 17 My question is, does that 18 mean, in your opinion, Dr. Sheinin, that 19 nitrosamines only need to be controlled 20 at not more than .1 percent, as stated in 21 this impurity section on the USP 22 monograph? 23 A. It's not something that I 24 feel I can address, because I'm not a</p>	<p style="text-align: right;">Page 97</p> <p>1 valsartan, or another substance, correct? 2 MR. REEFER: Object to form. 3 Go ahead. 4 THE WITNESS: According to 5 the Food, Drug and -- Federal 6 Food, Drug and Cosmetic Act, a 7 drug product or a drug substance 8 or an API, if you will, if there 9 is a USP monograph, that material 10 has to meet the requirements in a 11 USP -- in the USP monograph. 12 FDA has the authority to ask 13 for additional requirements in the 14 specification that's approved 15 generally. Companies include 16 tests and procedures in their drug 17 application that are not included 18 in the USP monograph. 19 BY MR. DAVIS: 20 Q. Right. There are additional 21 tests and limits that can apply that just 22 simply aren't in the USP monograph, 23 correct? 24 A. Yes, there are -- there are</p>

Page 98

1 tests and procedures and acceptance
2 criteria in the specification that's
3 included in an approved application that
4 are not in the USP.

5 Q. And in the case of N-nitroso
6 compounds specifically, we just saw ICH
7 M7, which provides some guidance on
8 testing and limits to control for
9 nitrosamine impurities specifically per
10 that guidance, right?

11 MR. REEFER: Object to form.
12 Beyond the scope. Lack of
13 foundation.

14 THE WITNESS: I saw what was
15 on -- whatever -- the Page 5 of
16 that guidance, that it mentioned
17 N-nitroso compounds.

18 BY MR. DAVIS:
19 Q. You list a number of Mylan
20 fact witness depositions in your Exhibit
21 B to your report.

22 Do you recall listing those?

23 A. I recall that they are on
24 the list and they are things that counsel

Page 99

1 provided to me.

2 Q. Did you ask counsel if that
3 was all of the Mylan fact witness
4 depositions that have been taken in the
5 case?

6 A. I did not.

7 Q. You don't list the
8 deposition of Wayne Talton.

9 Is there -- did you know
10 that he was deposed in this case?

11 A. The name is not familiar to
12 me.

13 Q. You wouldn't know him as
14 Mylan's regulatory affairs corporate
15 witness in this case?

16 A. No, I would not.

22 MR. DAVIS: Let me mark Tab
23 12, Jason. That will be
24 Exhibit-7.

Page 101

1 - - -

2 (Whereupon, Exhibit
3 Sheinin-7, MYLAN-MDL2875-00705126,
4 3/14/19 Cover Letter for Master
5 File GDUFA Complete Response
6 Letter, was marked for
7 identification.)

8 - - -

9 MR. REEFER: This is being
10 marked as 7, right, John?

11 MR. DAVIS: That's correct,
12 Exhibit-7.

13 MR. REEFER: Okay. I'm just
14 making sure I was keeping count.

15 BY MR. DAVIS:
16 Q. Dr. Sheinin, you'll see
17 there's a yellow exhibit sticker -- or
18 maybe it's not yellow if it printed in
19 black-and-white, but there's a sticker on
20 the first page that says Exhibit
21 Plaintiff Talton-11.

22 Do you see that on the top
23 right corner of the very first page of
24 the document?

Page 102

1 A. Yeah.
2 PL-Talton-11?
3 Q. Right.
4 A. Yes, I see it.
5 Q. And you'll see that the --
6 yes.
7 And you'll see that the file
8 name on that page of the file, as it was
9 produced to us by Mylan, says, DMF
10 Quality Information Amendment 20190314?
11 A. Yes.
12 Q. Okay. If you go to the
13 fourth page of the document, you'll see a
14 header, valsartan DMF Number 018253. And
15 then, Response to valsartan DMF letter,
16 dated February 5th, 2019.
17 Do you see that?
18 A. Yes.

6 [REDACTED]
7 BY MR. DAVIS:
8 Q. Turning to your report for a
9 second, Dr. Sheinin, in Paragraphs 64 to
10 66 -- and I'm going to paraphrase you
11 here, and feel free to take issue with my
12 paraphrasing if you'd like, but --
13 A. Which paragraphs again?
14 Q. Sure. Paragraphs 64 through
15 68, under the header, Mylan's Valsartan
16 API Manufactured Between Market Entry in
17 2012 and the Recalls in 2018 Complied
18 With the Standards and Specifications in
19 Place at the Time of Manufacture.
20 A. Yes.
21 Q. You write there in that
22 section -- or one of the things you write
23 is that the valsartan USP monograph did
24 not contain any testing or acceptance

Page 109

1 criteria for nitrosamine content.
2 And I'm specifically guiding
3 you to Paragraph 66.
4 Do you see that?
5 A. Yes.
6 Q. Why is that relevant to you?
7 What's the point of having that in your
8 report?
9 A. The relevance is that I'm
10 opining on the fact that Mylan's
11 valsartan API, manufactured between
12 market entry in 2012 and the recalls in
13 2018, complied with the standards and
14 specifications in place at the time of
15 the manufacture.
16 So it's relevant in that
17 there was no mention in the USP monograph
18 of the need to test for nitrosamines.
19 Q. Okay. But that doesn't mean
20 that Mylan's valsartan was okay simply
21 because it met the USP monograph,
22 correct?
23 MR. REEFER: Object to form.
24 Vague.

<p style="text-align: right;">Page 110</p> <p>1 THE WITNESS: It meant that 2 the -- Mylan's valsartan met the 3 USP monograph prior to recalls of 4 2018, and Mylan's valsartan 5 products are on the market today. 6 They meet the USP monograph. They 7 meet the specifications in the 8 FDA-approved applications. They 9 have USP on the label of the -- 10 both the drug product, valsartan 11 tablets USP, and they also include 12 the USP on the drug substance, 13 valsartan USP. 14 So at this point I've lost 15 track of what your initial 16 question was. 17 BY MR. DAVIS: 18 Q. Well, sure, let me -- let me 19 ask it this way. 20 Is it your testimony, 21 Dr. Sheinin, that between Mylan's entry 22 on the market in 2012 and the time of 23 recall in late 2018/early 2019, that 24 nitrosamines only had to be controlled at</p>	<p style="text-align: right;">Page 112</p> <p>1 monograph and they have to meet the 2 specification requirements in the 3 approved application. 4 Q. And the approved application 5 here is the ANDA, correct? 6 A. Correct. 7 Q. And that references the DMF 8 in this case by Mylan, which you said you 9 didn't review, correct? 10 A. Correct. Because drug 11 master files are not approved or not -- 12 and not not approved. 13 Q. Well, in this case, Mylan -- 14 Mylan's ANDA referenced the drug master 15 file, so it became incorporated into the 16 ANDA. 17 Do you understand that? 18 A. That's correct. And 19 that's -- that's the way it works. 20 But DMFs by themselves are 21 not approved or not -- and not not 22 approved. The FDA takes no -- no 23 regulatory action on drug master files. 24 Q. Right. But they would have</p>
<p style="text-align: right;">Page 111</p> <p>1 not more than .1 percent per the USP 2 monograph? 3 A. The monograph, as well as 4 the specification in the approved 5 application, includes, in the impurities 6 section, a requirement for any unknown 7 impurity not more than 0.1 percent. 8 So in order to meet the 9 requirements of the USP monograph and the 10 ANDA specification for the API, any other 11 unknown impurity would need to be 12 controlled to not more than 0.1 percent. 13 Q. So it is your opinion, then, 14 that during that timeframe Mylan only had 15 to control nitrosamine impurities at not 16 more than .1 percent? 17 Are you saying that the USP 18 standard governs solely Mylan's 19 marketability of its products? 20 A. I'm not equipped to discuss 21 the marketability of a product. I'm a 22 chemist, that's not my area. 23 But in order for Mylan to be 24 on the market, they have to meet the USP</p>	<p style="text-align: right;">Page 113</p> <p>1 taken an action on the ANDA in this case, 2 which incorporated, by reference, the 3 drug master file, correct? 4 A. Yeah. As I believe is 5 included in my -- in my expert report, 6 that when there's deficiencies in a drug 7 master file, the NDA or ANDA holder -- or 8 it's possible to have a DMF that 9 references another DMF. 10 So however it works, the FDA 11 would say in a letter to the applicant 12 that there's issues or deficiencies in 13 the drug master file, and the FDA would 14 send a detailed letter to the drug master 15 file holder detailing what those 16 deficiencies or issues are. But they 17 would not communicate to the NDA or ANDA 18 applicant what those deficiencies are. 19 And I think that's included 20 in my report. So that's how that works. 21 Q. Well, sure. But what I was 22 asking was whether the -- in the setup 23 that Mylan had, where they chose to 24 submit an ANDA and then incorporate, by</p>

Page 114

1 reference, their drug master file, that's
2 submitted with the ANDA to the FDA,
3 correct, and reviewed by the FDA as part
4 of the ANDA review process, is it not?
5 A. I don't think that's exactly
6 right.
7 The drug master file is
8 submitted separately to the agency, and
9 there's a letter authorizing reference to
10 the drug master file that's included in
11 the ANDA. But the ANDA and the drug
12 master file are not submitted at the same
13 time to the same place.
14 Q. Okay. Well, taking that,
15 that they can come in waves -- I take
16 your point there.
17 The point -- the point I'm
18 trying to make, though, is that when the
19 ANDA is submitted -- let's say the drug
20 master file is submitted a month
21 beforehand. When the ANDA is submitted,
22 that makes reference and incorporates by
23 reference the drug master file, that
24 becomes, essentially, part of the ANDA

Page 115

1 submission that the FDA reviews in
2 determining whether to approve the ANDA,
3 correct?
4 A. I wouldn't say -- well, from
5 a -- I'm not a lawyer, so I can't say how
6 that's incorporated -- a drug master file
7 is incorporated into the application.
8 But the drug master file may
9 or may not be reviewed for a given ANDA.
10 It depends on whether the drug master
11 file has been reviewed in the past and
12 found to be acceptable. So when a new
13 ANDA comes in, that drug master file may
14 or may not be reviewed. It depends --
15 Q. Well, let's -- well, let's
16 take Mylan's first ANDA here that was
17 approved. There were three ANDAs.
18 You're familiar with that,
19 right?
20 A. Yes.
21 [REDACTED]
22 [REDACTED]
23 [REDACTED]
24 [REDACTED]

Page 116

1 [REDACTED]
2 [REDACTED]

6 [REDACTED]
7 [REDACTED]
8 [REDACTED]
9 [REDACTED]
10 [REDACTED]
11 [REDACTED]
12 [REDACTED]
13 Q. Okay. And you just told me
14 you haven't reviewed the ANDAs in any
15 particular detail and you haven't
16 reviewed the DMF at all, correct?
17 A. Correct.
18 Q. Let's say, Dr. Sheinin, that
19 there was a discrepancy between the
20 impurity limits in the USP monograph and
21 the limits approved or set by the FDA,
22 whether approving an ANDA or in some
23 other guidance document or official FDA
24 document that sets limits, which would

Page 117

1 control in that instance? Would the USP
2 monograph limit control or would the FDA
3 approved limit control?
4 A. If I remember correctly, the
5 USP acceptance criteria would control.
6 But I'm not 100 percent certain of that.
7 MR. DAVIS: I'm going to
8 mark Tab 10, Jason, as Exhibit-8.
9 - - -
10 (Whereupon, Exhibit
11 Sheinin-8, No Bates, Impurities in
12 Drug Products and Drug
13 Substances - A USP Approach, was
14 marked for identification.)
15 - - -
16 BY MR. DAVIS:
17 Q. Do you have this set of USP
18 slides in front of you, Dr. Sheinin?
19 A. I do.
20 Q. Do you see that it's titled,
21 Impurities in Drug Products and Drug
22 Substances - A USP Approach?
23 A. Yes.
24 Q. Do you know who

<p style="text-align: right;">Page 118</p> <p>1 Dr. Ravichandran is?</p> <p>2 A. I do. I hired him.</p> <p>3 Q. Have you seen this</p> <p>4 presentation before?</p> <p>5 A. I don't believe I have.</p> <p>6 Do you know where it was</p> <p>7 given?</p> <p>8 Q. You might see in very, very</p> <p>9 grayed-out text on the first page that</p> <p>10 says, Last update, March 2018.</p> <p>11 Do you see that?</p> <p>12 A. On the first page here of</p> <p>13 the exhibit? I don't see anything about</p> <p>14 that.</p> <p>15 Q. Okay. It might be too</p> <p>16 grayed out in the way it printed.</p> <p>17 I'll represent to you that</p> <p>18 the document --</p> <p>19 A. Oh, yeah. It's very, very</p> <p>20 light. I can't -- I can't see that.</p> <p>21 Q. And then even smaller text</p> <p>22 on the bottom right corner of each page,</p> <p>23 also grayed out, is a, Copyright 2020,</p> <p>24 USP.</p>	<p style="text-align: right;">Page 120</p> <p>1 THE WITNESS: I think he's</p> <p>2 knowledgeable to the point that</p> <p>3 his supervisor approved giving</p> <p>4 this presentation.</p> <p>5 Again, I can't say that he's</p> <p>6 more or less knowledgeable about</p> <p>7 the topic than other scientists at</p> <p>8 USP. It's -- I -- there's only a</p> <p>9 handful of USP scientists who are</p> <p>10 still there from when I left.</p> <p>11 BY MR. DAVIS:</p> <p>12 Q. Flip to Page 9 as it's</p> <p>13 numbered on these slides.</p> <p>14 And it's, again, in very</p> <p>15 small numbering, gray text in the bottom</p> <p>16 right corner. You'll see a slide that's</p> <p>17 titled, Contents.</p> <p>18 MR. REEFER: John, if you're</p> <p>19 going to ask questions about, you</p> <p>20 know, the substance of this, can</p> <p>21 we have an opportunity to go</p> <p>22 through it? I think Dr. Sheinin</p> <p>23 said he had not seen the</p> <p>24 presentation before.</p>
<p style="text-align: right;">Page 119</p> <p>1 Do you see that?</p> <p>2 A. I see something. I can't</p> <p>3 tell you what it says.</p> <p>4 Q. Okay. Do you hold</p> <p>5 Dr. Ravichandran in high regard?</p> <p>6 MR. REEFER: Object to form.</p> <p>7 THE WITNESS: Yes.</p> <p>8 BY MR. DAVIS:</p> <p>9 Q. You think he's quite</p> <p>10 knowledgeable?</p> <p>11 MR. REEFER: Object to form.</p> <p>12 Vague.</p> <p>13 THE WITNESS: I think he's</p> <p>14 knowledgeable. I don't know that</p> <p>15 he's more or less knowledgeable</p> <p>16 than other scientists at USP.</p> <p>17 BY MR. DAVIS:</p> <p>18 Q. Do you think he's quite</p> <p>19 knowledgeable regarding the USP approach</p> <p>20 to impurities and drug products and drug</p> <p>21 substances, which is the title of this</p> <p>22 presentation?</p> <p>23 MR. REEFER: Object to form.</p> <p>24 Vague. Foundation.</p>	<p style="text-align: right;">Page 121</p> <p>1 MR. DAVIS: I mean, sure.</p> <p>2 It's 90 pages, Jason, and I only</p> <p>3 have questions regarding, at most,</p> <p>4 a couple of them. So I'm not</p> <p>5 sure --</p> <p>6 MR. REEFER: All right.</p> <p>7 MR. DAVIS: -- if fully</p> <p>8 reviewing the document in</p> <p>9 different aspects of it will</p> <p>10 pertain to what I want to talk</p> <p>11 about.</p> <p>12 I mean, what if we -- what</p> <p>13 if we did this, I'll ask my</p> <p>14 questions, and if Dr. Sheinin</p> <p>15 wants to review the pages</p> <p>16 surrounding that for context, I'm</p> <p>17 happy to let him do that.</p> <p>18 MR. REEFER: Yeah. John,</p> <p>19 I'm not trying to interrupt you.</p> <p>20 I just want to give him a fair</p> <p>21 opportunity based on his testimony</p> <p>22 he hadn't seen it before.</p> <p>23 So if the doctor says that,</p> <p>24 you know, he needs to take a</p>

<p>Page 122</p> <p>1 minute to understand it, I just 2 ask that you let him do so. 3 That's all. 4 Fair enough? 5 MR. DAVIS: Fair enough. 6 MR. REEFER: Cool. Thank 7 you. 8 BY MR. DAVIS: 9 Q. So you're at Page 9, the 10 table of contents for this presentation, 11 Dr. Sheinin? 12 A. I see on Page 3 of what 13 you've given me something that says, 14 Contents. I don't know what's -- I can't 15 see any page numbers. 16 Q. Yes. Is it -- did it print 17 out for you as four slides to a page? 18 A. Two slides to a page. 19 Q. Two slides to a page. 20 A. Yes. 21 Q. Okay. I see. 22 So the contents section 23 actually appears twice, it appears. So 24 we can -- we can stick on the one you're</p> <p>Page 123</p> <p>1 on. 2 And, I guess, do you see 3 where it says -- there's a header, 4 Guidelines, guidances? And it says, ICH 5 FDA, below that? 6 A. Yes. 7 Q. Why would -- why would 8 Dr. Ravichandran include ICH/FDA 9 guidelines and guidances in a 10 presentation that's titled, A USP 11 Approach to Impurities? 12 MR. REEFER: Object to form. 13 Foundation. Calls for 14 speculation. 15 THE WITNESS: I don't know 16 why he included them. I'd have to 17 ask him why he included this as a 18 topic. 19 BY MR. DAVIS: 20 Q. Why would they be -- 21 A. I'm not -- 22 Q. Why would they be -- 23 A. I'm not in a position -- 24 MR. REEFER: Can you let him</p>	<p>Page 124</p> <p>1 finish, John? Sorry about that. 2 MR. DAVIS: Yes, go ahead. 3 THE WITNESS: I'm not in a 4 position to be able to say why he 5 included them. I don't know. 6 BY MR. DAVIS: 7 Q. Why would -- let me ask it 8 this way, then: Why would ICH/FDA 9 guidelines and guidances be germane to 10 discussing in a presentation titled, A 11 USP Approach to Impurities? 12 MR. REEFER: Object to form. 13 Foundation. Calls for 14 speculation. 15 THE WITNESS: I can't tell 16 you exactly why. I can tell you 17 that there were times when ICH 18 created a guidance, in FDA 19 perspective, in ICH perspective, 20 when they created a guideline 21 where USP eventually modified a 22 general chapter to be in agreement 23 with what ICH did. 24 So that's the only reason I</p> <p>Page 125</p> <p>1 might be able to offer. But I 2 don't know -- I don't know what 3 was in Ravi's mind as to why he 4 included them in this 5 presentation. It's beyond my 6 capability to tell you why. 7 BY MR. DAVIS: 8 Q. Okay. Turn, if you would, 9 to the slide that's numbered 36. 10 A. What's the -- I don't see 11 any numbers on any of them, so what's the 12 heading? 13 Q. Okay. Flip until you find a 14 USP sort of face page that says, 15 Discussion, in bold lettering. It should 16 be about 15 or so pages in. 17 A. I see something that says 18 Discussion and contents listed again. 19 Q. Yes, correct. 20 And then if you flip a few 21 pages further than that, you'll see a 22 question and answer. 23 The question is, If a 24 manufacturer controls impurities and</p>
--	---

Page 126

1 degradation products in accordance with
2 only a pharmacopeial monograph, is that
3 acceptable to the regulators?
4 Do you see that?
5 A. No.
6 Q. It should be four -- the
7 fifth slide after that discussion face
8 page.
9 A. So if we're counting
10 slides --
11 MR. REEFER: John, would you
12 mind if I went over and helped a
13 little bit?
14 MR. DAVIS: Sure. If you
15 know where it is, Jason, feel free
16 to show it to him.
17 MR. REEFER: I think the
18 challenge we're facing is the way
19 it's printed, the slide number is
20 super-duper faint.
21 And so if you don't mind,
22 I'm going to stand up and just
23 walk around the table.
24 MR. DAVIS: Okay. Not a

Page 127

1 problem.
2 THE WITNESS: Maybe I had
3 the wrong discussion slide.
4 MR. REEFER: I think there's
5 a -- I think there's a number of
6 instances where the heading,
7 Discussion, appears, and I think
8 you guys might have landed on
9 different pages.
10 But, ultimately, Mr. Davis
11 will confirm. But the top of the
12 slide that I'm looking at, John,
13 says, Source of impurities, and
14 it's got a little demonstrative.
15 And then below that it's the
16 second slide that begins with
17 question.
18 MR. DAVIS: Yes, that's
19 right.
20 Thanks, Jason.
21 MR. REEFER: You're welcome.
22 BY MR. DAVIS:
23 Q. Okay. So you'll see the
24 question presented there is, If a

Page 128

1 manufacturer controls impurities and
2 degradation products in accordance with
3 only a pharmacopeial monograph, is that
4 acceptable to the regulators?
5 Do you see that?
6 A. I see it.
7 Q. And then Ravi responds to
8 that question by saying, in the second
9 bullet point of his answer, that, A
10 particular manufacturer's manufacturing
11 method for formulation components may
12 lead to unexpected impurities due to a
13 different route of synthesis, different
14 reagents, et cetera. Different processes
15 may lead to different impurities.
16 Do you see that?
17 A. Yes.
18 Q. And then -- then he
19 continues in the third bullet, it says,
20 If an individual monograph is inadequate
21 to control an impurity, the manufacturer
22 is responsible for developing and
23 validating appropriate analytical
24 procedures, establishing acceptance

Page 129

1 criteria, and communicating with USP.
2 Do you see that?
3 A. Yes.
4 Q. Okay. At any time between
5 2012 and '18, did you see any evidence
6 that Mylan had attempted to communicate
7 with USP regarding setting an acceptance
8 criteria and test for NDMA or NDEA?
9 A. I did not see anything
10 that -- of that nature.
11 MR. REEFER: Object to form
12 and scope.
13 But go ahead.
14 BY MR. DAVIS:
15 Q. Do you disagree with the way
16 that Ravi has answered the question as
17 presented?
18 MR. REEFER: Object to form
19 and scope.
20 THE WITNESS: This is --
21 this is why, when I was at USP, we
22 developed the flexible monograph
23 approach. Because if the
24 innovator either synthesizes their

<p style="text-align: right;">Page 130</p> <p>1 API themselves or purchases it 2 from a third party and an ANDA 3 comes along and a generic company 4 purchases the active ingredient 5 from a different source that's 6 using a different manufacturing 7 procedure, they almost certainly 8 will introduce a different set of 9 impurities; some may be the same 10 as in the innovator's product, 11 some may be different. 12 And USP created this 13 flexible monograph approach 14 between Roger Williams and myself 15 and another chemist who worked for 16 me. And we have a procedure where 17 a company, as it says here, if the 18 individual monograph is inadequate 19 to control the impurity, the 20 manufacturer is responsible for 21 developing, validating appropriate 22 analytical procedures and 23 communicating with USP. 24 So that's a way for the</p>	<p style="text-align: right;">Page 132</p> <p>1 Q. Do you agree that 2 manufacturers are responsible for 3 evaluating their manufacturing method for 4 these different impurities that may 5 result from that specific method that 6 they're undertaking? 7 MR. REEFER: Object to form. 8 Scope. 9 THE WITNESS: I would agree 10 that manufacturers are responsible 11 for the analytical methods that 12 are used to control impurities in 13 their drug substance and drug 14 product, if that's what you're 15 asking. 16 BY MR. DAVIS: 17 Q. Right. They're responsible 18 for evaluating their manufacturing method 19 for potentially different impurities and 20 then if they -- if they find them or 21 are -- let me strike that. 22 Manufacturers are 23 responsible for both evaluating their 24 manufacturing method for these different</p>
<p style="text-align: right;">Page 131</p> <p>1 generic to meet the USP monograph, 2 even if they have a different set 3 of impurities. 4 And the way that works, 5 then, if there would be more than 6 one impurity procedure, as I 7 mention in my report, that I 8 don't -- I'm not sure that I 9 mentioned this part in the report, 10 but if you're using Impurity 11 Procedure 1, you don't have to say 12 anything. If you're using 13 Impurity Procedure 2, you would 14 have to say something in your 15 labeling. And I give an example 16 in my report to that extent. 17 So that's -- that's the 18 premise for why we developed this 19 flexible monograph approach. 20 BY MR. DAVIS: 21 Q. So what Ravi is essentially 22 describing here in his answer is the 23 flexible monograph approach, correct? 24 A. Essentially, yes.</p>	<p style="text-align: right;">Page 133</p> <p>1 impurities, like Ravi mentions, and then 2 once identified, they are also 3 responsible for developing controls for 4 them, which is what Ravi describes in the 5 third bullet of his answer, correct? 6 MR. REEFER: Object to form. 7 Scope. 8 You can answer. 9 THE WITNESS: Companies are 10 responsible for developing the 11 analytical methods and validating 12 them to control whatever 13 impurities are found in their drug 14 substance or in their drug 15 product. 16 BY MR. DAVIS: 17 Q. Well, they're not -- would 18 you agree, manufacturers aren't just 19 responsible for controlling for 20 impurities they happen to find in their 21 drug substances or products, they're also 22 responsible for evaluating the process 23 chemistry to predict potential impurities 24 that may arise from the chemical</p>

Page 134

1 reactions that take place, right?
2 MR. REEFER: Object to form.
3 Beyond the scope.
4 THE WITNESS: That's a
5 position or a responsibility for a
6 process chemist who is designing
7 the process. That's not something
8 that I'm familiar with doing.
9 BY MR. DAVIS:
10 Q. But you're --
11 A. I can't agree or disagree
12 with you.
13 Q. Okay.
14 MR. DAVIS: Let me mark Tab
15 13, Jason.
16 MR. REEFER: Can we put the
17 slides away, John, the USP stuff?
18 MR. DAVIS: Yes, for now.
19 MR. REEFER: Okay. That was
20 ominous.
21 THE WITNESS: Can we go off
22 the record for a second?
23 MR. DAVIS: Sure. Yes.
24 MR. REEFER: I'm sorry,

Page 135

1 before we do, John, can you just
2 say again what you want me to get?
3 MR. DAVIS: Yes. Tab 13.
4 MR. REEFER: Tab 13?
5 MR. DAVIS: Yes. I'm
6 marking it as Exhibit-9, before we
7 go off the record.
8 - - -
9 (Whereupon, Exhibit
10 Sheinin-9, No Bates, FAQs: Organic
11 Impurities, was marked for
12 identification.)
13 - - -
14 MR. DAVIS: Okay. We can go
15 off.
16 VIDEO TECHNICIAN: Going off
17 the record. The time is
18 12:37 p.m.
19 - - -
20 (Whereupon, a discussion off
21 the record occurred.)
22 - - -
23 VIDEO TECHNICIAN: We are
24 back on the record. The time is

Page 136

1 12:38 p.m.
2 BY MR. DAVIS:
3 Q. Okay. Do you have what's
4 been marked as Exhibit-9 in front of you,
5 Dr. Sheinin?
6 A. Yes, Tab 13. I'm trying to
7 write down the numbers. That's 9.
8 Okay. Yes, I have it.
9 Q. You'll see that it's an FAQ
10 document, FAQs: Organic impurities.
11 Do you see that?
12 A. I see that. I see also it's
13 a -- something from USP.
14 Q. Correct. It's been pulled
15 from the USP website. The URL is at the
16 bottom, <https://www.usp.org>, frequently
17 asked questions, organic impurities.
18 Do you see that?
19 A. Yes.
20 Q. And one of the FAQs at the
21 bottom, specifically the fourth one at
22 the bottom of Page 1, is, What does it
23 mean to characterize the impurity profile
24 of a product?

Page 137

1 Do you see that?
2 A. Yes.
3 Q. And then there's an answer
4 that appears on Page 2 of 3, correct?
5 A. Where is the answer?
6 Q. The answer appears on the
7 next page. It starts with, As described
8 in applicable guidance.
9 Do you see that?
10 A. Oh, so this is -- this is
11 answering all four of these questions in
12 one --
13 Q. No, no. What I've done --
14 I'll explain --
15 MR. REEFER: It looks like
16 it's probably a drop-down,
17 Dr. Sheinin, so.
18 MR. DAVIS: That's correct.
19 MR. REEFER: If you just
20 click on --
21 MR. DAVIS: He's right.
22 BY MR. DAVIS:
23 Q. It's a drop-down. And to
24 make the document less lengthy, I've only

Page 138

1 dropped down the question that I'm
2 interested in seeing the answer to.
3 A. Oh, okay.
4 MR. REEFER: Then I'll
5 object on the basis that we don't
6 have the complete document before
7 us.
8 But with that said, if you
9 want to ask questions about it, go
10 ahead.
11 MR. DAVIS: Sure.
12 BY MR. DAVIS:
13 Q. So do you see where the
14 answer to that question, What does it
15 mean to characterize the impurity profile
16 of a product, starts on Page -- the next
17 page?
18 A. I'd like to read it. I'd
19 like to --
20 Q. Sure. Take a moment to read
21 it.
22 A. -- be able to read it.
23 Okay.
24 Q. Okay. Have you had a chance

Page 139

1 to read the answer that USP provides to
2 that question?
3 A. Yes.
4 Q. And it starts with -- it
5 starts with, As described in the --
6 sorry. What was that, Dr. Sheinin?
7 A. I was going to say, are
8 these next bullets, are they part of the
9 answer? Or are they --
10 Q. No, those are additional
11 frequently asked questions regarding
12 organic impurities that come up.
13 So what I'm directing your
14 attention to --
15 A. Okay.
16 Q. -- is the question and
17 answer that I read out for you, which is,
18 What does it mean to characterize the
19 impurity profile of a product? And then
20 the answer that USP provides.
21 Do you understand that?
22 A. Yes.
23 Q. Okay. And the first part of
24 the answer starts with, As described in

Page 140

1 applicable guidance, which include but
2 are not limited to -- and then it refers
3 to some of the ICHQ guidances.
4 Do you see that?
5 A. Yes.
6 MR. REEFER: Objecting to
7 the form. Beyond the scope. But,
8 go ahead. Sorry.
9 BY MR. DAVIS:
10 Q. So would you agree that even
11 if there is a USP monograph for a
12 product, that doesn't mean that the
13 manufacturer doesn't also have to comply
14 with other applicable guidance, for
15 example, such as ICH guidances as the USP
16 states here, correct, especially
17 regarding organic impurities, right?
18 MR. REEFER: Object to form.
19 Beyond the scope.
20 Go ahead, Dr. Sheinin.
21 THE WITNESS: I believe USP
22 is in agreement with the ICH
23 guidances, in terms of how
24 impurities are handled in their

Page 141

1 monographs. So there's -- they
2 are in agreement.
3 BY MR. DAVIS:
4 Q. Well, my question, and maybe
5 you're answering it in an indirect way,
6 but my question is, even if there is a
7 USP monograph for a product, that doesn't
8 mean that any other applicable guidances,
9 as USP terms it here, including,
10 specifically, ICH guidances, that those
11 aren't -- that those aren't likewise
12 applicable even in the presence of a USP
13 monograph?
14 MR. REEFER: Same objection.
15 Go ahead, Doctor.
16 THE WITNESS: FDA -- FDA
17 says guidances are suggestions.
18 So I -- there are other approaches
19 that a company can take that could
20 differ from an ICH guidance, as
21 well as an FDA guidance.
22 So I can't say that
23 companies are required to follow
24 other guidances. They are not

Page 142

1 required to. They can have
2 different approaches.
3 BY MR. DAVIS:
4 Q. If a company were to take a
5 different approach under an ICH guidance,
6 isn't that something they would have to
7 consult with the FDA about first?
8 MR. REEFER: Objection.
9 Beyond the scope.
10 THE WITNESS: FDA's
11 guidances -- ICH guidances, in and
12 of themselves, don't have anything
13 to do with FDA, sort of. FDA has
14 to publish those guidances before
15 they become FDA official
16 guidances.
17 But once they -- once they
18 publish them, there's no
19 difference between an ICH guidance
20 and an FDA guidance. They're one
21 and the same. So I can't
22 distinguish an FDA guidance from
23 an ICH guidance.
24 BY MR. DAVIS:

Page 143

1 Q. My general question, though,
2 is, even where a USP monograph exists,
3 there are other applicable guidances,
4 regulations, et cetera, that don't just
5 go away, right?
6 MR. REEFER: Object to form.
7 Beyond the scope.
8 THE WITNESS: I don't -- I
9 don't discuss these other ICH
10 guidances or other FDA guidances
11 to form the basis of my opinion in
12 my report. So I'm -- I'm at a
13 loss to understand what you're
14 really asking me.
15 BY MR. DAVIS:
16 Q. Well, what I'm asking you,
17 and I'll phrase it differently, but just
18 because, you know, you haven't talked
19 about it in your report doesn't mean I'm
20 not entitled to ask you a question about
21 it.
22 My -- let me ask it this
23 way: When there's a USP monograph, the
24 USP monograph doesn't just supercede

Page 144

1 other applicable FDA guidances,
2 regulations or other FDA authorities that
3 exist, right?
4 A. As a layperson, not a
5 lawyer, I can't really comment on the
6 legal aspects of that. So it's difficult
7 for me to give you an answer to that.
8 From a legal perspective, it's out of my
9 area.
10 Q. So you're not holding
11 yourself out as a regulatory expert?
12 A. I'm not holding myself out
13 as a legal expert.
14 Q. Well, my question is a
15 regulatory one, not a legal one.
16 My question is, when there
17 is a USP monograph for a product, does
18 that supercede and just make, you know,
19 irrelevant other -- other applicable
20 regulations or guidances, including, for
21 example, ICH guidances that the FDA has
22 adopted?
23 A. I think I said earlier that
24 USP in general is in conformance with ICH

Page 145

1 guidances. So I don't know that there's
2 a difference there.
3 MR. REEFER: John, if you're
4 happening to transition, do you
5 want to talk a little bit about
6 planning? We've been on about an
7 hour and 50 minutes here.
8 MR. DAVIS: Let me just
9 finish this document, and then we
10 can talk about that.
11 BY MR. DAVIS:
12 Q. If you look at the next
13 paragraph, Dr. Sheinin, it says, The
14 methods used to characterize an impurity
15 profile include, but are not limited to,
16 a sound scientific appraisal of the
17 chemical reactions involved in the
18 synthesis of the drug substance and the
19 impurities associated with raw materials,
20 et cetera, et cetera.
21 Do you see that?
22 A. Yes.
23 Q. That's consistent with what
24 Ravi is saying in his presentation we

Page 146

1 looked at in Exhibit-8, right, that you
2 can't just rely on a USP monograph, you
3 have to do a sound scientific appraisal
4 of your own manufacturing method, right?
5 MR. REEFER: Object to form.
6 Asked and answered.
7 THE WITNESS: The -- whoever
8 is developing the process to
9 create the drug substance is a
10 process chemist, and they would be
11 the ones to understand that
12 process.
13 It's not something that I
14 feel comfortable or capable of
15 second-guessing what a process
16 chemist would do. It's not
17 something that I have done, as I
18 have not worked in the industry,
19 and it's not something I've done
20 where you have to scale up a
21 process. It's just not within my
22 expertise.
23 BY MR. DAVIS:
24 Q. And I'm not -- I'm not

Page 147

1 asking you, Dr. Sheinin, to comment on
2 the substance of any particular
3 scientific appraisal of impurities that
4 was done by anyone, including Mylan.
5 I'm just asking you to
6 confirm what USP is saying here and what
7 Ravi said in his presentation we just
8 looked at in Exhibit-8, that such an
9 obligation exists?
10 MR. REEFER: Object to the
11 form. Scope.
12 THE WITNESS: And I think I
13 discussed before about the purpose
14 of an analytical method is to
15 detect and quantify, or in some
16 cases to qualify, impurities in
17 these materials.
18 So I would have to say that
19 there needs to be analytical
20 procedures to control impurities
21 in drug substances and drug
22 products.
23 BY MR. DAVIS:
24 Q. Not just analytical

Page 148

1 procedures, though; there actually has to
2 be -- and I hear you when you say this is
3 a process chemist's job to do
4 substantively, but there has -- there has
5 to be an evaluation, i.e., what -- in the
6 USP's terms, a quote, sound scientific
7 appraisal of the chemical reactions.
8 Do you disagree that that's
9 what the -- do you disagree with this USP
10 document here, that that obligation
11 exists?
12 MR. REEFER: Object to form.
13 Scope.
14 But go ahead, Doctor, you
15 can answer.
16 THE WITNESS: I'm rereading
17 this paragraph.
18 I have difficulty in putting
19 into general terms this. Yes, I
20 think you need to be able to look
21 at your analytical method and have
22 a technique, whatever your
23 detection is, to be able to
24 identify whatever impurities are

Page 149

1 in the -- whatever analyte you're
2 looking for.
3 BY MR. DAVIS:
4 Q. Okay. But that's analytical
5 chemistry.
6 What --
7 A. That -- that's what I can
8 talk to.
9 Q. Okay. So you have no
10 opinion on whether a manufacturer is
11 required to do a sound scientific
12 appraisal of the chemical reactions
13 involved in its manufacturing process?
14 A. I did not use anything in
15 this -- that's discussed in this document
16 to form the basis of my opinions about
17 USP.
18 As I mention, I did talk
19 about the flexible monograph approach,
20 and I understand that different routes of
21 synthesis can lead to different
22 impurities. And that's a way for USP to
23 be able to have companies able to meet
24 the requirements of the monograph, even

Page 150

1 when the impurity profile is different
2 than what is there in the -- from the
3 innovator product.
4 Q. And as part of that flexible
5 monograph approach, that requires
6 somebody to look at how -- how their
7 method of manufacture may differ from
8 another method and to predict the kinds
9 of impurities that may arise from that --
10 from that -- those changes in the
11 manufacturing method, correct?
12 That's part of the sound
13 scientific appraisal that the USP is
14 referring to here, is it not?
15 MR. REEFER: Object to form.
16 Scope.
17 Go ahead, Doctor, you can
18 answer.
19 THE WITNESS: I'll have to
20 fall back on what I've said.
21 There has -- the method that's
22 used is different depending on
23 what the impurity profile is.
24 So there's a -- that's why

Page 151

1 USP created the flexible monograph
2 approach.
3 BY MR. DAVIS:
4 Q. Are you familiar with FDA
5 guidances on conducting risk assessments?
6 A. On what?
7 Q. Conducting risk assessments?
8 A. For nitrosamines or just in
9 general?
10 Q. No, generally.
11 A. No, I'm not.
12 Q. Okay. And in working on
13 your report, did you see any evidence
14 that Mylan had done a sound scientific
15 appraisal of the chemical reactions
16 involved in the synthesis of Mylan's
17 valsartan API for impurities?
18 MR. REEFER: Objection to
19 form. I'm sorry, John. I thought
20 you were done. I apologize.
21 Objection to form. Beyond
22 the scope. Asked and answered.
23 THE WITNESS: I did not look
24 to see if there was anything as

Page 152

1 you described. I did not go
2 through the drug master file,
3 which is where any information
4 like that would have -- would have
5 been.
6 There was really nothing in
7 the application, in the ANDA that
8 I looked at, that contained any
9 information of that type. I did
10 not see anything. I have no way
11 of knowing if it's there or not.
12 BY MR. DAVIS:
13 Q. Let's say that someone did
14 do a sound scientific appraisal and it
15 led them to believe they might be
16 creating nitrosamine by-products in their
17 drug substance.
18 Are you with me?
19 MR. REEFER: What's that,
20 John? You broke up.
21 MR. DAVIS: Sure.
22 BY MR. DAVIS:
23 Q. I'm asking you a
24 hypothetical, Dr. Sheinin.

Page 153

1 The hypothetical is, let's
2 say there was someone at a generic
3 manufacturer who did a sound scientific
4 appraisal of the chemical reactions for
5 an API drug product substance and
6 believed, as a result of that sound
7 scientific appraisal, that the process
8 would create nitrosamine by-products.
9 Do you follow me?
10 A. I follow you.
11 Q. What would be their
12 obligation under applicable guidances and
13 regulations to do next, do you know?
14 MR. REEFER: Objection to
15 form. Incomplete hypothetical.
16 Beyond the scope. And foundation.
17 But go ahead.
18 THE WITNESS: I'm not
19 prepared to answer hypothetical
20 questions. It's --
21 BY MR. DAVIS:
22 Q. There's no basis for you not
23 to answer any question.
24 MR. REEFER: John, you

<p style="text-align: right;">Page 154</p> <p>1 interrupted him.</p> <p>2 MR. DAVIS: Well, look, he's</p> <p>3 saying he's not willing to answer</p> <p>4 a hypothetical question. That's</p> <p>5 not how this works. I'm</p> <p>6 entitled --</p> <p>7 MR. REEFER: He wasn't --</p> <p>8 MR. DAVIS: -- to ask</p> <p>9 questions --</p> <p>10 MR. REEFER: He wasn't --</p> <p>11 John, he wasn't even able to</p> <p>12 finish his answer. So I think</p> <p>13 it's a little bit presumptuous to</p> <p>14 suggest how he was going to</p> <p>15 respond in totality. Perhaps --</p> <p>16 BY MR. DAVIS:</p> <p>17 Q. You followed --</p> <p>18 MR. REEFER: -- you should</p> <p>19 let him respond.</p> <p>20 BY MR. DAVIS:</p> <p>21 Q. You followed my hypothetical</p> <p>22 question.</p> <p>23 What's your answer to it,</p> <p>24 Dr. Sheinin?</p>	<p style="text-align: right;">Page 156</p> <p>1 under the regulations, to do next, do you</p> <p>2 know?</p> <p>3 MR. REEFER: Object --</p> <p>4 objection to form. Beyond the</p> <p>5 scope. Incomplete hypothetical.</p> <p>6 And foundation.</p> <p>7 Go ahead, Doctor, if you</p> <p>8 know.</p> <p>9 THE WITNESS: I don't know</p> <p>10 what the obligation is under</p> <p>11 applicable guidance. I -- I have</p> <p>12 to go back and reread some of</p> <p>13 those guidances to see if there is</p> <p>14 language to that effect that says</p> <p>15 exactly what you said.</p> <p>16 BY MR. DAVIS:</p> <p>17 Q. Would it be your</p> <p>18 expectation -- and I get that you haven't</p> <p>19 actually reviewed the necessary documents</p> <p>20 in this case.</p> <p>21 But would it be your</p> <p>22 expectation that Mylan, here, did a sound</p> <p>23 scientific appraisal for potential</p> <p>24 genotoxic impurities, based on its</p>
<p style="text-align: right;">Page 155</p> <p>1 MR. REEFER: Object to form.</p> <p>2 Incomplete hypothetical. Beyond</p> <p>3 the scope. And foundation.</p> <p>4 But go ahead, Doctor, you</p> <p>5 can continue your answer.</p> <p>6 THE WITNESS: I would have</p> <p>7 to have some data, I would have to</p> <p>8 have some real information to be</p> <p>9 able to address a hypothetical</p> <p>10 question.</p> <p>11 It depends. It could be</p> <p>12 yes, it could be no. It's just --</p> <p>13 it's hypothetical. It's not real</p> <p>14 world.</p> <p>15 BY MR. DAVIS:</p> <p>16 Q. No. I respectfully and</p> <p>17 wholeheartedly disagree.</p> <p>18 I'm asking you, not</p> <p>19 quantitatively, I'm asking you</p> <p>20 qualitatively, if a person at a</p> <p>21 pharmaceutical manufacturer did a sound</p> <p>22 scientific appraisal and said, oh, we</p> <p>23 might be creating nitrosamine</p> <p>24 by-products, what's their obligation,</p>	<p style="text-align: right;">Page 157</p> <p>1 detailed laboratory process for creating</p> <p>2 valsartan API?</p> <p>3 MR. REEFER: Object to form.</p> <p>4 Beyond the scope.</p> <p>5 You almost acknowledge this</p> <p>6 is beyond the scope, John. I</p> <p>7 mean, you keep asking these</p> <p>8 questions. But, you know, at some</p> <p>9 point there's got to be some</p> <p>10 connection to the report, right?</p> <p>11 But with that being said, go</p> <p>12 ahead, Doctor, if you can --</p> <p>13 MR. DAVIS: Let me respond</p> <p>14 to that briefly, Jason. I'm</p> <p>15 entitled to ask him about what's</p> <p>16 in his report. I'm also entitled</p> <p>17 to point out things that he hasn't</p> <p>18 looked at, at all, or that he</p> <p>19 might -- he might think relevant</p> <p>20 or that he might, if he hasn't</p> <p>21 reviewed them, might -- you know,</p> <p>22 this is in his wheelhouse.</p> <p>23 So, you know, I'm entitled</p> <p>24 to ask the question even if it's</p>

Page 158

1 not in the report, because it's
2 part of his -- his 40 years of
3 work at the regulator and at USP,
4 and it's tangential to what he's
5 got in his report.
6 So, yeah, I'm entitled to
7 ask the question.
8 MR. REEFER: Well, that's
9 incorrect, John. You can't force
10 him to offer opinions that he
11 hasn't formulated for purposes of
12 this litigation on the spot, on
13 the fly, based on your
14 hypotheticals.
15 He says that he hasn't done
16 this analysis. He's not offering
17 the opinion on whether Mylan's DMF
18 was adequate or otherwise.
19 BY MR. DAVIS:
20 Q. Would you expect that it was
21 adequate, given what you know about the
22 facts of this case?
23 MR. REEFER: Objection to
24 form. Foundation. Scope.

Page 159

1 Go ahead.
2 BY MR. DAVIS:
3 Q. Would you expect,
4 Dr. Sheinin, that Mylan did, in fact, do
5 a sound scientific appraisal for
6 potential genotoxic impurities, based on
7 its detailed laboratory process, when, in
8 fact, there were genotoxic impurities in
9 Mylan's valsartan?
10 Would you expect --
11 MR. REEFER: Object to form.
12 BY MR. DAVIS:
13 Q. -- they did do that, given
14 what the history showed?
15 MR. REEFER: Object to form.
16 It's compound. Beyond the scope.
17 Lack of foundation. Incomplete
18 hypothetical.
19 But go ahead, Doctor.
20 THE WITNESS: The fact that
21 Mylan is on the market and FDA has
22 not, again, recalled or asked
23 Mylan to recall their product says
24 to me that their DMF is adequate

Page 160

1 and FDA has no reason to take
2 other regulatory action.
3 BY MR. DAVIS:
4 Q. Are you -- sir, are you not
5 aware that Mylan recalled every single
6 lot and batch of valsartan API that was
7 on the market in 2018 and 2019? Are you
8 not aware of that fact?
9 A. I'm aware of that. I'm also
10 aware that Mylan is back on the market.
11 Q. Okay. But you haven't --
12 we've gone over this about four or five
13 times today.
14 You have no idea the
15 circumstances how they got back on the
16 market, do you?
17 MR. REEFER: Object to form.
18 Argumentative. Beyond the scope.
19 MR. DAVIS: Well, he says
20 it's not in his report, and yet he
21 keeps bringing up the fact that
22 Mylan is back on the market, and
23 he doesn't know anything about how
24 they got back on the market.

Page 161

1 So I'm happy -- if you want
2 me to stick to your report,
3 Dr. Sheinin, you have to stick to
4 your report, too. And you brought
5 this up six times, but you haven't
6 looked at it at all.
7 MR. REEFER: Because, John,
8 you keep asking him questions
9 about areas that he's not going
10 into. I mean --
11 BY MR. DAVIS:
12 Q. You've reviewed the
13 nitrosamine testing data, have you not,
14 Dr. Sheinin? That's in your materials
15 considered list, is it?
16 MR. REEFER: Object to form.
17 Beyond the scope.
18 THE WITNESS: What are you
19 saying I reviewed?
20 BY MR. DAVIS:
21 Q. Your materials considered
22 list, Exhibit B, refers to you having
23 reviewed Mylan's nitrosamine testing data
24 for its valsartan products.

Page 162

1 Did you actually look at
2 that?
3 A. Are you referring to a
4 spreadsheet?
5 Q. Yes, I am.
6 A. I did see the spreadsheet.
7 Q. Okay. And did you see that
8 NDEA was present in every single line
9 there in that spreadsheet, every -- in
10 each line, representing a different lot
11 or batch of valsartan, that there was
12 NDEA in every single one of them? Did
13 you see that?
14 MR. REEFER: Object --
15 object to form. Mischaracterizes
16 the document.
17 Do you want to look at it,
18 John?
19 MR. DAVIS: He looked at it.
20 I'm entitled to ask him about it.
21 BY MR. DAVIS:
22 Q. Did you see the document?
23 You said you saw the
24 spreadsheet that had the nitrosamine

Page 163

1 testing data, that's right, Dr. Sheinin,
2 correct?
3 A. Correct.
4 Q. Okay. And did you see that
5 every single lot or batch on that
6 spreadsheet had NDEA in it?
7 A. I did not notice -- I did
8 not look at the entire spreadsheet, so I
9 can't say that yes or no, every single
10 lot had NDEA -- NDEA in it. I'd be happy
11 to look at it again.
12 Q. Do you think that -- do you
13 think that NDEA would have made it into
14 Mylan's valsartan products if they had
15 done a sound scientific appraisal of
16 their chemical manufacturing process?
17 MR. REEFER: Object to form.
18 Beyond the scope. Calls for
19 speculation. Foundation.
20 This is -- John, I'll just
21 let you know, this will be the
22 last question until -- you know, I
23 asked for a break 22 minutes ago.
24 And, you know, this is still going

Page 164

1 on.
2 So go ahead, Doctor.
3 THE WITNESS: That is not
4 something that I can answer. It's
5 organic chemistry, it's process
6 chemistry, and I can't say yes or
7 no. It's not within my -- the
8 expertise that I developed over
9 the last 50 years.
10 BY MR. DAVIS:
11 Q. It's in the FDA's warning
12 letter to Mylan, correct?
13 The FDA, in their warning
14 letter, said to Mylan that your firm had
15 not anticipated the creation of
16 nitrosamines in your drug product.
17 And that was the basis for
18 the warning letter, was that failure, was
19 it not?
20 MR. REEFER: Object to form.
21 Beyond the scope. Foundation.
22 Mischaracterizes the document.
23 THE WITNESS: FDA has said
24 that the formation of nitrosamines

Page 165

1 was unexpected. They did not see
2 it either. And they did a -- I
3 would hope, did a very thorough
4 review of the drug master file
5 that was submitted by Mylan. And
6 they did not see it.
7 So it's not something that I
8 would have seen, because it's
9 outside of my expertise. FDA did
10 not see it either, so --
11 BY MR. DAVIS:
12 Q. Okay. Well, you're
13 assuming --
14 A. -- it's not something --
15 Q. -- that Mylan disclosed all
16 the facts.
17 You're assuming there that
18 Mylan, in the DMF, actually disclosed the
19 salient information to the FDA, are you
20 not?
21 MR. REEFER: Object to form.
22 Beyond the scope. Argumentative.
23 Foundation.
24 He's not reviewed the DMF.

Page 166

1 He's not offering an opinion on
2 the content of the DMF, whether
3 Mylan's risk evaluation was --
4 MR. DAVIS: Hang on, Jason.
5 MR. REEFER: -- or
6 otherwise.
7 MR. DAVIS: Stop with the
8 speaking objections. He's brought
9 up that the FDA didn't see it
10 either. I'm entitled to ask about
11 that.
12 BY MR. DAVIS:
13 Q. And my question about that,
14 Dr. Sheinin, is, you're making an
15 assumption there that the FDA had the
16 same information in their hands that
17 Mylan did, right, based on what was in
18 the DMF?
19 MR. REEFER: Objection.
20 Foundation. Form. Can't speak to
21 what FDA knew or didn't know.
22 Go ahead, Doctor, if you
23 can.
24 THE WITNESS: I mean, I have

Page 167

1 not seen the DMF, so I don't know
2 what was in it.
3 I -- maybe I'm naive, but I
4 did not -- when I was at FDA, I
5 did not make an assumption that
6 companies that submitted drug
7 master files were not telling me
8 the truth. So I'm at a loss
9 there.
10 It's -- I don't know what
11 was in the DMF, so I don't know
12 exactly what FDA reviewed. But
13 FDA has said in several of their
14 statements on nitrosamines that
15 the presence of nitrosamines was
16 unexpected. So it goes beyond
17 Mylan, it goes to all the
18 companies who were making similar
19 types of APIs. The FDA has said
20 this was totally unexpected. And
21 I believe the EMA has said the
22 same thing, that it was
23 unexpected.
24 MR. REEFER: With that said,

Page 168

1 John --
2 MR. DAVIS: Last question --
3 last question before lunch.
4 BY MR. DAVIS:
5 Q. You said that, you know, you
6 had a right, when you were at FDA, to
7 assume what was being provided to you was
8 the truth, correct?
9 A. I didn't say it was a right.
10 I said that was me, as Eric Sheinin,
11 assuming that what was in the DMF was the
12 truth.
13 Q. That's a fair --
14 MR. REEFER: So, John --
15 BY MR. DAVIS:
16 Q. That's a fair --
17 MR. REEFER: John, hold on.
18 BY MR. DAVIS:
19 Q. -- and reasonable assumption
20 to make, right?
21 MR. REEFER: Hold on.
22 John, you said last question
23 and, you know. That was your last
24 question.

Page 169

1 MR. DAVIS: Let me -- let me
2 tie a bow on it.
3 BY MR. DAVIS:
4 Q. That was a fair and
5 reasonable assumption for someone in your
6 shoes at the FDA to make, that the DMF
7 that was being provided to them was the
8 truth, was transparent, correct?
9 MR. REEFER: Object to form.
10 Beyond the scope.
11 Go ahead, Dr. Sheinin, if
12 you want.
13 THE WITNESS: Yes. That was
14 my assumption. And I would think
15 that when FDA investigators come
16 in to the facility and are doing
17 an inspection to make sure that
18 the manufacturer is performing the
19 synthetic scheme to what's in the
20 drug master file that they would
21 be viewing whether or not the
22 processes that are being used to
23 manufacture and synthesize the
24 active ingredient are what's

<p>Page 170</p> <p>1 included in the drug master file. 2 If there was any 3 discrepancies, I would expect an 4 FDA investigator to note them. 5 MR. REEFER: So with that 6 being said, John, how long do you 7 need for lunch? And sort of let's 8 talk planning a little bit. 9 MR. DAVIS: We can go off 10 the record. 11 VIDEO TECHNICIAN: Going off 12 the record. The time is 1:17 p.m. 13 - - - 14 (Whereupon, a luncheon 15 recess was taken.) 16 - - - 17 VIDEO TECHNICIAN: We are 18 back on the record. The time is 19 2:19 p.m. 20 BY MR. DAVIS: 21 Q. Okay. Dr. Sheinin, I'm 22 going to mark Tab 5. 23 - - - 24 (Whereupon, Exhibit</p>	<p>Page 172</p> <p>1 files? 2 A. I don't think that the -- 3 whatever information that was in there 4 was really pertinent to my discussion of 5 drug master files in my report. I wasn't 6 going to be opining on the adequacy of 7 Mylan's DMF. 8 So in the interest of the 9 time that I had to devote to this 10 project, if I had gotten involved in 11 really looking at the DMF, I probably 12 would have just wanted to keep going and 13 going. 14 So it just -- it wasn't 15 necessary for what I was asked to look 16 at. 17 Q. Well, let me direct your 18 attention, then, before we turn to 19 Exhibit-10, back to your report for a 20 second. 21 I just want to get 22 clarification on what you mean in 23 Paragraph 68 of your report where you 24 write, Mylan's valsartan USP API</p>
<p>Page 171</p> <p>1 Sheinin-10, 2 MYLAN-MDL2875-00894833, Valsartan 3 Drug Master File, Section 3.2.S.3, 4 was marked for identification.) 5 - - - 6 BY MR. DAVIS: 7 Q. Let me know when you have 8 that document in front of you. 9 MR. REEFER: And I think, 10 John, this is 10, Exhibit-10, that 11 is. 12 MR. DAVIS: Exhibit-10, 13 that's right. 14 THE WITNESS: I have it. 15 BY MR. DAVIS: 16 Q. Okay. Let me ask a 17 prefatory question. 18 You told me you did not 19 review any aspect of Mylan's DMF; is that 20 right? 21 A. That is correct. 22 Q. Can I ask why, given that 23 you have an entire section of your report 24 dedicated to discussing drug master</p>	<p>Page 173</p> <p>1 continued to meet its specification, as 2 well as it's DMF specification, 3 throughout this period. 4 What are you -- what do you 5 mean by "DMF specification" there? 6 A. By DMF specification I mean 7 what was on file with the FDA. 8 Q. Okay. But you didn't review 9 the DMF? 10 A. That's correct. But I did 11 look at certificates of analysis, so I 12 could see that Mylan was in compliance 13 with all of the acceptance criteria in 14 the DMF. 15 Q. So what is -- is a DMF 16 specification similar to a USP 17 specification, it just has a test 18 procedure laid forth, basically? 19 A. A DMF specification is, 20 basically, the same specification that's 21 in the ANDA. Because that's where the 22 specification comes from, since Mylan is 23 using a drug master file to report that 24 information to FDA.</p>

<p style="text-align: right;">Page 174</p> <p>1 So that means that the DMF 2 specification has more in it than what's 3 in the USP monograph. 4 Q. Okay. 5 A. Because the application 6 specification is the same as the DMF 7 specification, and that has additional 8 tests in it. 9 Q. Is the DMF specification 10 sort of the final output of the ANDA DMF? 11 A. I don't understand that 12 question. I'm not clear. 13 Q. Sure. 14 There might be -- for 15 example, let's take a category of 16 testing, like residual solvent testing, 17 that's in the DMF specification. 18 There's a lot of workup in 19 the DMF regarding what to test for that's 20 ultimately put in the DMF specification, 21 is it not -- is there not? 22 A. That's correct. 23 Q. So the DMF specification, 24 ultimately, is an output of all of the</p>	<p style="text-align: right;">Page 176</p> <p>1 documented? 2 A. Well, part of the work 3 that's in the specification is the 4 analytical methods. And that's -- that's 5 done in Section 4.2 of the application. 6 And Section 4.3 is the validation of the 7 analytical method. 8 So that -- that's -- that 9 has to be done before you can have a 10 specification. 11 Q. And where -- where is that 12 work documented? It's documented in the 13 DMF, is it not? 14 A. The method validation work 15 is -- should be documented in the drug 16 master file. So those -- the method 17 validation for each one of the analytical 18 procedures that's used to control the 19 quality of the product should be included 20 in the drug master file. 21 Q. Okay. Back to Exhibit-10, 22 which I just marked. 23 Do you recognize that as the 24 impurities section of the valsartan drug</p>
<p style="text-align: right;">Page 175</p> <p>1 work that's done in the DMF itself, 2 right? 3 A. Yes and no. I mean, there's 4 other information in the DMF that has 5 nothing to do with the specification. 6 Q. Sure. But what's in the 7 specification is an output of what's -- 8 of the work that's done in the DMF, is it 9 not? 10 A. I've never heard it 11 expressed in that way. It's the -- the 12 specification is what FDA says you have 13 to meet, your specification. 14 And, in general, what's in 15 the USP monograph is in agreement with 16 the part of the specification that those 17 tests are included in. 18 Q. You wouldn't just write a 19 DMF specification, would you? There's 20 quite a bit of work that goes into 21 generating a DMF specification, right? 22 A. Well, yeah. Yeah. Of 23 course. 24 Q. And where is that work</p>	<p style="text-align: right;">Page 177</p> <p>1 master file? 2 A. No, I've never seen this, 3 because I didn't look at the drug master 4 file. 5 Q. Right. I understand that 6 you haven't seen this in particular. 7 But you've seen drug master 8 files generally, correct? 9 A. Yes. 10 Q. And a drug master file will 11 have an impurities section, will it not? 12 A. It should have an impurities 13 section, yeah. 14 Q. Okay. And does what I've 15 marked here as Exhibit-10 look like that 16 might be the impurities section of 17 Mylan's valsartan USP drug master file? 18 A. It looks like it. 19 Q. Okay. And you'll see on 20 the -- there's some numbering in the 21 bottom right corner, starting on the 22 second page. 23 A. Page numbers? 24 Q. That's correct.</p>

Page 178

1 Do you see that?

2 A. Yes.

3 Q. At the first numbered page,

4 you'll see a table of contents for this

5 DMF impurities section.

6 Do you see that?

7 A. Yes.

8 Q. And then at the very end, at

9 Pages 80 to 82, there's a section on

10 genotoxic impurities.

11 Do you see that?

12 A. Yes.

13 Q. Why are genotoxic impurities

14 broken out as a separate category of

15 impurities, do you know?

16 MR. REEFER: Object to form.

17 Scope.

18 THE WITNESS: I don't know.

19 BY MR. DAVIS:

20 Q. Okay.

21 A. I've not seen them --

22 anything that I have looked at, at FDA or

23 USP, where genotoxic impurities were

24 broken out as a separate category of

Page 179

1 impurities.

2 I know impurities, I know

3 inorganic impurities, residual solvents

4 are basically organic impurities, but

5 they are oftentimes categorized different

6 because there's a separate analytical

7 method. And I have never seen a list

8 like this that had genotoxic impurities

9 as a category.

10 Q. You don't think that would

11 be because there's separate applicable

12 guidances that govern genotoxic

13 impurities, such as, for example, ICH M7

14 that I've shown you today?

15 MR. REEFER: Objection.

16 Form and scope.

17 THE WITNESS: It's possible,

18 but I can't say yes or no. I

19 don't -- I don't know.

20 BY MR. DAVIS:

21 Q. Flip, if you would, to the

22 very last two pages of this document,

23 which are numbered 81 and 82.

24 A. Okay.

Page 180

1 Q. Do you see the header at the

2 top of Page 81, Genotoxic Impurities?

3 A. Yes.

23 MR. DAVIS: I'm going to

24 mark Tab 24.

Page 182

1 MR. REEFER: Can we put this
2 away?
3 MR. DAVIS: Yes. Tab 24,
4 Jason.
5 MR. REEFER: Is that one
6 that you sent today or --
7 MR. DAVIS: Yes, that's one
8 sent today.
9 MR. REEFER: What's the
10 one -- which one did you send me
11 at lunch? Is that the one or is
12 that --
13 MR. DAVIS: That's 25.
14 MR. REEFER: Okay. Just one
15 moment, then, okay, John?
16 - - -
17 (Whereupon, Exhibit
18 Sheinin-11,
19 MYLAN-MDL2875-00392350, 11/26/18
20 E-mail, Owens to Smith, was marked
21 for identification.)
22 - - -
23 MR. REEFER: They're not
24 stapled, but I think that we

Page 183

1 should be able to make due. So
2 I'm going to hand it to him now,
3 okay, John.
4 MR. DAVIS: Sure.
5 BY MR. DAVIS:
6 Q. You'll see, Dr. Sheinin,
7 that this is an internal -- or partly
8 internal Mylan e-mail chain that has a
9 Plaintiff Owens-2 sticker on it.
10 MR. REEFER: I'm going to
11 object initially to foundation.
12 Is this Exhibit-11 marked,
13 John?
14 MR. DAVIS: Yes, it is.
15 MR. REEFER: Thanks. But I
16 object to foundation.
17 But go ahead, Dr. Sheinin.
18 BY MR. DAVIS:
19 Q. Sure. And I'm just making a
20 representation to you here, Dr. Sheinin,
21 I understand that you haven't seen this
22 document before.
23 I'm representing this to you
24 to be a partly internal Mylan e-mail

Page 184

1 chain with a Mylan Bates stamp, as it was
2 produced to us, dated November 2018.
3 Do you see that?
4 A. Yes.
5 Q. And I say "partly internal,"
6 because if you go down to the second and
7 third e-mails, there are some FDA e-mail
8 addresses on the e-mails, including for
9 Ms. Dellarese Herbert.
10 Do you see that?
11 A. Yes.
12 Q. Okay. And you'll see on the
13 second page of the e-mail chain, there's
14 an e-mail from Dellarese Herbert at FDA
15 to several Mylan individuals that's dated
16 November 19, 2018.
17 Do you see that?
18 MR. REEFER: Let me, just
19 for a moment, Eric, object. I'll
20 object on foundation.
21 But based on your prior
22 representation about who is on the
23 e-mail recipients, I'll let him
24 answer, okay, John?

Page 185

1 Do you understand what I'm
2 saying?
3 MR. DAVIS: Sure. Yeah.
4 MR. REEFER: Yeah. My point
5 being I don't think that
6 Dr. Sheinin knows exactly who
7 these people are. But your
8 representation being that those
9 are Mylan employees, with that
10 said, I'll let him go, okay?
11 MR. DAVIS: Sure. And I'm
12 happy to ask about e-mail
13 addresses.
14 BY MR. DAVIS:
15 Q. Do you see some FDA e-mail
16 addresses and some Mylan.com e-mail
17 addresses on that particular e-mail at
18 the top of Page 2?
19 A. Yes.
20 Q. And the from e-mail address,
21 it's dellarese.herbert@fda.hhs.gov.
22 Do you see that?
23 A. Yes.
24 Q. And there's several Mylan

Page 186

1 individuals listed in the to and cc
2 section.
3 Do you see that?
4 MR. REEFER: Same objection.
5 THE WITNESS: Yes.
6 BY MR. DAVIS:
7 Q. Including a Ms. Cassandra
8 Bird.
9 Is that a name you
10 recognize?
11 A. No.
12 Q. So you wouldn't know that
13 she was deposed in this case and that --
14 and that there would have been a
15 transcript of her deposition prepared?
16 A. I don't know that she was
17 deposed. I don't know who she is. I
18 have not seen a deposition from her. I
19 just don't know anything about her.
20 Q. Right. And that's because
21 it wasn't provided to you by counsel in
22 the package, right?
23 MR. REEFER: Object to form.
24 THE WITNESS: Correct.

Page 187

15 [REDACTED]
16 [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 BY MR. DAVIS:
22 Q. Okay.
23 MR. DAVIS: I'm going to
24 mark Tab 23 as Exhibit-12.

Page 188

1 - - -
2 (Whereupon, Exhibit
3 Sheinin-12,
4 MYLAN-MDL2875-00552465, DMF DLAPI
5 Information Request, was marked
6 for identification.)
7 - - -
8 MR. REEFER: Should we put
9 it away, John, or keep it handy?
10 MR. DAVIS: We can put it
11 away.
12 MR. REEFER: Okay. So now
13 you want 23. What's on the front
14 page, John? I'm trying to leaf
15 through this.
16 MR. DAVIS: Plaintiff
17 Talton-7 is the exhibit stamp.
18 MR. REEFER: Okay. Thanks.
19 THE WITNESS: This is going
20 to be 12; is that right?
21 MR. DAVIS: Exhibit-12,
22 that's correct.
23 BY MR. DAVIS:
24 Q. And I only am going to show

Page 189

1 you this for a limited reason,
2 Dr. Sheinin. So don't fret, I'm not
3 going to make you look at all 100 pages
4 of it.
5 So you'll see --
6 A. Thank you.
7 Q. -- in the first -- the first
8 actual page -- a lot of these documents
9 come with a slip page at the front, which
10 is just what's called metadata regarding
11 the document that is as it was produced
12 by Mylan.
13 But you'll see the first
14 actual page, there's a letter from the
15 FDA to Mylan, attention Michael Plastina.
16 Do you see that?
17 A. Yes.
18 Q. And it says, This
19 communication is in reference to your
20 drug master file for valsartan.
21 Do you see that?
22 A. Yes.
23 Q. Okay. If you flip to the
24 next page, Page 2, you'll see the actual

Page 190

1 information requests that start at the
2 very bottom, Numbered 1, and then 1 has A
3 through J subparts that continue on the
4 next pages.
5 Do you see that?
6 A. Yeah.
7 I was looking for the date
8 of this letter.
9 Q. I can help you with that.
10 A. It's usually at the end.
11 MR. REEFER: It's November
12 13th, 2018. Is that what you were
13 going to say, John?
14 MR. DAVIS: Yes.
15 BY MR. DAVIS:
16 Q. That's on Page 7.
17 MR. REEFER: Dr. Sheinin, if
18 you need to take a moment to
19 familiarize yourself with the
20 document, you're entitled to do
21 so.
22 BY MR. DAVIS:
23 Q. Do you see the date stamp,
24 Dr. Sheinin, that appears after David

Page 191

1 Skanchy's signature?
2 A. Yes.
3 Q. And that date is November
4 13th, 2018?
5 A. Yes.
6 Q. What's your understanding
7 of -- what's your understanding of
8 where --
9 A. I was going to say --
10 Q. -- where that date falls in
11 the chronology of Mylan's valsartan
12 recall?
13 A. I'm not sure if it was
14 before or after the recall. But I think
15 it was -- this was after the recall, I
16 believe. But I'm -- I can't say for
17 sure.
18 Q. I'll represent to you that
19 Mylan's recall of all of its lots and
20 batches of valsartan on the market with
21 an expiry occurred in late November and
22 early December, after this letter --
23 A. Okay.
24 Q. -- if that gives you some

Page 192

1 context.
2 [REDACTED]

6 MR. DAVIS: Let's mark Tab

7 25 as Exhibit-13.

8 - - -

9 (Whereupon, Exhibit

10 Sheinin-13, No Bates, Valsartan

11 Development Report, Addendum IV,

12 was marked for identification.)

13 - - -

14 MR. REEFER: Should we put

15 12 aside, John?

16 MR. DAVIS: Yes, you may.

17 MR. REEFER: Okay. And 25

18 is the new one, right --

19 MR. DAVIS: That's correct.

20 MR. REEFER: -- that you

21 sent during lunch?

22 Okay. Thank you.

23 BY MR. DAVIS:

24 Q. Did you review any

Page 203

1 development reports related to Mylan's

2 development of its manufacturing process

3 for valsartan API, Dr. Sheinin?

4 A. Not that I'm aware of. I

5 don't believe I reviewed any development

6 reports.

7 Q. You'll see some numbering,

8 C01, C02, C03, it's kind of like stamped

9 numbering in the bottom center of the

10 pages.

11 A. Yeah. Some of them are

12 rather blurry. But I can see there's

13 numbers or something down there.

14 [REDACTED]

15 [REDACTED]

13 [REDACTED]

14 [REDACTED]

15 [REDACTED]

16 [REDACTED]

17 [REDACTED]

18 Q. Did you -- in preparing your

19 expert report, Dr. Sheinin, did you come

20 to any kind of understanding of how NDEA

21 was formed exactly in Mylan's valsartan

22 API?

23 MR. REEFER: Object to form.

24 Scope and foundation.

Page 205

1 But go ahead, Doctor, if you

2 know.

3 THE WITNESS: I did not come

4 to any conclusion on that. I

5 wasn't asked to look into it.

6 BY MR. DAVIS:

7 Q. Even though you weren't

8 asked to look into it, do you have at

9 least some kind of understanding of how

10 it formed?

11 MR. REEFER: Same objection.

12 Asked and answered.

13 THE WITNESS: I have some

14 understanding, but I don't know

15 the -- all the conditions and what

16 it takes to form NDEA.

17 BY MR. DAVIS:

18 Q. Dr. Daniel Snyder's

19 deposition testimony and exhibits are

20 listed in your Exhibit B, materials

21 considered, are they not?

22 A. I see a Dan Snyder, yes. I

23 did not look at his report.

24 Q. Well, he's a -- he was a

Page 206

1 Mylan fact witness deposition that was
2 taken in this case. So he wouldn't have
3 prepared an expert report. However, his
4 testimony largely centered on Mylan's
5 root cause evaluation.
6 Do you recall reading his
7 testimony?
8 A. I did not read it.
9 Q. Did you look at any of the
10 exhibits to his deposition?
11 A. I don't know anything about
12 him. I didn't look at it.
13 I think I mentioned earlier
14 all those individuals listed at the end
15 of my list, I did not look at any of
16 their information, reports or depositions
17 or anything.
18 Q. So it was provided to you
19 but you didn't look at it?
20 A. Correct.
21 Q. Okay. What I've marked as
22 Exhibit-13 here, which is Addendum IV to
23 the valsartan development report, that's
24 also listed in your Exhibit B, materials

Page 207

1 considered, is it not?
2 MR. REEFER: I'm sorry,
3 John, the correct -- I think you
4 said, maybe, the wrong exhibit
5 number. Or did I write it down
6 wrong?
7 Oh, I'm sorry. I'm so
8 sorry, John, I interrupted you. I
9 messed up. I wrote down
10 Exhibit-25 because it was Tab 25.
11 I'm sorry to interrupt your
12 examination, John.
13 MR. DAVIS: Not a problem.
14 BY MR. DAVIS:
15 Q. So the question,
16 Dr. Sheinin, is what I've marked as
17 Exhibit-13, which is the 70-page document
18 entitled, Addendum IV to Valsartan
19 Development Report, that's also listed in
20 your materials considered, is it not,
21 under Item 8?
22 A. Yes.
23 Q. Did you review this?
24 A. No.

Page 208

13 [REDACTED]
14 [REDACTED]
15 [REDACTED]
16 [REDACTED]
17 BY MR. DAVIS:
18 Q. Let me ask you, Dr. Sheinin,
19 from a -- from a process chemistry
20 perspective, would you assume a different
21 result, in terms of chemical reactions,
22 if the same process was followed every
23 single time?
24 MR. REEFER: Object to

<p>Page 210</p> <p>1 foundation and scope.</p> <p>2 THE WITNESS: And I'm not a</p> <p>3 process chemist, but my experience</p> <p>4 has been that when you're</p> <p>5 manufacturing batch after batch</p> <p>6 after batch of a drug substance,</p> <p>7 you're not going to end up with</p> <p>8 exactly the same impurity profile</p> <p>9 and you're not going to end up</p> <p>10 with exactly the same assay value.</p> <p>11 So I wouldn't want to say</p> <p>12 that everything is going to be</p> <p>13 exactly the same if you run the</p> <p>14 procedure the same way, with the</p> <p>15 qualification that I'm not a</p> <p>16 process chemist.</p> <p>17 BY MR. DAVIS:</p> <p>18 Q. But assuming -- let's assume</p> <p>19 that, you know, all of the -- all of the</p> <p>20 variables, meaning, like, the reagents,</p> <p>21 catalysts, the temperatures, the</p> <p>22 equipment used, all of those things are</p> <p>23 the same, chemical reactions don't choose</p> <p>24 to happen sometimes and not others,</p> <p>Page 211</p> <p>1 right?</p> <p>2 Isn't that a basic principle</p> <p>3 of organic chemistry, is that you can</p> <p>4 reliably cause chemical reactions to</p> <p>5 occur under certain conditions?</p> <p>6 MR. REEFER: Object to the</p> <p>7 scope. Foundation. Asked and</p> <p>8 answered.</p> <p>9 THE WITNESS: Again, when</p> <p>10 companies -- again, not being a</p> <p>11 process chemist, but companies are</p> <p>12 running their synthetic schemes, I</p> <p>13 would assume, the same way, and</p> <p>14 yet they can -- sometimes an</p> <p>15 impurity shows up, sometimes it's</p> <p>16 not.</p> <p>17 So it's not always going to</p> <p>18 be exactly the same even though</p> <p>19 they run the procedure the same</p> <p>20 way, use the same chemicals, the</p> <p>21 same reagents, the same</p> <p>22 temperatures, the same time.</p> <p>23 There is variation in what</p> <p>24 the results are.</p>	<p>Page 212</p> <p>1 BY MR. DAVIS:</p> <p>2 Q. Right. I'm asking more of a</p> <p>3 theoretical question, which is, isn't it</p> <p>4 a -- just a general principle of</p> <p>5 chemistry that if you -- that chemical</p> <p>6 reactions will occur in the way you would</p> <p>7 expect them to reliably?</p> <p>8 You don't mix two things and</p> <p>9 have a completely different result one</p> <p>10 time or another; chemical reactions occur</p> <p>11 reliably as a matter of the basic</p> <p>12 discipline of the science, correct?</p> <p>13 MR. REEFER: Object to form.</p> <p>14 Scope. Asked and answered again.</p> <p>15 THE WITNESS: In general,</p> <p>16 chemical reactions will go the</p> <p>17 same way. But there's</p> <p>18 different -- to a different</p> <p>19 extent, I have to go back to I'm</p> <p>20 not a process chemist, but when</p> <p>21 they run the procedure the same</p> <p>22 way, they are going to find</p> <p>23 differences. So it's not going to</p> <p>24 be exactly the same every time.</p> <p>Page 213</p> <p>1 BY MR. DAVIS:</p> <p>2 Q. You did say that you had</p> <p>3 reviewed the nitrosamine testing</p> <p>4 spreadsheet, correct?</p> <p>5 A. Yes.</p> <p>6 Q. And that did show NDEA</p> <p>7 present in every single lot batch that</p> <p>8 was tested, correct?</p> <p>9 A. I believe what I said was</p> <p>10 that I did not look at the entire</p> <p>11 spreadsheet, so I can't say that it was</p> <p>12 present in every single batch.</p> <p>13 But the page that I looked</p> <p>14 at, I did see it in those lots. But I</p> <p>15 did not look at the entire spreadsheet.</p> <p>16 MR. DAVIS: Hey, Jason,</p> <p>17 let's take a quick break, five</p> <p>18 minutes. I'm actually almost</p> <p>19 done, I just want to review my</p> <p>20 notes.</p> <p>21 MR. REEFER: No problem.</p> <p>22 VIDEO TECHNICIAN: Going off</p> <p>23 the record. The time is 3:13 p.m.</p> <p>24 - - -</p>
---	---

Page 214

1 (Whereupon, a brief recess
2 was taken.)
3 - - -
4 VIDEO TECHNICIAN: We are
5 back on the record. The time is
6 3:26 p.m.
7 BY MR. DAVIS:
8 Q. The last real item I want to
9 touch on, Dr. Sheinin, is your response
10 to Dr. Najafi's report.
11 That discussion appears at
12 Paragraphs 83 through, I guess, the end
13 of your report; is that right?
14 A. Basically, yeah, I think. I
15 don't think there's any other
16 subheadings.
17 Q. Can you describe to me
18 what -- what is your critique of
19 Dr. Najafi's report?
20 A. The main critique is that
21 he's saying that the impurity profile has
22 to be the same for the generic to be able
23 to say that the API is the same as is
24 used in the reference-listed drug.

Page 215

1 And I believe I go on to
2 discuss why that's not the case. And,
3 again, I would come back to the fact that
4 when a company makes the drug substance
5 by one route and a second company is
6 making it by a different route, you're
7 going to get, almost for certain, a
8 different impurity profile, and, still,
9 under the definition in the regulations,
10 those two APIs are the same.
11 The impurity profile is
12 immaterial to whether or not the API is
13 the same as what's in the
14 reference-listed drug. And he doesn't
15 seem to agree with that.
16 Q. Well, he also doesn't say
17 that, though, does he? He doesn't say
18 anywhere in his declaration that the
19 impurity profiles generally have to be
20 the same, does he?
21 A. From what I remember, he's
22 saying that the impurity profiles have to
23 be the same or it's not considered to be
24 the same API.

Page 216

1 Q. But you can't point me to a
2 particular portion of his report you're
3 referring to where you claim that he says
4 that?
5 A. I don't have it in front of
6 me, and I'd have to read through his
7 report again.
8 But that's -- that's my
9 understanding and impression, was that he
10 was saying that they're not the same
11 because they have different impurity
12 profiles.
13 Q. You don't cite the portion
14 of his report you're claiming where he
15 says that in your -- in your report, do
16 you?
17 A. I don't -- I don't think so.
18 Q. Okay. So the answer is no?
19 A. 98, Dr. Najafi concludes
20 that valsartan-containing products that
21 contained NDMA and NDEA were not the
22 generic equivalent of Diovan or Exforge
23 because they contained NDMA and NDEA.
24 And what I'm saying is the

Page 217

1 drug substance used in Mylan's valsartan,
2 by the definition in the regulations, is
3 the same as the valsartan that's used in
4 the innovator product. But he's saying
5 they're not, and I'm saying that they
6 are.
7 Q. Well, what's your basis for
8 saying that they are, despite the fact
9 that they had NDMA and NDEA and were all,
10 by the way, recalled?
11 A. The basis for what I'm
12 saying is that, as I stated a little bit
13 ago, you can have different impurity
14 profiles in the active ingredient and
15 it's still considered the same as that
16 that's used in the reference-listed drug.
17 That's what the regulations
18 describe, that the API is the same. The
19 impurity profile is immaterial to that,
20 unless -- unless you have a case where
21 there's an impurity that makes up 50
22 percent of the API.
23 I mean, you're not going to
24 have that, so --

Page 218

1 Q. So -- go ahead, Dr. Sheinin.
2 I didn't mean to cut you off.
3 A. The impurity profile is not
4 what determines whether the API is the
5 same in the reference-listed drug and the
6 generic drug.
7 Q. So let me get -- let me see
8 if I understand what you're saying.
9 You're saying, from a
10 general -- as a general proposition, it's
11 possible that an API can have a different
12 impurity profile and still be considered
13 a generic equivalent; is that what you're
14 saying?
15 A. I'm saying that the API can
16 have a different impurity profile and be
17 considered the same as the
18 reference-listed drug.
19 Q. And when you say "the
20 same" --
21 A. I'm saying that the API in a
22 generic drug can have a different
23 impurity profile and still be considered
24 the same as the API that's used in the

Page 219

1 reference-listed drug.
2 Q. Okay. And you're saying --
3 by "the same" -- what do you mean by "the
4 same" there?
5 A. That under the regulations
6 that it's considered the same ingredient
7 if it has the same structure, the same
8 purity -- I guess purity doesn't -- is
9 not really a factor.
10 But if it has the same
11 structure, if it's the same chemical,
12 then it's the same, regardless of what
13 its impurity profile is.
14 Q. Well, purity is a factor,
15 though.
16 What -- what regulations are
17 you referring to when you say that it
18 doesn't have to be -- that it is the same
19 regardless of the impurity profiles?
20 What regulation are you referring to for
21 your understanding of that?
22 A. I'd have to go back into the
23 CFR. It could be in a guidance. But
24 it's --

Page 220

1 Q. Are you familiar with the
2 FDA's Orange Book?
3 A. Yes.
4 Q. You don't mention the Orange
5 Book anywhere in your report, do you?
6 A. No, I do not.
7 Q. And it's not listed in your
8 materials considered, is it?
9 A. It is not.
10 Q. Okay. When is the last time
11 you think you reviewed the -- anything
12 regarding the FDA's Orange Book?
13 A. It was at some point this
14 year that I can remember looking --
15 looking at the Orange Book.
16 Q. In your understanding, what
17 is the FDA Orange Book?
18 A. The Orange Book is --
19 MR. REEFER: Objection to
20 scope.
21 THE WITNESS: Sorry.
22 MR. REEFER: Go ahead.
23 THE WITNESS: The Orange
24 Book is a -- basically a

Page 221

1 compendium of all the products
2 that are approved by FDA, and
3 they're listed by active
4 ingredient.
5 And it shows whether or not
6 a generic is considered
7 bioequivalent to the
8 reference-listed drug, and it
9 shows which -- which product or
10 products are considered as
11 reference-listed drugs.
12 BY MR. DAVIS:
13 Q. Well, bioequivalence is just
14 one aspect of therapeutic equivalence,
15 right, which is the larger thing the
16 Orange Book is concerned with, correct?
17 A. I believe so.
18 Q. And the Orange Book will
19 list, like you say, various drugs and
20 which ones are therapeutically
21 interchangeable with each other because
22 of a therapeutic equivalence
23 determination, correct?
24 MR. REEFER: Object to form.

<p>Page 222</p> <p>1 Scope.</p> <p>2 THE WITNESS: Correct.</p> <p>3 MR. DAVIS: Let me mark Tab</p> <p>4 17 as Exhibit-14.</p> <p>5 - - -</p> <p>6 (Whereupon, Exhibit</p> <p>7 Sheinin-14, No Bates, Orange Book</p> <p>8 Preface, Food and Drug</p> <p>9 Administration, Center for Drug</p> <p>10 Evaluation and Research, Approved</p> <p>11 Drug Products with Therapeutic</p> <p>12 Equivalence Evaluations, was</p> <p>13 marked for identification.)</p> <p>14 - - -</p> <p>15 BY MR. DAVIS:</p> <p>16 Q. Have you read this</p> <p>17 FDA-authored Orange Book preface before,</p> <p>18 Dr. Sheinin?</p> <p>19 A. No, I have not.</p> <p>20 Q. Do you see that the URL at</p> <p>21 the bottom of the page is pulled from the</p> <p>22 www.fda.gov website?</p> <p>23 A. Yes.</p> <p>24 Q. And you'll see on the second</p> <p>Page 223</p> <p>1 page, bottom -- bottom two paragraphs,</p> <p>2 really, the FDA says that, The</p> <p>3 therapeutic equivalence evaluations in</p> <p>4 the Orange Book reflect the FDA's</p> <p>5 application of specific criteria to the</p> <p>6 multi-source prescription drug products</p> <p>7 listed in the Orange Book and approved</p> <p>8 under the FD&C Act.</p> <p>9 Do you see that?</p> <p>10 A. Yes.</p> <p>11 Q. And then the next paragraph</p> <p>12 down says that, A complete discussion of</p> <p>13 the background and basis of the FDA's</p> <p>14 therapeutic equivalence evaluation policy</p> <p>15 was published in the Federal Register in</p> <p>16 1979.</p> <p>17 Do you see that?</p> <p>18 A. Yes.</p> <p>19 Q. If you go to Page 4, you'll</p> <p>20 see a section titled, Introduction.</p> <p>21 A. Yes.</p> <p>22 Q. It says, The Orange Book is</p> <p>23 composed of four parts.</p> <p>24 And the first part is,</p>	<p>Page 224</p> <p>1 Approved prescription drug products with</p> <p>2 therapeutic equivalence evaluations.</p> <p>3 Do you see that?</p> <p>4 A. Can you read that again?</p> <p>5 Q. The first sentence of the</p> <p>6 introduction reads, The Orange Book is</p> <p>7 composed of four parts.</p> <p>8 And then the first part it</p> <p>9 lists is, Approved prescription drug</p> <p>10 products with therapeutic equivalence</p> <p>11 evaluations.</p> <p>12 Do you see that?</p> <p>13 A. Yes.</p> <p>14 Q. Okay.</p> <p>15 A. I see that.</p> <p>16 Q. So would you agree that</p> <p>17 therapeutic equivalence is really the</p> <p>18 regulatory touchstone of evaluating</p> <p>19 whether a generic product is -- can be</p> <p>20 considered the same as a brand product?</p> <p>21 MR. REEFER: Object to form.</p> <p>22 Scope.</p> <p>23 THE WITNESS: I would say</p> <p>24 that therapeutic equivalence,</p> <p>Page 225</p> <p>1 if -- if the generic is</p> <p>2 therapeutically equivalent to the</p> <p>3 reference-listed drug, that</p> <p>4 they're interchangeable.</p> <p>5 BY MR. DAVIS:</p> <p>6 Q. And that's the FDA's way of</p> <p>7 saying you can -- you can take it to the</p> <p>8 bank that this drug is going to be the</p> <p>9 same as the RLD, correct?</p> <p>10 MR. REEFER: Object to form.</p> <p>11 Vague.</p> <p>12 THE WITNESS: My -- my way</p> <p>13 of looking at it is if FDA has</p> <p>14 approved a generic drug and FDA</p> <p>15 says it's therapeutically</p> <p>16 equivalent, that I can take the</p> <p>17 generic in lieu of taking the</p> <p>18 reference-listed drug to achieve</p> <p>19 the desired outcome for whatever</p> <p>20 reason that I'm taking the drug</p> <p>21 for.</p> <p>22 BY MR. DAVIS:</p> <p>23 Q. And that's what's most</p> <p>24 important here, right, for physicians'</p>
--	--

Page 226

1 and patients' purposes in evaluating
2 whether a generic is the same as the
3 brand, right?
4 It's not living in some
5 hypothetical world, it's -- there's a
6 reason for that, which is, can I
7 substitute it for the brand, right?
8 MR. REEFER: Object to form.
9 Scope. Foundation.
10 THE WITNESS: Yeah. The --
11 again, to me, the generic means
12 that the FDA has approved it and
13 it's therapeutically equivalent,
14 so I have no problem with taking
15 the generic in lieu of taking a
16 reference-listed drug.
17 BY MR. DAVIS:
18 Q. And that's what it means to
19 be -- sorry. Go ahead.
20 A. I was going to say, the
21 issue of sameness, we were discussing
22 sameness of the active ingredient. I
23 don't know that that's exactly the same
24 as the sameness of whether it's

Page 227

1 therapeutically equivalent or not.
2 It's two different -- to me,
3 it's two different uses of "sameness."
4 Q. Okay. And you're not sure
5 what Dr. Najafi was referring to in his
6 report, whether he was referring to the
7 defendants at issue, VCDs being
8 therapeutic equivalents or generic
9 equivalents or whether the API was just
10 the same, are you?
11 A. He's saying
12 valsartan-containing drug products that
13 contain NDMA and NDEA were not the
14 generic equivalent of Diovan or Exforge
15 because they contained NDMA and NDEA.
16 So I'm saying that they are
17 equivalent.
18 Q. You're saying that they're
19 therapeutically equivalent under the
20 Orange Book?
21 A. Yes.
22 Q. But you haven't looked at
23 the Orange Book at all in your report,
24 have you?

Page 228

1 A. No, I have not.
2 Q. Okay. And you're just now
3 looking at the Orange Book preface since
4 I've showed it to you, correct?
5 A. Correct.
6 Q. So is this, like, an
7 off-the-cuff opinion that you're making?
8 MR. REEFER: Object to form.
9 Argumentative.
10 MR. DAVIS: Well, no, it's a
11 fair question.
12 BY MR. DAVIS:
13 Q. Dr. Sheinin, you don't --
14 you don't put anywhere in your report the
15 opinion that the NDMA- and
16 NDEA-contaminated valsartan is a
17 therapeutic equivalent to the RLD, do
18 you? That's nowhere in your report, is
19 it?
20 A. No.
21 Q. Okay. And do you know what
22 criteria, even, the FDA requires for a
23 drug to be considered therapeutically
24 equivalent to an RLD?

Page 229

1 MR. REEFER: Object to form.
2 Foundation.
3 Go ahead.
4 THE WITNESS: I know it has
5 to be considered to be
6 bioequivalent. I'm not sure what
7 the second criteria is. I know
8 that there's two factors that go
9 into the therapeutic equivalence.
10 BY MR. DAVIS:
11 Q. So how could you form an
12 opinion that the defendants' valsartan in
13 this case was therapeutically equivalent
14 to the RLD when you're not sure what the
15 definition of therapeutic equivalence is?
16 MR. REEFER: Object to form.
17 Misstates testimony. Beyond the
18 scope.
19 THE WITNESS: What exactly
20 did I say?
21 Najafi said that if it
22 contains NDMA and NDEA, that it's
23 not the generic equivalent. I did
24 not use the words "therapeutically

Page 230

1 equivalent."
2 And, to me, the fact that
3 NDMA and NDEA may be present does
4 not make it not generically
5 equivalent to the reference-listed
6 drug.
7 It's the active ingredient
8 that's important. The impurities
9 in general do not contribute to
10 the efficacy of the active
11 ingredient and the drug product.
12 So the presence of impurities is
13 immaterial to whether or not the
14 generic is equivalent to the
15 reference-listed drug.
16 BY MR. DAVIS:
17 Q. Well, the FDA is not just
18 concerned with efficacy, they're also
19 concerned with safety, aren't they?
20 MR. REEFER: Object to form.
21 Beyond the scope.
22 THE WITNESS: They are. And
23 FDA has said that there is a
24 very -- what's the word I'm

Page 231

1 looking for -- theoretical issue
2 with nitrosamines and that there's
3 a very minimal risk and that these
4 impurities are present at
5 extremely low levels, they are
6 trace impurities. And there are
7 products that FDA has allowed on
8 the market that do contain
9 nitrosamines.
10 BY MR. DAVIS:
11 Q. I thought you told me you're
12 not a toxicologist, right, so you have no
13 way to independently evaluate any of
14 those assertions, right?
15 A. That's correct. I'm not a
16 toxicologist, but I can read what's
17 written in the FDA statements, that it's
18 a theoretical risk.
19 And it may -- I think it
20 says further in those statements that it
21 may be a cause of cancer; it may.
22 As a scientist, I don't have
23 to be a toxicologist to understand what
24 FDA is saying there.

Page 232

1 Q. The FDA did require the
2 recall of every single lot and batch of
3 Mylan's valsartan, did they not, though?
4 MR. REEFER: Objection to
5 form. Misstates facts. Beyond
6 the scope.
7 THE WITNESS: I believe
8 that, yes, FDA recalled all the
9 lots of Mylan's valsartan
10 products.
11 BY MR. DAVIS:
12 Q. And you're aware that the
13 IARC, EPA and other regulatory bodies
14 that evaluate toxicology have classified
15 NDMA and NDEA as probable human
16 carcinogens, correct?
17 MR. REEFER: Object to form.
18 Foundation. Beyond the scope.
19 MR. DAVIS: He's -- Jason,
20 he's the one who just brought this
21 up. I've got to delve into it
22 now.
23 MR. REEFER: He -- John, he
24 clarified that he was --

Page 233

1 MR. DAVIS: No, he didn't,
2 Jason. He went off on a tangent,
3 and now I've got to -- now I have
4 to put the lid back on it.
5 BY MR. DAVIS:
6 Q. So you can answer the
7 question, Dr. Sheinin.
8 Are you aware that the IARC,
9 EPA and other regulatory bodies governing
10 toxicology assessments have classified
11 NDMA and NDEA as probable human
12 carcinogens? Are you aware of that?
13 MR. REEFER: Object to form.
14 Foundation. Beyond the scope.
15 THE WITNESS: I know that
16 I -- IA-what -- IAR-whatever was
17 mentioned in the M7, I believe, in
18 that paragraph you had me look at.
19 But other than that, I don't
20 know anything else about that
21 organization or what EPA has said
22 or what any other organization has
23 said.
24 BY MR. DAVIS:

Page 234

1 Q. Are you aware that these
2 entities are so certain that NDMA and
3 NDEA are human carcinogens that it's
4 considered unethical to actually do the
5 studies to confirm that?
6 MR. REEFER: Object to form.
7 Sorry.
8 Object to form. Beyond the
9 scope. Foundation.
10 THE WITNESS: No, I'm not
11 aware.
12 BY MR. DAVIS:
13 Q. Okay. Are you aware that
14 Mylan's valsartan at times contained up
15 to 20 times what the FDA considers safe,
16 acceptable intakes for NDEA?
17 MR. REEFER: Object to form.
18 Misstates testimony and evidence.
19 But go ahead, Doctor.
20 THE WITNESS: I'm not aware
21 of -- I didn't do any calculations
22 to see how much above or below
23 the -- what FDA recommended.
24 That's all I can say.

Page 235

1 I did not do any kind of
2 calculation to determine that.
3 BY MR. DAVIS:
4 Q. Okay. Thank you.
5 So in Paragraph 99 of your
6 report, you say, As presented above,
7 valsartan manufactured by a different
8 route of synthesis that resulted in a
9 different impurity profile still would be
10 considered the same as that used in the
11 RLD.
12 Do you see that?
13 A. Yes, I see that.
14 Q. You're not saying there that
15 valsartan that contains NDMA and NDEA
16 would still be considered the same as
17 that -- as that used in the RDL, are you?
18 Is there a reason you're not
19 saying that -- is there -- let me strike
20 that and rephrase it.
21 Is there a reason that
22 Paragraph 99 reads the way it does as
23 opposed to stating the following, which
24 would be, valsartan that contains NDMA

Page 236

1 and NDEA would still be considered the
2 same as the RLD?
3 MR. REEFER: Object --
4 object to form. Vague.
5 But go ahead, Doctor, if you
6 understand.
7 THE WITNESS: That's the way
8 I always refer to the active
9 ingredient in a generic drug
10 versus the active ingredient in
11 the reference-listed drug.
12 To me, it's always the same.
13 If you have different routes of
14 synthesis, and even if you have a
15 different impurity profile, it's
16 still going to be the same active
17 ingredient.
18 BY MR. DAVIS:
19 Q. Well, the FDA, in that
20 situation, would have approved that
21 different route of synthesis, correct?
22 A. Correct.
23 Q. Okay. Have you seen any
24 evidence that the FDA approved valsartan

Page 237

1 products where there was an affirmative
2 disclosure that they contained NDMA and
3 NDEA?
4 MR. REEFER: Object to form.
5 Scope.
6 THE WITNESS: I have no way
7 to access whether or not there was
8 a valsartan that claimed to have
9 NDMA or NDEA in it and that
10 application was submitted to the
11 FDA and that it was approved. I
12 have no way of knowing that. So I
13 can't say if that's a possibility.
14 That information is
15 confidential and the FDA would not
16 release that. I don't have access
17 to FDA's information anymore.
18 BY MR. DAVIS:
19 Q. Is it your position that
20 purity has nothing to do with therapeutic
21 equivalence?
22 MR. REEFER: Object to form.
23 Misstates the testimony. Beyond
24 the scope.

Page 238

1 THE WITNESS: As long as the
2 drug substance meets the purity
3 acceptance criteria in the assay
4 in its specification, the purity
5 is going to vary for a number of
6 reasons.
7 And I don't believe that
8 that -- that a purity on one API
9 that was in the acceptance
10 criteria for the assay would be
11 considered not to be equivalent to
12 the reference-listed drug active
13 ingredient that had a different
14 assay value.
15 So there's -- that's why, in
16 many cases, the active ingredient
17 has an acceptance criteria of 98.0
18 to 102.0 percent.
19 BY MR. DAVIS:
20 Q. What about quality, is it --
21 do you have any understanding of whether
22 quality has anything to do with
23 therapeutic equivalence?
24 MR. REEFER: Object to form.

Page 239

1 Vague. Beyond the scope.
2 THE WITNESS: As long as the
3 generic or any -- any drug
4 substance meets the acceptance
5 criteria in the specification,
6 then -- and that includes not only
7 the assay but the impurity
8 testing, then I would consider
9 that to be the same as any other
10 API of that same chemical that has
11 also met the acceptance criteria
12 in the specification.
13 BY MR. DAVIS:
14 Q. Okay. Let me ask a
15 hypothetical to you, Dr. Sheinin.
16 The specification lists
17 impurities of not more than .1 percent in
18 this case, right, for valsartan? That's
19 what the specification says, right?
20 A. The specification for any
21 other unknown impurity is point -- not
22 more than .1 percent.
23 Q. Right. Let's say there was
24 some other unknown impurity that was

Page 240

1 guaranteed to kill anyone who ingested
2 the product at levels below .1 percent,
3 percent mortality rate, are you saying
4 that that would be considered the same,
5 from a purity or quality standpoint, as
6 the RLD?
7 MR. REEFER: Object to form.
8 Assumes facts. Incomplete
9 hypothetical.
10 Go ahead.
11 THE WITNESS: That's a very
12 hypothetical question that has no
13 place in the real world.
14 But in the specification, if
15 it's -- if it's -- has -- if it
16 meets the specification, then it's
17 the same.
18 BY MR. DAVIS:
19 Q. Okay.
20 A. You have to have other --
21 other testing and other things to come
22 into play for it to be considered not the
23 same.
24 Q. Okay. Turn to Page 7 of

Page 241

1 Exhibit-14, which is the FDA Orange Book
2 preface.
3 A. Okay.
4 Q. You'll see there's a
5 definition provided there for therapeutic
6 equivalence.
7 Do you see that?
8 A. Yes.
9 Q. And it says, FDA classifies
10 as therapeutically equivalent those drug
11 products that meet the following general
12 criteria.
13 Do you see that?
14 A. Yes.
15 Q. Okay. One, they are
16 approved as safe and effective.
17 Do you see that?
18 A. Yes.
19 Q. Do you know -- back to my
20 earlier question.
21 You don't know whether the
22 FDA has ever approved any valsartan drug
23 product -- or, rather, any product at all
24 that contains NDMA or NDEA as safe and

Page 242

1 effective, with the disclosure that it
2 actually contained NDMA or NDEA, correct?
3 A. I have no way of knowing
4 that.
5 Q. Do you have any
6 understanding of whether NDMA or NDEA
7 have any therapeutic benefit?
8 MR. REEFER: Object to form.
9 Foundation and scope.
10 But go ahead, if you know.
11 THE WITNESS: I don't know
12 whether they have any therapeutic
13 benefit. I -- I have not looked
14 into that.
15 I don't -- I don't believe
16 they act -- act to enhance the
17 therapeutic effect of the
18 valsartan, but I don't know what
19 their -- what could possibly be
20 their therapeutic benefit.
21 But I can't answer that
22 question. I don't know.
23 BY MR. DAVIS:
24 Q. Okay. The second criteria

Page 243

1 for meeting therapeutic equivalence is,
2 2, They are pharmaceutical equivalents in
3 that they contain identical amounts of
4 the identical active drug ingredient in
5 the identical dosage form and route of
6 administration.
7 Do you see that?
8 A. Yes.
9 Q. 2A?
10 A. I see that.
11 Q. Is that -- is that what
12 you're talking about when you're saying
13 that the API is the same because it meets
14 the spec? Are you saying that valsartan
15 API would be pharmaceutically equivalent
16 under 2A there?
17 A. I would say under 2B, Meet
18 compendial or other applicable standards
19 of strength, quality, purity and
20 identity.
21 If you take A and B
22 together, yes, that's what I'm saying.
23 Q. Okay. But you're -- you
24 conceded, though, that there are -- that

Page 244

1 other applicable standards out there
2 other than USP, correct? For example,
3 the ICH guidelines?
4 MR. REEFER: Object to form.
5 Misstates testimony.
6 THE WITNESS: ICH guidelines
7 do not set acceptance criteria for
8 any particular test --
9 BY MR. DAVIS:
10 Q. For ICH M7 it does, though.
11 We saw that in ICH M7.
12 ICH M7 does set thresholds.
13 In fact, that's how the acceptable
14 intakes for NDMA and NDEA were created by
15 the FDA.
16 MR. REEFER: John, you
17 interrupted -- John, you
18 interrupted his answer. I'd like
19 to --
20 MR. DAVIS: My apologies.
21 MR. REEFER: -- give him a
22 chance to finish.
23 THE WITNESS: I'm talking
24 about the ICH quality guidelines.

Page 245

1 I will give you that the ICH
2 Q3C and Q3D do set standards for
3 the amount of residual solvent and
4 the amount of inorganic impurities
5 or elemental impurities.
6 But beyond that, they do not
7 set standards for what the assay
8 has to be, what the level of
9 impurities have to be. There are
10 impurity guidelines that talk
11 about various categories, but they
12 don't say that the acceptance
13 criteria for a given impurity in a
14 given drug substance or drug
15 product has to meet a certain
16 level.
17 That's what I'm saying. And
18 that's the guidelines and
19 guidances that I was talking
20 about. Where it talks here about,
21 meet compendial or other
22 standards, to me, that's the
23 specification that's on file
24 with -- in their application at

Page 246

1 FDA.
2 BY MR. DAVIS:
3 Q. We saw that ICH M7 sets
4 acceptance criteria, correct?
5 MR. REEFER: Object to form.
6 Misstates the document.
7 But go ahead, Doctor.
8 THE WITNESS: The little bit
9 of M7 that I know, it has
10 information in there about these
11 impurities. But I don't know that
12 they actually said acceptance
13 criteria. I'd have to go back and
14 study that guideline.
15 BY MR. DAVIS:
16 Q. Okay. You haven't studied
17 it for your report here?
18 A. Correct.
19 Q. Or for your conclusion in
20 Paragraph 99 of your report, have you?
21 A. Correct.
22 Q. And you haven't even studied
23 the FDA's Orange Book definition of
24 therapeutic equivalence here for

Page 247

1 Paragraph 99 of your report, have you?
2 A. I have not.
3 Q. Do you see Number 5 a little
4 bit further down?
5 A. Yes.
6 Q. And they are manufactured in
7 compliance with current good
8 manufacturing practice regulations.
9 Do you see that as a
10 requirement that the FDA has for a drug
11 product to be considered therapeutically
12 equivalent?
13 A. Yes.
14 MR. DAVIS: Just a little
15 recordkeeping. I'm going to mark
16 Tabs 20, 21 and 22 as Exhibits-15
17 through 17.
18 - - -
19 (Whereupon, Exhibit
20 Sheinin-15, No Bates, 12/31/21
21 ProPharma Group Invoice
22 #PPGUS000581, was marked for
23 identification.)
24 - - -

Page 248

1 (Whereupon, Exhibit
2 Sheinin-16, No Bates, 1/31/22
3 ProPharma Group Invoice
4 #PPGUS000820, was marked for
5 identification.)
6 - - -
7 (Whereupon, Exhibit
8 Sheinin-17, No Bates, 2/28/22
9 ProPharma Group Invoice
10 #PPGUS001080, was marked for
11 identification.)
12 - - -
13 MR. DAVIS: Do you have
14 those, Jason? Those are the
15 invoices.
16 MR. REEFER: Yeah, I was --
17 I was understanding it was just
18 housekeeping, I wasn't about to
19 pull them up. Do you want me to?
20 MR. DAVIS: Sure. I do want
21 him to see them and verify them
22 for me, so.
23 MR. REEFER: Sure. Sorry, I
24 just -- I thought you were just

Page 249

1 going to attach them and move on.
2 Remind me what you're looking at,
3 20 --
4 MR. DAVIS: 20 through 22,
5 which are now Exhibits-15 through
6 17.
7 MR. REEFER: Three one-page
8 documents, correct?
9 MR. DAVIS: That's right.
10 MR. REEFER: I'm marking the
11 one dated 12/31/21 as
12 Exhibit-20 --
13 MR. DAVIS: Okay.
14 MR. REEFER: -- is that
15 correct?
16 MR. DAVIS: Yes. And then
17 do the January one for 21.
18 THE WITNESS: 15, 16 and 17
19 he said -- oh --
20 MR. DAVIS: Yes.
21 THE WITNESS: 15, 16 and 17.
22 MR. DAVIS: Yes. Thank you,
23 Dr. Sheinin.
24 December would be

Page 250

1 Exhibit-15. January, 16 and
2 February, 17.
3 MR. REEFER: All right.
4 BY MR. DAVIS:
5 Q. Okay. Just a few brief
6 housekeeping questions on these,
7 Dr. Sheinin.
8 Did you prepare these
9 invoices or did somebody else prepare
10 them?
11 A. Somebody else. I report my
12 time on a timekeeping system, and I
13 can't -- there have been -- let me back
14 up.
15 I used to file a time report
16 with NDA Partners, and then they went to
17 a timekeeping system, and I was using
18 that. And then they went to a different
19 timekeeping system.
20 So I don't know at what
21 point in time that this new timekeeping
22 system went into effect. But I think
23 it's -- since it's talking -- all these
24 are ProPharma Group, I believe it's the

Page 251

1 current system.
2 And I enter my time on a
3 daily basis if I'm doing any work for NDA
4 Partners. And I then enter the, in a
5 comment field, what work I did that day,
6 and it goes on a weekly basis.
7 Q. Okay. So even if you didn't
8 generate the actual invoice, the
9 description notations and dates,
10 quantities, et cetera, that's stuff you
11 would have written in your own words,
12 correct?
13 A. Correct.
14 Q. Okay. Are there any
15 invoices prior to -- if you look at
16 Exhibit-15, which is the December
17 invoice, did you do any work on this case
18 prior to December 13th or would that have
19 been the first time you encountered work
20 on this case?
21 A. I believe that's the first
22 time.
23 Q. Okay. And then the last --
24 Exhibit-17, the last entry is February

Page 252

1 17th, 2022.
2 Do you see that?
3 A. Yes.
4 Q. Could you estimate for me
5 the amount of time you've billed in this
6 case since February 17?
7 A. Not counting today?
8 Q. Sure. Not counting today.
9 A. I think it's somewhere in
10 the neighborhood of 15 to 17 hours this
11 month. But I can't say for certainty.
12 Q. Okay. Would all of that
13 time have been part of preparing for your
14 deposition today?
15 A. I believe so.
16 Q. Can you recall doing any
17 work after February 17 that was not
18 dedicated to preparing for today?
19 A. No, I -- I mean, I -- this
20 is when -- I reviewed the certificates of
21 analysis and I looked at some additional
22 FDA statements. But it was all in
23 relation to getting ready for today.
24 Q. Okay. Would that be the

Page 253

1 supplement to Exhibit B to your report,
2 where you say you reviewed the deposition
3 of Ron Najafi?
4 A. Yes.
5 MR. DAVIS: Let me --
6 just another housekeeping matter.
7 Let me introduce that into
8 evidence.
9 - - -
10 (Whereupon, Exhibit
11 Sheinin-18, No Bates, Supplement
12 to Exhibit B to the Report of Eric
13 Sheinin, Ph.D., was marked for
14 identification.)
15 - - -
16 BY MR. DAVIS:
17 Q. Okay. I've marked that as
18 Sheinin-18. And I don't need --
19 actually, here, what I'll do is just
20 screen share it.
21 Can you see that on your
22 screen, Dr. Sheinin?
23 A. Yes.
24 Q. It's a supplement to

Page 254

1 Exhibit B, the report of Eric Sheinin,
2 Ph.D., Deposition of Ron Najafi.
3 A. I see that.
4 Q. Was there anything else you
5 reviewed since submitting your expert
6 report on January 12th that didn't make
7 it into this supplemental exhibit,
8 supplement to Exhibit B?
9 A. I don't believe so.
10 Q. Okay.
11 MR. DAVIS: Okay. That's
12 all the questions I have for you
13 today, Dr. Sheinin. Thank you for
14 your time.
15 I'll pass the witness.
16 THE WITNESS: Thank you.
17 MR. REEFER: Does anyone
18 have questions on the phone or
19 remote?
20 Hearing none, John, let
21 me -- let's go off the record.
22 VIDEO TECHNICIAN: We're
23 going off the record. The time is
24 4:15 p.m.

Page 255

1 - - -
2 (Whereupon, a brief recess
3 was taken.)
4 - - -
5 VIDEO TECHNICIAN: We're
6 back on the record. The time is
7 4:51 p.m.
8 MR. DAVIS: For the record,
9 before you start your questions,
10 Jason. I'll note that we've been
11 on a break for over 30 minutes
12 since I concluded my questioning.
13 We'll reserve all rights
14 regarding how this is all going to
15 be allocated in terms of cost. So
16 I'm going to reserve all that on
17 the record.
18 You can go ahead, Jason.
19 MR. REEFER: I can also
20 respond. John, what's the basis
21 for your suggestion that my
22 taking -- I don't know if it was
23 30 minutes or not, but what's the
24 basis for your suggestion that I

Page 256

1 owe you costs for a 30-minute
2 break in a deposition?
3 MR. DAVIS: If we get a bill
4 for Dr. Sheinin's deposition time,
5 there will be a dispute over this
6 time period.
7 MR. REEFER: Okay. Well, I
8 guess you can raise that dispute
9 when you get the bill.
10 MR. DAVIS: Okay.
11 MR. REEFER: I don't -- I
12 don't understand the basis of your
13 objection. But let's just move
14 on, okay?
15 MR. DAVIS: Okay. Go ahead.
16 MR. REEFER: Thank you.
17 - - -
18 EXAMINATION
19 - - -
20 BY MR. REEFER:
21 Q. Dr. Sheinin, I just have a
22 few questions to clarify some of the
23 testimony that you've offered thus far
24 today. I'll be as brief as I can,

Page 257

1 recognizing it's already been a long day.
2 Do you remember,
3 Dr. Sheinin, this morning Mr. Davis asked
4 you a few questions about some of the
5 prior litigation work you've done as an
6 expert witness?
7 A. Yes, I remember.
8 Q. Okay. And one of the
9 questions Mr. Davis asked you was whether
10 your prior work as an expert witness was
11 all performed on behalf of pharmaceutical
12 manufacturers.
13 Do you recall that question?
14 A. I don't recall it in that
15 exact way.
16 Q. Do you recall that during
17 Mr. Davis's previous questions to you, he
18 asked whether, during your prior work as
19 an expert consultant, that work was
20 performed on behalf of pharmaceutical
21 manufacturers?
22 A. It was.
23 Q. And just to be clear, that
24 prior work as an expert consultant

Page 258

1 involved litigation featuring
2 pharmaceutical manufacturers as both
3 plaintiffs and defendants, correct?
4 A. Yes.
5 Q. Were the only --
6 MR. DAVIS: Objection.
7 Leading.
8 BY MR. REEFER:
9 Q. Were the only parties to
10 those lawsuits pharmaceutical
11 manufacturers?
12 A. Yes.
13 Q. So, therefore, if you were
14 going to be involved as an expert
15 consultant, would you have any choice but
16 to represent a pharmaceutical
17 manufacturer?
18 MR. DAVIS: Object to form.
19 THE WITNESS: I doubt that
20 anybody would hire me.
21 BY MR. REEFER:
22 Q. And to the best of your
23 recollection, did you represent
24 pharmaceutical manufacturers that were

Page 259

1 both plaintiffs and defendants?
2 A. I believe so.
3 Q. Dr. Sheinin, I think marked
4 as Exhibit-3 was a warning letter issued
5 to Unit 8, dated November 5th, 2019.
6 Do you recall talking about
7 that with Mr. Davis?
8 A. Yes.
9 Q. Does a warning letter
10 constitute final agency action by the
11 FDA?
12 A. No, it doesn't.
13 Q. Have you reviewed FDA's
14 website to determine whether Mylan, at
15 any point in time, has been placed on an
16 import alert?
17 A. I have. I could not find
18 any -- any time that Mylan had an import
19 alert. I don't know how far back the
20 database goes, but it came back and said
21 no -- no response or something to that
22 effect.
23 Q. So based on your review of
24 information published by FDA, you've seen

Page 260

1 no evidence to suggest Mylan was placed
2 on import alert following the recall of
3 valsartan, correct?
4 A. Correct.
5 Q. Under the FDCA, can FDA
6 permit the sale of drug product known by
7 the agency to be adulterated or
8 misbranded?
9 A. I don't believe so. I would
10 think not.
11 Q. If you assume that Mylan's
12 Unit 8 continued to manufacture drug
13 substance for the United States market
14 from the time of the recalls to present,
15 would that confirm in your mind that FDA
16 did not consider drug substance from
17 Unit 8 to be misbranded or adulterated?
18 A. Yes.
19 MR. DAVIS: Wait. Objection
20 to form. Objection. Leading.
21 BY MR. REEFER:
22 Q. Do you remember,
23 Dr. Sheinin, having a discussion with
24 Mr. Davis about the M7 guidance?

Page 261

1 A. Yes.
2 Q. Did you testify that the M7
3 guidance was not one which you regularly
4 worked with during your time at FDA?
5 A. I don't believe I worked
6 with it at all at FDA.
7 MR. REEFER: And for the
8 record, I think the M7 guidance
9 was marked as Exhibit-5, but I
10 don't want to mess that up.
11 BY MR. REEFER:
12 Q. If you'd pull out Exhibit-5,
13 please, Dr. Sheinin.
14 A. Okay.
15 Q. Dr. Sheinin, do you recall a
16 portion of your testimony with Mr. Davis
17 where he asked you to read beginning on
18 Page 5 of Exhibit-5 under the heading,
19 General Principles?
20 A. Yes, I remember. In fact, I
21 had to read this -- parts of two pages,
22 right?
23 Q. Correct. Yes, sir.
24 Dr. Sheinin, if you look at

Page 262

1 the second paragraph under general
2 principles, you'll see a sentence
3 beginning with, A threshold of
4 toxicological concern.
5 Do you see that paragraph,
6 sir?
7 A. Yes.
8 Q. And in the second sentence,
9 does this document state that, The
10 methods upon which the TTC -- that being
11 the threshold of toxicological concern --
12 is based are generally considered to be
13 very conservative since they involve a
14 simple linear extrapolation from the
15 dose, giving a 50 percent tumor incidence
16 to a 1 in 106 incidence, using TD50 data
17 for the most sensitive species and most
18 sensitive site of tumor induction?
19 Do you see that language,
20 sir?
21 MR. DAVIS: Before you
22 answer, Dr. Sheinin, let me place
23 an objection on the record here.
24 He's testified a billion

Page 263

1 times today he's not a
2 toxicologist, so asking him about
3 the substance of how thresholds
4 for toxicological concern are
5 created is totally outside of --
6 not only of his report but also of
7 his expertise, as he's admitted
8 today.
9 And I'll object to form,
10 just for the heck of it.
11 MR. REEFER: I understand
12 your position to be that the
13 section of M7 that you required my
14 witness to read cannot now be read
15 into the record; is that your
16 position, counsel?
17 MR. DAVIS: No, I'm
18 objecting to where this is going,
19 which is -- which is --
20 MR. REEFER: You don't
21 know -- John -- you have no idea
22 where this is going, John.
23 MR. DAVIS: I have a pretty
24 good idea. All right, go ahead

Page 264

1 and answer the question.
2 Object to form.
3 BY MR. REEFER:
4 Q. Yes.
5 The question was, do you see
6 that language; yes or no?
7 A. Yes.
8 Q. If you turn the page,
9 Dr. Sheinin, to Page 6 of the M7 guidance
10 marked as Exhibit-5, you'll see some
11 language, a sentence beginning with the
12 words, The use of a numerical cancer risk
13 value.
14 Do you see that, sir?
15 A. Yes.
16 Q. And does the M7 guidance
17 say, The use of a numerical cancer risk
18 value (1 in 100,000) and its translation
19 into risk-based doses (TTC) is a highly
20 hypothetical concept that should not be
21 regarded as a realistic indication of the
22 actual risk.
23 Did I read that correctly,
24 sir?

Page 265

1 MR. DAVIS: Object to form.
2 MR. REEFER: What's the
3 nature of the objection, counsel?
4 MR. DAVIS: I said object to
5 form.
6 You can go ahead.
7 MR. REEFER: Right. I just
8 wanted to clarify the nature so I
9 can fix it.
10 MR. DAVIS: Well, it's the
11 inherent nature of asking this
12 witness about concepts that he's
13 not an expert in. You're asking
14 him to read a sentence that he
15 doesn't understand.
16 MR. REEFER: Did you ask him
17 to do the same thing, counsel?
18 MR. DAVIS: No, I didn't. I
19 asked him -- I had him clarify
20 that he's never seen this
21 document, didn't look at it,
22 didn't consider it.
23 MR. REEFER: And did you ask
24 him to read it, counsel?

Page 266

1 MR. DAVIS: Sure. Yeah, I
2 asked him to read it to -- in
3 order to -- in order to get the
4 testimony that he never looked at
5 it and never considered it.
6 MR. REEFER: Okay. Thank
7 you.
8 BY MR. REEFER:
9 Q. Let me continue,
10 Dr. Sheinin.
11 The next sentence reads,
12 Nevertheless, the TTC concept provides an
13 estimate of the safe exposures for any
14 mutagenic compound. However, exceeding
15 the TTC is not necessarily associated
16 with an increased cancer risk, given the
17 conservative assumptions employed in the
18 derivation of the TTC value.
19 Do you see those sentences,
20 Doctor?
21 A. Yes.
22 MR. DAVIS: Objection.
23 BY MR. REEFER:
24 Q. The exact sentence reads --

Page 267

1 MR. REEFER: I haven't
2 finished my -- I haven't finished
3 stating my question.
4 BY MR. REEFER:
5 Q. The next sentence reads, The
6 most likely increase in cancer incidence
7 is actually much less than 1 in 100,000.
8 Did I read that correctly?
9 A. Yes.
10 Q. The next sentence reads, In
11 addition, in cases where a mutagenic
12 compound is a noncarcinogen in a rodent
13 bio assay, there would be no predicted
14 increase in cancer risk.
15 Did I read that correctly?
16 MR. DAVIS: Jason, are you
17 just going to ask him to confirm
18 that you're reading sentences in
19 the document? Or are you going to
20 actually ask him any questions
21 about this stuff that he doesn't
22 understand?
23 MR. REEFER: I am --
24 MR. DAVIS: This is an utter

Page 268

1 waste of time. This is an
2 absolute waste of time, if this is
3 what you're doing.
4 MR. REEFER: Counsel, I am
5 putting on the record what you
6 asked my witness to read so as to
7 allow you to ask him questions.
8 MR. DAVIS: I didn't ask him
9 anything about derivation of TTCs
10 or how they were derived for
11 nitrosamines, because he doesn't
12 know anything about that. He's
13 not a toxicologist.
14 This is -- this is an
15 absolute waste of time. You all
16 have other experts -- had other
17 experts who have opined on this
18 stuff, some of whom have been
19 struck.
20 But you all had plenty of
21 experts that could -- they can
22 talk about this. This is not one
23 of those experts, as he himself
24 has testified.

Page 269

1 This is a waste of time.
2 I'm going to make that a
3 continuing objection. Keep going,
4 if you like.
5 MR. REEFER: Thank you.
6 BY MR. REEFER:
7 Q. The next sentence,
8 Dr. Sheinin, I believe, reads, Based on
9 all of the above considerations, any
10 exposure to an impurity that is later
11 identified as a mutagen is not
12 necessarily associated with an increased
13 cancer risk for patients already exposed
14 to the impurity.
15 Did I read that correctly?
16 A. Yes, you did.
17 Q. Is it true that a new drug
18 application or abbreviated new drug
19 application may contain standards and
20 specifications in addition to what's
21 found in a compendial monograph?
22 A. Yes.
23 Q. Do you remember counsel
24 asking you questions with respect to

Page 270

1 Exhibit-6, the valsartan drug substance
2 monograph?
3 A. Yes.
4 Q. If you look -- if you focus
5 simply on the monograph, irrespective of
6 any other standards or specifications
7 that might be in place, is it true that
8 so long as nitrosamine impurities were
9 not detected above 0.1 percent, the drug
10 substance would comply with compendial
11 standards?
12 A. It would.
13 Q. To this day, to the best of
14 your knowledge, does FDA permit the sale
15 of drug products within the United States
16 containing NDMA or NDEA, so long as those
17 levels are below acceptable intake
18 limits?
19 A. I believe that's true.
20 MR. DAVIS: Object to form.
21 BY MR. REEFER:
22 Q. Dr. Sheinin, you were asked
23 a series of questions related to, I
24 think, three or four consecutive

Page 271

1 exhibits, including an e-mail exchange,
2 DMF information requests, and a process
3 validation report.
4 Do you remember generally
5 that line of questioning from Mr. Davis?
6 A. Oh. Yeah, I remember.

3 [REDACTED]

4 Q. You had discussed,

5 Dr. Sheinin, concepts about whether the

6 impurity profile between a generic drug

7 and an innovator or reference-listed drug

8 must be identical.

9 Do you remember that

10 discussion?

11 A. Yes.

12 Q. Do you understand that

13 oftentimes what's referred to as a

14 reference-listed drug is an NDA holder or

15 what some people refer to as an innovator

16 drug?

17 A. Quite often it is. It's not

18 necessarily, but not -- most of the time,

19 yeah. It's pretty -- pretty common.

20 Q. For -- and I'll refer to,

21 you know, an NDA holder as an innovator

22 drug; is that okay, for shorthand?

23 A. Yes, okay.

24 Q. In your experience at FDA,

Page 277

1 will you see batch-by-batch variants in

2 the impurity profiles of API used to

3 manufacture innovator drugs?

4 A. Yeah. I think I mentioned

5 that during testimony today, that there's

6 going to be variation from batch to batch

7 and even sometimes there's -- a given

8 impurity is not present at the time of

9 manufacture and sometimes it is,

10 especially if it's a very low-level

11 impurity.

12 Q. Dr. Sheinin, in your

13 experience at FDA, are you aware of

14 instances where the manufacturer of an

15 innovator drug sources API from multiple

16 sources?

17 A. Yes. Sometimes they do that

18 in their original NDA, sometimes they do

19 it, through a supplement, to add another

20 manufacturer. And I have seen NDAs where

21 there were more than two manufacturers,

22 especially for a, quote/unquote,

23 blockbuster drug, where there's times

24 that one -- one source of a drug

<p>Page 278</p> <p>1 substance is having issues and companies 2 need to have alternate sources. 3 Q. When a manufacturer of an 4 innovator drug sources API from multiple 5 sources, do those API manufacturers have 6 to use identical processes? 7 A. They don't have to. 8 Sometimes the innovator may have the 9 patent on the synthetic scheme and they 10 want their suppliers to use the same 11 scheme. Sometimes that's not the case 12 and whoever they are purchasing the drug 13 substance from is using different routes 14 of synthesis. 15 Q. When an innovator drug 16 manufacturer sources API from multiple 17 manufacturers and those API manufacturers 18 utilize separate and distinct 19 manufacturing processes, would you expect 20 there to be differences in the impurity 21 profile of the API? 22 A. Definitely, I would. 23 Q. Does the FDCA adopt the USP 24 compendial standard as the standard by</p> <p>Page 279</p> <p>1 which products are evaluated for 2 adulteration? 3 A. Yes. I think that's in my 4 report. 5 Q. If a product complies with 6 the compendial monograph, does that mean 7 it's not adulterated? 8 MR. DAVIS: Objection. 9 Calls for a legal conclusion that 10 he was unwilling to provide to me 11 in his direct testimony here. 12 BY MR. REEFER: 13 Q. Do you offer the opinion 14 that the standards set forth in Mylan's 15 DMF were consistent with the valsartan 16 USP monograph for a drug substance? 17 A. Yes. The fact that 18 valsartan -- Mylan's valsartan is on the 19 market and being sold in the U.S., to me, 20 that says the quality of the valsartan 21 API is in conformance with the USP 22 monograph. 23 Q. And you did not need to 24 review the drug master file for that</p>	<p>Page 280</p> <p>1 opinion, did you? 2 A. No, I did not. I also 3 looked at, I think I had mentioned 4 earlier, two certificates of analysis. 5 And I compared the test in the 6 certificates of analysis with the USP 7 monograph and found them to be in 8 agreement. 9 Q. Did -- have you had an 10 opportunity to review the label from 11 Mylan's valsartan drug product? 12 A. I have. And I -- I looked 13 at the package insert. And in Section 14 11, where it talks about the description, 15 I could see that the heading there was 16 valsartan tablets USP. And in the 17 discussion of the active ingredient, it 18 says valsartan USP. 19 Q. And does that -- why is that 20 significant to you? 21 A. Because that means the -- 22 both the drug product and the drug 23 substance meet the requirements set forth 24 in the compendial monographs for those</p> <p>Page 281</p> <p>1 two items. 2 Q. Does the potential presence 3 of NDEA, at levels up to 1.57 parts per 4 million, change your opinion that drug 5 substance manufactured in accordance with 6 the specifications set forth in Mylan's 7 DMF would be compliant with compendial 8 standards? 9 A. There's not -- 10 MR. DAVIS: Object to form. 11 BY MR. REEFER: 12 Q. Okay. Can you explain why 13 that is? 14 COURT REPORTER: I'm sorry. 15 I need that answer repeated. 16 MR. REEFER: Could you 17 repeat your answer, Dr. Sheinin. 18 THE WITNESS: I think I 19 said, no, it does not. 20 BY MR. REEFER: 21 Q. And can you explain why it 22 does not? 23 A. Because at 1.57 PPM, it 24 would still meet the acceptance criteria</p>
--	---

Page 282

1 in the test for any other impurity of 0.1
2 percent.
3 Q. Do you remember a portion of
4 your report where you discuss whether
5 routine testing performed on drug
6 substance would have allowed for the
7 detection of trace levels of nitrosamine
8 impurities?
9 A. I do recall.
10 Q. Is it your opinion that
11 routine testing would not have detected
12 levels of NDEA as found in some batches
13 of Mylan's drug substance?
14 MR. DAVIS: Objection.
15 Object to form.
16 THE WITNESS: Yes.
17 MR. DAVIS: Objection.
18 Vague as to what "routine testing"
19 means.
20 MR. REEFER: Was your answer
21 yes?
22 THE WITNESS: The answer is
23 yes.
24 BY MR. REEFER:

Page 283

1 Q. And what's the basis of that
2 opinion?
3 A. The basis of my opinion is
4 the 30 years I had at the FDA, both in
5 the laboratory and as a supervisory
6 review chemist, and my experience at USP.
7 And even before I worked at
8 USP, I actually served as a volunteer on
9 a number of USP expert committees,
10 evaluating proposed monographs for -- to
11 go into the book.
12 And just from my experience,
13 routine testing would not have picked up
14 an impurity at that low of a level.
15 The fact that FDA had to
16 resort to using mass spec -- using mass
17 spec is a very sensitive detector to
18 begin with, and they had to make that
19 detector even more sensitive because they
20 were looking at a single ion.
21 When you introduce a
22 chemical into a mass spectrometer, it's
23 ionized and then it breaks down into
24 fragments. The initial ion is called the

Page 284

1 parent ion, and as it breaks down it
2 forms daughter ions.
3 And that -- to be able to
4 look at a single ion for NDEA or a single
5 ion for NDMA increases the sensitivity of
6 that method. So it's -- basically, I
7 guess I would say it's -- compared to a
8 routine GC or LC analysis, I would call
9 it supercharged. It's many -- it's
10 multiple times more sensitive than a
11 routine procedure.
12 MR. DAVIS: I can't hear
13 you, Jason.
14 VIDEO TECHNICIAN: The phone
15 is on mute, I think.
16 The phone disconnected.
17 - - -
18 (Whereupon, a discussion off
19 the record occurred.)
20 - - -
21 MR. DAVIS: Let's go off the
22 record.
23 VIDEO TECHNICIAN: Going off
24 the record. The time is 5:23 p.m.

Page 285

1 - - -
2 (Whereupon, a brief recess
3 was taken.)
4 - - -
5 VIDEO TECHNICIAN: We are
6 back on the record. The time is
7 5:29 p.m.
8 BY MR. REEFER:
9 Q. Dr. Sheinin, I understand
10 that we were just disconnected from the
11 phone line used for this Zoom deposition
12 and that madam court reporter read back
13 your prior answer.
14 Did you hear her recite that
15 answer?
16 A. I did.
17 Q. Was there any additional
18 information that you sought to provide in
19 response to my previous question?
20 A. No.
21 Q. Has --
22 MR. DAVIS: Are you
23 speaking, Jason, or did we lose
24 you again?

Page 286

1 MR. REEFER: No, you haven't
 2 lost me yet, John. I was -- my
 3 wheels don't turn as fast as yours
 4 do, John, as you can probably
 5 tell.
 6 BY MR. REEFER:
 7 Q. Dr. Sheinin, has -- has FDA
 8 made statements indicating that the
 9 properties of nitrosamine impurities make
 10 them hard to detect in standard
 11 laboratory testing?
 12 A. They have.
 13 MR. DAVIS: Object to form.
 14 Object to the extent that it's not
 15 listed in his -- in the four
 16 corners of his report or reliance
 17 materials, whatever this is
 18 calling for, these statements.
 19 BY MR. REEFER:
 20 Q. With respect to your -- the
 21 opinion you offered regarding the
 22 capabilities of routine testing to detect
 23 levels of NDEA as found in some batches
 24 of Mylan's drug substance, is it relevant

Page 287

1 for you to compare the specification set
 2 forth in the compendium of not more than
 3 0.1 percent versus the levels of NDEA
 4 detected in Mylan's drug?
 5 A. Yes.
 6 Q. How so?
 7 A. The levels that are found in
 8 Mylan's API would be well below the .1
 9 percent. So the testing of the
 10 impurity -- testing for impurities in the
 11 API, it would pass if -- unless -- unless
 12 there was another impurity of some
 13 unknown that was greater than .1 percent.
 14 Q. And --
 15 A. The NDEA or NDMA, if it was
 16 present, would be well below .1 percent.
 17 Q. And just, I guess, for
 18 purposes of comparing apples to apples,
 19 does .1 percent translate to 1,000 parts
 20 per million?
 21 A. Yes.
 22 Q. And when I refer to routine
 23 testing, did you understand that to mean
 24 the high-performance liquid

Page 288

1 chromatography methods set forth and
 2 described in the monograph for valsartan?
 3 A. Yes.
 4 MR. REEFER: I don't have
 5 any further questions at this
 6 time, though I may, depending on
 7 whether or not Mr. Davis does.
 8 MR. DAVIS: Okay. Just a
 9 few follow-ups, Dr. Sheinin. And
 10 I'll try to take them in the order
 11 in which they appeared.
 12 - - -
 13 EXAMINATION
 14 - - -
 15 BY MR. DAVIS:
 16 Q. You testified to me earlier
 17 that you weren't an expert and not
 18 qualified to offer opinions on risk
 19 assessment; is that right?
 20 A. Yeah. I'm not.
 21 Q. So you wouldn't know how an
 22 in-process parameter could become what
 23 the FDA refers to as a critical quality
 24 attribute or a critical process

Page 289

1 parameter; is that right?
 2 A. I -- I have an understanding
 3 of what critical quality parameters are.
 4 They are parameters that are critical to
 5 the manufacturing process. And --
 6 Q. And the determination of
 7 their -- sorry, go ahead.
 8 A. Go ahead.
 9 Q. The determination of whether
 10 they are critical or not is through a
 11 risk assessment pursuant to ICH Q9,
 12 correct?
 13 A. I believe it's in Q9.
 14 Q. Okay. And do you have any
 15 idea of what the FDA expects in terms of
 16 inclusion in a DMF regarding critical
 17 quality attributes or critical process
 18 parameters?
 19 A. I believe FDA expects them
 20 to be included in the description of the
 21 manufacturing process and the development
 22 report and so on.
 23 Q. Okay. Thank you.
 24 Counsel asked you some

Page 290

1 questions regarding routine testing.
2 Do you recall that? And
3 whether GC-MS did something that would be
4 considered routine testing or not?
5 MR. REEFER: Object to the
6 form. Beyond the scope of my
7 direct.
8 THE WITNESS: I recall he
9 asked me questions about routine
10 testing, and I would not consider
11 GC-mass spec to be routine
12 testing.
13 BY MR. DAVIS:
14 Q. When you say "routine
15 testing," are you referring to routine
16 testing that's done as part of, like, a
17 USP monograph, like the specification and
18 testing procedure for a USP monograph or
19 an approved DMF specification or ANDA
20 spec?
21 A. Or NDA spec. All of that.
22 Q. Right. But an
23 already-approved specification, correct?
24 A. No. A company that's

Page 291

1 submitting an ANDA or an NDA today, for
2 the most part, will be using routine
3 analytical procedures.
4 GC-mass spec is not anything
5 that I would consider routine.
6 Q. Even though the FDA expects
7 it to be done when unknown impurities are
8 found?
9 A. I'm not aware that the FDA
10 said you have to use GC-mass spec anytime
11 there's an unknown impurity.
12 I'm aware that the method
13 that FDA published for valsartan
14 impurities -- nitrosamine impurities in
15 valsartan is a GC-mass spec method. But
16 I'm not aware that FDA has said that any
17 unknown has to be looked at by GC-mass
18 spec.
19 Q. You are aware that the DEA
20 requires manufacturers to evaluate
21 unknown impurities?
22 Are you aware of that?
23 MR. REEFER: Object to form.
24 Misstates the testimony.

Page 292

1 But go on.
2 THE WITNESS: According to
3 ICH Q3A and Q3B, companies are --
4 well, as I said earlier, FDA
5 considers ICH guidance as
6 recommendations. So, accordingly,
7 FDA is recommending that those two
8 guidances be followed in terms of
9 determine -- making a
10 determination of the impurities in
11 a given API or a drug product.
12 I don't see anywhere in
13 those guidances where ICH says you
14 have to use GC-mass spec.
15 BY MR. DAVIS:
16 Q. I'm talking about the FDA
17 requiring manufacturers to evaluate
18 unknown impurities.
19 Are you aware of that
20 obligation?
21 A. I'm not -- I'm not aware of
22 a specific guidance that says -- anything
23 beyond what's in Q3A or Q3B as to how
24 to -- not how to, but as to what the

Page 293

1 criteria would be for reporting and
2 identifying those impurities.
3 MR. DAVIS: I'm marking Tab
4 16 as Exhibit-19.
5 - - -
6 (Whereupon, Exhibit
7 Sheinin-19, No Bates, Warning
8 Letter, Mylan Laboratories
9 Limited -- Unit 7, was marked for
10 identification.)
11 - - -
12 MR. REEFER: I'll take a --
13 will you give me a standing
14 objection, John, to the use of
15 this exhibit on the basis that
16 it's beyond the scope of my direct
17 and, also, it does not apply to
18 any facility that's been deemed to
19 be at issue in this litigation?
20 MR. DAVIS: Standing
21 objection granted, but also
22 disagreed with.
23 MR. REEFER: Very lawyerly.
24 BY MR. DAVIS:

Page 294

1 Q. You told me earlier,
2 Dr. Sheinin, you hadn't looked at
3 anything related to Unit 7; is that
4 right?
5 A. That's right.
6 Q. Okay. Do you recognize this
7 as a warning letter that was issued to
8 Unit 7 in August of 2020?
9 MR. REEFER: Objection.
10 Beyond the scope.
11 THE WITNESS: Yes.
12 BY MR. DAVIS:
13 [REDACTED]

Page 295

1 [REDACTED]

Page 296

1 [REDACTED]

Page 297

1 [REDACTED]

16 BY MR. DAVIS:
17 Q. You wouldn't think it
18 relevant to know what the FDA has been
19 advising manufacturers their obligations
20 are regarding analytical testing --
21 MR. REEFER: Object to form.
22 BY MR. DAVIS:
23 Q. -- specifically as it
24 relates to nitrosamines?

Page 298

1 MR. REEFER: Object to form.
2 Misstates the document. Beyond
3 the scope. Foundation.
4 Go ahead.
5 THE WITNESS: I have no idea
6 whatsoever what FDA has asked any
7 other defendant in this case. I
8 have no way of knowing that.
9 It's -- I mean, you know it.
10 But I have no way to know that.
11 How would you think I would know
12 that?
13 BY MR. DAVIS:
14 [REDACTED]
15 [REDACTED]
16 [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 [REDACTED]
22 [REDACTED]
23 [REDACTED]
24 [REDACTED]

Page 299

1 [REDACTED]
2 [REDACTED]
3 [REDACTED]
4 [REDACTED]
5 [REDACTED]
6 [REDACTED]
7 [REDACTED]
8 So I don't require a
9 response to that question, but -- or
10 statement, rather.
11 MR. REEFER: Object to the
12 colloquy.
13 BY MR. DAVIS:
14 Q. But let me ask you this,
15 Dr. Sheinin.
16 Is one of the ways to
17 thoroughly evaluate an unknown peak in a
18 GC FID by doing GC-MS?
19 MR. REEFER: Object to form.
20 Beyond the scope. Beyond the
21 direct.
22 Go ahead, Dr. Sheinin, if
23 you know.
24 THE WITNESS: It's one

Page 300

1 possible way.
2 BY MR. DAVIS:
3 Q. Okay. Would it be the most
4 prevalent possible way in terms of
5 evaluating unknown peaks that appear in a
6 GC FID?
7 MR. REEFER: Same objection.
8 THE WITNESS: It would be a
9 very good way. I guess partly it
10 depends on if -- if the
11 material -- well, it's one way --
12 GC-mass spec would be one way to
13 evaluate a peak coming out of a GC
14 that's an unknown by
15 flame-ionization detection.
16 But we've been talking here
17 about solvents and recovered
18 solvents. When you mentioned the
19 API, my question is, are you
20 talking about, when you talk about
21 an API, the assay? Are you
22 talking about the impurity test
23 that's in the specification or in
24 the USP monograph? Or are you

Page 301

1 talking about a solvent?
2 There's -- there's a world
3 of differences in how you go about
4 testing for unknowns in the API
5 versus these nitrosamines. So
6 there's -- I just feel that you
7 were not specific enough in what
8 you were asking me.
9 BY MR. DAVIS:
10 Q. Okay. Well, I think you've
11 answered my question, which is, GC-MS is
12 a prevalent way to thoroughly evaluate an
13 unknown peak in a GC, correct?
14 A. My premise was that I do not
15 consider GC-mass spec to be a routine
16 procedure. And I stand by that. I do
17 not consider it to be routine.
18 Q. You don't consider it to be
19 routine in -- as a procedure that's in an
20 approved specification, that's right.
21 Is that what your testimony
22 is?
23 A. Yes.
24 Q. Okay.

Page 302

1 A. It may -- it may be in an
2 approved specification today because of
3 nitrosamines. But I do not consider it
4 to be routine.
5 Q. In an approved
6 specification?
7 A. In an approved specification
8 or in an application for marketing
9 approval.
10 Q. You don't think that it's
11 routine that all the workup in a DMF that
12 goes into an ANDA application or drug
13 master file for a product that's to be
14 approved, you don't think that it's
15 routine that companies -- manufacturers
16 do GC-MS?
17 MR. REEFER: Objection.
18 Asked and answered.
19 THE WITNESS: I do not
20 consider it to be a routine
21 quality control test.
22 BY MR. DAVIS:
23 Q. Okay. A routine quality
24 control test. Okay.

Page 303

1 A. Well, you're talking about
2 quality control of a product. It's not
3 a -- it's not a routine test.
4 Q. Right. But quality control
5 is analytical chemistry for an approved
6 product, right?
7 A. Or it's a proposed
8 specification for inclusion in an
9 application of an ANDA or NDA. It's the
10 same thing. It's still -- it's a quality
11 control test.
12 Q. Are you aware that --
13 A. That we're talking about.
14 Q. Are you aware that Mylan's
15 own toxicologist testified to me that he
16 gets about, like, 3 to 4,000 requests for
17 GC-MS per year?
18 Did you review Lance Monar's
19 testimony? It wasn't even provided to
20 you, was it?
21 MR. REEFER: Object to form.
22 Foundation. Beyond the scope.
23 THE WITNESS: I'd have to
24 look on the list in Appendix B.

Page 304

1 But as I said earlier, I have not
2 reviewed any of those testimonies
3 from anybody from Mylan.
4 BY MR. DAVIS:
5 Q. Okay. And that would
6 include, also, Derek Glover's testimony;
7 you haven't reviewed any of his, even
8 though it is listed on Exhibit B, right?
9 MR. REEFER: Objection.
10 Literally just answered.
11 But go ahead, Dr. Sheinin.
12 THE WITNESS: I have not
13 reviewed any testimony from
14 anybody at Mylan.
15 BY MR. DAVIS:
16 [REDACTED]

14 [REDACTED]
15 [REDACTED]
16 BY MR. DAVIS:
17 Q. Okay. Thank you.
18 You told Mr. Reefer that
19 even a -- a Mylan valsartan product that
20 had 1.57 parts per million NDEA would
21 still meet compendial standards because
22 unknown impurities are controlled in the
23 USP monograph at not more than .1
24 percent, which is 1,000 parts per

Page 306

1 million, right?

2 A. I believe I qualified that

3 also by saying in the specification in

4 the approved application as well.

5 Q. So why did the recalls even

6 happen, then, if that's what -- if NDEA

7 was only to be controlled at not less

8 than 1,000 parts per million, which

9 appears to be your expert opinion, why

10 are we here? Why did these recalls

11 happen?

12 A. I did not -- I did not say

13 that -- I forget what your question was

14 already. It's been a long day.

15 Can you repeat your

16 question?

17 Q. Sure. And I appreciate it's

18 been a long day.

19 You testified to Mr. Reefer,

20 in response to one of his questions, that

21 a Mylan valsartan product containing 1.57

22 parts per million NDEA would still meet

23 compendial -- the USP monograph for

24 valsartan which controlled any other

Page 307

1 impurities at .1 percent; is that right?

2 A. Yes.

3 Q. So if that's the case, why

4 did the recalls happen? Can you tell me

5 that?

6 MR. REEFER: Object to form.

7 Beyond the scope. Beyond the

8 redirect.

9 THE WITNESS: The recalls

10 happened because FDA was told that

11 there were nitrosamines in some

12 products, and FDA's investigation

13 showed that there was -- there was

14 a theoretical risk and,

15 ultimately, they determined that

16 there needs to be a lower

17 acceptance criteria for

18 nitrosamines. And they called it

19 the acceptable intake level.

20 And there had to be a

21 development of more sensitive

22 analytical procedures to be able

23 to detect and quantify those

24 nitrosamines.

Page 308

1 So that's why there was a

2 recall, and I -- I would expect

3 that companies manufacturing these

4 products will have to include

5 testing for nitrosamines in their

6 specification as a -- doing a

7 supplement to their approved

8 application.

9 So there would be an

10 additional test beyond what's in

11 the USP. And I would hope that

12 companies would submit the same

13 information to USP, for USP to be

14 able to update the monograph for

15 all of the sartans.

16 BY MR. DAVIS:

17 Q. So why does it even matter

18 that USP monograph had a not more than .1

19 percent limit, if that's not even the

20 limit that applied to nitrosamines at any

21 point?

22 MR. REEFER: Object to form.

23 Object to form. It misstates the

24 testimony.

Page 309

1 THE WITNESS: I don't -- I

2 just don't understand your

3 question. It's --

4 BY MR. DAVIS:

5 Q. Well, I don't understand

6 your report.

7 MR. REEFER: Come on.

8 MR. DAVIS: Let me ask it

9 again. Let me ask it again.

10 BY MR. DAVIS:

11 Q. Why would it be important

12 for you, in your report, that the USP

13 monograph had a not more than .1 percent

14 limit for other impurities if that's not

15 even the limit that applied to

16 nitrosamines at any point? Why is that

17 relevant to your report?

18 MR. REEFER: Objection to

19 form. Misstates the testimony.

20 But go ahead, Doctor.

21 THE WITNESS: I'm totally

22 confused by now.

23 The USP monograph is

24 recognized in the Food, Drug and

<p style="text-align: right;">Page 310</p> <p>1 Cosmetic Act as being an official 2 compendium. And that monograph 3 has to be met in order for a 4 product not to be considered 5 adulterated. 6 That's why the monograph is 7 important. And that's why the 8 acceptance criteria in the 9 specification for unknown 10 impurities is important. 11 BY MR. DAVIS: 12 Q. Have you looked at what 13 the -- what the definition of adulterated 14 is in the FD&C Act at all recently? 15 A. Yes, I have. I believe I 16 have it in my report. 17 Q. Okay. And so you'll agree 18 with me, then, that a product is 19 adulterated if it's manufactured in a way 20 where the manufacturer could not assure 21 that it would -- well, let me just read 22 you the language so I'm not confused or 23 misstating it. 24 MR. REEFER: What are you</p>	<p style="text-align: right;">Page 312</p> <p>1 quality and purity characteristics which 2 it purports or is represented to possess. 3 Have you seen that language 4 before? 5 A. Yes. 6 Q. Okay. So you agree with me, 7 then, that a drug is adulterated if it's 8 manufactured out of compliance with GMP, 9 correct? 10 MR. REEFER: Object to form. 11 Object to form. Beyond the scope. 12 THE WITNESS: The -- that 13 definition is -- I want to look at 14 the definition I copied into my 15 report. 16 MR. REEFER: He's quoting 17 from a different subsection. 18 THE WITNESS: Oh, okay. 19 Can you read that again? 20 MR. DAVIS: Sure. 21 BY MR. DAVIS: 22 Q. A drug or a device shall be 23 deemed to be adulterated -- and then this 24 is A1 -- or A2B, Subsection A2B, If it is</p>
<p style="text-align: right;">Page 311</p> <p>1 reading from, John? 2 MR. DAVIS: 21 USC 351. 3 BY MR. DAVIS: 4 Q. A drug or device shall be 5 deemed adulterated -- 6 A. Wait. Wait. 7 MR. REEFER: Hold on. He 8 said 21 USC 351. 9 THE WITNESS: Okay. I 10 thought you said USP. 11 MR. DAVIS: 21 USC 351, 12 United States Code. 13 BY MR. DAVIS: 14 Q. A drug or a device shall be 15 adulterated, if it is a drug, and the 16 methods used in, or the facilities or 17 controls used for, its manufacture, 18 processing, packing or holding do not 19 conform to or are not operated or 20 administered in conformity with current 21 good manufacturing practice to assure 22 that such drug meets the requirements of 23 this chapter as to safety and has the 24 identity and strength, and meets the</p>	<p style="text-align: right;">Page 313</p> <p>1 a drug and the methods used in, or the 2 facilities or controls used for, its 3 manufacture, processing, packing or 4 holding do not conform to or are not 5 operated or administered in conformity 6 with current good manufacturing practice 7 to assure that such drug meets the 8 requirements in this chapter as to safety 9 and has the identity and strength, and 10 meets the quality and purity 11 characteristics which it purports or is 12 represented to possess. 13 Do you agree with me that 14 that's -- that's a definition of an 15 adulterated drug, a situation in which a 16 drug becomes adulterated, per federal 17 law? 18 A. Yes. 19 Q. Okay. And, in fact, that's 20 what Mylan was told in its November 2019 21 Unit 8 warning letter, Exhibit-3, was it 22 not? 23 MR. REEFER: Objection. 24 BY MR. DAVIS:</p>

<p style="text-align: right;">Page 314</p> <p>1 Q. We saw that language, right?</p> <p>2 MR. REEFER: Object to form.</p> <p>3 You've covered this in cross. You</p> <p>4 know, asked and answered.</p> <p>5 But go ahead.</p> <p>6 THE WITNESS: And yet FDA,</p> <p>7 within a short period of time,</p> <p>8 allowed Mylan to reintroduce their</p> <p>9 valsartan. So there was no legal</p> <p>10 action taken, as far as I know,</p> <p>11 about the valsartan that was the</p> <p>12 subject of that inspection.</p> <p>13 BY MR. DAVIS:</p> <p>14 Q. Okay. And for about the</p> <p>15 umpteenth time today, you have no idea</p> <p>16 how that valsartan that was brought back</p> <p>17 to the market differed from the valsartan</p> <p>18 that Mylan had to recall?</p> <p>19 MR. REEFER: As acknowledged</p> <p>20 by the question itself, asked and</p> <p>21 answered.</p> <p>22 BY MR. DAVIS:</p> <p>23 Q. Is that a yes?</p> <p>24 A. Yes.</p>	<p style="text-align: right;">Page 316</p> <p>1 procures raw materials from a vendor, a</p> <p>2 raw material vendor, and that vendor is</p> <p>3 out of GMP compliance and the raw</p> <p>4 materials it's sending to Mylan are no</p> <p>5 good, it's ultimately Mylan's</p> <p>6 responsibility to adequately vet its</p> <p>7 vendors.</p> <p>8 Isn't that the FDA's</p> <p>9 position as stated in regulations, and</p> <p>10 GMP regulations specifically?</p> <p>11 MR. REEFER: Object to form.</p> <p>12 BY MR. DAVIS:</p> <p>13 Q. Do you have any</p> <p>14 understanding of that?</p> <p>15 MR. REEFER: Object to form.</p> <p>16 Beyond the scope of his report.</p> <p>17 Beyond the scope of my direct.</p> <p>18 But, I don't know, go ahead.</p> <p>19 THE WITNESS: Yes. Mylan</p> <p>20 would be responsible for their</p> <p>21 suppliers.</p> <p>22 MR. DAVIS: Okay. That's</p> <p>23 all the questions I have.</p> <p>24 MR. REEFER: So we'll go</p>
<p style="text-align: right;">Page 315</p> <p>1 Q. Okay. Last questions.</p> <p>2 Mr. Reefer asked you some</p> <p>3 questions about procurements of API, I</p> <p>4 believe, from multiple sources and how</p> <p>5 that might affect the quality or purity</p> <p>6 characteristics of the product.</p> <p>7 Do you remember that</p> <p>8 discussion with him?</p> <p>9 A. Yes.</p> <p>10 Q. Okay. Do you have an</p> <p>11 understanding that under FDA regulations</p> <p>12 that a manufacturer like Mylan is</p> <p>13 responsible for all of its suppliers?</p> <p>14 MR. REEFER: Object to form.</p> <p>15 Beyond the scope.</p> <p>16 THE WITNESS: That Mylan is</p> <p>17 responsible for all of their</p> <p>18 suppliers? And to what extent and</p> <p>19 to what regard?</p> <p>20 I think that's a -- like an</p> <p>21 unfinished question.</p> <p>22 BY MR. DAVIS:</p> <p>23 Q. Sure.</p> <p>24 If Mylan, for example,</p>	<p style="text-align: right;">Page 317</p> <p>1 huddle, and I'll come back to see</p> <p>2 if -- I'm just kidding, John.</p> <p>3 VIDEO TECHNICIAN: No more</p> <p>4 questions?</p> <p>5 MR. DAVIS: We can go off</p> <p>6 the record.</p> <p>7 MR. REEFER: No. I have --</p> <p>8 MR. DAVIS: Sorry, I take it</p> <p>9 back.</p> <p>10 MR. REEFER: I just had -- I</p> <p>11 just have maybe two questions,</p> <p>12 three questions.</p> <p>13 - - -</p> <p>14 EXAMINATION</p> <p>15 - - -</p> <p>16 BY MR. REEFER:</p> <p>17 Q. Dr. Sheinin, do you purport</p> <p>18 to offer any opinions with respect to</p> <p>19 whether Mylan complied with GMP</p> <p>20 regulations?</p> <p>21 A. No.</p> <p>22 Q. Do you intend to offer any</p> <p>23 opinion with respect to whether Mylan's</p> <p>24 investigation of unknown peaks, in some</p>

Page 318

1 form or fashion, complied with rules and
 2 regulations?
 3 A. No.
 4 Q. To your knowledge, did
 5 what's been described as Mylan Unit 7
 6 manufacture API -- API valsartan?
 7 A. I have no idea what Unit 7
 8 manufactures.
 9 MR. REEFER: All right. I
 10 think that's all I have.
 11 MR. DAVIS: No further
 12 questions.
 13 VIDEO TECHNICIAN: This
 14 marks the end of today's
 15 deposition. The time is 6:06 p.m.
 16 - - -
 17 (Whereupon, the deposition
 18 concluded at 6:06 p.m.)

1 INSTRUCTIONS TO WITNESS
 2
 3 Please read your deposition
 4 over carefully and make any necessary
 5 corrections. You should state the reason
 6 in the appropriate space on the errata
 7 sheet for any corrections that are made.
 8 After doing so, please sign
 9 the errata sheet and date it.
 10 You are signing same subject
 11 to the changes you have noted on the
 12 errata sheet, which will be attached to
 13 your deposition.
 14 It is imperative that you
 15 return the original errata sheet to the
 16 deposing attorney within thirty (30) days
 17 of receipt of the deposition transcript
 18 by you. If you fail to do so, the
 19 deposition transcript may be deemed to be
 20 accurate and may be used in court.

1 CERTIFICATE
 2
 3
 4 I, Amanda Maslinsky-Miller, Certified Realtime
 5 Reporter, do hereby certify that prior to the
 6 commencement of the examination, ERIC SHEININ,
 7 Ph.D., was remotely sworn by me to testify to
 8 the truth, the whole truth and nothing but the
 9 truth.
 10 I DO FURTHER CERTIFY that the foregoing is a
 11 verbatim transcript of the testimony as taken
 12 stenographically by me at the time, place and
 13 on the date hereinbefore set forth, to the best
 14 of my ability.
 15 I DO FURTHER CERTIFY that I am neither a
 16 relative nor employee nor attorney nor counsel
 17 of any of the parties to this action, and that
 18 I am neither a relative nor employee of such
 19 attorney or counsel, and that I am not
 20 financially interested in the action.

 Carcinogenic Risk, Guidance
 for Industry

<p>Page 6</p> <p>1 Exhibit 7 Valsartan USP Monograph, 128 January 28, 2022</p> <p>2</p> <p>3 Exhibit 8 Impurities in Drug Products and Drug Substances - A USP 145 Approach, Ravi Ravichandran, Principal Scientific Liaison</p> <p>4</p> <p>5 Exhibit 9 Overview of USP General 152 Chapters <476> and <1086>, Prescription/Non-Prescription Stakeholder Forum, October 19, 2017</p> <p>6</p> <p>7 Exhibit 10 FDA's Overview of the Guidance 156 for Industry: Control of Nitrosamine Impurities in Human Drugs, David Keire, Ph.D., and Dongmei Lu, Ph.D., Office of Pharmaceutical Quality, October 2, 2020</p> <p>8</p> <p>9 Exhibit 11 E-mail, 06 July 2018, To: All, 165 From: Global Quality Compliance, Re: Lift of Hold Status for All Finished Products Manufactured using Valsartan API from Jubilant and Mylan</p> <p>10</p> <p>11 Exhibit 12 Generic Drug Manufacturer 210 Ranbaxy Pleads Guilty and Agrees to Pay \$500 Million to Resolve False Claims Allegations, cGMP Violations and False Statements to the FDA</p> <p>12</p> <p>13 Exhibit 13 Orange Book Preface 224</p> <p>14</p> <p>15 Exhibit 14 Expert: Nitrosamines 'Can Slip 256 Through the Manufacturing Process,' Making Reference Standards Essential to Avoid this Carcinogen in the Drug Supply Chain, June 29, 2021</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25 Exhibit 15 Invoices, 5 pages 270</p>	<p>Page 8</p> <p>1 THE VIDEOGRAPHER: Okay. We are now on</p> <p>2 the record.</p> <p>3 My name is Kristina Lee. I am a</p> <p>4 videographer for Golkow Litigation Services.</p> <p>5 Today's date is February 17th, 2022, and</p> <p>6 the time is 7:18 Pacific.</p> <p>7 This remote video deposition is being held</p> <p>8 in the matter of Valsartan, Losartan and Irbesartan</p> <p>9 Products Liability Litigation, MDL No. 2875, for the</p> <p>10 United States District Court, District of New</p> <p>11 Jersey. The deponent is Roger Williams.</p> <p>12 All parties to this deposition are</p> <p>13 appearing remotely and have agreed to the witness</p> <p>14 being sworn in remotely. Due to the nature of</p> <p>15 remote reporting, please pause briefly before</p> <p>16 speaking to ensure all parties are heard completely.</p> <p>17 All counsel will be noted on the</p> <p>18 stenographic record.</p> <p>19 The court reporter is Elaina Bulda-Jones,</p> <p>20 and she will now swear in the witness.</p> <p>21 ROGER WILLIAMS, M.D.,</p> <p>22 called as a witness by the Plaintiffs herein, being</p> <p>23 first duly sworn by the Certified Shorthand Reporter</p> <p>24 was thereupon examined and testified as is</p> <p>25 hereinafter set forth.</p>
<p>Page 7</p> <p>1 Exhibit 16 NDA Partners LLC, Curriculum 284 Vitae of Roger Williams, M.D., November 2021</p> <p>2</p> <p>3 Exhibit 17 Video 284</p> <p>4 Exhibit 18 Complete set of materials sent 292 to Dr. Williams</p> <p>5</p> <p>6</p> <p>7</p> <p>8</p> <p>9</p> <p>10</p> <p>11</p> <p>12</p> <p>13</p> <p>14</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>	<p>Page 9</p> <p>1 THE REPORTER: Mr. Stanoch.</p> <p>2 MR. STANOCH: Thank you.</p> <p>3 EXAMINATION</p> <p>4 BY MR. STANOCH:</p> <p>5 Q. Good morning, Dr. Williams.</p> <p>6 A. Good morning, Mr. Stanoch.</p> <p>7 Q. Could you tell us where you are located</p> <p>8 today?</p> <p>9 A. I'm in San Francisco, California, in 4</p> <p>10 Embarcadero Center in the offices of Greenberg</p> <p>11 Taurig.</p> <p>12 Q. Thank you.</p> <p>13 And other than Teva's counsel, Ms. Lockard</p> <p>14 and Mr. Harkins, and perhaps any tech people, are</p> <p>15 there anybody else in the room with you?</p> <p>16 A. No, there are not.</p> <p>17 Q. Other than a box which we have yet to open</p> <p>18 of potential documents that we sent to your counsel,</p> <p>19 do you have any documents with you in your room?</p> <p>20 A. I see three documents that my counsel has</p> <p>21 put before me. One is the report, one is the</p> <p>22 materials considered, and one is the deposition</p> <p>23 request.</p> <p>24 Q. Perfect. Anything else?</p> <p>25 A. I have a blank pad of paper and a pen, and</p>

<p style="text-align: right;">Page 10</p> <p>1 nothing else.</p> <p>2 Q. Thank you.</p> <p>3 Now, you have been deposed a number of</p> <p>4 times before; is that fair?</p> <p>5 A. That's true, Mr. Stanoch.</p> <p>6 Q. Right. So you understand the general</p> <p>7 rules we will be following here today, that I will</p> <p>8 be asking you a series of questions, you'll be</p> <p>9 providing answers, everything everyone says on the</p> <p>10 record will be taken down by the stenographer and on</p> <p>11 the video; you understand that?</p> <p>12 A. I do.</p> <p>13 Q. Right. And if you do not understand the</p> <p>14 question, I ask, please tell me; otherwise I will</p> <p>15 assume you understand; is that fair?</p> <p>16 A. That's fair.</p> <p>17 Q. Do you understand you should answer the</p> <p>18 question unless your counsel instructs you</p> <p>19 otherwise?</p> <p>20 A. I do understand that.</p> <p>21 Q. Is there any reason why you cannot testify</p> <p>22 truthfully and accurately today?</p> <p>23 A. There is no reason.</p> <p>24 Q. Excellent. Let's do some housekeeping</p> <p>25 with exhibits, Dr. Williams. First, before we get</p>	<p style="text-align: right;">Page 12</p> <p>1 correct?</p> <p>2 A. Yes, I do, Mr. Stanoch.</p> <p>3 Q. Very good. And as a housekeeping matter,</p> <p>4 Dr. Williams, could you tell us what revisions were</p> <p>5 made in the copy of your report that we have marked</p> <p>6 as Exhibit 1 over the report that was originally</p> <p>7 provided on January 12th, 2022?</p> <p>8 A. Yes. There were two references that</p> <p>9 needed to be changed.</p> <p>10 One was a reference to a guidance of FDA</p> <p>11 that talks about drug substances for ANDAs. In the</p> <p>12 unrevised report, that was not provided, so we have</p> <p>13 now provided that guidance. And it's listed in the</p> <p>14 materials considered as well as cited in my report.</p> <p>15 And I'll be glad to answer questions about that</p> <p>16 guidance if you wish, Mr. Stanoch.</p> <p>17 The other change was a reference to a USP</p> <p>18 guidance that talks about submitting requests for</p> <p>19 revisions to the United States Pharmacopeia-National</p> <p>20 Formulary. And the reason for the change was when I</p> <p>21 looked at it recently, it spoke to requests for</p> <p>22 revisions of dietary supplements, which of course is</p> <p>23 not pertinent in this matter. So we changed it to</p> <p>24 requests for revisions for chemical substances, and</p> <p>25 that is now referenced in the revised report and</p>
<p style="text-align: right;">Page 11</p> <p>1 going, I am going to mark as Williams 1 the revised</p> <p>2 expert report that your counsel provided to us 20 or</p> <p>3 so minutes ago.</p> <p>4 MR. STANOCH: Stand by, everyone.</p> <p>5 (Whereupon, Exhibit 1 was marked for</p> <p>6 identification.)</p> <p>7 BY MR. STANOCH:</p> <p>8 Q. So, Dr. Williams, the copy of your report</p> <p>9 in front of you given to you by your counsel, we</p> <p>10 will call that Exhibit 1, and for everyone else's</p> <p>11 benefit, it's available as Exhibit 1 on the</p> <p>12 electronic shared files. Are you good with that,</p> <p>13 Doctor?</p> <p>14 A. I am.</p> <p>15 Q. Excellent. I am going to mark also the</p> <p>16 revised list of the materials you considered that</p> <p>17 your counsel also provided a little earlier this</p> <p>18 morning. Stand by.</p> <p>19 (Whereupon, Exhibit 2 was marked for</p> <p>20 identification.)</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Exhibit 2, Dr. Williams, that's the list</p> <p>23 of materials considered that were provided to us 20</p> <p>24 or so minutes ago. You have a physical copy in</p> <p>25 front of you, I understand, from your counsel,</p>	<p style="text-align: right;">Page 13</p> <p>1 also in the materials considered. Again, I'll be</p> <p>2 glad to answer questions about that document if you</p> <p>3 wish, Mr. Stanoch.</p> <p>4 And then there were two additional</p> <p>5 documents that were important to my report relating</p> <p>6 to the Orange Book, and those were not listed in the</p> <p>7 materials considered, so we adjusted the materials</p> <p>8 considered to include those references. One was an</p> <p>9 Orange Book from January 2019 summarizing the prior</p> <p>10 year, 2018. And then the other Orange Book</p> <p>11 reference was the Orange Book Supplement No. 8,</p> <p>12 August for 2018, and those are both referenced in my</p> <p>13 report and also now listed in the materials</p> <p>14 considered.</p> <p>15 Q. Okay. Thank you, Doctor.</p> <p>16 And regarding your report first, I believe</p> <p>17 the particular footnotes that were updated with the</p> <p>18 two materials you noted, those are Footnotes 20 and</p> <p>19 21 of page 17 of your report; is that right?</p> <p>20 A. Let me take a quick look just to confirm.</p> <p>21 Yes, you have it exactly right, Mr. Stanoch.</p> <p>22 Q. Very good. And the materials considered,</p> <p>23 the two Orange Book references that are now listed</p> <p>24 in your revised materials considered, I believe it's</p> <p>25 your testimony that you had relied on them in</p>

<p>Page 14</p> <p>1 preparing your report, they just didn't make it into 2 the reliance materials initially; is that fair? 3 A. Yes, the materials considered listing. 4 But they were referenced in my report appropriately 5 and cited. 6 Q. Understood. And do you happen to have the 7 page of the reliance materials where the two Orange 8 Book sources are now listed? 9 A. I'm sure I do, but it might help me if we 10 agree on what page that is. 11 Q. I think it may be page 2, but if you 12 cannot do it quickly, Doctor, we can certainly take 13 care of it at a break. I don't think there is a 14 controversy on this. 15 A. Oh, yeah, there it is. It's under 16 "Regulatory Guidances, Standards, and Documents," 17 and there is a 2019 Orange Book, which is the second 18 listing in that category, and then the 2018 Orange 19 Book, Cumulative Supplement 8, August 2018, which is 20 the third listing. 21 MR. HARKINS: Did we lose Mr. Stanoch? 22 THE WITNESS: Oh, I think he is looking at 23 the materials considered. 24 (Whereupon, a brief discussion off the 25 record.)</p> <p>Page 15</p> <p>1 THE VIDEOGRAPHER: Okay. We're going off 2 the record. The time is 7:29. 3 (Whereupon, a brief recess was taken.) 4 THE VIDEOGRAPHER: Okay. We're coming 5 back on the record. The time on the video monitor 6 is 7:37. Please begin. 7 BY MR. STANOCH: 8 Q. Okay. Doctor, thank you for bearing with 9 us with the technical issues. I believe we were 10 just looking at your revised reliance materials, 11 correct, that's where we were? 12 A. Yes, I understand. 13 Q. Uh-huh. And you were showing us, you 14 know, the two Orange Book sources that are now 15 listed under the "Regulatory Guidances" heading, I 16 believe it was, right? 17 A. Yes. 18 Q. All right. Other than the updates of 19 Footnotes 20 and 21 of your report, does the revised 20 report that's been produced today have any other 21 changes to it over your original January 12th, 2022, 22 report? 23 A. No, it does not. 24 Q. Okay. Thank you. 25 A. There is a new signature page,</p>	<p>Page 16</p> <p>1 Mr. Stanoch, with today's date. 2 Q. Understood. Other than the two footnote 3 revisions we discussed and the new signature page, 4 are there any other changes in your report, now 5 dated February 17th, 2022, over the original 6 iteration of your report from January 12th, 2022? 7 A. No, there are not. 8 Q. Okay. And on your lists of materials 9 considered, I think there were a few other things 10 that were added between your original lists from 11 January 12th and today besides the two Orange Book 12 sources. And do you recall that generally, sir? 13 A. No, actually I can't say I do, 14 Mr. Stanoch. 15 Q. That's fine. And, you know, for instance, 16 if you look at page 1 of Exhibit 2, your latest 17 iteration of materials considered, there is now a 18 section that says, "Defendants' Expert Reports (with 19 exhibits)." Do you see that? 20 A. Page 1? Oh, yes, I do see that. 21 Q. Right. And the first line is the report 22 of Timothy Anderson. Do you see that? 23 A. I do see that. 24 Q. And then it continues on, correct? 25 A. Yes.</p> <p>Page 17</p> <p>1 Q. And you could say it in your own words, 2 but it looks like your revised materials here of 3 2/17/2022 is showing that you have now reviewed all 4 of the other defense expert reports listed here, 5 whereas you had not reviewed them at the time you 6 rendered your original report of January 12th, 2022; 7 is that right? 8 A. Yes. I think I did not see these expert 9 reports before I concluded my January 12th report. 10 Q. Uh-huh. Okay. And so the -- 11 MS. LOCKARD: And just for the record, 12 Dave, the list updating the list of materials with 13 the new expert report was included in the 2/15 14 production. So just, I think, to clarify, you have 15 received -- prior version that did have the expert 16 reports listed. 17 MR. STANOCH: No, I agree, Counsel. And 18 this isn't controversial. It's just more 19 housekeeping. 20 MS. LOCKARD: Right. 21 BY MR. STANOCH: 22 Q. But I just wanted to establish, 23 Dr. Williams, that as of the date of your original 24 January 12th, 2022, report, you had not reviewed any 25 defense expert reports in this case, right?</p>
---	---

<p style="text-align: right;">Page 18</p> <p>1 A. That's true.</p> <p>2 Q. And since then, you did review them all at</p> <p>3 some point, correct?</p> <p>4 A. Well, what I would say --</p> <p>5 MS. LOCKARD: Objection. Form.</p> <p>6 THE WITNESS: -- is I looked at all of</p> <p>7 them, and some of them I looked at more carefully</p> <p>8 than others.</p> <p>9 MS. LOCKARD: All of them on the list.</p> <p>10 THE WITNESS: All of them on the list,</p> <p>11 yes.</p> <p>12 BY MR. STANOCH:</p> <p>13 Q. And because you looked at the defense</p> <p>14 expert reports on the list we're looking at in</p> <p>15 Exhibit 2 after you issued your original report, is</p> <p>16 it fair to say that you did not rely on any defense</p> <p>17 expert report in rendering your January 12th, 2022,</p> <p>18 opinions?</p> <p>19 A. That's accurate, Mr. Stanoch. Thank you.</p> <p>20 Q. Right. And further, because you only</p> <p>21 noted two changes, to Footnotes 20 and 21, in your</p> <p>22 report dated today, did anything in the defense</p> <p>23 expert reports listed here in Exhibit 2 alter or</p> <p>24 change your opinions as they were originally</p> <p>25 expressed in your January 12th, 2022, report?</p>	<p style="text-align: right;">Page 20</p> <p>1 original January 12th report to your February 17th</p> <p>2 report, right?</p> <p>3 A. No, I have not changed my opinions at all.</p> <p>4 Q. Very good. Thank you, Doctor. Let's put</p> <p>5 that aside, and if there is other sort of</p> <p>6 housekeeping things with the reliance materials, we</p> <p>7 can hit it later, okay?</p> <p>8 A. Thank you.</p> <p>9 Q. So, Doctor, your report -- and we will use</p> <p>10 Exhibit 1, which is the one dated February 17th,</p> <p>11 2022, this report includes all opinions you are</p> <p>12 currently offering in this matter, correct?</p> <p>13 A. Yes.</p> <p>14 Q. At this time, do you intend to offer any</p> <p>15 other opinions in this matter besides those</p> <p>16 reflected in your report, Exhibit 1?</p> <p>17 A. No.</p> <p>18 MS. LOCKARD: I'm going to object to that,</p> <p>19 as it calls for attorney work product. Obviously we</p> <p>20 reserve the right to use Dr. Williams in the</p> <p>21 liability portion and for liability opinions, but he</p> <p>22 is not intending to give those opinions today.</p> <p>23 Court Reporter, can you hear me?</p> <p>24 THE REPORTER: Yes, ma'am.</p> <p>25 MR. STANOCH: I heard you too,</p>
<p style="text-align: right;">Page 19</p> <p>1 A. No, nothing at all.</p> <p>2 Q. It also appears, Doctor, looking at</p> <p>3 Exhibit 2, your reliance materials list of today,</p> <p>4 page 2, you see "Deposition Transcripts"? Do you</p> <p>5 see that?</p> <p>6 A. Yes, I do.</p> <p>7 Q. All right. And I believe you now list</p> <p>8 four entries there, beginning with, "Transcript of</p> <p>9 Edward Kaplan," through "Transcript of Ron Najafi</p> <p>10 Deposition"; do you see those four entries?</p> <p>11 A. I do.</p> <p>12 Q. Right. And those were not listed in your</p> <p>13 original reliance materials in January 12th, 2022,</p> <p>14 right, because these transcripts postdated your</p> <p>15 report; is that fair?</p> <p>16 A. Exactly. You can see that from the date</p> <p>17 in the first part of each entry.</p> <p>18 Q. Absolutely right. And my only point is</p> <p>19 going to be, Doctor, is that you did not rely on the</p> <p>20 transcripts of Edward Kaplan, Kali Panagos, John</p> <p>21 Quick or Ron Najafi in rendering your January 12th,</p> <p>22 2022, opinions, correct?</p> <p>23 A. That's correct.</p> <p>24 Q. And nothing in those four transcripts have</p> <p>25 led you to change or alter your opinions from your</p>	<p style="text-align: right;">Page 21</p> <p>1 Ms. Lockard.</p> <p>2 MS. LOCKARD: Okay.</p> <p>3 MR. STANOCH: I had nothing to respond to.</p> <p>4 MS. LOCKARD: Okay. No problem. I just</p> <p>5 didn't see it come up on the realtime, so I thought</p> <p>6 maybe we had lost someone, but I see it now.</p> <p>7 BY MR. STANOCH:</p> <p>8 Q. Doctor, you reference, you know, this</p> <p>9 litigation by caption in Paragraph 2 of your report,</p> <p>10 right?</p> <p>11 A. I'm looking at Paragraph -- "I make this</p> <p>12 disclosure," is that what you are talking about,</p> <p>13 Mr. Stanoch?</p> <p>14 Q. Yes, sir. Yes, sir.</p> <p>15 A. Yes, that's correct.</p> <p>16 Q. And what is your understanding, generally,</p> <p>17 of this litigation, sir?</p> <p>18 A. It relates to the presence of nitrosamine</p> <p>19 impurities, in terms of my report, in Tab 4, ANDAs</p> <p>20 that were approved by FDA for Teva. And there are</p> <p>21 of course many ramifications to that statement, but</p> <p>22 I'll stop there in terms of what my report focuses</p> <p>23 on.</p> <p>24 Q. And you can look at your reliance</p> <p>25 materials, Doctor, but I believe you did not review</p>

<p style="text-align: right;">Page 22</p> <p>1 any plaintiff-specific discovery materials, did you?</p> <p>2 A. I'm not sure I understand your question.</p> <p>3 Can you point out what you are talking about on my</p> <p>4 materials-considered list?</p> <p>5 Q. Sure. You did not review any transcripts</p> <p>6 of any plaintiffs in this litigation, correct?</p> <p>7 A. As part of my report?</p> <p>8 Q. Correct.</p> <p>9 A. Yes, I was speaking particularly in my</p> <p>10 report about the expert report of Dr. Panagos,</p> <p>11 Mr. Quick, and Dr. Najafi. But as I already said, I</p> <p>12 did not rely on the transcript of the deposition to</p> <p>13 inform my opinions. I was looking more at their</p> <p>14 expert reports.</p> <p>15 Q. Understood, Doctor. You did not review</p> <p>16 any transcripts of depositions taken of any</p> <p>17 plaintiff, as opposed to a plaintiff expert, in this</p> <p>18 litigation, correct?</p> <p>19 A. You know, plaintiffs' expert reports, I'm</p> <p>20 looking at my materials considered, and I think the</p> <p>21 answer to that question is yes. I did not review</p> <p>22 plaintiffs' depositions.</p> <p>23 Q. Okay. You did not --</p> <p>24 A. If I am answering -- yeah. If I am</p> <p>25 answering your question correctly, Mr. Stanoch.</p>	<p style="text-align: right;">Page 24</p> <p>1 but I wouldn't be able to safely say it was --</p> <p>2 Mr. Stanoch, does that help?</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. Well, again, Dr. Williams, this is not</p> <p>5 trying to be a gotcha. I don't see in your reliance</p> <p>6 materials, for example, any Bates number for a</p> <p>7 document that a plaintiff produced the documents.</p> <p>8 And I just want to confirm, then, you did not look</p> <p>9 at any documents that were Bates-stamped as being</p> <p>10 produced from plaintiffs.</p> <p>11 A. I think I can agree with that unless my</p> <p>12 counsel wishes to object.</p> <p>13 MS. LOCKARD: No. I assume you are</p> <p>14 talking about discovery documents. And obviously</p> <p>15 there are plaintiff pleadings and disclosures and</p> <p>16 then whatnot on the list, but --</p> <p>17 MR. STANOCH: Yes, that's right. And my</p> <p>18 questions were about discovery materials, Counsel,</p> <p>19 you know, right. Right.</p> <p>20 Q. And, Dr. Williams, again, so you did not</p> <p>21 review, for example, copies of individual plaintiff</p> <p>22 pharmacy records that any given plaintiff might have</p> <p>23 produced, right? You don't recall seeing any of</p> <p>24 that, right?</p> <p>25 A. No, you are correct, Mr. Stanoch.</p>
<p style="text-align: right;">Page 23</p> <p>1 Please help me if you think I didn't.</p> <p>2 Q. No, this is not a trick question,</p> <p>3 Dr. Williams. I agree with you that nowhere in your</p> <p>4 reliance materials do you list transcripts of</p> <p>5 depositions taken of a plaintiff, as opposed to a</p> <p>6 plaintiff expert, so I just wanted to make sure my</p> <p>7 understanding was correct. And it sounds like we</p> <p>8 are in accord, right?</p> <p>9 A. Yes. Yes. I think we're in agreement</p> <p>10 now. One of the reasons I was struggling, I was</p> <p>11 trying to look for something that wasn't on the</p> <p>12 list, and that's a little difficult.</p> <p>13 Q. Of course. And you did not review any</p> <p>14 documents produced by any plaintiff in this</p> <p>15 litigation, correct?</p> <p>16 MS. LOCKARD: And I'll just make the</p> <p>17 objection that I'll say it's vague and confusing</p> <p>18 because I don't know that Dr. Williams knows who</p> <p>19 produced what. But, I mean, I don't want to answer</p> <p>20 the question for him, but --</p> <p>21 THE WITNESS: Well, yeah, I think</p> <p>22 Ms. Lockard is stating it correctly. I don't know</p> <p>23 what was produced by plaintiffs. But I find it hard</p> <p>24 to believe that they wouldn't have produced some of</p> <p>25 the material that also came to me from my counsel,</p>	<p style="text-align: right;">Page 25</p> <p>1 Q. Right. And you don't recall ever</p> <p>2 reviewing any medical records that a particular</p> <p>3 plaintiff might have produced in this litigation,</p> <p>4 correct?</p> <p>5 A. I did not.</p> <p>6 Q. Uh-huh. And you don't recall reviewing</p> <p>7 any insurance materials that any particular</p> <p>8 plaintiff might have produced in this litigation,</p> <p>9 correct?</p> <p>10 A. I did not.</p> <p>11 Q. Uh-huh. Do your opinions in this case</p> <p>12 depend on the number of the potential plaintiffs in</p> <p>13 the litigation?</p> <p>14 A. No.</p> <p>15 Q. Right. If this litigation involved one</p> <p>16 plaintiff or 10,000 plaintiffs, your opinions as</p> <p>17 expressed in your report would be the same, correct?</p> <p>18 A. Yes.</p> <p>19 Q. Were you asked to assume by counsel</p> <p>20 anything for purposes of your report, sir?</p> <p>21 A. No, I was not.</p> <p>22 Q. Were you asked to assume that Teva's</p> <p>23 finished-dose valsartan products contained any</p> <p>24 nitrosamines?</p> <p>25 A. Was I asked to make that assumption? No,</p>

<p style="text-align: right;">Page 26</p> <p>1 I was not asked to make that assumption.</p> <p>2 Q. Do you have any opinion on whether Teva's</p> <p>3 finished-dose products did contain nitrosamines?</p> <p>4 MS. LOCKARD: Outside the scope of his</p> <p>5 report. Objection.</p> <p>6 THE WITNESS: My understanding is that FDA</p> <p>7 asked Teva to test some samples of their finished --</p> <p>8 of their drug product manufactured under the four</p> <p>9 ANDAs and that Teva did supply that information to</p> <p>10 FDA. But it's not something I cited to in my</p> <p>11 report.</p> <p>12 BY MR. STANOCH:</p> <p>13 Q. Uh-huh. So you don't know one way or the</p> <p>14 other whether Teva's finished-dose valsartan</p> <p>15 products contained nitrosamines?</p> <p>16 MS. LOCKARD: Objection. Vague.</p> <p>17 I think if you want to ask him if he has</p> <p>18 personal knowledge, that would be a better question.</p> <p>19 THE WITNESS: Well, in any case, I do</p> <p>20 recall seeing some numbers that Teva provided to</p> <p>21 FDA, but they are not in my report and I don't</p> <p>22 recollect them now.</p> <p>23 BY MR. STANOCH:</p> <p>24 Q. Uh-huh. And you are not opining, are you,</p> <p>25 Doctor, on the levels of nitrosamines that may or</p>	<p style="text-align: right;">Page 28</p> <p>1 impurity. After approval, it depends on a number of</p> <p>2 factors, including -- I'm sorry, Mr. Stanoch. Were</p> <p>3 you asking generally about impurities, genotoxic</p> <p>4 impurities, or nitrosamine impurities?</p> <p>5 BY MR. STANOCH:</p> <p>6 Q. Potential genotoxic impurities generally,</p> <p>7 not specific to nitrosamines at this question.</p> <p>8 A. Okay. Good. I would say after approval,</p> <p>9 if such an impurity is discovered, I think there</p> <p>10 would be an attempt to work with FDA for a marketed</p> <p>11 drug in the United States to determine what the</p> <p>12 limit should be and what corrective action should</p> <p>13 need to be taken.</p> <p>14 Q. Uh-huh. Should a API manufacturer who</p> <p>15 becomes aware of a potential genotoxic impurity in</p> <p>16 API notify their customers who buy that API?</p> <p>17 MS. LOCKARD: Objection. Outside the</p> <p>18 scope of Dr. Williams' class-certification report</p> <p>19 opinions and gets into the liability issue.</p> <p>20 THE WITNESS: Well, I'm thinking of the</p> <p>21 specific example in this matter where, yes, you</p> <p>22 know, the API manufacturer did inform customers. So</p> <p>23 I would say that is a good practice in my personal</p> <p>24 opinion.</p> <p>25</p>
<p style="text-align: right;">Page 27</p> <p>1 may not have been in Teva's finished-dose products,</p> <p>2 correct?</p> <p>3 A. No, I'm not.</p> <p>4 Q. Uh-huh. Were you asked to assume by</p> <p>5 counsel that Teva's finished-dose products did not</p> <p>6 contain nitrosamines?</p> <p>7 A. No, I was not.</p> <p>8 Q. Uh-huh. Were you asked to assume that</p> <p>9 Teva had no knowledge about the chemical synthesis</p> <p>10 processes necessary to create valsartan API?</p> <p>11 A. I was not asked to make that assumption.</p> <p>12 Q. Okay. Right. You were not asked to make</p> <p>13 any assumptions in rendering your opinions, correct?</p> <p>14 A. Yes, that's correct.</p> <p>15 Q. Okay. When an API manufacturer becomes</p> <p>16 aware of a potential genotoxic impurity, sir, what</p> <p>17 should they do?</p> <p>18 MS. LOCKARD: Objection. Form. Outside</p> <p>19 the scope -- his report and the class-certification</p> <p>20 phase.</p> <p>21 THE WITNESS: The way I would answer that,</p> <p>22 Mr. Stanoch, is it depends on when the discovery was</p> <p>23 made. If it is during the development process,</p> <p>24 prior to approval of either the NDA or ANDA, a</p> <p>25 company may be able to mitigate the presence of the</p>	<p style="text-align: right;">Page 29</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. You mentioned in your answer the API</p> <p>3 manufacturer did inform customers here. What do you</p> <p>4 mean?</p> <p>5 A. Well, if I understand the history in this</p> <p>6 matter, Princeton, which is a company associated with</p> <p>7 ZHP in China, did inform FDA that they were finding</p> <p>8 the NDMA nitrosamine impurity, and I think in turn</p> <p>9 then FDA began working with the various</p> <p>10 manufacturers using the ZHP drug substance.</p> <p>11 Q. Uh-huh. When, to your recollection, did</p> <p>12 ZHP become aware of the potential nitrosamine</p> <p>13 impurities in valsartan API that you alluded to in</p> <p>14 your prior answer?</p> <p>15 MS. LOCKARD: Objection. Speculation.</p> <p>16 THE WITNESS: I think we can look at my</p> <p>17 report.</p> <p>18 BY MR. STANOCH:</p> <p>19 Q. Sure.</p> <p>20 A. Is it all right if I look at my report</p> <p>21 now, Mr. Stanoch?</p> <p>22 Q. Of course, Doctor.</p> <p>23 A. I would say when this became generally</p> <p>24 known to the public was July 13th, 2018, with the</p> <p>25 first FDA press release. And FDA noted in the press</p>

<p style="text-align: right;">Page 30</p> <p>1 release that their understanding came from Princeton 2 Pharmaceuticals, as I said, which in turn, became 3 aware of the impurity through the efforts of ZHP. 4 And when we are talking about the impurity, we are 5 talking about NDMA. 6 Q. Okay. What paragraph are you looking at, 7 Doctor, so we can be on the same page? 8 A. It's Paragraph 92. 9 Q. Right. And this is the July 13, 2018, 10 reference to an FDA press release about NDMA in the 11 ZHP valsartan API. My question was: When do you 12 recall that ZHP became aware of the NDMA impurity in 13 the valsartan API? 14 MS. LOCKARD: Objection. Form. 15 Speculation. 16 THE WITNESS: Yes, I don't think I have 17 that information in my report or that I cited to it. 18 BY MR. STANOCH: 19 Q. You don't know when ZHP discovered the 20 potential NDMA impurity in valsartan API? 21 MS. LOCKARD: Same objection. Asked and 22 answered as well. 23 THE WITNESS: I don't think I stated it in 24 my report, Mr. Stanoch. 25</p>	<p style="text-align: right;">Page 32</p> <p>1 as vague to the extent you are asking about 2 potential genotoxic impurities. 3 MR. STANOCH: How would you like me to fix 4 the question, Counsel? 5 MS. LOCKARD: Well, if you are asking 6 about nitrosamines, the presence of nitrosamines, 7 that's more specific than potential genotoxic 8 impurities. 9 MR. STANOCH: Okay. I withdraw my prior 10 question. 11 Q. Doctor, when did Teva become aware of the 12 potential nitrosamine contamination in valsartan 13 API? 14 A. It was around the time Teva put on hold 15 the manufacture of its four ANDAs because of the 16 presence of these impurities in the ZHP drug 17 substance. 18 Q. Uh-huh. And when -- 19 A. And that, I believe, was in June of 2018. 20 Then there were a number of activities that Teva 21 undertook, which of course is a core part of my 22 report, but the most important one in terms of my 23 report were the recalls of the products that 24 contained the ZHP drug substance. 25 Q. Okay. Should a drug manufacturer such as</p>
<p style="text-align: right;">Page 31</p> <p>1 BY MR. STANOCH: 2 Q. Don't you think it would be important for 3 you to know when ZHP became aware of the potential 4 for NDMA impurities in valsartan API in rendering 5 your opinions? 6 MS. LOCKARD: Objection. Argumentative. 7 THE WITNESS: Remember, I'm speaking to 8 Teva, so, you know, for the most part, I don't focus 9 on ZHP. I'm talking about Teva's actions in the 10 context of the finding of nitrosamine impurities. 11 BY MR. STANOCH: 12 Q. Wouldn't you need to know, sir, when ZHP 13 became aware of the NDMA in valsartan API to assess 14 when Teva, as the customer, should have known about 15 that as well? 16 A. No, I don't believe so. I think Teva was 17 aware in the weeks before the FDA press release. 18 But again, my focus is on Teva's activities and what 19 they did when they became aware of the presence of 20 nitrosamine impurities in the ZHP drug substance. 21 Q. Let's focus on Teva. When did Teva learn 22 of the potential for NDMA genotoxic impurities in 23 valsartan API? 24 A. Well -- 25 MS. LOCKARD: I'm going to object to that</p>	<p style="text-align: right;">Page 33</p> <p>1 Teva have quality systems in place to ensure that 2 its API suppliers notify them upon the discovery of 3 potential genotoxic impurities? 4 MS. LOCKARD: Objection. Outside the 5 scope of the class-certification expert report. 6 THE WITNESS: Yes, I did not comment on 7 that in my report. If you are asking me as a 8 personal question, I could say I would think it 9 likely that Teva would have that kind of agreement 10 or understanding. 11 BY MR. STANOCH: 12 Q. Uh-huh. Did you undertake to assess 13 whether that agreement or understanding existed here 14 between Teva and ZHP for valsartan API? 15 A. No, that was not part of my report or my 16 opinions. 17 MS. LOCKARD: Objection. That's outside 18 the scope of the expert report on 19 class-certification issues. 20 BY MR. STANOCH: 21 Q. Isn't it a finished-dose manufacturer's 22 responsibility to obtain material information about 23 genotoxic impurities from their API source in a 24 timely manner? 25 MS. LOCKARD: Objection. It's liability</p>

<p style="text-align: right;">Page 34</p> <p>1 question. It's outside the scope of the 2 class-classification expert report opinions. 3 MR. STANOCH: Counsel, you have said 4 outside the scope and liability issue a number of 5 times. Could you just -- I'm not picking a fight. 6 I just want to know what you mean by that. 7 MS. LOCKARD: Well, okay. We are in the 8 class-certification phase of the case, correct? 9 There are opinions that are very specific that have 10 been directed by Dr. Williams in his report. These 11 are not liability opinions. 12 The majority of your questions so far this 13 morning have been, what should manufacturers do? 14 What should their quality systems be? And they are 15 all liability opinions, and that is not the 16 substance of his report. That's not within his 17 report. These are squarely liability questions. 18 MR. STANOCH: Well, I appreciate that, 19 Ms. Lockard. I'll just say I don't necessarily 20 agree with you that these are outside the scope of 21 the report that he has issued at class, but I'll 22 note your objection and we can keep going. 23 I'm sorry, Madam Reporter. Would you be 24 kind enough? Did I have a question pending? 25 THE REPORTER: Let me check for you.</p>	<p style="text-align: right;">Page 36</p> <p>1 The next question: What common evidence 2 would you need to look at to determine whether it is 3 a finished-dose manufacturer's responsibility to 4 obtain important information about genotoxic 5 impurities from their API source in a timely 6 fashion? 7 MS. LOCKARD: Objection. Vague. 8 Confusing. Outside the scope of the 9 class-certification expert report. 10 Did you say common evidence? Or I might 11 have misheard you. 12 THE WITNESS: Are you waiting for 13 Mr. Stanoch to answer, Ms. Lockard? 14 MS. LOCKARD: It's okay. I was, but I 15 have the -- I see on the transcript what he said. 16 All right. I stand by the objection. 17 THE WITNESS: You know, the way I would 18 answer it, Mr. Stanoch, it's a very general 19 question. It's probably more important to focus on 20 nitrosamine impurities because that's what my report 21 focuses on. 22 And all I can say is FDA at many points in 23 this episode said that the finding of these 24 genotoxic nitrosamine impurities was unexpected. So 25 I don't think I can speculate as to when either a</p>
<p style="text-align: right;">Page 35</p> <p>1 MR. STANOCH: Thank you. 2 (Whereupon, the reporter read the record 3 as follows: 4 "Question: Isn't it a finished-dose 5 manufacturer's responsibility to obtain material 6 information about genotoxic impurities from their 7 API source in a timely manner?") 8 MS. LOCKARD: Same objection. 9 THE WITNESS: You know, the understanding 10 that a drug substance and the corresponding drug 11 product may have genotoxic impurities has been a 12 challenge to FDA and the pharmaceutical industry 13 over many years. The FDA guidance that spoke to how 14 to deal with that actually came out in 2015. 15 So when you ask a general question like 16 that, it's very difficult for me to answer. But 17 definitely if the manufacturer of a drug product 18 feels there could be a genotoxic impurity, there is 19 an obligation to work with FDA to understand that 20 and to limit it if necessary. 21 I hope that's responsive to your question, 22 Mr. Stanoch. 23 BY MR. STANOCH: 24 Q. Partially, but I appreciate you trying, 25 Dr. Williams. I really do.</p>	<p style="text-align: right;">Page 37</p> <p>1 drug-substance manufacturer or a dosage-form 2 manufacturer would expect something that was -- or 3 anticipate something that was unexpected. I think 4 it's important to keep in mind that these impurities 5 were unexpected. 6 BY MR. STANOCH: 7 Q. Are you finished, Doctor? 8 A. Yes. 9 Q. Thank you. 10 I may ask you that from time to time, just 11 for the video, to make sure I don't step over you 12 and vice versa; is that okay? 13 A. Yes, no problem, Mr. Stanoch. 14 Q. Thank you. I appreciate your patience 15 there. 16 You said "unexpected" a number of times in 17 your answer there, and we will certainly get to 18 that. But let me -- you said that my question would 19 be different if I asked about nitrosamines versus 20 genotoxic impurities generally, so I'm going to ask 21 you the question differently. 22 Question: What evidence would you need to 23 look at in order to determine whether it is a 24 finished-dose manufacturer's responsibility to 25 obtain important information about nitrosamine</p>

<p style="text-align: right;">Page 38</p> <p>1 impurities from their API source in a timely 2 fashion? 3 MS. LOCKARD: Objection. Vague. 4 Confusing. Outside the scope of the 5 class-certification expert report. 6 THE WITNESS: You know, it might be 7 helpful, Mr. Stanoch, to back up a little bit on 8 what are the responsibilities of an ANDA filer in 9 terms of assessing impurities in its drug substance 10 and its drug product. 11 The presence of genotoxic impurities I 12 would say doesn't really come up too often in that 13 primary responsibility. So I think you are asking 14 for something that, if I may say so, is not routine 15 as part of the ANDA requirements or recommendations 16 by FDA. 17 BY MR. STANOCH: 18 Q. Are you saying it's not the responsibility 19 of a drug-product manufacturer to identify potential 20 genotoxic impurities? 21 MS. LOCKARD: Objection. Clearly outside 22 the scope of the class-certification opinions in the 23 expert report. It's clearly a liability question. 24 MR. STANOCH: This is his last answer, 25 Counsel.</p>	<p style="text-align: right;">Page 40</p> <p>1 Q. Was there any industry guidance on 2 genotoxic impurities prior to 2015, Doctor? 3 A. I think if we look at my report, I could 4 find reference to other documents that had been 5 produced by FDA or the EMA or in ICH, so -- and 6 those documents preceded the 2015 guidance. 7 Q. Do you agree that a drug-product 8 manufacturer is ultimately responsible for the API 9 that it incorporates into its finished-dose product? 10 A. Yes, I think that's generally a fair 11 statement, Mr. Stanoch. 12 Q. Yeah. So Teva is ultimately responsible 13 for the valsartan API that was in its finished-dose 14 valsartan product, correct? 15 A. Yes, I think I can agree with that. 16 MS. LOCKARD: Objection. It's vague. 17 BY MR. STANOCH: 18 Q. And that would include the identification, 19 characterization, testing, and control of any 20 potential genotoxic impurities, correct? 21 MS. LOCKARD: Objection. Compound. 22 Vague. Outside the scope of the class-certification 23 expert report. 24 THE WITNESS: Well, remember, ZHP and Teva 25 are working according to FDA requirements that speak</p>
<p style="text-align: right;">Page 39</p> <p>1 Q. Go ahead, Mr. Williams. 2 A. What I would say, Mr. Stanoch, is, you 3 know, the ANDA applicant has a responsibility to 4 look at the impurities in their drug substance and 5 their drug product and decide whether they need to 6 be reported, identified, and qualified. And those 7 are general recommendations that appear in the 8 guidances I cited. 9 It was only until 2015 that FDA produced 10 the guidance on how to deal with genotoxic 11 impurities, and that, of course, came to a head 12 three years later with the finding of the 13 nitrosamine impurities. 14 So I really can't answer your question 15 about the responsibility of a drug-product 16 manufacturer other than to refer you to that 2015 17 guidance. 18 Q. You are saying there was no guidance to 19 the drug industry about genotoxic impurities until 20 2015? 21 A. No, I think there were guidances, which I 22 allude to in my report. But the M7 guidance that 23 we're talking about now I think clarified it in 24 terms of how manufacturers need to focus on the 25 possibility of genotoxic impurities.</p>	<p style="text-align: right;">Page 41</p> <p>1 to identity, strength, quality, purity, and potency. 2 When we talk about purity, we're talking about 3 impurities. 4 And the guidances that ZHP and Teva would 5 use are the ones I cited in my report, both the ICH 6 Q3A and Q3B with revisions, and then also the 7 corresponding ANDA guidances. None of those 8 guidances mention genotoxic impurities. 9 BY MR. STANOCH: 10 Q. Are you saying, then, that Teva had no 11 obligation to potentially identify genotoxic 12 impurities in its finished-dose valsartan products? 13 MS. LOCKARD: Objection. Vague. Outside 14 the scope of class-certification expert report. 15 THE WITNESS: You know, I think it's clear 16 in my report that FDA gives recommendations in these 17 guidances, and that is what Teva and ZHP would be 18 following to submit their ANDA to FDA for review and 19 approval. 20 Now, if FDA had some concern about 21 genotoxic impurities based on the route of synthesis 22 of the drug substance, they could certainly bring 23 that to Teva's attention or the DMF-holder's 24 attention, in this case, ZHP. 25 But again, to talk about it generally in</p>

<p style="text-align: right;">Page 42</p> <p>1 terms of responsibility and liability is not 2 something I dealt with in my report. 3 BY MR. STANOCH: 4 Q. Uh-huh. So you are not offering any 5 opinion at this time about which firm would be 6 responsible for the identification of genotoxic 7 impurities in Teva's finished-dose valsartan 8 product? 9 A. I think if there was some reason to 10 suspect the presence of a genotoxic impurity, any 11 drug manufacturer would have to consider that and 12 discuss it with FDA in terms of what to do, but that 13 was not the case here. 14 Q. Uh-huh. Would it be your expectation that 15 Teva would have had systems in place to assure that 16 ZHP would promptly notify it in the event ZHP 17 identified a potential genotoxic impurity in 18 valsartan API? 19 MS. LOCKARD: Objection. Vague. Outside 20 the scope of the class-certification expert report. 21 THE WITNESS: You know, again, you are 22 asking these very general questions, but I would say 23 both ZHP and Teva are sort of marching, if you will, 24 to laws, regulations and guidances that come from 25 FDA, and for the most part those guidances don't</p>	<p style="text-align: right;">Page 44</p> <p>1 Q. Right. And the paragraph number there is 2 116. Do you see that? 3 A. I do. I do see that. Thank you. 4 Q. Right. Sure. 5 A. And your question about that is? I'm 6 sorry. 7 Q. Yeah, we will get back to that. Let's do 8 this housekeeping. So we scroll back up, that's 9 actually some misnumbering issue. You have another 10 Paragraph 116 starting under "Dr. Najafi's 11 Declaration" on page 38, right? 12 A. Yes, I apologize for these errors. I'm 13 sorry. 14 But I'm sure we can find the part of the 15 report that you want me to talk about. 16 Q. Sure. 17 A. So -- 18 Q. Well, hold on. Hold on. Sure. We could 19 fix. And just to button this up, so then it looks 20 like your paragraph numbering restarts, for the 21 record, on page 44, under the "Rebuttal to 22 Mr. Quick's Expert Declaration." Do you see that? 23 A. Yes, I do. It jumps from 127 and then to 24 110. 25 Q. Right.</p>
<p style="text-align: right;">Page 43</p> <p>1 speak to genotoxic impurities. 2 So if you are talking about a general 3 moral obligation, I could only answer in a personal 4 opinion, but I'm really trying to focus on the 5 regulatory requirements for an ANDA to be considered 6 and, if possible, approved. 7 BY MR. STANOCH: 8 Q. Well, Doctor, you are opining on whether 9 or not Teva followed GMP or proper regulatory 10 practice, I'm looking at Paragraph 116, right? 11 A. 116 speaks to Dr. Najafi's report. Is 12 that where we're looking, Mr. Stanoch? 13 Q. Oh. Well, that might be a separate issue, 14 Doctor. You know, your January 12th report, the 15 numbering -- there is two Paragraph 116s. It went 16 from 116 to 127, and then it restarted at 110. I 17 was looking at your conclusion. Maybe you fixed 18 that in your latest report. Let's take a look. 19 A. I'm sorry for those typo errors. 20 Can you point me exactly to where you are 21 looking, then? Is there a page number? 22 Q. I am looking at page 46, Doctor. 23 A. Okay. Good. 24 Q. And you see the heading "Conclusion"? 25 A. Yes, I do.</p>	<p style="text-align: right;">Page 45</p> <p>1 A. So I think to make sure we're always 2 talking about the right thing, I think if we just 3 give the paragraph number and the page, we should be 4 fine. Would that be all right with you, 5 Mr. Stanoch? 6 Q. Absolutely fine. And, Doctor, was there 7 some cutting-and-pasting issue with the section on 8 your rebuttal to Mr. Quick that messed up your 9 numbering of your paragraphs here? 10 A. No, I would say it was a word-processing 11 error, where you have to sort of back up and make 12 sure that the Word program numbers the paragraph 13 correctly. 14 Q. Sure. I have been there, Doctor. I'm 15 sure we all have. 16 No, did you write this whole section, the 17 "Rebuttal to Mr. Quick's Expert Declaration" in your 18 report? 19 A. I would say, you know, I wrote the report, 20 and I apologize for the limits on my word-processing 21 skills. 22 I did try to correct this. I think we 23 noticed some of the misnumbering when we were 24 looking at drafts, and apparently I failed to do it 25 in the final document.</p>

<p style="text-align: right;">Page 46</p> <p>1 Q. Again, that's totally understandable. I 2 was just getting at -- to say if you wrote this 3 section here, "Rebuttal to Mr. Quick's Expert 4 Declaration," or not? 5 A. Yes, I did. 6 Q. Uh-huh. And no one gave you that to cut 7 and paste into the report and that messed up your 8 numbering? 9 A. No. 10 Q. Uh-huh. You said "we" noticed some 11 pagination errors before. Who is the "we" in your 12 answer a couple answers ago? 13 A. Well, first of all, it's not a pagination 14 error, it's a paragraph-numbering error. I can tell 15 you exactly how it happens. But I think when we 16 were looking at drafts, one of the counsel pointed 17 out that the numbering was not consistent. 18 Q. Okay. Moving on, I'm looking at page 46, 19 your "Conclusions," Doctor. Tell me when you are 20 there. 21 A. Okay, Mr. Stanoch, I'm there. 22 Q. And the Paragraph 116 on this page, you 23 write in part, "Teva did not fail to follow cGMP or 24 proper regulatory practice." Do you see that? 25 A. I do.</p>	<p style="text-align: right;">Page 48</p> <p>1 learning from ZHP about the NDMA in valsartan API? 2 A. You know, you are asking a question that 3 sort of asks me to take your word for it. I don't 4 think I commented on when ZHP or FDA actually 5 informed Teva, but it was certainly in the May, 6 June, July time frame, and I think Teva acted 7 promptly to recall two of its ANDA valsartan 8 products from the U.S. market. 9 And that's the way the system is supposed 10 to work. That's what recalls do. It allows the 11 removal of a product that, for one reason or 12 another, needs to be removed from the market, either 13 because it fails GMPs or it fails a specification. 14 What is unusual, and I noted this in my 15 report, is the recall occurred before FDA had set a 16 limit on the nitrosamine impurity. So Teva was 17 acting, and I'm going to use FDA words, with what I 18 might call an abundance of caution to remove the two 19 valsartan products manufactured in Malta from the 20 U.S. market. 21 Q. Uh-huh. So what I hear you saying is the 22 system worked as it should here. 23 ZHP discovered NDMA in valsartan API 24 sometime in the summer of 2018 or shortly before, 25 right?</p>
<p style="text-align: right;">Page 47</p> <p>1 Q. Right. So you are opining on whether or 2 not Teva followed cGMP and proper regulatory 3 practice, right? 4 A. Yes. 5 Q. Right. So in the context of your opinions 6 on cGMP and proper regulatory practice, my question, 7 now several questions ago is: Do you believe that 8 Teva was following proper regulatory practice in 9 terms of its relationship with ZHP to ensure that it 10 was promptly notified about potential genotoxic 11 impurities in valsartan API? 12 A. I think the answer is yes. I think ZHP 13 was communicating to Princeton, they were 14 communicating with FDA, FDA was communicating with 15 Teva. And Teva promptly recalled all these 16 products, as my report says. So to me, that's the 17 way the system should work. 18 And Teva never was under any particular 19 GMP failure notice from FDA. I think FDA was 20 pleased with the way Teva worked out its recalls in 21 order to protect the public when they found out 22 about the nitrosamine impurities. I don't see a 23 failure, Mr. Stanoch. I see success. 24 Q. So you are saying, Doctor, that Teva acted 25 reasonably promptly in the summer of 2018 upon</p>	<p style="text-align: right;">Page 49</p> <p>1 A. Yes, I think you are saying it correctly, 2 Mr. Stanoch. 3 Q. ZHP told Teva, correct? 4 A. Well, again, I'm not sure of the routes of 5 communication. I think Princeton told FDA and FDA 6 told Teva, and pretty soon everybody is talking 7 about this difficult situation. 8 Q. Well, that's fine, whatever your 9 understanding of the route is. So ZHP told its 10 affiliate company, Princeton, right? 11 A. If you want to postulate the route of 12 communication, that's fine with me, Mr. Stanoch. 13 Q. No, I'm not postulating anything, Doctor. 14 I'm just trying to -- whatever your understanding 15 is, I'm not bickering with it. I'm just trying to 16 make sure I establish what you think the route is, 17 right? So ZHP, we already determined, identified 18 NDMA in valsartan API in 2018, right? We agree with 19 that? 20 A. And that information came to Princeton and 21 Princeton brought it to FDA, and then FDA started 22 looking at all the manufacturers of valsartan, and 23 there were several, who used the ZHP product. And 24 that included Teva for two of its four ANDAs. 25 Q. So how did the information about the NDMA</p>

<p style="text-align: right;">Page 50</p> <p>1 in 2018 get to Teva?</p> <p>2 A. I would be speculating, but to me, it</p> <p>3 might have come from FDA.</p> <p>4 Q. Well, whatever you think your answer is.</p> <p>5 I'm just trying to see what the telephone route of</p> <p>6 communication is.</p> <p>7 And that's what you were referring to more</p> <p>8 generally as the system working, that the API</p> <p>9 manufacturer passed the information along, and it</p> <p>10 went to the FDA and at some point it got to Teva,</p> <p>11 and then Teva, as you said, instituted its recalls</p> <p>12 for its product that contained the valsartan API,</p> <p>13 right?</p> <p>14 MS. LOCKARD: Objection. Vague.</p> <p>15 Compound. And outside of the scope to the extent</p> <p>16 this line of questioning is asking about what ZHP</p> <p>17 did or should have done.</p> <p>18 THE WITNESS: Yeah, I don't want to get</p> <p>19 into the details of the way you described the routes</p> <p>20 of communication, but I can certainly say that when</p> <p>21 these things come up, everybody needs to talk to</p> <p>22 everybody, including FDA, and FDA is the one that</p> <p>23 prompted Teva to make the recalls.</p> <p>24 BY MR. STANOCH:</p> <p>25 Q. Yeah, right. You opine that FDA asked</p>	<p style="text-align: right;">Page 52</p> <p>1 a page number. But yes, your Exhibit 1, page 36,</p> <p>2 Paragraph 109. It begins, "Somewhat unusual,"</p> <p>3 right?</p> <p>4 A. Yes. Yes. We are in the same place,</p> <p>5 Mr. Stanoch.</p> <p>6 Q. Perfect. And you wrote, "the FDA asked</p> <p>7 for recalls of drug products"; do you see that?</p> <p>8 A. Yes. I do see that. And I think that</p> <p>9 corresponds with what I said previously.</p> <p>10 Q. Right, right, right. Well, you were</p> <p>11 saying that FDA and Teva were talking previously,</p> <p>12 but you write in your report that FDA asked for the</p> <p>13 recalls, right?</p> <p>14 A. Well, FDA works with the manufacturer to</p> <p>15 make a voluntary recall. I would say the decision</p> <p>16 on the recall is up to the manufacturer.</p> <p>17 Q. Well, that's not what you wrote here in</p> <p>18 Paragraph 109, is it?</p> <p>19 A. You know, I think the way it works is FDA</p> <p>20 wishes a recall, and a manufacturer -- I don't think</p> <p>21 FDA has the authority to compel a recall. So the</p> <p>22 reason I say it's voluntary is it's up to Teva to</p> <p>23 say, yes, we will do this recall at your request,</p> <p>24 and that's what Teva did.</p> <p>25 I don't think we should quibble about, you</p>
<p style="text-align: right;">Page 51</p> <p>1 Teva to recall its valsartan containing the API from</p> <p>2 ZHP, right?</p> <p>3 A. Well, the recall was voluntary on Teva's</p> <p>4 part, but they certainly worked closely with FDA to</p> <p>5 make sure that FDA was satisfied with the way their</p> <p>6 recall occurred.</p> <p>7 Q. Uh-huh.</p> <p>8 A. And that recall was in, I want to say,</p> <p>9 June of 2018. Wait a minute. I may have the month</p> <p>10 wrong. I'm sorry, Mr. Stanoch. I can check that if</p> <p>11 you wish.</p> <p>12 Q. Well, I'm looking at Paragraph 109 of your</p> <p>13 report, Doctor. Tell me when you are there.</p> <p>14 A. All right. Which paragraph?</p> <p>15 Q. 109.</p> <p>16 A. And I see that on -- can you say the page,</p> <p>17 Mr. Stanoch?</p> <p>18 Q. 37, sir.</p> <p>19 MS. LOCKARD: It starts on 36.</p> <p>20 THE WITNESS: Okay, yes. I see that,</p> <p>21 Paragraph 109 on page 36.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Stand by. Right. Yeah, you know, I have</p> <p>24 the earlier version of your report, not the one</p> <p>25 given to me this morning, so I'm sorry if I'm off by</p>	<p style="text-align: right;">Page 53</p> <p>1 know, who was actually driving the decision. I</p> <p>2 think it's a joint decision between FDA and Teva,</p> <p>3 but it's a voluntary act on the part of Teva.</p> <p>4 Q. Well, you know, Doctor, I can only ask</p> <p>5 questions about what you opine and write in your</p> <p>6 report, and what you wrote in your report twice in</p> <p>7 this paragraph is about the FDA asking for these</p> <p>8 recalls, correct?</p> <p>9 A. That could well be how a recall occurs,</p> <p>10 FDA finds something and they work with the company</p> <p>11 to execute a recall. But Teva was voluntarily</p> <p>12 making these recalls, and they did so successfully.</p> <p>13 And they kept FDA apprised of what they were doing,</p> <p>14 and FDA agreed with it.</p> <p>15 Q. Well, you don't write here in this</p> <p>16 paragraph or anywhere in your report that Teva went</p> <p>17 to the FDA and said, we're going to recall our</p> <p>18 product, did you?</p> <p>19 A. You know, I stand by the words in the</p> <p>20 document. Are you providing alternate words,</p> <p>21 Mr. Stanoch?</p> <p>22 Q. I'm not providing anything alternate,</p> <p>23 Dr. Williams. I'm focused on your words in</p> <p>24 Paragraph 109 of your report, where you twice say</p> <p>25 the FDA asked for the recalls.</p>

<p style="text-align: right;">Page 54</p> <p>1 A. Yes, I have no problem with FDA asking for 2 recalls. Does that seem a problem in terms of how 3 Teva executed the recall? 4 Q. I'm trying to establish based on your 5 words in your report, Doctor, that Teva did not go 6 to the FDA and said, we need to recall our product, 7 rather, the FDA asked Teva to recall the valsartan 8 product, correct? 9 A. I'm not going to debate the words with 10 you. I think you are right, Mr. Stanoch, that 11 Teva -- FDA was asking Teva and Teva responded to 12 this request. It was voluntary because I think Teva 13 could have said, no, we're not going to recall. 14 Teva did not do that. They voluntarily recalled. 15 But you are right, Teva initiated the 16 request based on their findings working with ZHP and 17 other manufacturers. 18 Q. I'm going to go back to sort of the chain 19 of communication about the NDMA discovery in June 20 2018. So do you think there was any direct 21 communication between ZHP and Teva about the NDMA 22 discovered in June 2018? 23 A. Well, I would have to speculate. It may 24 be in my materials considered, but I didn't cite 25 anything in that report, so at this point it would</p>	<p style="text-align: right;">Page 56</p> <p>1 part of my report. And I'm not a GMP expert, so I 2 very carefully combined my GMP opinions through 3 brief statements in this report. 4 BY MR. STANOCH: 5 Q. That's confusing to me, Doctor, because 6 the conclusion paragraph we were looking at is you 7 are opining that Teva did not fail to follow cGMP or 8 proper regulatory practice, right? 9 A. And I base that on my review of 10 inspections of Teva that occurred over the decade of 11 2010 to the present time. Teva did not have GMP 12 issues insofar as FDA was concerned, including GMP 13 issues related to the nitrosamine impurities. 14 Q. So the only basis for your opinion that 15 Teva did not fail to follow cGMP or proper 16 regulatory practice is the status of any FDA 17 inspections of Teva finished-dose facilities? 18 A. Yes, exactly. And that's where I spent 19 some time in my report, on that inspectional 20 history, and for the most part, I did not see any 21 particular GMP problems that FDA was bringing to 22 Teva's attention. 23 Q. So your opinions are not based in any way 24 on Teva's compliance with cGMP or proper regulatory 25 practice vis-à-vis its API suppliers ZHP and Mylan?</p>
<p style="text-align: right;">Page 55</p> <p>1 be speculative for me to answer. I would be very 2 surprised if ZHP and Teva weren't communicating on 3 this point. 4 Q. Okay. Would it be proper regulatory 5 practice for ZHP to be in communication with its 6 customer Teva about the discovery of NDMA in the 7 valsartan API? 8 MS. LOCKARD: Object to the extent you are 9 asking him about what ZHP should or shouldn't have 10 done. It's outside the report. 11 THE WITNESS: It seems to me, if a 12 drug-substance manufacturer finds an unidentified 13 impurity that is problematic in their drug 14 substance, they would certainly notify their 15 purchasers. 16 BY MR. STANOCH: 17 Q. What cGMP procedures did Teva have in 18 place to assure that ZHP would inform Teva about any 19 genotoxic impurities in APIs that Teva was 20 purchasing? 21 MS. LOCKARD: Objection. Vague. Scope. 22 THE WITNESS: You know, Mr. Stanoch, we 23 may look for it in my materials considered, but I 24 did not study that to form my opinions, and I don't 25 think I cite anything into that part of my -- any</p>	<p style="text-align: right;">Page 57</p> <p>1 MS. LOCKARD: Objection. Vague. 2 Confusing. 3 THE WITNESS: Yes, I did not explore 4 separate from FDA inspections how Teva's SOPs 5 conform to FDA's requirements on GMPs. That was not 6 part of my report. 7 BY MR. STANOCH: 8 Q. Okay. Well, why do you list all Teva's 9 SOPs in your reliance materials, then, Doctor? 10 A. There is a huge amount of material in my 11 materials-considered document, and I would say only 12 a small fraction of that was cited in my report, and 13 even that small fraction was voluminous. 14 Q. So am I to take it, then, that the 15 materials that you only relied on for your opinions 16 at this stage are the ones quoted in the -- or cited 17 in the body of your report, not all of them listed 18 in your reliance materials? 19 A. No, I think if it is cited in my report, 20 it should be listed in my materials-considered list. 21 Was that your question, Mr. Stanoch? 22 Q. No. My question is a little different, 23 Doctor. You know, you list a lot of stuff in your 24 reliance materials, including Teva's SOPs, but now 25 you are telling me your opinions don't turn on</p>

<p style="text-align: right;">Page 58</p> <p>1 Teva's SOPs as it relates to Teva's relationship 2 with its API suppliers, right? 3 MS. LOCKARD: Objection. Lacks 4 foundation. Vague. Misstates the document. 5 THE WITNESS: Yes, I think I make -- my 6 opinions are clearly stated both at the beginning 7 and at the end of the report and I provide citations 8 to support those opinions, but I certainly didn't 9 get into the adequacy of Teva's SOPs with regard to 10 conformance to FDA's GMPs. That would have been a 11 completely different report. 12 BY MR. STANOCH: 13 Q. So how am I to know from your reliance 14 materials, Doctor, which materials you are relying 15 on, the opinions in the body of your report? 16 A. I think the best way I could answer that, 17 Mr. Stanoch, is to look at the citations in my 18 report, which are also listed in the materials 19 considered. 20 Q. Got it. So -- 21 MS. LOCKARD: Objection to that question 22 because you continue to name the list of materials 23 considered as his reliance materials, which is 24 confusing and vague and lacks foundation. 25</p>	<p style="text-align: right;">Page 60</p> <p>1 THE VIDEOGRAPHER: Okay. So we're going 2 off the record. The time is 8:42. 3 (Whereupon, a brief recess was taken.) 4 THE VIDEOGRAPHER: Okay. We're coming 5 back on the record. The time on the video monitor 6 is 8:51. Please begin. 7 BY MR. STANOCH: 8 Q. Doctor, just yes/no, did you talk to your 9 counsel during the break? 10 A. Yes, I did. 11 Q. Did you talk to anyone else? 12 A. No, not at all. 13 Q. Did you look at any documents? 14 A. Did we look at any documents? 15 Q. Correct. 16 A. I think there was one document we looked 17 at. 18 Q. What did you look at? 19 A. It was a management document of Teva that 20 went out globally to many scores of people about -- 21 and it's cited in my report -- about the problem 22 with the ZHP drug substance having nitrosamine 23 impurities. 24 Q. Where is that cited in your report? 25 THE WITNESS: Can you tell me where it is</p>
<p style="text-align: right;">Page 59</p> <p>1 BY MR. STANOCH: 2 Q. So let me make sure I fully understand it, 3 then. So the materials you rely upon to render your 4 opinions reflected in your report are the ones that 5 are cited in the body of the report? 6 A. Yes, I think as a general statement, 7 Mr. Stanoch, that's correct. And as you can see, 8 it's only a small fraction of all the materials 9 listed in the materials-considered document. 10 Q. Okay. So if an item is listed in your 11 materials considered but not cited in the body of 12 the report, you are not relying on that material in 13 rendering your opinions at this time? 14 A. I think I can agree with that. 15 Q. That's fine. It will make the day go 16 faster, Doctor. Again, I just want to make sure 17 we're on the same field. I appreciate that. 18 MS. LOCKARD: So I think we have been 19 going about an hour, if you are at a point in 20 time -- you are changing topics -- 21 MR. STANOCH: That's fine. Doctor, would 22 you like a break? 23 THE WITNESS: That would be very nice, 24 Mr. Stanoch. 25 MR. STANOCH: Let's do it.</p>	<p style="text-align: right;">Page 61</p> <p>1 in the cited materials? 2 Okay. It's on page 9, and it's Reference 3 9 on page 9, I believe. 4 BY MR. STANOCH: 5 Q. Is that "Notification Letter from 6 Valsartan re" -- sorry. Start over. "Notification 7 Letter from re Valsartan" "update"? 8 MS. LOCKARD: Just to clear it up, it's -- 9 sorry, you're not trying to -- I know you are just 10 trying to figure out which document it is. The 11 document is 565758. 12 THE WITNESS: Yes, and it's Reference 9. 13 There are actually two references in Reference 9, 14 and it's the first that we looked at briefly. 15 BY MR. STANOCH: 16 Q. Why don't you tell me the Bates numbers of 17 the two documents you looked at? 18 MS. LOCKARD: He looked at one document. 19 He is saying there are two documents referenced in 20 Footnote 9. 21 MR. STANOCH: Oh, I'm sorry, Counsel. I 22 thought he was looking at his materials considered. 23 We are looking at his footnote in his report. Thank 24 you. That's helpful. I see it now, thank you. 25 Q. Did that document refresh your</p>

<p style="text-align: right;">Page 62</p> <p>1 recollection about anything you had looked at 2 before?</p> <p>3 A. No. I don't think it's really pertinent 4 to the questioning. I'm glad to ask questions about 5 it if you wish, Mr. Stanoch.</p> <p>6 Q. Sure. I just need to get a copy of it and 7 to share it for all of our colleagues who are 8 remote, so give me one second. Okay. We will mark 9 that document as Williams Exhibit 3. 10 (Whereupon, Exhibit 3 was marked for 11 identification.)</p> <p>12 THE WITNESS: And if I -- Mr. Stanoch, may 13 I point out something in the document that was 14 helpful to some of your questions?</p> <p>15 BY MR. STANOCH:</p> <p>16 Q. Before you do that, let's make sure I have 17 the same document as you. I'm going to share my 18 screen, Doctor. You will see it looks like a -- 19 it's an e-mail from June 21, 2018, Bates No. 565758. 20 Is this the same document you are holding?</p> <p>21 A. Yes, I believe so.</p> <p>22 Q. Great. I'm going to stop sharing now that 23 we're on the same page.</p> <p>24 This is the document you were referring to 25 that you looked at, right?</p>	<p style="text-align: right;">Page 64</p> <p>1 break, FDA asked for the recall, but Teva 2 voluntarily did the recall, working with FDA and to 3 FDA's satisfaction.</p> <p>4 Q. You think it was appropriate for Teva to 5 wait, as you said, a month later after being told by 6 ZHP about the NDMA impurity, to institute its 7 recalls?</p> <p>8 MS. LOCKARD: Objection to the form of 9 that question. It lacks foundation and it misstates 10 the evidence.</p> <p>11 THE WITNESS: Well, you know, you can 12 imagine, I'm speaking generally, not to anything I 13 said in my report, but this is an incredibly 14 difficult finding, inspecting a company making 15 products all over the globe, including FDA. And of 16 course FDA is a very stringent regulatory authority, 17 so it doesn't surprise me at all that by the time 18 they sorted through the issues, it took about a 19 month to get the product off the U.S. market.</p> <p>20 BY MR. STANOCH:</p> <p>21 Q. Okay.</p> <p>22 A. And that's what my report says. And at no 23 time was Teva's product ever deemed adulterated or 24 misbranded, and it was always AB-rated. So I think 25 Teva acted with incredible swiftness.</p>
<p style="text-align: right;">Page 63</p> <p>1 A. Yes. And if you look at the four-digit 2 page number ending 5763 --</p> <p>3 Q. Okay.</p> <p>4 A. -- you can see at the top there is a 5 reference to when ZHP informed Teva that "they came 6 to be aware of a previously unknown impurity that 7 may have genotoxic potential," and that was on 8 June 20th, 2018.</p> <p>9 Q. Got it. And it's your opinion that Teva 10 acted appropriately, promptly, after receiving 11 notification from ZHP on June 20th, 2018?</p> <p>12 A. Yes. The way I would say it, if you look 13 further down, where it says "Investigation," "sites 14 to requested to remove any materials or products 15 using Valsartan API from Zhejiang" -- ZHP.</p> <p>16 So to me, you know, this is a very rapid 17 response on the part of Teva to a problem brought to 18 their attention by ZHP. Remember, the date of the 19 e-mail is 6/21 and they are notified by ZHP on 6/20, 20 so I don't think you could have a much more rapid 21 response.</p> <p>22 And then subsequently to this notice, Teva 23 also issued the recall. And I believe that was in 24 July 16th, 2018, so that was about a month later. 25 And again, as we discussed before the</p>	<p style="text-align: right;">Page 65</p> <p>1 And remember, the issue is not could the 2 nitrosamine impurity be there or not. It could be 3 there. It just didn't have a limit. And FDA set 4 that limit in December 2018.</p> <p>5 Q. Uh-huh. Well, nothing stopped Teva from 6 taking its valsartan with ZHP API in it off the 7 market sooner than when the FDA asked, right?</p> <p>8 MS. LOCKARD: Objection. Vague.</p> <p>9 THE WITNESS: No, I think you're asking 10 for sort of a personal opinion. It seemed to me it 11 happened remarkably quickly, Mr. Stanoch. It wasn't 12 anything that was delayed.</p> <p>13 You know, to issue a recall and discuss 14 with the FDA how to do the recall takes some time. 15 So if you ask me, a few weeks, was that unusual, I 16 don't think it was unusual at all.</p> <p>17 BY MR. STANOCH:</p> <p>18 Q. Uh-huh. It's your opinion that this is 19 how it's supposed to happen, right? ZHP became 20 aware of the impurity, looks like they told Teva, 21 and then Teva acted, based on this Exhibit 3, right?</p> <p>22 MS. LOCKARD: Objection. Vague.</p> <p>23 THE WITNESS: Again, it -- I think I'm 24 speaking personally, but I think Teva's activities 25 here were highly responsible and laudatory.</p>

<p style="text-align: right;">Page 66</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. Okay. And would you say that this is an</p> <p>3 example of -- in your words from prior to the</p> <p>4 break -- as how the system is supposed to work in</p> <p>5 terms of notification about the impurity with</p> <p>6 genotoxic potential finding its way back to Teva?</p> <p>7 A. Yes, I appreciate those words,</p> <p>8 Mr. Stanoch. Thank you.</p> <p>9 Q. And you would expect this to be the case</p> <p>10 of how it should work for the discovery of genotoxic</p> <p>11 impurities in API that a manufacturer like Teva is</p> <p>12 buying generally, right?</p> <p>13 A. Well, that's a very general statement.</p> <p>14 But I think in terms of the specifics here with a</p> <p>15 very difficult impurity to identify and measure,</p> <p>16 which can be there, it just needs a limit, Teva did</p> <p>17 something quite remarkable. They might --</p> <p>18 Q. If -- I'm sorry. Go ahead.</p> <p>19 A. I'm speculating, but they might have said</p> <p>20 to FDA, well, let's wait until we figure out what</p> <p>21 the limit should be, and, you know, they may not</p> <p>22 have needed to do a recall at all. But they acted</p> <p>23 highly responsibly at FDA's request.</p> <p>24 Q. Uh-huh. Right. If ZHP came to be aware</p> <p>25 of a genotoxic impurity earlier than 2018, would you</p>	<p style="text-align: right;">Page 68</p> <p>1 from the equation is the limits that FDA set in</p> <p>2 December 2018.</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. Were there any acceptable limits for</p> <p>5 nitrosamines in valsartan API as of June 20, 2018?</p> <p>6 A. Not that I'm aware of, no.</p> <p>7 Q. Uh-huh. Right. Nitrosamines were --</p> <p>8 there was -- strike that.</p> <p>9 Right. There was no established</p> <p>10 acceptable limit for nitrosamines in any valsartan</p> <p>11 products prior to June 2018, correct?</p> <p>12 A. Or any chemically synthesized drug in the</p> <p>13 U.S. market.</p> <p>14 Q. Right. Because no one expected the</p> <p>15 nitrosamines to be in them, correct?</p> <p>16 A. You are reiterating what FDA said. This</p> <p>17 was unexpected.</p> <p>18 Q. Well, unexpected, you say that numerous</p> <p>19 times in your report, Doctor. We will get back to</p> <p>20 that.</p> <p>21 But is it your opinion that without the</p> <p>22 interim guidelines, there were no guidances out</p> <p>23 there which would have indicated what level of</p> <p>24 nitrosamines were allowable in valsartan API or</p> <p>25 finished dose?</p>
<p style="text-align: right;">Page 67</p> <p>1 expect ZHP to inform Teva of that?</p> <p>2 MS. LOCKARD: Objection. Outside the</p> <p>3 scope of his opinions. He is not here to give</p> <p>4 liability opinions about ZHP.</p> <p>5 THE WITNESS: Yes, and I don't have any</p> <p>6 information on that, Mr. Stanoch, and I don't</p> <p>7 believe I cited anything about that question.</p> <p>8 BY MR. STANOCH:</p> <p>9 Q. In your answer a moment ago, you said Teva</p> <p>10 did something quite remarkable. Is it your opinion</p> <p>11 that Teva should have allowed their valsartan to be</p> <p>12 sold on the market while the FDA came up with</p> <p>13 interim limits?</p> <p>14 A. I think that's a possible conjecture.</p> <p>15 Q. So you are saying Teva could have --</p> <p>16 strike that.</p> <p>17 So you are saying Teva could have kept</p> <p>18 selling its valsartan with the NDMA in it until the</p> <p>19 FDA came up with interim limits?</p> <p>20 MS. LOCKARD: Objection. Vague.</p> <p>21 Speculation.</p> <p>22 THE WITNESS: Yeah, I am speculating, but</p> <p>23 I point out that it was unusual for FDA to ask a</p> <p>24 recall of an impurity which FDA says can be in a</p> <p>25 drug product and a drug substance. What was missing</p>	<p style="text-align: right;">Page 69</p> <p>1 A. That's my understanding.</p> <p>2 Q. Right. So until the FDA caught ZHP, it</p> <p>3 was okay for any amount of nitrosamines to be in</p> <p>4 valsartan API; is that what you are saying?</p> <p>5 MS. LOCKARD: Objection to the form of the</p> <p>6 question. Argumentative.</p> <p>7 THE WITNESS: Yeah, no, I'm not saying</p> <p>8 that at all, but of course, you are dealing with an</p> <p>9 impurity which has a presence in food, and sometimes</p> <p>10 quite high levels. So FDA had just never crossed</p> <p>11 this bridge, nor had U.S. industry. Now, as a</p> <p>12 result of the events of the summer of 2018, they</p> <p>13 have crossed the bridge, so things are better.</p> <p>14 BY MR. STANOCH:</p> <p>15 Q. So you are saying until the FDA</p> <p>16 established acceptable intake limits for</p> <p>17 nitrosamines, it was okay whatever limit -- strike</p> <p>18 that.</p> <p>19 You are saying that valsartan API could</p> <p>20 have nitrosamines in it until the FDA established</p> <p>21 interim acceptable limits?</p> <p>22 A. Well, that's true now. You can have --</p> <p>23 FDA will allow nitrosamine in drug products as long</p> <p>24 as they are within the acceptable intake limits.</p> <p>25 FDA is not saying that a product needs to have no</p>

<p style="text-align: right;">Page 70</p> <p>1 nitrosamine impurities. That is not true.</p> <p>2 Q. So it's your opinion that a drug</p> <p>3 manufacturer could have had any amount of</p> <p>4 nitrosamines in their drugs prior to the interim</p> <p>5 limits and that did not pose any concern?</p> <p>6 A. I don't believe I said that anywhere in my</p> <p>7 report, but if you can point it out, Mr. Stanoch, I</p> <p>8 would be glad to comment.</p> <p>9 Q. Well, I'm asking you now if that's your</p> <p>10 opinion, Doctor.</p> <p>11 A. You want me to add that to my opinion in</p> <p>12 my report?</p> <p>13 Q. Are you of the view that prior to the</p> <p>14 FDA's establishment of acceptable intake limits for</p> <p>15 nitrosamines, there was no prohibition on the amount</p> <p>16 of nitrosamines that could be in a drug product?</p> <p>17 A. I think you are saying that correctly,</p> <p>18 because FDA didn't know how to measure for it,</p> <p>19 neither did industry. That all had to be worked</p> <p>20 out. And then once you could measure it, then you</p> <p>21 could begin, you know, following the recommendations</p> <p>22 of the 2015 guidance. And FDA did all that and came</p> <p>23 to a limit.</p> <p>24 Now, you are sort of asking the question:</p> <p>25 What happens before you do all that work? And I</p>	<p style="text-align: right;">Page 72</p> <p>1 Q. Uh-huh.</p> <p>2 A. Time marches on, regulation marches on.</p> <p>3 If you want to go back in the past and say</p> <p>4 everything was awful or not as good as it is now, I</p> <p>5 don't want to say that.</p> <p>6 Q. Well, respectfully, Dr. Williams, things</p> <p>7 in the past were awful for some of the plaintiffs</p> <p>8 who got these drugs with a genotoxic carcinogen in</p> <p>9 it. So we are talking about that today, all right?</p> <p>10 Do you understand that?</p> <p>11 MS. LOCKARD: I'm going to object to that.</p> <p>12 That's not a question --</p> <p>13 MR. STANOCH: Withdrawn. I will withdraw</p> <p>14 it.</p> <p>15 Q. You understand this case is about in part</p> <p>16 folks who took the drug, and they had nitrosamines</p> <p>17 in it, right?</p> <p>18 A. I do understand that, and I would be loath</p> <p>19 to have an opinion about whether or how people were</p> <p>20 damaged by the presence of those nitrosamines. I'm</p> <p>21 not offering a toxicology or pharmacology opinion.</p> <p>22 Q. Right. And it's your opinion, though,</p> <p>23 that until the FDA established the acceptable intake</p> <p>24 limits -- and when was that? The final guidance</p> <p>25 was, what, February 2021, I believe you say?</p>
<p style="text-align: right;">Page 71</p> <p>1 guess the answer is, you know, that's how science</p> <p>2 progresses, that's how regulation progresses, and</p> <p>3 we're all the better for it now. I really can't</p> <p>4 speak to the past.</p> <p>5 Q. Well, isn't it incumbent on a drug</p> <p>6 manufacturer to identify potential genotoxic</p> <p>7 impurities in its product?</p> <p>8 A. You know, Mr. Stanoch, you keep asking</p> <p>9 these questions that are very general. Let me point</p> <p>10 out -- I don't know if you consider this germane,</p> <p>11 but let me say in the 1980s, before there was</p> <p>12 analytical technology, there were a whole bunch of</p> <p>13 impurities that neither FDA nor industry could even</p> <p>14 measure. What do you say about that?</p> <p>15 I mean, are drugs more pure now, better</p> <p>16 controlled than they were in the 1980s? And my</p> <p>17 answer to that is yes. No question about it. You</p> <p>18 know, ICH and FDA worked together to bring that</p> <p>19 better control for what I will call usual impurities</p> <p>20 through the ICH documents.</p> <p>21 And then later on, now, FDA came out with</p> <p>22 the guidance in 2015 that extended it to genotoxic</p> <p>23 impurities. And then the nitrosamine brought it all</p> <p>24 to the fore for a particular genotoxic impurity. So</p> <p>25 we're better off now.</p>	<p style="text-align: right;">Page 73</p> <p>1 A. No, but there were interim limits</p> <p>2 established in December 2018, and those carried</p> <p>3 forward into the guidance that appeared in</p> <p>4 September 2020, with an update in February 2021.</p> <p>5 Q. Uh-huh. So it's your opinion that prior</p> <p>6 to December 2018, a drug can have any amount of NDMA</p> <p>7 in it with no regulatory consequence?</p> <p>8 A. I wouldn't offer that opinion. I think it</p> <p>9 seems like a dangerous opinion to offer, and I'm</p> <p>10 surprised you state it.</p> <p>11 Q. If a drug had 1,000 nanograms of NDMA in</p> <p>12 it in January of 2018, would that be appropriate?</p> <p>13 MS. LOCKARD: Objection. Vague.</p> <p>14 THE WITNESS: You know, I just can't</p> <p>15 comment on those kind of questions. You are getting</p> <p>16 into how does the FDA set limits for certain</p> <p>17 impurities. And, you know, it has to be done</p> <p>18 carefully and in the context of background, food</p> <p>19 impurities that are nitrosamine impurities. I just</p> <p>20 can't answer that question, Mr. Stanoch.</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Uh-huh. So you see no problem with a drug</p> <p>23 product that had a thousand nanograms of NDMA in it</p> <p>24 in January 2018?</p> <p>25 A. I didn't offer that opinion.</p>

<p style="text-align: right;">Page 74</p> <p>1 Q. I'm asking you, do you see any issue with 2 a drug having a thousand nanograms of NDMA in it in 3 January 2018? 4 MS. LOCKARD: Objection. Vague. Outside 5 the scope of his class-certification report. 6 THE WITNESS: You know, and some of it, as 7 you well know, Mr. Stanoch, relates to the amount of 8 drug in the drug product and the duration of dosing. 9 I mean, your hypothesis might be okay for a drug 10 that's just taken once and never taken again as a 11 single oral tablet. 12 BY MR. STANOCH: 13 Q. Uh-huh. 14 A. I just can't answer your question. There 15 are too many factors that you are not specifying. 16 Q. Uh-huh. Uh-huh. So you can't tell me 17 whether it was okay for any valsartan drug to have 18 NDMA in it prior to the interim limits of 19 December 2018? 20 MS. LOCKARD: Objection. Vague. 21 THE WITNESS: No, I do know that. FDA has 22 said you could have nitrosamine in your drug 23 product. They say that even now. The question is: 24 What are the limits? And, you know, you can read 25 about it in the guidance in terms of daily dose and</p>	<p style="text-align: right;">Page 76</p> <p>1 THE WITNESS: Yes, I think that's what FDA 2 would say. And remember, there can be many 3 impurities in a drug substance that are below 4 detectable limit that you just never know about. I 5 mean, we're getting into hypotheticals that are 6 beyond my report. 7 BY MR. STANOCH: 8 Q. Is it your opinion, sir, that without the 9 interim guidelines, there were no guidances 10 available which would have indicated what levels of 11 nitrosamines could be present in valsartan? 12 MS. LOCKARD: Objection. Asked and 13 answered. 14 THE WITNESS: Yes, that's my 15 understanding, that those limits came in 16 December 2018 from FDA. 17 BY MR. STANOCH: 18 Q. Uh-huh. So prior to December 2018, there 19 was no guidance available to the industry about 20 levels of nitrosamines in valsartan? 21 MS. LOCKARD: Objection. Asked and 22 answered. 23 THE WITNESS: Yes, I -- do you want me to 24 repeat my answer, Mr. Stanoch? 25</p>
<p style="text-align: right;">Page 75</p> <p>1 duration of dose. That's how they come to these 2 limits. 3 BY MR. STANOCH: 4 Q. Do you agree that there was no acceptable 5 limit for nitrosamines prior to December 2018? 6 A. That's my understanding. The FDA did not 7 have limits for the nitrosamine impurities before 8 December 2018. 9 Q. So without an acceptable limit, then the 10 limit is zero, isn't it? 11 A. No. No, no. I wouldn't say that at all. 12 I don't know how you come to zero. 13 Q. Uh-huh. Well, the purpose of a limit is 14 to say you can have this much of a substance in the 15 drug, right? 16 A. Up to the limit. 17 Q. Correct. Up to the limit. Right. And so 18 until that limit was determined, you can't have more 19 than zero amount of a substance in it, can you? 20 A. No, no, I wouldn't agree with that at all. 21 Q. Well, so even without an interim limit, 22 you are saying it was appropriate for a drug to have 23 some amount of nitrosamine in it? 24 MS. LOCKARD: Objection. Asked and 25 answered.</p>	<p style="text-align: right;">Page 77</p> <p>1 BY MR. STANOCH: 2 Q. Please answer the question. 3 A. No, my understanding is I don't think 4 there were specified limits for any nitrosamine 5 impurity before December 2018. 6 Q. So I'm trying to understand your opinions, 7 Doctor. So if there is not an established limit for 8 a certain substance in a drug, then you can have 9 that substance in the drug? 10 MS. LOCKARD: Objection. Vague. Also 11 outside the scope of his expert report for class 12 certification. 13 THE WITNESS: Yes, and I'm looking at my 14 opinion where -- if we go to Page 46, where I look 15 at my conclusions, I don't think I speak to the 16 limit in that set of conclusions. But if you think 17 I did, please draw my attention to it, Mr. Stanoch. 18 BY MR. STANOCH: 19 Q. Doctor, you reference interim limits 20 throughout your report, don't you? 21 A. As provided by FDA in December 2018. I 22 don't speak to them in any other context, just 23 something that came from FDA. 24 Q. Uh-huh. So if there is not an established 25 limit for a certain substance in a drug, you are</p>

<p style="text-align: right;">Page 78</p> <p>1 saying that substance can be in the drug, no 2 problem? 3 MS. LOCKARD: Objection. Vague. Asked 4 and answered. Outside the scope of the 5 class-certification expert report. 6 THE WITNESS: And that really isn't what 7 I'm saying. I would say if somebody found a 8 nitrosamine impurity in their drug product in 2018, 9 they would properly follow the 2015 guidance and try 10 to figure out a limit. But as I point out in my 11 report, FDA did that for the entire industry. They 12 didn't wait for a single manufacturer to do it. 13 BY MR. STANOCH: 14 Q. Uh-huh. If a manufacturer found a 15 nitrosamine impurity in their drug product in 2018, 16 they should have properly followed the 2015 guidance 17 to try to figure out a limit, correct? 18 A. I think you are saying it correctly. I'll 19 give a little bit more specification to your 20 example. Let's say an NDA applicant who is building 21 an application for consideration by FDA, if they 22 found a nitrosamine impurity, they could follow the 23 2015 guidance and figure out a limit for it and then 24 submit that to FDA, and FDA would review it and say, 25 yeah, that limit is okay, or, no, we want you to do</p>	<p style="text-align: right;">Page 80</p> <p>1 I'm speculating, that before FDA set limits, an 2 individual company could have done it, and that 3 might have been perfectly okay. 4 And even now, I suppose -- company or a 5 consortium of company could try to convince FDA to 6 set higher limits than the ones they set in 7 December 2018. It's all subject to good data and a 8 good scientific review. 9 BY MR. STANOCH: 10 Q. Uh-huh. 11 A. So I'm not debating what you are saying at 12 all, Mr. Stanoch. 13 Q. Good. And I think we can agree, then, 14 that under the ICH M7(R1) guidance from 2015, it 15 would be incumbent on the manufacturer that 16 discovered a genotoxic impurity to attempt to 17 characterize, test it and potentially set limits on 18 its own without regulatory action, correct? 19 MS. LOCKARD: Objection. Outside the 20 scope. 21 THE WITNESS: Well, I would agree with 22 your statement, except without regulatory action, 23 because whatever the company would do would be 24 subject to FDA review and approval. 25</p>
<p style="text-align: right;">Page 79</p> <p>1 something different. 2 But in this case, FDA did that work for 3 industry. So I would say industry now doesn't need 4 to figure out their own limits. FDA has done that 5 for them. And that's what is described in the 6 guidance that I cite. 7 Q. Uh-huh. And you referenced a 2015 8 guidance. What are you talking about? 9 A. I think that's the M7 guidance. 10 Q. That's the ICH M7(R1) guidance, correct? 11 A. Yes. And I think I do cite that, so it 12 should be in my materials considered. 13 Q. No, you do. I'm not -- issuing with that. 14 I want to make sure I understood what you meant by 15 2015 guidance in your answer. 16 So I understand you are saying the FDA 17 here set limits eventually for nitrosamines. But if 18 a manufacturer had reason to believe its product 19 contained nitrosamines, the appropriate course would 20 have been for them to work towards establishing 21 limits on their own prior to any FDA guidance, 22 correct? 23 MS. LOCKARD: Objection. Outside the 24 scope of his class-certification expert opinions. 25 THE WITNESS: Yes, I could imagine, and</p>	<p style="text-align: right;">Page 81</p> <p>1 BY MR. STANOCH: 2 Q. Fair enough. So then, I guess, to clarify 3 it, we agree, then, that under the ICH M7(R1) 4 guidance from 2015, it would be incumbent on the 5 manufacturer that suspected genotoxic impurity to 6 attempt to characterize it, test it, and potentially 7 set limits for it, and letting the regulatory body 8 know? 9 A. And letting the regulatory body see the 10 data and review it and approve it. 11 Q. That's fair. Let's take that same 12 situation and say we're talking about an API 13 manufacturer first, okay? You with me? 14 A. Okay. 15 Q. Okay. Right. Would you agree that under 16 the ICH M7(R1) guidance from 2015, it would be 17 incumbent on an API manufacturer that suspected a 18 genotoxic impurity to attempt to characterize it, 19 test it and potentially set limits for it, not only 20 in connection with the regulatory body, but also 21 customers purchasing that API? 22 MS. LOCKARD: Objection. This is getting 23 far outside the scope of his class-certification 24 expert report, Counsel. You are asking him about 25 API manufacturers and their requirements. That's a</p>

<p style="text-align: right;">Page 82</p> <p>1 liability opinion. He hasn't been retained for that 2 issue, and specifically not for ZHP or any API 3 manufacturers. 4 THE WITNESS: You know, and I would add, 5 Mr. Stanoch, that if we're going to talk about it, 6 it might be good to put that guidance on the screen 7 and see exactly who it's directed to. Usually, when 8 FDA creates a guidance with recommendations, they 9 identify who it's intended for. And I'll be glad to 10 review that with you if we could sort of find it. 11 It did not figure prominently in my report 12 or my opinions because, as I have already noted, FDA 13 did this for industry. I didn't have to look at 14 what an industry drug-substance or drug-product 15 manufacturer would have or should have done. 16 BY MR. STANOCH: 17 Q. We can look at the ICH guidance in a 18 little bit, but sitting here right now, Doctor, is 19 it your view that the ICH M7(R1) guidance applies 20 only to finished-dose manufacturers, not API 21 manufacturers? 22 A. No, I wouldn't say that. And if I looked 23 at the nitrosamine guidance, I think when -- if we 24 put that up, I think FDA is speaking to 25 manufacturers of drug products and also drug</p>	<p style="text-align: right;">Page 84</p> <p>1 MR. STANOCH: Enough, Counsel. 2 THE WITNESS: I would say at this point in 3 time, Mr. Stanoch, I can't add anything more to what 4 I have already said. 5 But I'm not going to disagree with you 6 that, you know, a drug-substance manufacturer that 7 suspects a genotoxic impurity would want to follow 8 the guidance and, you know, make sure that it's a 9 selling point to customers that we're controlling 10 genotoxic impurities. That's a good drug substance. 11 BY MR. STANOCH: 12 Q. Uh-huh. Do you agree that nitrosamines 13 are probable human carcinogens? 14 MS. LOCKARD: Objection. Outside the 15 scope of his retention, his expert report, his 16 disclosure. 17 THE WITNESS: Yeah, I'm certainly not 18 offering opinion about that, but I have read the 19 statements in the materials cited and some of the 20 materials considered that would cause me to agree 21 with what you said, Mr. Stanoch. 22 BY MR. STANOCH: 23 Q. Do you agree that nitrosamines are 24 genotoxic? 25 A. Yeah, for purposes of discussions I will</p>
<p style="text-align: right;">Page 83</p> <p>1 substances. 2 Q. Uh-huh. All right. I'm going to repeat 3 my question a little bit ago because you didn't 4 answer it when you said you wanted to look at the 5 MCH guidance. 6 So would you agree that under the ICH 7 M7(R1) guidance from 2015, it would be incumbent on 8 an API manufacturer that suspected a genotoxic 9 impurity to attempt to characterize it, test it, 10 potentially set limits for it, and to let the 11 regulatory body and its API customers know? 12 MS. LOCKARD: I am going to object to this 13 question. He said he's not going to answer it. He 14 wants to look at the document. So you are asking 15 him to interpret a document and you are refusing to 16 provide it to him, so I have an objection. 17 We can take a break and get it if you want 18 him to interpret it. It's also outside the scope of 19 his expert opinion, however. 20 BY MR. STANOCH: 21 Q. Go ahead, Dr. Williams. 22 A. I'm sorry, Mr. Stanoch. 23 Q. Please answer the question. 24 MS. LOCKARD: If you can answer the 25 question.</p>	<p style="text-align: right;">Page 85</p> <p>1 agree with that, Mr. Stanoch. 2 Q. Do you agree that nitrosamines are not an 3 active ingredient in any FDA-approved drug? 4 MS. LOCKARD: Objection. Speculation. 5 THE WITNESS: To the best of my knowledge, 6 Mr. Stanoch, I can agree with that. 7 BY MR. STANOCH: 8 Q. Uh-huh. Do you agree that the presence of 9 nitrosamines even at trace level is considered 10 unacceptable because these impurities are probable 11 human carcinogens? 12 MS. LOCKARD: Objection. Outside the 13 scope of his retention and his expert report on 14 class certification. He is not here to testify 15 about whether the drug is a potential human 16 carcinogen. But if you want to waste your time 17 asking him causation questions, have at it. 18 MR. STANOCH: Counsel, I don't need the 19 colloquy. Thank you. 20 Please answer, Dr. Williams. 21 THE WITNESS: Would you restate the 22 question, Mr. Stanoch? I'm sorry. 23 BY MR. STANOCH: 24 Q. Sure. Do you agree that the presence of 25 nitrosamines even at trace level is considered</p>

<p style="text-align: right;">Page 86</p> <p>1 unacceptable because these impurities are probable 2 human carcinogens? 3 MS. LOCKARD: Same objection. It's 4 outside of his scope, the class-certification expert 5 report. He is not here to give a causation opinion. 6 THE WITNESS: But in answer to your 7 question, Mr. Stanoch, no, I don't agree with that. 8 BY MR. STANOCH: 9 Q. Stand by. Stand by, sir. 10 You are familiar with the U.S. 11 Pharmacopeia Association, right, the USP? 12 A. Yes, Mr. Stanoch, I am. 13 Q. Yeah, you mean you used to be affiliated 14 with them, right? 15 A. I was an employee of USP between 2000 and 16 2014. 17 Q. Right. I'm going to mark another exhibit. 18 (Whereupon, Exhibit 4 was marked for 19 identification.) 20 BY MR. STANOCH: 21 Q. You are going to have to look on your 22 screen, unfortunately, Dr. Williams. I don't have a 23 copy of this in the binder available. 24 Can you pull it up, or would you like me 25 to share my screen? Exhibit 4.</p>	<p style="text-align: right;">Page 88</p> <p>1 MR. HARKINS: The exhibit share is what 2 you are talking about. 3 MS. LOCKARD: The exhibit-share box is 4 what I'm talking about. 5 THE WITNESS: Oh. 6 MR. HARKINS: Open the chat, Roger. 7 THE WITNESS: Oh. 8 (Whereupon, a brief discussion off the 9 record.) 10 THE WITNESS: Okay. I'm opening the chat 11 room, and -- 12 MR. HARKINS: Hold on. Let me -- someone 13 repaste the link to the exhibit share, please? 14 Sorry. Can someone please repaste the 15 link to the exhibit share? 16 All right. Can you hear me in the room? 17 MR. STANOCH: We can hear you, Steve. 18 THE VIDEOGRAPHER: I might be able to 19 retrieve it from the chat. 20 MR. HARKINS: Oh. I think that's it. 21 THE VIDEOGRAPHER: Okay. Yeah, you got 22 it. 23 MR. HARKINS: You control it here on the 24 separate screen, and you can scroll it down from 25 there.</p>
<p style="text-align: right;">Page 87</p> <p>1 A. Oh, I'll rely on you to give me something 2 that I can look at. 3 Q. Okay. Stand by, sir. 4 I'm now sharing my screen. This is 5 Exhibit 4 in the public folder. 6 Do you see this, sir? 7 A. Could we open the box and get it out of 8 the box? 9 MS. LOCKARD: Is it in the binder? 10 MR. STANOCH: It's not in the binder. I'm 11 sorry. 12 THE WITNESS: I think you are showing 13 me -- it looks like a PowerPoint; is that correct? 14 BY MR. STANOCH: 15 Q. Yeah, this is the -- correct. This is the 16 cover page of a webinar in which Naiffer Romero of 17 USP spoke on nitrosamine impurities? 18 A. Yeah, I don't see it very clearly. Can 19 you expand it or -- 20 MS. LOCKARD: Can you get it up out of the 21 box? 22 THE WITNESS: I don't -- 23 MR. STANOCH: It's not in the box, 24 Counsel, I'm sorry. 25 THE WITNESS: Not in the box.</p>	<p style="text-align: right;">Page 89</p> <p>1 THE WITNESS: Can I make it bigger? 2 MR. HARKINS: You should be able to zoom, 3 yeah. 4 THE WITNESS: Okay. I'm looking at it, 5 Mr. Stanoch. 6 BY MR. STANOCH: 7 Q. Okay. Great. 8 A. Please proceed. 9 Q. Sure. And you see the title page of this 10 slide, it's a USP webinar presentation? 11 A. I think I do see that, yes. 12 Q. All right. And then there is -- I have an 13 excerpt here, I have Slide 8 from that webinar on 14 the next page, if you scroll down, sir. The slide 15 says, "Background." 16 A. Okay. I'm looking at "Background." 17 Q. Great. And you will see that it's -- and 18 the highlighting, by the way, is original in the 19 document. I didn't modify this. 20 A. Okay. 21 Q. Do you see on the right it says, "Although 22 nitrosamines are also present in some foods and 23 drinking-water supplies, their presence in 24 medicines, even at trace level is considered 25 unacceptable because these impurities are probable</p>

<p style="text-align: right;">Page 90</p> <p>1 human carcinogens." Did I read that right?</p> <p>2 A. Yes, I think you read it correctly. And</p> <p>3 can you tell me the date of this document?</p> <p>4 Q. It's 2020.</p> <p>5 A. Oh, I see. All right. Thank you.</p> <p>6 Q. Uh-huh. And do you agree with that</p> <p>7 statement from this USP presentation?</p> <p>8 MS. LOCKARD: Objection. Asked and</p> <p>9 answered.</p> <p>10 THE WITNESS: I would say what I rely on</p> <p>11 is FDA's guidance document, which it does say you</p> <p>12 can have nitrosamine impurities within acceptable</p> <p>13 limits.</p> <p>14 BY MR. STANOCH:</p> <p>15 Q. Uh-huh.</p> <p>16 A. So I would not agree with this statement.</p> <p>17 Q. Okay. And you see there in the middle,</p> <p>18 there is a fake Post-it that says, "Purpose of ICH</p> <p>19 M7"; do you see that?</p> <p>20 A. Yes, I do see that.</p> <p>21 Q. It reads, "Provide a practical framework</p> <p>22 that is applicable to the identification</p> <p>23 categorization, qualification, and control of</p> <p>24 mutagenic impurities to limit potential carcinogenic</p> <p>25 risk." Did I read that right?</p>	<p style="text-align: right;">Page 92</p> <p>1 though, that a drug-substance or product</p> <p>2 manufacturer would follow ICH M7 guidance to</p> <p>3 identify, characterize, qualify, and control</p> <p>4 mutagenic impurities on its own, correct?</p> <p>5 A. It could do. I mean, I'm not a</p> <p>6 toxicologist, but my understanding is that there</p> <p>7 could be many mutagenic impurities beyond the</p> <p>8 nitrosamine impurities that we're considering in</p> <p>9 this matter.</p> <p>10 Q. Right. And it's the expectation that</p> <p>11 manufacturers on their own would work to identify,</p> <p>12 characterize, qualify, and control mutagenic</p> <p>13 impurities to limit potential carcinogenic risk,</p> <p>14 correct?</p> <p>15 MS. LOCKARD: Objection. Outside the</p> <p>16 scope of his class-certification opinions.</p> <p>17 THE WITNESS: Yes, and I'm certainly not</p> <p>18 debating with you the content of the M7 document,</p> <p>19 Mr. Stanoch. If you read statements from that, I</p> <p>20 would probably generally agree with your statements.</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Right. And you agree that it's the</p> <p>23 expectation that manufacturers would follow the ICH</p> <p>24 M7 guidance themselves, correct?</p> <p>25 MS. LOCKARD: Objection. Asked and</p>
<p style="text-align: right;">Page 91</p> <p>1 A. Yes, I think you are reading it correctly.</p> <p>2 Q. And would you agree with that statement</p> <p>3 about the purpose of ICH M7?</p> <p>4 A. Yes, that seems like a general statement,</p> <p>5 and I agree with it.</p> <p>6 Q. Right. And that would have been the case</p> <p>7 with ICH M7 guidance prior to the FDA's first take</p> <p>8 at establishing interim limits for nitrosamines in</p> <p>9 December 2018, correct?</p> <p>10 A. And although I didn't offer this as an</p> <p>11 opinion, I think FDA itself tended to follow the ICH</p> <p>12 M7 document, particularly with regard to the word</p> <p>13 "control." So when FDA is saying control, they are</p> <p>14 saying, we can put a limit on the NDMA impurity.</p> <p>15 Q. Well, the guidance is to the industry to</p> <p>16 deal with impurities when they find them in their</p> <p>17 drug substance or their drug products, right?</p> <p>18 A. Now, are you asking about M7?</p> <p>19 Q. Yes.</p> <p>20 A. Yes. And it's a general statement, but I</p> <p>21 think a specific example is the nitrosamine</p> <p>22 impurities, and that's what I alluded to in my</p> <p>23 report.</p> <p>24 Q. Right. Well, you mention control in the</p> <p>25 context of the FDA setting limits. The point is,</p>	<p style="text-align: right;">Page 93</p> <p>1 answered. Outside the scope.</p> <p>2 THE WITNESS: With the exception of</p> <p>3 nitrosamine, where, if I may say so, FDA did the</p> <p>4 work of M7 on behalf of the entire industry.</p> <p>5 BY MR. STANOCH:</p> <p>6 Q. Well, prior to December 2018 there were no</p> <p>7 FDA interim limits, right?</p> <p>8 A. That's true.</p> <p>9 Q. Okay. But we had ICH M7 guidance,</p> <p>10 correct?</p> <p>11 A. Yes.</p> <p>12 Q. And the guidance set forth that</p> <p>13 manufacturers should identify, characterize,</p> <p>14 qualify, and control mutagenic impurities to limit</p> <p>15 potential carcinogenic risk, yes?</p> <p>16 A. I'm not debating the words of the</p> <p>17 guidance, if that's your question. I agree with the</p> <p>18 words of the guidance.</p> <p>19 Q. Well, I'm asking you about the application</p> <p>20 of the guidance, Dr. Williams, that even in the</p> <p>21 absence of the FDA interim limits in December 2018,</p> <p>22 was the expectation that a manufacturer would still</p> <p>23 attempt to identify, characterize, qualify, and</p> <p>24 control mutagenic impurities to limit potential</p> <p>25 carcinogenic risk?</p>

<p style="text-align: right;">Page 94</p> <p>1 MS. LOCKARD: Objection. Vague. Outside 2 the scope. 3 THE WITNESS: Yeah, I didn't really 4 comment on this, Mr. Stanoch. Do you want me to 5 speculate? 6 BY MR. STANOCH: 7 Q. I would like you to answer the question, 8 Dr. Williams. 9 A. You know, the way I would say it, and I 10 think I have already alluded to this previously, is, 11 you know, an ANDA applicant generally follows the 12 guidances I cited in my report. 13 And to the extent that they -- you know, 14 when they get into qualifying an impurity, they may 15 have to consider mutagenic or DNA-reactive 16 impurities, and then they would turn to the M7 17 guidance. But that is certainly a case-by-case 18 decision, and you would have to suspect the impurity 19 was present and you would have to be able to measure 20 it. So you are asking a very general question. 21 Q. And the ICH M7 guidance is not confined to 22 ANDA applications, correct? 23 A. That's my understanding. Again, if you 24 are going to ask me questions about it, it would 25 probably be best if I could see it.</p>	<p style="text-align: right;">Page 96</p> <p>1 the lines of your questioning. 2 Q. So you can't tell me one way or the other 3 about whether the ICH M7 guidance applies throughout 4 the life of a drug? 5 MS. LOCKARD: Objection. Asked and 6 answered. 7 He said if you are going to ask him 8 questions about the application and interpretation 9 of the guidance, he wants to have it in front of 10 him, which is a fair request. 11 BY MR. STANOCH: 12 Q. You can answer the question, Dr. Williams. 13 MS. LOCKARD: Objection. It's 14 argumentative. 15 THE WITNESS: I prefer not to answer the 16 question without seeing the guidance. 17 BY MR. STANOCH: 18 Q. And which guidance do you want to see, 19 Doctor? 20 A. M7. 21 Q. What version? 22 A. The current version. 23 Q. What year? 24 A. I think it's 2015. 25 Q. Show me where it is in your reliance</p>
<p style="text-align: right;">Page 95</p> <p>1 Q. Well, we will get to specific parts of it, 2 but -- your understanding that the ICH M7 guidance 3 applies to the life of a drug from application 4 through commercialization, correct? 5 A. Again, you know, I feel very uncomfortable 6 answering questions about a document that I haven't 7 seen and that I cite in my report, but I would say 8 it was not particularly important to my opinions. 9 But again, you know, I'll be glad to walk 10 through it with you, Mr. Stanoch. I don't think it 11 is particularly appropriate for my opinions or 12 important to my opinions, but again, I'm certainly 13 here to be responsive to your questions. 14 Q. Right. And you agree that the ICH M7 15 guidance applies throughout the life of a drug, 16 correct? 17 A. I don't believe I said that. I think what 18 I said is if we're going -- if you are going to ask 19 me that question, I feel like I need to see the 20 guidance. 21 Q. You can't tell me anything about the ICH 22 M7 guidance general applicability without looking at 23 it? 24 A. I think, yes, I'm saying that. I would be 25 hesitant to make statements about the guidance along</p>	<p style="text-align: right;">Page 97</p> <p>1 materials and report, which version you want. 2 MS. LOCKARD: Let me just put an objection 3 on the record. You are asking him questions about a 4 guidance that you haven't identified. He is asking 5 to see the guidance that you were questioning him 6 about. If you want to question him about a 7 document, identify it. Now you are telling him 8 to -- 9 MR. STANOCH: Counsel, enough. Enough, 10 Counsel. Counsel, enough. 11 (Overlapping speakers.) 12 MR. STANOCH: I'm asking him to tell me 13 the document he wants. I'm asking him to tell me 14 what document he wants. I'm trying to comply with 15 his request, Counsel. Please, let him tell me what 16 he wants to see. Thank you. 17 We have lost Dr. Williams. Dr. Williams, 18 we can't see you. 19 MS. LOCKARD: We're on break. We can go 20 off the record. You can keep running. 21 MR. STANOCH: Wait a minute. Wait a 22 minute. Wait a minute. Wait a minute. I am not 23 agreeing to go off the record. I have a pending 24 question to the witness to tell me what document he 25 said he needs to see. I am not agreeing to go off</p>

<p style="text-align: right;">Page 98</p> <p>1 the record.</p> <p>2 Q. Are you going to answer the question,</p> <p>3 Dr. Williams?</p> <p>4 MR. STANOCH: Or, Counsel, are you going</p> <p>5 to instruct him not to answer it?</p> <p>6 Well, let it be noted that despite the</p> <p>7 nonagreement and the pending question, both the</p> <p>8 witness and counsel have gone off.</p> <p>9 Let's keep running.</p> <p>10 THE WITNESS: I have been instructed by</p> <p>11 counsel to come back, Mr. Stanoch, and now I'm</p> <p>12 trying to look for the guidance that you are</p> <p>13 alluding to.</p> <p>14 MR. STANOCH: Thank you.</p> <p>15 THE WITNESS: And I would say we can look,</p> <p>16 if you agree, to the guidance for industry</p> <p>17 genotoxic -- the other one -- I would really</p> <p>18 appreciate it if you would pick the guidance because</p> <p>19 you are talking about it. But yes, here it is.</p> <p>20 I have been handed it in a copy. M7,</p> <p>21 Revision 1, Addendum to ICH M7. Now, that makes me</p> <p>22 a little nervous because it's an addendum, and it</p> <p>23 makes me wonder, where is the M7(R1)? But if we can</p> <p>24 look at M7(R1), I'll be glad to answer questions</p> <p>25 about it if I can.</p>	<p style="text-align: right;">Page 100</p> <p>1 benefit of all of your colleagues on Zoom. Well,</p> <p>2 that's going to take me time.</p> <p>3 Q. Doctor, I can pull up the March 2018</p> <p>4 guidance. You want to work with that for now? Or</p> <p>5 would --</p> <p>6 A. And I also think it would be important to</p> <p>7 go to my report where I reference this document.</p> <p>8 Let me see if I can find that.</p> <p>9 MS. LOCKARD: And while he is doing that,</p> <p>10 Exhibit 4 was the USP PowerPoint. It looks like</p> <p>11 there are only two pages of that. Do you have</p> <p>12 the -- are you making the full PowerPoint the</p> <p>13 exhibit?</p> <p>14 MR. STANOCH: Those are excerpts from the</p> <p>15 webinar. We will mark the entire webinar.</p> <p>16 Q. Well, Doctor, let's see if we can cut</p> <p>17 through this a little bit, shall we? You agree, do</p> <p>18 you not, that ICH M7 guidance has been in effect --</p> <p>19 has been effective in different forms for quite some</p> <p>20 time, yes?</p> <p>21 A. I can agree with that, Mr. Stanoch,</p> <p>22 please, if the --</p> <p>23 Q. Sure. Sure. And why don't we get a</p> <p>24 ballpark. I mean, can we say that at least since</p> <p>25 2003 there has been some form of ICH M7 guidance?</p>
<p style="text-align: right;">Page 99</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. I'm --</p> <p>3 A. Can you proceed, Mr. Stanoch?</p> <p>4 Q. Well, I want to make sure we have the</p> <p>5 right documents in front of us, and I have to mark</p> <p>6 it, Dr. Williams. So why don't you tell me the date</p> <p>7 of the document you are looking at?</p> <p>8 A. Well, what I have been handed is M7(R1),</p> <p>9 dated March 31st, 2017, and then a M7(R1) addendum,</p> <p>10 so it's lot of paper and I'm looking at two</p> <p>11 documents.</p> <p>12 MS. LOCKARD: And for the record, I still</p> <p>13 don't know what it is that your question is asking</p> <p>14 about, so we are trying to print whatever we think</p> <p>15 you are asking about, but you have refused so far to</p> <p>16 identify -- counsel has refused to identify the</p> <p>17 specific guidance that he is asking the doctor to</p> <p>18 interpret, so --</p> <p>19 THE WITNESS: Okay. I'm prepared to</p> <p>20 answer questions. Did you get the dates of the</p> <p>21 documents I'm looking at? The M7, Revision 1, is</p> <p>22 March 2017.</p> <p>23 MS. LOCKARD: Can you hear us?</p> <p>24 MR. STANOCH: Yeah, I'm trying to pull up</p> <p>25 the version that you have in the hard copy for the</p>	<p style="text-align: right;">Page 101</p> <p>1 A. You know, I'd hesitate from that, but for</p> <p>2 purpose of a discussion let me agree so that we can</p> <p>3 go forward.</p> <p>4 Q. I appreciate that. I won't hold you to</p> <p>5 the particular date. I was just trying to pick a</p> <p>6 date that we could just move forward from. So --</p> <p>7 and we can agree, can we not, that there has been</p> <p>8 revisions and addenda to the M7 guidance over time,</p> <p>9 correct?</p> <p>10 A. Okay. Let me agree.</p> <p>11 Q. And would you agree that even in the</p> <p>12 absence of FDA interim limits for nitrosamines,</p> <p>13 there was an expectation that a manufacturer would</p> <p>14 adhere to the ICH M7 guidance concerning genotoxic</p> <p>15 impurities, whatever the status of that guidance was</p> <p>16 at the particular time?</p> <p>17 MS. LOCKARD: Objection. These are</p> <p>18 liability opinions and outside the scope of his</p> <p>19 report.</p> <p>20 THE WITNESS: Yeah, I am very hesitant</p> <p>21 with your general statements, but again, I won't</p> <p>22 contest them so we can move forward. Go ahead,</p> <p>23 Mr. Stanoch.</p> <p>24 BY MR. STANOCH:</p> <p>25 Q. I'm a little unclear what you mean by</p>

<p style="text-align: right;">Page 102</p> <p>1 don't contest them. Does that mean you will agree 2 with that question? 3 MS. LOCKARD: Objection. Vague. 4 THE WITNESS: You know, it would be 5 much -- can you restate the question? 6 BY MR. STANOCH: 7 Q. Sure. Would you agree that even in the 8 absence of FDA interim limits for nitrosamines, 9 there was an expectation that a manufacturer would 10 adhere to the ICH M7 guidance concerning genotoxic 11 impurities as that guidance stood at the particular 12 time? 13 MS. LOCKARD: Objection. Vague. Outside 14 the scope of his expert report. 15 THE WITNESS: Yes, it's not any opinion I 16 offered, but I won't debate what you are saying, so 17 I can agree with it, Mr. Stanoch. 18 BY MR. STANOCH: 19 Q. Fair enough. And do you agree that the 20 ICH M7 guidance includes nitrosamines in the cohort 21 of concern? And if you need to look at the version 22 in front of you, that's fine, and we could mark it 23 later. 24 A. I don't know where I see nitrosamines 25 here, and I didn't look for it.</p>	<p style="text-align: right;">Page 104</p> <p>1 reading anything correctly. 2 THE WITNESS: No, okay. 3 All right. Well, I'm a little hesitant 4 about answering, Mr. Stanoch. 5 MR. STANOCH: Then stand by for an 6 exhibit, sir. 7 I'm going to mark the next exhibit, sir. 8 (Whereupon, Exhibit 5 was marked for 9 identification.) 10 BY MR. STANOCH: 11 Q. Exhibit 5. This is actually Tab 2 in your 12 binder. You can take the binder out of the box we 13 sent you as a courtesy. 14 MS. LOCKARD: Hold on. We are opening the 15 box. There is one black binder in here. Tab 2? 16 MR. STANOCH: Yes, please. 17 MS. LOCKARD: Okay. 18 BY MR. STANOCH: 19 Q. Tell me when you have that, Doctor. 20 A. I think I'm looking at it. Tab 2, it is a 21 letter from FDA to -- I don't see who it's to. But 22 it looks to be about a five-page letter. 23 Q. Right. It's a general advice letter from 24 the FDA. You see that in the upper right, "General 25 Advice"?</p>
<p style="text-align: right;">Page 103</p> <p>1 Q. All right. Let -- 2 A. Can you point it out where you see it, 3 Mr. Stanoch? 4 Q. Sure. Put that aside, then. Let's put it 5 a different way. Are you aware that the FDA has 6 stated that N-nitroso compounds are identified as a 7 cohort of concern in ICH M7 guidance? 8 MS. LOCKARD: Objection. Outside the 9 scope of his expert report. 10 THE WITNESS: Yeah, I see no reason to 11 deny what you are saying, so I'll agree with it to 12 continue the discussion, Mr. Stanoch. 13 BY MR. STANOCH: 14 Q. Thank you. I appreciate that, Doctor. 15 And a substance that falls within the ICH 16 cohort of concern should be controlled, correct? 17 MS. LOCKARD: Objection. Falls outside of 18 the scope of his class-certification opinions. 19 THE WITNESS: You know, I could probably 20 agree more readily if you could show me where you 21 are reading in the guidance. But again, for 22 purposes of the discussion, I won't debate what you 23 are saying, Mr. Stanoch. I'm sure you are reading 24 it correctly. 25 MS. LOCKARD: I wouldn't assume that he is</p>	<p style="text-align: right;">Page 105</p> <p>1 A. I do see that. 2 Q. Uh-huh. And do you see -- 3 MS. LOCKARD: There is no Bates number, 4 for those on the call. 5 BY MR. STANOCH: 6 Q. Would you look at the last paragraph of 7 the first page, sir? 8 A. Last paragraph, first page. 9 Q. It begins, "Nitrosamine compounds." Do 10 you see that? 11 A. Wait a minute. Oh, "Nitrosamine 12 compounds." Yes, I'm with you, Mr. Stanoch. Go 13 ahead. 14 Q. Wonderful. Why don't you read for us the 15 first few sentences of that paragraph? 16 A. "Nitrosamine compounds are potent 17 genotoxic carcinogens in several nonclinical species 18 and are classified as probable human carcinogens by 19 the International Agency for Research on Cancer. In 20 fact, 'N-nitroso' compounds are identified as a 21 'cohort of concern' in internationally" recognized 22 "guidance, ICH M7," and then it states the name. 23 Should I stop there? 24 Q. Keep going. Slowly, please, for the court 25 reporter.</p>

<p style="text-align: right;">Page 106</p> <p>1 A. "ICH M7 recommends that known mutagenic 2 carcinogens, such as nitrosamines," to "be 3 controlled at or below the acceptable cancer risk 4 level. Due to their known potent carcinogenic 5 effects, and because it is feasible to limit these 6 impurities by taking reasonable steps to prevent or 7 eliminate their presence, FDA has determined that 8 there is no acceptable specification for 9 nitrosamines in ARB API and DP." 10 Q. That's fine. Okay. And, oh, actually, 11 why don't you read the one more sentence? 12 A. "Therefore, FDA advises that nitrosamines 13 should be absent (not detectable as described below) 14 from ARB API and ARB drug products." 15 Q. Okay. Thank you. 16 So, first of all, were you aware of this 17 general advice letter from the FDA prior to right 18 now? 19 A. No. 20 Q. Okay. Second of all, do you agree with 21 the FDA's statement in this letter that nitrosamine 22 compounds are potent genotoxic carcinogens? 23 MS. LOCKARD: Objection. Outside the 24 scope of his class-certification opinions. He is 25 not here to give a causation opinion.</p>	<p style="text-align: right;">Page 108</p> <p>1 And the next sentence, do you agree with 2 the FDA that N-nitroso compounds are part of the 3 cohort of concern under ICH M7 guidance? 4 A. Yes, I see the words, and I think you are 5 reading them correctly. 6 Q. And do you agree with that statement, 7 regardless of whether I read it correctly? 8 MS. LOCKARD: Does he agree that it -- 9 right. Objection. Vague. 10 THE WITNESS: I see no reason to disagree 11 with the words in this letter. 12 BY MR. STANOCH: 13 Q. Perfect. And do you agree, then, that as 14 part of the cohort of concern, nitrosamines should 15 be controlled? 16 A. Yes, I can agree with that. 17 Q. All right. And do you agree generally 18 that nitrosamines can be controlled? 19 A. Yes, I think FDA documented that in its 20 December 2018 statement. 21 Q. And do you agree that nitrosamines can be 22 avoided entirely? 23 A. You know, that's sort of a case-by-case 24 question. 25 But what is perplexing me about this</p>
<p style="text-align: right;">Page 107</p> <p>1 THE WITNESS: And I know I'm not supposed 2 to ask questions, but I don't see a date on this 3 letter. Is there a date? 4 BY MR. STANOCH: 5 Q. It doesn't appear that it has a date on 6 it. 7 A. And also, if I may say so, I think this 8 conflicts with the FDA guidance on nitrosamine 9 impurities, but we can have that conversation if you 10 wish. 11 But anyway, back to you, Mr. Stanoch. Am 12 I answering your questions about this document? 13 Q. Well, not yet. The question was: Do you 14 agree with the FDA's statement that nitrosamine 15 compounds are potent genotoxic carcinogens? 16 MS. LOCKARD: Objection. Outside the 17 scope of his class-certification opinions. He is 18 not here to give a causation opinion. 19 THE WITNESS: Yes, and I'm not going to 20 debate the wording in this letter. It seems like a 21 formal letter from the agency, and I'm not in a 22 position to disagree with FDA on this point. 23 So please continue, Mr. Stanoch. 24 BY MR. STANOCH: 25 Q. I certainly will. Thank you, Doctor.</p>	<p style="text-align: right;">Page 109</p> <p>1 letter is I think the FDA guidance says you can have 2 nitrosamine impurities as long as they stay within 3 the acceptable intake limits. 4 Q. Uh-huh. 5 A. So I see a dissonance between this letter 6 and the FDA guidance. 7 Q. Uh-huh. 8 A. But please continue. 9 Q. And you say "a case-by-case basis." Do 10 you mean by that that it would be on a particular 11 manufacturer to assess whether nitrosamines could be 12 avoided entirely in its manufacturing process? 13 A. Yes, I agree with the way you stated that. 14 Thank you. 15 Q. Uh-huh. Yep. And were you aware prior to 16 seeing this letter that at one point the FDA said 17 that it had determined that there is no acceptable 18 specification for nitrosamines in ARB API and DP? 19 A. Well, as I say, I think that's not what 20 the guidance says, but I see where it says it here 21 in this letter. 22 Q. Uh-huh. You keep saying "guidance." 23 Which guidance do you mean specifically? 24 A. It was the nitrosamine impurities guidance 25 that I cite in my report. It came out in September</p>

<p style="text-align: right;">Page 110</p> <p>1 of 2020, and then it was updated in February of 2 2021. 3 Q. Uh-huh. So at the time this FDA general 4 advice letter was put out, it was the FDA's view 5 that there is no acceptable specification for 6 nitrosamines in ARB API and DP, correct? 7 A. Yes, and we don't quite know when because 8 we can't see a date on this letter. 9 Q. Well, I believe the letter was from 10 sometime in 2019. 11 MS. LOCKARD: Objection to counsel 12 testifying. 13 BY MR. STANOCH: 14 Q. Assume the letter was from 2019, Doctor, 15 okay? 16 A. Okay. I'm willing to make that 17 assumption. It may have come out, then -- 18 Q. Great. 19 A. It may have come out, then, before the 20 first iteration of the draft September 2020 21 guidance, and therefore the guidance superseded this 22 document. 23 Q. Sure. Then -- 24 A. That would resolve my dissonance. 25 Q. And that may be the sequence of events,</p>	<p style="text-align: right;">Page 112</p> <p>1 MS. LOCKARD: What paragraph are you 2 looking at? 3 MR. STANOCH: Same one. 4 THE WITNESS: Uh-huh. Well, we can keep 5 on looking at this letter. Is there a question 6 pending, Mr. Stanoch? 7 BY MR. STANOCH: 8 Q. There was. The FDA goes on to say they 9 used the interim limits only to guide immediate 10 decision-making for the product recalls. Do you see 11 that? 12 A. I do see that. 13 Q. Uh-huh. And were you aware of that prior 14 to today? 15 MS. LOCKARD: Objection. Vague. 16 THE WITNESS: And this is the first time I 17 have seen this letter. 18 BY MR. STANOCH: 19 Q. Okay. Let's put that aside for now, 20 Doctor. 21 A. Okay. Thank you. 22 Q. Why don't you flip to Tab 3 in your 23 binder. It will be introduced as Exhibit 6. 24 (Whereupon, Exhibit 6 was marked for 25 identification.)</p>
<p style="text-align: right;">Page 111</p> <p>1 Doctor. But at the time this letter came out, 2 right, the FDA had determined there is no acceptable 3 specification for nitrosamines in ARB API and DP, 4 right? 5 A. I see the wording in the letter. I don't 6 disagree with the way you are stating the wording. 7 And I'm willing to make the assumption it came out 8 sometime in 2019. 9 Q. So then, at the time of this letter, there 10 should be no nitrosamines in any valsartan API or 11 drug product, correct? 12 MS. LOCKARD: Objection. Vague. 13 Foundation. 14 THE WITNESS: Well, I think FDA is even 15 saying in this letter that they provided interim 16 acceptable limits for nitrosamine impurities in 17 ARBs. So I don't know how to kind of piece together 18 what it's saying here versus, well, the other 19 realities of their December 2018 decision and the 20 guidance that I cited in my report. 21 BY MR. STANOCH: 22 Q. Uh-huh. The FDA goes on to say that they 23 used the interim limits only to guide immediate 24 decision-making for the product recalls. Do you see 25 that?</p>	<p style="text-align: right;">Page 113</p> <p>1 BY MR. STANOCH: 2 Q. Tell me when you are there, Doctor. 3 A. I'm there. I see it. M7(R1). Is that 4 what we're talking about, March 2018? 5 Q. Yes, sir. We're on the same document. 6 That's a good step. So are you familiar with this 7 document? 8 A. I'm aware of it. I did not study it 9 closely for my report. 10 Q. That's okay. But you understand that it's 11 the ICH guidance as of March 2018, correct? 12 A. Yes, I do. And then the one I had printed 13 out for me before was dated 31 March 2017. 14 Q. Right. And I don't have a copy of exactly 15 what you were handed. We can get it. 16 But this goes back to our point that the 17 guidance might have went through various iterations 18 over time generally, right? 19 A. Yes, exactly. That's how the ICH 20 guidances work. So I'm prepared to consider this 21 with you, Mr. Stanoch. 22 Q. That's great. So why don't we turn to 23 page 5 of this document, sir? 24 A. All right. 25 Q. And tell me when you are there.</p>

<p style="text-align: right;">Page 114</p> <p>1 A. I'm there. Where it says, "General 2 Principles"? 3 Q. Yes, sir. And then you see the paragraph 4 in the middle, "A Threshold of Toxicological 5 Concern"? 6 A. I do see that. 7 Q. Uh-huh. And do you see at the end that 8 this March 2018 guidance states, "This group of high 9 potency mutagenic carcinogens, referred to as the 10 cohort of concern, comprises aflatoxin-like-, 11 N-nitroso-, and alkyl-azoxy compounds," correct? 12 A. Yes, I do see that. 13 Q. All right. And N-nitroso compounds, those 14 would include the NDMA and NDEA nitrosamines that 15 you discuss in your report, correct? 16 A. I think you are saying that correctly. 17 Thank you, Mr. Stanoch. 18 Q. And then what is your understanding of 19 cohort of concern, sir? 20 A. As the words say here, it's a group of 21 high-potency mutagenic carcinogens that comprises 22 the three -- excuse me, Mr. Stanoch -- that 23 comprises the three types of compounds stated in the 24 sentence. A cohort of concern, apparently they are 25 trying to classify some particularly mutagenic</p>	<p style="text-align: right;">Page 116</p> <p>1 beginning of the paragraph, it says, "was developed 2 to define an acceptable intake for any unstudied 3 chemical that poses a negligible risk." So I guess 4 if it is below the threshold, the risk is 5 negligible, but if it is above, you begin to have 6 some concern. Please correct me if -- 7 BY MR. STANOCH: 8 Q. Right. I apologize. Are you done, 9 Doctor? 10 A. Yes, I think I am. Thank you, 11 Mr. Stanoch. 12 Q. Yes. And just following along, you see 13 later in that paragraph it says, "For application of 14 a TTC in the assessment of acceptable limits of 15 mutagenic impurities," and the sentence continues. 16 Do you see that? 17 A. I do. 18 Q. Right. And the purpose of the TTC was to 19 assess acceptable limits of impurities in drug 20 substances, correct? 21 MS. LOCKARD: Objection. Outside the 22 scope of his expert opinion. You are asking him 23 what the purpose of the TTC was. This is not part 24 of his class-certification report. 25 THE WITNESS: Yeah, and -- the only thing</p>
<p style="text-align: right;">Page 115</p> <p>1 carcinogens, as stated here in the sentence. 2 Q. And the purpose of that is to alert 3 industry that limits for the cohort of concern might 4 be much lower than the threshold of toxicological 5 concern that might otherwise be defined per the 6 guidance, right? 7 MS. LOCKARD: Objection. Vague. And 8 outside the scope of his testimony. 9 THE WITNESS: Yeah. And you are beginning 10 to ask me questions that I would call 11 pharmacology/toxicology questions. 12 I can read the sentences here and agree 13 with them, Mr. Stanoch. For example, it says, "Some 14 structural groups were identified to be of such high 15 potency," and then the sentence continues. And 16 these high potency are referred to as a cohort of 17 concern, and then it lists the three compounds that 18 fall into the structural categories that we have 19 already discussed. 20 BY MR. STANOCH: 21 Q. Uh-huh. And then the threshold of 22 toxicological concern, what does that relate to? 23 MS. LOCKARD: Objection. Vague. Outside 24 the scope. 25 THE WITNESS: Well, if we go back to the</p>	<p style="text-align: right;">Page 117</p> <p>1 I can do is read the words and sort of say I have a 2 general understanding of what they are saying. I'm 3 certainly not a pharmacologist-toxicologist. 4 BY MR. STANOCH: 5 Q. I'm not asking for a pharmacology or 6 toxicology opinion, Doctor. I'm asking your 7 understanding in the context of a report where you 8 talk about thresholds of limits that may or may not 9 have existed. 10 We're looking now here at the ICH 11 guidance, the March 20th, 2018, version, and it's 12 talking about acceptable limits of mutagenic 13 impurities, right? 14 A. But I still don't see limits. Am I 15 missing limits? 16 Q. Well, the whole thrust is talking about 17 assessment of acceptable limits, is it not? 18 A. I think it's talking about it generally, 19 but when I spoke about it in my report, I was 20 talking specifically about the limits that FDA 21 created in December 2018 and nothing more. 22 Q. Right. And what I'm getting at, Doctor, 23 is: Prior to the FDA's interim limits, there 24 already was industry guidance on acceptable limits 25 of mutagenic impurities, correct?</p>

<p style="text-align: right;">Page 118</p> <p>1 MS. LOCKARD: Objection. Outside the 2 scope of his opinions. 3 THE WITNESS: If you are talking about 4 this document, I would certainly agree with you. 5 BY MR. STANOCH: 6 Q. Great. And you would agree for any other 7 iteration of this M7(R1) guidance prior to this one 8 that spoke of acceptable limits of mutagenic 9 impurities as well, correct? 10 A. Well, that's a broad statement, but again, 11 let me agree for purposes of discussion. 12 Q. I appreciate that. And then let's flip to 13 page 14. Let me know when you are there, sir. 14 A. Okay. I'm there. 15 Q. And do you see Section E, sir? 16 A. I do. 17 Q. Right. And do you see there is three 18 bullets under Section E? 19 A. I do. 20 Q. And the third bullet is talking about the 21 cohort of concern impurities again, fair? 22 A. I see that, yes. 23 Q. And it notes, "If these compounds are 24 found as impurities in pharmaceuticals, acceptable 25 intakes for these high-potency carcinogens would</p>	<p style="text-align: right;">Page 120</p> <p>1 what we're talking about, what are the acceptable 2 intake limits. And I think FDA has -- they provided 3 those in December 2018. That's what I stated in my 4 report. 5 Q. You -- 6 A. You know, as long as we're sort of looking 7 at this ad hoc document that I did not study or cite 8 in my report other than to notice its availability, 9 Mr. Stanoch, I might draw your attention to the 10 first bullet on this page, where it says, "Higher 11 acceptable intakes may be justified when human 12 exposure to the impurity will be much greater from 13 other sources, e.g., food." Now, of course that's 14 exactly the case with nitrosamines. 15 Q. Well, thank you for the gratuitous 16 statement, Doctor, but let's talk about that. 17 All three of these bullets we are looking 18 at, flexibilities in approaches, they are suggesting 19 to manufacturers to conduct a case-by-case approach 20 to come up with acceptable intake limits for 21 products, correct? 22 A. Yes, and in the case of nitrosamines, in 23 the current matter, FDA did that for manufacturers, 24 as the prior letter you showed me noticed, in 25 December 2018.</p>
<p style="text-align: right;">Page 119</p> <p>1 likely be significantly lower than the acceptable 2 intakes defined in this guidance." 3 Did I read that right? 4 A. I can agree with your reading of the 5 words. 6 Q. Uh-huh. Right. And then you see it 7 further says, "Although the principles of this 8 guidance can be used, a case-by-case approach 9 using," for example, "carcinogenicity data from 10 closely related structures, if available, should 11 usually be developed to justify acceptable intakes 12 for pharmaceutical development and marketed 13 products." 14 Did I read that correctly? 15 A. I think you are reading it correctly, yes, 16 no question about that. 17 Q. I appreciate that, Doctor. 18 And so what the guidance we're looking at 19 here is saying is that for the cohort of concern 20 impurities, which includes the nitrosamine 21 compounds, at least as of the date of this guidance 22 of March 2018, that acceptable intake limits for it 23 should be developed for both the development and 24 marketing of pharmaceutical products? 25 A. Well, I agree with you. I think that's</p>	<p style="text-align: right;">Page 121</p> <p>1 Q. Right. Well, prior to the FDA's interim 2 limits for nitrosamines in December of 2018, there 3 already was industry guidance, was there not, that 4 manufacturers should be conducting their own 5 assessments to potentially set limits for impurities 6 such as nitrosamines? 7 MS. LOCKARD: Objection. Outside the 8 scope of his class-certification opinions. 9 THE WITNESS: Yes, and remember, we're 10 dealing with a situation where FDA said this was 11 unexpected, they didn't know how it occurred. They 12 had many other caveats that indicated, if you will, 13 their surprise that came about in the summer of 14 2018. These are very low-level impurities, and you 15 would have to suspect them and then have analytical 16 capability to identify them, notwithstanding all the 17 words in this guidance. 18 So I'm glad to walk through the guidance 19 with you. I think it's an interesting and important 20 guidance, Mr. Stanoch, but it really only is 21 tangentially related to my report. 22 BY MR. STANOCH: 23 Q. So it's not important to your opinions 24 that there already was industry guidance on how to 25 address levels of nitrosamines in drugs prior to the</p>

<p style="text-align: right;">Page 122</p> <p>1 December 2018 FDA interim guidance?</p> <p>2 MS. LOCKARD: Objection. Outside of the</p> <p>3 scope of his opinions. That's not what he was</p> <p>4 retained, that's not what he discussed in his expert</p> <p>5 report.</p> <p>6 THE WITNESS: Yeah, I'm listening to the</p> <p>7 two counsel, and I think the way you both said it is</p> <p>8 correct. I was considering other factors and</p> <p>9 information that I cited in my report that led to my</p> <p>10 opinions, and I certainly haven't changed my</p> <p>11 opinions as a result of the review of this document.</p> <p>12 BY MR. STANOCH:</p> <p>13 Q. Okay. Are you aware of any Novartis</p> <p>14 Diovan product sold in the --</p> <p>15 (Reporter clarification.)</p> <p>16 MR. STANOCH: No problem. Let's start</p> <p>17 over.</p> <p>18 Q. Are you aware of any Novartis Diovan</p> <p>19 product sold in the United States that contained</p> <p>20 NDMA?</p> <p>21 A. I am not.</p> <p>22 Q. Are you aware of any Novartis Diovan</p> <p>23 product sold in the United States that contained</p> <p>24 NDEA?</p> <p>25 A. No, I am not.</p>	<p style="text-align: right;">Page 124</p> <p>1 to June 20, 2018, but Teva could not?</p> <p>2 MS. LOCKARD: Objection. Outside the</p> <p>3 scope of his expert opinion on class-certification</p> <p>4 issues. Vague. Lacks foundation. Argumentative.</p> <p>5 THE WITNESS: Again, Mr. Stanoch, I just</p> <p>6 have not seen any documents to that point. If you</p> <p>7 can point to them in my materials considered, I</p> <p>8 would be glad to look at them with you.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. Uh-huh. Well, you tell me, Doctor, did</p> <p>11 you look at any materials that identify how Novartis</p> <p>12 was able to discover NDMA in ZHP's valsartan API?</p> <p>13 MS. LOCKARD: Objection. Outside the</p> <p>14 scope of his class-certification opinions. Lacks</p> <p>15 foundation. Speculation.</p> <p>16 THE WITNESS: And my apologies,</p> <p>17 Mr. Stanoch. I thought I had answered that</p> <p>18 question. I have not seen any documents, anywhere,</p> <p>19 that speak to Novartis' testing of any products for</p> <p>20 nitrosamines.</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Can you tell me what methods Novartis used</p> <p>23 to detect NDMA in ZHP's valsartan API?</p> <p>24 MS. LOCKARD: Objection. Outside the</p> <p>25 scope of his class-certification opinions. Lacks</p>
<p style="text-align: right;">Page 123</p> <p>1 Q. You are aware, are you not, that Novartis</p> <p>2 detected NDMA in ZHP's valsartan API prior to</p> <p>3 June 20th, 2018, correct?</p> <p>4 A. You know, I have heard statements to that</p> <p>5 effect from counsel, but I don't think I have ever</p> <p>6 seen any documents for it. I don't think a document</p> <p>7 exists on my materials-considered list, and I</p> <p>8 certainly didn't cite anything like that in my</p> <p>9 report.</p> <p>10 Q. Uh-huh. Can you tell us how --</p> <p>11 A. But I would be glad to look at such a</p> <p>12 document if you have it, Mr. Stanoch.</p> <p>13 Q. Uh-huh. Can you tell us how Novartis was</p> <p>14 able to identify NDMA in ZHP's valsartan API prior</p> <p>15 to June 20, 2018?</p> <p>16 MS. LOCKARD: Objection. Outside the</p> <p>17 scope of his expert opinions on class certification.</p> <p>18 Lacks foundation. Speculation.</p> <p>19 THE WITNESS: You know, I'm not,</p> <p>20 Mr. Stanoch. I just don't have any documents to</p> <p>21 speak to that. I would be glad to look at them if</p> <p>22 you have them.</p> <p>23 BY MR. STANOCH:</p> <p>24 Q. Uh-huh. Can you tell us how Novartis was</p> <p>25 able to identify NDMA in ZHP's valsartan API prior</p>	<p style="text-align: right;">Page 125</p> <p>1 foundation. Speculation.</p> <p>2 THE WITNESS: No, I cannot, Mr. Stanoch.</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. You cannot tell me why Novartis would have</p> <p>5 a method for detecting NDMA in ZHP's valsartan API,</p> <p>6 can you?</p> <p>7 MS. LOCKARD: Objection. Outside the</p> <p>8 scope of his class-certification opinions. Lacks</p> <p>9 foundation. Calls for speculation.</p> <p>10 THE WITNESS: No, I can't, Mr. Stanoch.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. Why would -- strike that. Start over.</p> <p>13 Why would Novartis be testing ZHP's</p> <p>14 valsartan API for NDMA in the first place?</p> <p>15 MS. LOCKARD: Objection. Outside the</p> <p>16 scope of his class-certification opinions. Calls</p> <p>17 for speculation. Lacks foundation.</p> <p>18 THE WITNESS: I just have no idea,</p> <p>19 Mr. Stanoch. It would be guessing, and I could only</p> <p>20 guess.</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Well, there is no specification in the</p> <p>23 Diovan monograph, for example, for nitrosamines,</p> <p>24 right?</p> <p>25 A. When you say "Diovan monograph," I assume</p>

<p style="text-align: right;">Page 126</p> <p>1 you are talking about the USP monographs for 2 valsartan API and valsartan drug product, and if 3 that's what we are talking about, Mr. Stanoch, there 4 are no tests for nitrosamine in those monographs. 5 Q. That would be for both the branded Diovan 6 product as well as generic valsartan products, 7 correct? 8 A. I think you are saying that correctly, 9 Mr. Stanoch, that USP doesn't distinguish between 10 manufacturers. The monographs are supposed to apply 11 to all manufacturers of the named article. 12 Q. When you refer in your report to 13 compendial requirements, what do you mean? 14 A. Well, in brief, I think, as we have 15 already discussed, we're talking about the 16 monographs, in this case, for valsartan drug 17 substance and valsartan drug product. 18 Q. Right. And you have looked at a couple of 19 monographs for valsartan, correct? 20 A. Yes, I think they were part of the 21 information I looked at, and I think they are in my 22 materials considered. And I'm glad to talk about 23 them if you wish, Mr. Stanoch. 24 Q. Of course. Would you agree that 25 compendial requirements includes the general USP</p>	<p style="text-align: right;">Page 128</p> <p>1 February 2021. 2 Q. I apologize. That's correct. I agree 3 with you there. 4 I'm going to mark an exhibit. Stand by, 5 sir. 6 (Whereupon, Exhibit 7 was marked for 7 identification.) 8 BY MR. STANOCH: 9 Q. Stand by. 10 Okay. Exhibit 7, sir, has now been 11 marked. It also should be Tab 17 in your binder if 12 you would like to look at the hard copy. Tell me 13 when you are there. 14 A. Yes, I'm looking at it, Mr. Stanoch. 15 I'm -- 16 Q. Excellent. And this appears to be a copy 17 of the valsartan USP monograph printed January 28th, 18 2022. Do you see that? 19 A. Yes, and -- okay. Yes, I'm prepared to 20 discuss. 21 Q. Very good. So this would be an example of 22 a USP monograph that we were talking moments ago, 23 correct? 24 A. Exactly. 25 Q. All right. And this monograph is for</p>
<p style="text-align: right;">Page 127</p> <p>1 chapters? 2 A. Yes, the way I would say it is there is 3 general notices, which appear at the front of USP 4 and are generally applicable, and then a monograph 5 can reference general chapters that give detailed 6 information about a particular test or procedure. 7 Q. Got it. So it's fair to say, then, that 8 compendial requirements includes a drug monograph, 9 general notices and requirements, and conformance to 10 standards? 11 A. Yes. And if a monograph references a 12 general chapter, that would be part of the 13 monograph. 14 Q. And those also would include notices on 15 impurities, correct? 16 A. My sense is that impurities are a 17 universal test and should be present in most, if not 18 all, drug-substance and drug-product monographs, and 19 that would certainly be true of the valsartan 20 monographs. 21 Q. Uh-huh, uh-huh. And we talked earlier 22 that the FDA nitrosamine impurities guidance, I 23 think you said, was updated last September 2021? 24 A. Well, it appeared first in draft in 25 September '20, and then it was updated in</p>	<p style="text-align: right;">Page 129</p> <p>1 valsartan, correct? 2 A. Yes. 3 Q. And the date of this is current official 4 from last month, so this was after the FDA's last 5 turn of its nitrosamine impurities guidance in 6 February 2021, right? 7 A. I'm not sure I understood what you said. 8 It says, "Official Date: Official as of" May 1, 9 2020. Are we looking at the same thing? 10 Q. Right. And "Official Status" right above 11 that, sir, "Official Status: Currently Official on 12 28-Jan-2022." You see that? 13 A. I do, and that would be about a year after 14 the nitrosamine guidance. 15 Q. I can agree with that. And do you see any 16 mention of a test for nitrosamines in this valsartan 17 monograph? 18 A. All right. Now hold on just a sec. Okay. 19 When we get to "Impurities," I see, "Procedure 1: 20 Limit of Valsartan Related Compound A." "Procedure 21 2: Limit of Valsartan Related Compound B, Valsartan 22 Related Compound C, and Other Related Compounds." 23 And that's all I see. I do not see tests for 24 nitrosamine impurities. 25 Q. Do you see any reference to acceptable</p>

<p style="text-align: right;">Page 130</p> <p>1 limits for nitrosamines in this monograph?</p> <p>2 A. I do not.</p> <p>3 Q. Do you see any mention whatsoever of</p> <p>4 nitrosamines in this valsartan monograph?</p> <p>5 A. I don't believe -- I do not, Mr. Stanoch.</p> <p>6 Please correct me if you think I'm wrong.</p> <p>7 Q. No, I think you are correct. I just</p> <p>8 wanted to make sure we're on the same page. I don't</p> <p>9 see any mention of nitrosamines whatsoever in this</p> <p>10 monograph, and it sounds like you agree with me,</p> <p>11 correct?</p> <p>12 A. Yes.</p> <p>13 Q. So if a drug manufacturer made valsartan</p> <p>14 exactly per this monograph, they wouldn't</p> <p>15 necessarily be doing anything to test or control for</p> <p>16 NDMA, would they?</p> <p>17 A. If they just followed the monograph, I</p> <p>18 think I would agree with you.</p> <p>19 Q. Right. Following a monograph alone would</p> <p>20 not mean that a product was complying with the FDA's</p> <p>21 nitrosamine impurity guidance and limits, correct?</p> <p>22 A. Oh, I'm sorry. I'm hesitating a little</p> <p>23 bit because you alluded back to the nitrosamine</p> <p>24 impurities guidance.</p> <p>25 Q. Well, I'll withdraw the question and I'll</p>	<p style="text-align: right;">Page 132</p> <p>1 that specifically applies to a genotoxic impurity</p> <p>2 such as nitrosamines.</p> <p>3 Q. Uh-huh. Uh-huh. As of the date of this</p> <p>4 valsartan monograph, January 28, 2022, if a</p> <p>5 manufacturer followed it exactly, it would have no</p> <p>6 way of testing and identifying nitrosamines in the</p> <p>7 product, correct?</p> <p>8 MS. LOCKARD: Objection. Vague.</p> <p>9 THE WITNESS: I think I'll agree with you,</p> <p>10 Mr. Stanoch.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. So whether a product was made according to</p> <p>13 a USP monograph or not does not definitively speak</p> <p>14 to whether the product contains nitrosamines,</p> <p>15 correct?</p> <p>16 A. Well, remember, you don't make a product</p> <p>17 according to a monograph. This is a monograph that</p> <p>18 has tests, procedures, acceptance criteria, that if</p> <p>19 you -- I'm trying to get into the USP</p> <p>20 understanding -- if your drug substance conforms to</p> <p>21 all these tests, then you can confirm that you have</p> <p>22 valsartan.</p> <p>23 Now, as you are discussing, and I agree</p> <p>24 with you, it doesn't say, does your valsartan have</p> <p>25 nitrosamine impurities that are adequately</p>
<p style="text-align: right;">Page 131</p> <p>1 phrase it again. Following this monograph alone to</p> <p>2 manufacture valsartan would not have any specified</p> <p>3 way of identifying and controlling nitrosamines,</p> <p>4 correct?</p> <p>5 A. I think you are -- yes, I agree with you,</p> <p>6 Mr. Stanoch.</p> <p>7 Q. Uh-huh. So the fact that a drug complies</p> <p>8 with a USP monograph alone does not mean the drug is</p> <p>9 free of any nitrosamine impurities?</p> <p>10 A. Yes, I think you are right. That ability</p> <p>11 to control nitrosamine would come up in the</p> <p>12 application to FDA and the FDA review. It would not</p> <p>13 be in the USP monograph.</p> <p>14 Q. Okay. And the USP is not responsible for</p> <p>15 identifying genotoxic impurities in drug product or</p> <p>16 drug substance, right?</p> <p>17 A. No, I agree with your -- that to me is</p> <p>18 more a regulatory matter.</p> <p>19 Q. All right. USP believes companies are</p> <p>20 responsible for identifying and assessing genotoxic</p> <p>21 impurities in their drug product or substance,</p> <p>22 correct?</p> <p>23 A. Yes. It's up to the manufacturer working</p> <p>24 with FDA to detect -- I'm trying to think of the</p> <p>25 string of words -- report, identify, qualify, and</p>	<p style="text-align: right;">Page 133</p> <p>1 controlled? That is a separate matter that is</p> <p>2 adjudicated by FDA.</p> <p>3 Q. Uh-huh. And USP general notices and</p> <p>4 requirements may also guide a manufacturer on how to</p> <p>5 identify nitrosamine impurities, correct?</p> <p>6 A. Well, yeah, there may be some statements</p> <p>7 in there that are very general statements, for</p> <p>8 example, that you have to follow GMPs, and GMPs may</p> <p>9 say, yes, you have to think about a genotoxic</p> <p>10 impurity.</p> <p>11 And I have heard it said, although I</p> <p>12 haven't seen it, Mr. Stanoch, I have heard that USP</p> <p>13 has general chapters on how to measure nitrosamine</p> <p>14 impurities.</p> <p>15 Q. Uh-huh.</p> <p>16 A. But I can't confirm that. I just heard</p> <p>17 it. Maybe you are aware of it and I'm not.</p> <p>18 Q. And is that discussed anywhere in your</p> <p>19 report, sir?</p> <p>20 A. No, not at all. And as a matter of fact,</p> <p>21 this monograph is not discussed in my report. I</p> <p>22 think I am talking about monographs that were</p> <p>23 official at the time of the 2018 time period.</p> <p>24 Q. So, well, we can pull those up too,</p> <p>25 Doctor. But if someone followed the USP monograph</p>

Page 134

1 for valsartan products in the 2018 time period, so
 2 too they would have nothing from the monograph
 3 itself about identifying nitrosamines, correct?
 4 A. Yes. I agree with that, Mr. Stanoch.
 5 Q. Uh-huh. That does not mean, though, that
 6 the drug ultimately might not contain any
 7 nitrosamines, right?
 8 A. Or that they might be controlled in
 9 another way.
 10 Q. Correct. And it may be that even if a
 11 valsartan product was made according to the 2018
 12 monograph, that the drug could still be adulterated
 13 under FDA regulations?
 14 MS. LOCKARD: Objection. Vague.
 15 Speculation.
 16 THE WITNESS: I'm struggling a little bit
 17 with what you said. Now, if you are citing the act,
 18 I think we would say it was not adulterated
 19 according to the provisions of the act that talk
 20 about a USP standard, but it could be adulterated
 21 under a private specification, which is allowed in
 22 the act in the citation I provided.
 23 BY MR. STANOCH:
 24 Q. Uh-huh.
 25 A. Or it could be part of a GMP violation.

Page 135

1 Q. Let's take examples of some other drugs,
 2 Dr. Williams. Let's take an example of a drug that
 3 was made according to USP compendial standards. You
 4 with me so far?
 5 A. I'm a little hesitant to talk about making
 6 a drug according to the standards because USP does
 7 not give process steps. So you might make a drug
 8 according to your process steps and then test it
 9 according to a USP monograph.
 10 Q. Uh-huh. Well, that's a fair point,
 11 Doctor, that a manufacturer's individual process may
 12 have issues arise through it that are not covered by
 13 the monograph itself.
 14 A. Yes, exactly.
 15 Q. Right. And it would be incumbent on the
 16 manufacturer to understand its own individual
 17 process and to assess the potential for any
 18 impurities in the product even if the manufacturer
 19 is otherwise following the monograph, right?
 20 A. I agree with the way you stated that.
 21 Thank you.
 22 Q. Okay. And so let me go back to my
 23 example. I'll try to think -- I'll try to phrase it
 24 more accurately for you.
 25 Let's take a drug that met all compendial

Page 136

1 requirements. Is that okay?
 2 A. Okay.
 3 Q. Is that an accurate articulation of a
 4 product, that it can meet compendial requirements?
 5 A. It seems to me you are making a statement
 6 about a hypothetical, and I don't disagree with your
 7 hypothetical.
 8 Q. Okay. So let's say there is a drug that
 9 meets all compendial requirements, but it contains
 10 anthrax. Is that drug adulterated?
 11 MS. LOCKARD: Objection. Speculation.
 12 MR. STANOCH: I can ask a hypothetical,
 13 Counsel.
 14 Q. Go ahead, Dr. Williams.
 15 MS. LOCKARD: Incomplete hypothetical.
 16 Objection.
 17 THE WITNESS: You know, it's a
 18 hypothetical, and I would say, yes, it's got an
 19 unacceptable contaminant.
 20 BY MR. STANOCH:
 21 Q. Let's say a different, slightly different
 22 hypothetical. Say a drug met all compendial
 23 requirements but there was rat poison in it. Can it
 24 be adulterated?
 25 MS. LOCKARD: Objection. Calls for

Page 137

1 speculation. Incomplete hypothetical.
 2 THE WITNESS: Again, I would say it has a
 3 unacceptable contaminant.
 4 BY MR. STANOCH:
 5 Q. Even though the compendial requirements
 6 may not have a test for rat poison, correct?
 7 A. Exactly.
 8 Q. Uh-huh. And let's take another example.
 9 Let's say there is a drug that met all compendial
 10 requirements, but broken glass are in the capsules.
 11 Could it be adulterated?
 12 MS. LOCKARD: Objection. Speculation.
 13 Incomplete hypothetical.
 14 THE WITNESS: Well, it could be
 15 adulterated according to GMPs, but I think it could
 16 not be adulterated according to the compendial
 17 standard in the act.
 18 I have got another good example, which is
 19 the tampering of the Tylenol many years ago where
 20 somebody put needles in the bottles. I don't know
 21 if you remember that, Mr. Stanoch. Do you recall
 22 that?
 23 BY MR. STANOCH:
 24 Q. No, I don't.
 25 A. Well, FDA went to great trouble working

<p style="text-align: right;">Page 138</p> <p>1 with a highly responsible manufacturer to get that 2 product off the shelves. 3 Q. And was that product considered 4 adulterated because of the presence of needles in 5 the bottles? 6 A. I think you could probably say that it was 7 a GMP failure of some kind, but -- 8 Q. Uh-huh. 9 A. At a certain point in time, FDA could take 10 action, you know, as it deems appropriate for public 11 health. 12 Q. Uh-huh. And in your example of the 13 Tylenols with needles in the bottle, did a consumer 14 who got a bottle with a needle in it before any FDA 15 action, were they holding an adulterated product? 16 A. I can't remember the details. I think you 17 are asking sort of a speculative question. I think 18 you could say it was adulterated because of failure 19 of GMPs. 20 Q. But you could -- 21 A. You know, FDA has broad authority to 22 remove adulterated products from the market. I can 23 say that. 24 Q. Sure. I would agree with that. But you 25 can have a product, in this example we're talking</p>	<p style="text-align: right;">Page 140</p> <p>1 what is there according to tests, procedures, and 2 acceptance criteria. It couldn't possibly assess 3 all the possible negative things that might be 4 there. 5 Q. Right. And in this example, assuming you 6 have a product that met all compendial requirements 7 except it also contained anthrax, the consumer 8 holding that product is holding an adulterated 9 product prior to any FDA action against that 10 manufacturer, fair? 11 A. Yes. And as long as we're staying with 12 these hypotheticals, I can say a valsartan monograph 13 could have an impurity procedure for nitrosamines. 14 Of course, it would take very specialized equipment, 15 and it might have the limits set by FDA via the 16 guidance. So there is nothing precluding that. 17 Q. So -- 18 A. And I'm not exactly sure why it hasn't 19 occurred, but maybe companies are figuring out a way 20 to keep their manufacturing process such that the 21 limits are met without testing. 22 Q. Okay. And you have not seen any USP 23 monograph for valsartan that contains any impurity 24 procedures for nitrosamines, right? 25 A. I have not.</p>
<p style="text-align: right;">Page 139</p> <p>1 about, the consumer's holding a bottle of Tylenol 2 with needles in it. That product they are holding 3 is adulterated even prior to an FDA action against 4 the manufacturer, is it not? 5 A. I think you could say that. I think 6 people wouldn't quibble with that designation. 7 Q. Okay. You can say the same with sort of 8 the other examples. For example, I mean, we talked 9 about a drug made to compendial requirements that 10 contained anthrax. That drug in a consumer's hand 11 would be adulterated prior to the FDA taking 12 official action against the manufacturer, correct? 13 MS. LOCKARD: Objection. Speculation. 14 Incomplete hypothetical. 15 THE WITNESS: Yeah, I -- I'm sorry. I 16 have lost track of your question. The hypothetical 17 that the product has been willfully adulterated? 18 BY MR. STANOCH: 19 Q. The question simply was another example. 20 I'll say it again. Assume you have a product that 21 met all compendial requirements, except it also 22 contained anthrax. You with me? 23 A. Yes. I think you are making general 24 statements that are quite true, Mr. Stanoch, that 25 the compendial standard really is designed to assess</p>	<p style="text-align: right;">Page 141</p> <p>1 Q. Uh-huh. 2 MS. LOCKARD: We have been going about an 3 hour since the last break, so whenever you get to a 4 stopping point, I would like a break. 5 MR. STANOCH: Now is fine. 6 Doctor, would you like to take a break? 7 THE WITNESS: That would be nice, 8 Mr. Stanoch. Thank you. 9 MR. STANOCH: Let's do it. Great. 10 THE VIDEOGRAPHER: Great. Then we are 11 going off the record. The time is 10:49. 12 (Whereupon, a brief recess was taken.) 13 THE VIDEOGRAPHER: Okay. We are coming 14 back on the record. The time on the video monitor 15 is 11:07. Please begin. 16 BY MR. STANOCH: 17 Q. Welcome back, Dr. Williams. 18 A. Hi, Mr. Stanoch. 19 Q. Did you talk with anyone besides your 20 counsel during the break? 21 A. No, I did not. 22 Q. Did you talk with your counsel during the 23 break? 24 A. Yes, I did. 25 Q. And did you look at any documents during</p>

Page 142

1 the break?

2 A. We sort of looked through the documents in

3 the binder you provided, but we didn't review any.

4 And we didn't get through all the documents. There

5 were a few at the end we didn't look at, at all.

6 Q. You flipped through the binder of

7 potential exhibits?

8 A. Yes.

9 MS. LOCKARD: Just very briefly.

10 MR. STANOCH: Counsel, I'm going to --

11 MS. LOCKARD: We didn't go through these

12 documents.

13 MR. STANOCH: Counsel, and I didn't think

14 I needed to state this, but I'll put on the record,

15 I object to you flipping through the courtesy binder

16 of potential exhibits we prepared at your request

17 for the convenience of the witness.

18 Not all of them may be used. We want them

19 not to be looked at, certainly to be destroyed

20 without looking at them, the witness or counsel,

21 especially when we're doing it as a courtesy to you

22 and the witness, when we have asked for similar

23 courtesies from your side, not you, Counsel, but

24 other counsel on your side, we have been flat-out

25 rejected when we have asked for hard copies.

Page 143

1 So it's very troubling to me that you are

2 looking through all potential exhibits we provided,

3 and I would ask that that not happen again, now or

4 at a future deposition.

5 MS. LOCKARD: As the witness said, we did

6 not discuss these documents. I'm trying to make

7 sure I have copies of them in hand. We have one

8 binder here that I'm having to walk over and look

9 over Dr. Williams' shoulder, so --

10 MR. STANOCH: Every single document I

11 marked from the binder, Counsel, is also put up on

12 the screen for all counsel on the Zoom to see. So I

13 would just ask that no one looks at the binder until

14 the witness is directed to do it. Thank you.

15 MS. LOCKARD: Well, I would like to have

16 hard copies in my hand because on some of these we

17 don't even have the full document up on the screen,

18 just showing pages.

19 MR. STANOCH: Well, first of all, that

20 wasn't the request. It was for your witness.

21 Second of all, when we have asked for the

22 same thing for our witness, let alone us, we have

23 been flat-out refused by some on your side, not you.

24 So going forward, we can talk about this, but again,

25 for now I'm asking, do not look at the binder until

Page 144

1 an exhibit is marked. Thank you.

2 MS. LOCKARD: That's fine. You may have

3 to give me a moment to find the document in hard

4 copy if I need to. So --

5 BY MR. STANOCH:

6 Q. Did you look at any other documents,

7 Doctor, during the break?

8 A. No, no other documents.

9 Q. Okay. Doctor, would you agree that if a

10 manufacturer controls impurities and degradation

11 products in accordance with only a pharmacopeial

12 monograph, that is acceptable to regulators?

13 A. I think it can be, yes. If it is a good

14 monograph, it can be sufficient to control the

15 product in the marketplace.

16 Q. What if the individual monograph is

17 inadequate to control an impurity?

18 A. If we're talking about the nitrosamine, I

19 would say then there needs to be additional

20 requirements that are private, agreed to with FDA.

21 Q. Uh-huh. Well, what agreements with FDA

22 does any valsartan manufacturer have today, given

23 that we looked at the valsartan monograph and there

24 is nothing about nitrosamines in it?

25 A. Well, I can only speak to Teva, and the

Page 145

1 answer to that is clear, there are no Teva valsartan

2 products in the U.S. marketplace. As we have

3 already discussed, Teva immediately recalled them --

4 "immediately" can be a little debatable -- when the

5 impurities were discovered.

6 Q. Uh-huh. Is it incumbent on the

7 manufacturer that discovers an impurity to develop

8 and validate appropriate analytical procedures,

9 establish acceptance criteria, and communicate with

10 USP?

11 A. There is no obligation for a manufacturer

12 to work with USP at all. That's voluntary.

13 Q. Uh-huh.

14 A. I would say there is a requirement to do

15 so with FDA if you come to the private

16 specification.

17 Q. I'm going to mark the next exhibit. Stand

18 by.

19 (Whereupon, Exhibit 8 was marked for

20 identification.)

21 BY MR. STANOCH:

22 Q. I have marked Exhibit 8, Doctor, it's

23 actually Tab 12 in your -- tell me when you're

24 there, sir.

25 (Reporter clarification.)

<p style="text-align: right;">Page 146</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. Binder. Tell me when you are there.</p> <p>3 A. Okay. I have been handed Tab 12, which</p> <p>4 looks like it's about 20 or 30 pages of a USP</p> <p>5 webcast. So I'm there, Mr. Stanoch.</p> <p>6 Q. Very good. And this is a USP presentation</p> <p>7 entitled "Impurities in Drug Products and Drug</p> <p>8 Substances - A USP Approach," yes?</p> <p>9 A. Yes.</p> <p>10 Q. And you see the last update on the first</p> <p>11 page is March 2018, right?</p> <p>12 A. Wait a minute. I'm trying to find</p> <p>13 March 2018. Where is that?</p> <p>14 Q. Slide 1, lower left, light gray text.</p> <p>15 A. Yes, it's very faint in my print, but yes,</p> <p>16 I can see it. Thank you, Mr. Stanoch.</p> <p>17 Q. Not a problem. It's faint in mine too and</p> <p>18 in the original. That's why I was happy to draw</p> <p>19 your attention to it.</p> <p>20 So this is prior to the valsartan recalls</p> <p>21 that began in the summer of 2018, right?</p> <p>22 A. March 2018. Okay. I'm with you. Yes.</p> <p>23 Thank you. I agree.</p> <p>24 Q. Good. Let's flip to Slide 36. So if you</p> <p>25 are looking at the little page numbers in the lower</p>	<p style="text-align: right;">Page 148</p> <p>1 may lead to different impurities."</p> <p>2 Did I read that right?</p> <p>3 A. Yes, you read that correctly.</p> <p>4 Q. Do you agree with that statement?</p> <p>5 A. I do agree with it.</p> <p>6 Q. Then it also reads, "If an individual</p> <p>7 monograph is inadequate to control an impurity, the</p> <p>8 manufacturer is responsible for developing and</p> <p>9 validating appropriate analytical procedures,</p> <p>10 establishing acceptance criteria, and communicating</p> <p>11 with USP."</p> <p>12 Did I read that right?</p> <p>13 A. Yes, you did. And I agree with that</p> <p>14 statement.</p> <p>15 Q. Okay. So what USP is advising in this</p> <p>16 slide is that it's -- the onus on the manufacturer</p> <p>17 to understand and evaluate its own process and any</p> <p>18 impurities that may arise in that process for a</p> <p>19 drug, correct?</p> <p>20 A. Yes, I think you are stating it correctly.</p> <p>21 Q. Uh-huh. If you can flip to the slide --</p> <p>22 page 63. Let me know when you are there.</p> <p>23 A. Okay. I'm on page 63, top of the page.</p> <p>24 Q. Great. And it says, "Setting Acceptance</p> <p>25 Criteria for Impurities," right?</p>
<p style="text-align: right;">Page 147</p> <p>1 right, it would be the page that has Slides 35 and</p> <p>2 36 on it.</p> <p>3 A. 34. So I am looking at 35 and 36. Yes,</p> <p>4 I'm there.</p> <p>5 Q. Okay. You see there is a Q and A on Slide</p> <p>6 36, correct?</p> <p>7 A. I do see that.</p> <p>8 Q. And the question is: "If a manufacturer</p> <p>9 controls impurities and degradation products in</p> <p>10 accordance with only a pharmacopeial monograph, is</p> <p>11 that acceptable to the regulators?" Did I read that</p> <p>12 right?</p> <p>13 A. Yes, you did.</p> <p>14 Q. Then there is a three-bullet answer,</p> <p>15 correct?</p> <p>16 A. Yes, I do see that.</p> <p>17 Q. Okay. And it notes first the monographs</p> <p>18 are based on historic preparation, right?</p> <p>19 A. Yes. I'm not exactly sure what that</p> <p>20 means, but you are reading it correctly.</p> <p>21 Q. And then the next bullet notes that, "A</p> <p>22 particular manufacturer's manufacturing method for</p> <p>23 formulation components may lead to unexpected</p> <p>24 impurities, due to a different route of synthesis,</p> <p>25 different reagents, et cetera. Different processes</p>	<p style="text-align: right;">Page 149</p> <p>1 A. Yes.</p> <p>2 Q. And there is three bullets there?</p> <p>3 A. Yes, I see that.</p> <p>4 Q. Let me direct your attention to the third</p> <p>5 bullet. Are you there?</p> <p>6 A. Yes.</p> <p>7 Q. And read the first sentence for us.</p> <p>8 A. "If a limit for a specified impurity does</p> <p>9 not exist in the USP, FDA recommends that you</p> <p>10 qualify the impurity by comparing it to the observed</p> <p>11 amounts of the impurity in the reference listed</p> <p>12 drug. Your acceptance criterion should be similar</p> <p>13 to the level observed in the" reference listed drug.</p> <p>14 "Alternatively, the acceptance criteria may be set</p> <p>15 based on a qualified level that is justified by</p> <p>16 scientific literature, metabolite data, or toxicity</p> <p>17 studies."</p> <p>18 Q. Do you agree with that statement?</p> <p>19 A. I do.</p> <p>20 Q. Uh-huh. So the event that, say, a</p> <p>21 valsartan USP monograph did not contain a limit for</p> <p>22 a nitrosamine, the recommendation would be for the</p> <p>23 manufacturer to qualify the impurity, correct?</p> <p>24 A. If the impurity existed in their product,</p> <p>25 I think you could make that claim.</p>

<p style="text-align: right;">Page 150</p> <p>1 Q. Do you know if, prior to the summer of 2 2018, Teva ever made any effort to qualify any 3 nitrosamine impurity in its valsartan products? 4 A. I think they did not. They did not 5 suspect them, and their analytical tests in their 6 private or public specification wouldn't have picked 7 up a nitrosamine impurity. 8 Q. Uh-huh. Again, though, you don't know 9 like what tests Teva in particular might have been 10 employing for valsartan at the time, right? 11 A. Well, it seems to me we could assume they 12 were following the USP monograph for valsartan -- 13 Q. Uh-huh. 14 A. -- and valsartan drug product. 15 Q. Uh-huh. But you don't know how Novartis 16 was able to detect NDMA in valsartan API whereas 17 Teva did not? 18 MS. LOCKARD: Objection. Asked and 19 answered. 20 THE WITNESS: Yeah, that is sort of a 21 different set of questions. And Novartis would have 22 been following the monograph, too, for valsartan and 23 valsartan drug product if it existed. 24 BY MR. STANOCH: 25 Q. Well, that's sort of the point, Doctor,</p>	<p style="text-align: right;">Page 152</p> <p>1 wanted on another product for a myriad of reasons, 2 but I just don't have any information about what 3 Novartis was doing with the ZHP product. 4 BY MR. STANOCH: 5 Q. You look on the next page, on 65, sir. 6 Tell me when you are there. 7 A. Yes. Top of the page? 8 Q. Yes. It reads, "USP General Chapters for 9 Impurities: <476> & <1086>?" 10 A. Yes, I do see that. 11 Q. And these are examples of general chapters 12 in the USP that would be part of so-called 13 compendial requirements, correct? 14 A. Yes. I think we have alluded to this 15 before in our prior discussion. 16 Q. Thank you. You can put that aside for 17 now. 18 I'm going to mark the next exhibit. Stand 19 by, sir. 20 (Whereupon, Exhibit 9 was marked for 21 identification.) 22 BY MR. STANOCH: 23 Q. This will be Exhibit 9. It's Tab 13 in 24 your binder, sir. Tell me when you are there. 25 A. Okay. I'm seeing it. It, again, is a USP</p>
<p style="text-align: right;">Page 151</p> <p>1 that Novartis, following the monograph that did not 2 contain any mention of nitrosamines, nonetheless did 3 a test that detected the nitrosamines, right? 4 MS. LOCKARD: Objection. Lacks 5 foundation. Speculation. Outside the scope of his 6 opinions. 7 THE WITNESS: Yeah, I have already stated, 8 Mr. Stanoch, I have no understanding of what 9 Novartis was doing. 10 BY MR. STANOCH: 11 Q. Would you agree, though, that Novartis 12 performed some test that was not in the monograph 13 that detected the nitrosamines, correct? 14 MS. LOCKARD: Objection. Speculation. 15 Lacks foundation. Outside of his opinions in the 16 class-certification report. 17 THE WITNESS: I think what I was trying to 18 say is that when Novartis released its Diovan into 19 the U.S. market, it would try to make sure it 20 conformed to the USP valsartan and valsartan 21 drug-product monographs. Those monographs, as I 22 have already said, apply to brand and generic 23 manufacturers. 24 Now, speaking hypothetically, any company, 25 including Novartis, could do any kind of testing it</p>	<p style="text-align: right;">Page 153</p> <p>1 document. 2 Q. Correct. 3 A. "Overview of" -- "General Chapters <476> 4 and <1086>." 5 Q. Yes, sir. And the date on that document? 6 A. Another visual acuity test. I don't 7 see -- 8 Q. I see October 19th, 2017, right on the 9 title page. 10 A. Oh, right, yeah. Right. Thank you. 11 Q. Is that right? 12 A. Yes, exactly, thank you. 13 Q. Oh, good. No problem. And have you seen 14 this -- actually -- strike that. 15 Have you seen the last exhibit prior to 16 today, sir? 17 A. No, I haven't, nor this one. 18 Q. Thank you. Okay. So let's flip to page 19 13, sir. Tell me when you are there. 20 A. And where will I see the page numbers? 21 Q. Oh, it's the lower right of the pages. 22 The title is, "Manufacturers responsibilities in 23 <1086> and <476>." 24 A. Okay. I'm there. I see it. 25 Q. Okay. In this slide in the USP</p>

<p style="text-align: right;">Page 154</p> <p>1 presentation, sets forth what it says are</p> <p>2 "Manufacturer's Responsibilities in General Chapter</p> <p>3 <1086>" and "Manufacturer's Responsibilities in</p> <p>4 General Chapter <476>." Do you see that?</p> <p>5 A. I do see that.</p> <p>6 Q. And then why don't you read that first</p> <p>7 bullet that begins, "If a new impurity"?</p> <p>8 A. "If a new impurity is detected above the</p> <p>9 appropriate identification threshold or when the</p> <p>10 level of a specified related compound increases as</p> <p>11 compared to its characteristic impurity profile, the</p> <p>12 manufacturer is responsible for evaluating the</p> <p>13 impact on the safety and efficacy of the drug</p> <p>14 substance or drug product."</p> <p>15 Shall I continue?</p> <p>16 Q. Do you agree with that -- no, why don't</p> <p>17 you -- just that bullet. Do you agree with that</p> <p>18 statement, sir?</p> <p>19 A. Yes, I do.</p> <p>20 Q. Okay. Why don't you read the second</p> <p>21 bullet.</p> <p>22 A. "For marketed products, the manufacturers</p> <p>23 are responsible for controlling organic impurities</p> <p>24 in accordance with current regulatory standards."</p> <p>25 Q. Do you agree with that statement, sir?</p>	<p style="text-align: right;">Page 156</p> <p>1 that statement you just read. Do you agree with</p> <p>2 that statement, sir?</p> <p>3 A. I do agree with it.</p> <p>4 Q. And could you read the final bullet, sir?</p> <p>5 A. Right. "Manufacturers shall develop</p> <p>6 acceptance criteria for impurities justified by</p> <p>7 appropriate safety considerations and consistent</p> <p>8 with current applicable regulatory guidances."</p> <p>9 Q. Do you agree with that statement as well,</p> <p>10 sir?</p> <p>11 A. I do.</p> <p>12 Q. Okay. Thank you. Let's put that aside</p> <p>13 for now. Stand by for the next exhibit.</p> <p>14 (Whereupon, Exhibit 10 was marked for</p> <p>15 identification.)</p> <p>16 BY MR. STANOCH:</p> <p>17 Q. I am marking Exhibit 10. Sir, that should</p> <p>18 be Tab 14 in your binder. Let me know when you are</p> <p>19 there.</p> <p>20 A. Yes, I'm there.</p> <p>21 Q. Okay. This is a slide deck from the FDA.</p> <p>22 You see that, sir?</p> <p>23 A. I do. Dated October 2, 2020.</p> <p>24 Q. Correct. And you see the two names of the</p> <p>25 presenters there, Dr. -- is it Keire and Dr. Lu?</p>
<p style="text-align: right;">Page 155</p> <p>1 A. I do.</p> <p>2 Q. Could you read the next one under the</p> <p>3 subheading "Manufacturer's Responsibilities in</p> <p>4 General Chapter <476>"?</p> <p>5 A. The first bullet?</p> <p>6 Q. Yes, sir.</p> <p>7 A. "If an individual monograph is inadequate</p> <p>8 to control does not include a procedure for</p> <p>9 qualifying an impurity or acceptance criterion for</p> <p>10 an observed impurity, the manufacturer is</p> <p>11 responsible for developing and validating</p> <p>12 appropriate analytical procedures and establishing</p> <p>13 appropriate acceptance criteria."</p> <p>14 Q. Do you agree with that statement, sir?</p> <p>15 A. Yes, it seems -- I can agree with it.</p> <p>16 Q. Could you kindly read the next one, sir?</p> <p>17 A. "Manufacturers shall validate or verify,</p> <p>18 as appropriate analytical procedures must</p> <p>19 demonstrate their suitability for detection and</p> <p>20 quantification of impurities in the drug substances</p> <p>21 and drug products."</p> <p>22 Q. Thank you.</p> <p>23 A. "Manufacturers shall develop" -- oh, I'm</p> <p>24 sorry. I went on.</p> <p>25 Q. That's fine. Let's just stop there at</p>	<p style="text-align: right;">Page 157</p> <p>1 A. I do see those names.</p> <p>2 Q. Did you work with them when you were at</p> <p>3 the FDA?</p> <p>4 A. I don't recognize these names.</p> <p>5 Q. Quite all right. And have you seen this</p> <p>6 slide presentation before, sir?</p> <p>7 A. No, I haven't.</p> <p>8 Q. Let's turn to page 3. Tell me when you</p> <p>9 are there.</p> <p>10 A. Is this the one that states,</p> <p>11 "Pharmaceutical Quality"?</p> <p>12 Q. Yes, sir.</p> <p>13 A. Yes, I'm there.</p> <p>14 Q. It states, "A quality product of any kind</p> <p>15 consistently meets the expectations of the user,"</p> <p>16 correct?</p> <p>17 A. Yes, I see that.</p> <p>18 Q. And then flip to the next slide. You</p> <p>19 there?</p> <p>20 A. Yes.</p> <p>21 Q. Now it says, "A quality product of any</p> <p>22 kind consistently meets the expectations of the</p> <p>23 user. Drugs are no different," correct?</p> <p>24 A. I see that.</p> <p>25 Q. Do you agree with that characterization of</p>

<p style="text-align: right;">Page 158</p> <p>1 pharmaceutical quality?</p> <p>2 MS. LOCKARD: Objection. Outside the</p> <p>3 scope of his class-certification opinions. Vague.</p> <p>4 THE WITNESS: I don't want to debate what</p> <p>5 the FDA is saying here, but I will say that users,</p> <p>6 sometimes including me, can be very uninformed about</p> <p>7 what the expectation for a product should be. But I</p> <p>8 don't want to debate it. You know, I certainly can</p> <p>9 agree with it generally.</p> <p>10 BY MR. STANOCH:</p> <p>11 Q. Understood. And would you agree, though,</p> <p>12 that users of a drug have no way of knowing if the</p> <p>13 drug contains nitrosamines absent the disclosure by</p> <p>14 the manufacturer or regulator?</p> <p>15 MS. LOCKARD: Objection. Speculation.</p> <p>16 Vague.</p> <p>17 THE WITNESS: Yes, some kind of</p> <p>18 disclosure. And I think you were more specific</p> <p>19 about what I was trying to say. It's very hard for</p> <p>20 a user to understand what the quality expectations</p> <p>21 of a medicine are.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Uh-huh. And you can flip to the next page</p> <p>24 of the slide, sir.</p> <p>25 A. "Patients expect safe and effective"?</p>	<p style="text-align: right;">Page 160</p> <p>1 sir. You can tell me when you are there.</p> <p>2 A. Oh, wait. Okay. Yes, I'm on 9.</p> <p>3 Q. And here we see reference to the ICH M7</p> <p>4 guidance again?</p> <p>5 A. Yes, I do. Yes, exactly.</p> <p>6 Q. And again, there is reference to the</p> <p>7 nitroso compounds being part of a cohort of concern,</p> <p>8 right?</p> <p>9 A. Yes, I see that.</p> <p>10 Q. I think we established earlier, but you</p> <p>11 can correct me if I'm wrong, that we agree that the</p> <p>12 ICH M7 includes nitroso compounds in the so-called</p> <p>13 cohort of concern, right?</p> <p>14 MS. LOCKARD: Objection. Asked and</p> <p>15 answered. Outside the scope of his deposition.</p> <p>16 THE WITNESS: Yes. And this is a very</p> <p>17 general statement, but I see nothing to disagree</p> <p>18 with.</p> <p>19 BY MR. STANOCH:</p> <p>20 Q. Go back to the slide we were looking at</p> <p>21 prior to this, the pharmaceutical quality slide.</p> <p>22 A. "Pharmaceutical quality is assuring every</p> <p>23 dose"?</p> <p>24 Q. Yes, sir.</p> <p>25 A. I'm there, Mr. Stanoch.</p>
<p style="text-align: right;">Page 159</p> <p>1 Q. Yes. Just read the sentence for me.</p> <p>2 A. "Patients expect safe and effective</p> <p>3 medicines with every dose they take."</p> <p>4 Q. As a general matter do you agree with</p> <p>5 that?</p> <p>6 MS. LOCKARD: Objection. Calls for</p> <p>7 speculation. Vague.</p> <p>8 THE WITNESS: Yeah, and it's very hard for</p> <p>9 me to know what patients really expect, but I</p> <p>10 certainly don't disagree generally with the</p> <p>11 statement.</p> <p>12 BY MR. STANOCH:</p> <p>13 Q. Uh-huh. And then let's flip to the next</p> <p>14 page, sir.</p> <p>15 A. "Assuring every dose is safe"?</p> <p>16 Q. Yeah. Why don't you just read that whole</p> <p>17 statement there on the slide?</p> <p>18 A. "Pharmaceutical quality is assuring every</p> <p>19 dose is safe and effective, free of contamination</p> <p>20 and defects."</p> <p>21 Q. Uh-huh. Do you generally agree with that</p> <p>22 statement?</p> <p>23 A. Yeah, I don't see anything specifically</p> <p>24 objectionable.</p> <p>25 Q. Uh-huh. And if you can flip to page 9,</p>	<p style="text-align: right;">Page 161</p> <p>1 Q. Very good. Do you believe a valsartan</p> <p>2 drug that contained nitrosamines was safe and</p> <p>3 effective and free of contamination and defects?</p> <p>4 MS. LOCKARD: Objection. Outside the</p> <p>5 scope of his expert opinion for class certification.</p> <p>6 THE WITNESS: I'm sorry. Could you say</p> <p>7 the question again, Mr. Stanoch?</p> <p>8 BY MR. STANOCH:</p> <p>9 Q. Do you believe a valsartan drug that</p> <p>10 contained nitrosamines was safe and effective and</p> <p>11 free of contamination and defects?</p> <p>12 MS. LOCKARD: Same objection. And vague.</p> <p>13 THE WITNESS: Yeah. Speaking separate</p> <p>14 from my report, I think it's possible it could be</p> <p>15 free of contamination and defects, so I guess I'm</p> <p>16 answering yes to your question.</p> <p>17 BY MR. STANOCH:</p> <p>18 Q. And you opine that a, you know, recall is</p> <p>19 taken by companies to remove defective products in</p> <p>20 the market, correct?</p> <p>21 A. Yes. I would say that's the general</p> <p>22 purpose of a recall.</p> <p>23 Q. Uh-huh. Right. And so when Teva</p> <p>24 instituted its recalls for its valsartan products,</p> <p>25 it was removing defective drug product from the</p>

<p style="text-align: right;">Page 162</p> <p>1 market, correct?</p> <p>2 MS. LOCKARD: Objection. Outside the</p> <p>3 scope of his opinion. Also vague and speculation.</p> <p>4 Asking him to give legal opinion.</p> <p>5 BY MR. STANOCH:</p> <p>6 Q. I'm reading from your report, sir. There</p> <p>7 is no speculation.</p> <p>8 A. Yeah, I would say Teva recalled its</p> <p>9 valsartan-containing drug products because of</p> <p>10 nitrosamine contamination.</p> <p>11 Q. Right. And that contamination is what</p> <p>12 rendered them defective, making the voluntary recall</p> <p>13 action appropriate?</p> <p>14 A. Well, but what --</p> <p>15 MS. LOCKARD: Same objections.</p> <p>16 THE WITNESS: The way I would say it, it</p> <p>17 was -- I'm hesitating on the word "contamination."</p> <p>18 The nitrosamines could be there within acceptable</p> <p>19 limits. When -- but working with FDA, Teva recalled</p> <p>20 even though the limits hadn't been set. I'm trying</p> <p>21 to be specific in terms of what my report says.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Okay. And so let's slightly rephrase</p> <p>24 that, then, to see if we get on the same page. You</p> <p>25 write -- and you can look at Paragraph 69 of your</p>	<p style="text-align: right;">Page 164</p> <p>1 because of a defective product.</p> <p>2 BY MR. STANOCH:</p> <p>3 Q. And is it your understanding that Teva</p> <p>4 recalled all of its valsartan-containing drug</p> <p>5 products in the summer of 2018?</p> <p>6 A. No. No. I think there was -- the recalls</p> <p>7 in summer of 2018 were for the valsartan drug</p> <p>8 products using ZHP drug substance. And then, based</p> <p>9 on further information that came in over the fall,</p> <p>10 FDA recalled its valsartan drug products containing</p> <p>11 the Mylan product.</p> <p>12 Q. Right. Were you aware that Teva initially</p> <p>13 instituted a hold on the marketing of all its</p> <p>14 valsartan finished-dose products when it heard from</p> <p>15 ZHP in late June 2018?</p> <p>16 A. Yes. I think I am aware of that, and I</p> <p>17 think that's one of the documents -- there are two</p> <p>18 documents I cite in that regard.</p> <p>19 Q. That is correct. And then shortly after</p> <p>20 its hold, Teva lifted its hold on valsartan</p> <p>21 finished-dose made with non-ZHP API, correct?</p> <p>22 A. Yes, I think you are stating it correctly,</p> <p>23 because Teva had no reason to think that it had</p> <p>24 objectionable nitrosamine impurity levels.</p> <p>25 Q. Right. And I'm going to put up a document</p>
<p style="text-align: right;">Page 163</p> <p>1 report if you would like -- "A recall is a voluntary</p> <p>2 action taken by a company to remove a defective drug</p> <p>3 product from the market"; is that right?</p> <p>4 A. All right. I'm going to my report.</p> <p>5 Q. Of course.</p> <p>6 A. Paragraph 69.</p> <p>7 Yes, I'm reading from my report, and I see</p> <p>8 where you are reading, Mr. Stanoch.</p> <p>9 Q. And you characterize elsewhere in your</p> <p>10 report that Teva's recalls of its valsartan products</p> <p>11 were voluntary, that's what you say, right?</p> <p>12 A. Right, right.</p> <p>13 Q. And the defect behind the Teva voluntary</p> <p>14 recalls of its valsartan products were the</p> <p>15 nitrosamine impurities; is that right?</p> <p>16 MS. LOCKARD: Objection. Vague. Outside</p> <p>17 of the scope of his report.</p> <p>18 THE WITNESS: Well, the way I would say it</p> <p>19 is FDA and Teva working together agreed that the</p> <p>20 levels of nitrosamine impurities were unacceptable.</p> <p>21 But I have also alluded in my report that it was</p> <p>22 unusual because neither FDA nor Teva at the time had</p> <p>23 a specific limit as to what was unacceptable.</p> <p>24 But I don't think I'm debating you,</p> <p>25 Mr. Stanoch. Let me agree that the recall was</p>	<p style="text-align: right;">Page 165</p> <p>1 just to help us with the timeline. Stand by,</p> <p>2 Doctor.</p> <p>3 This will be Teva Exhibit 11. It should</p> <p>4 be Tab 24 in your binder, sir. Let me know when you</p> <p>5 are there.</p> <p>6 (Whereupon, Exhibit 11 was marked for</p> <p>7 identification.)</p> <p>8 THE WITNESS: Should I put away the FDA</p> <p>9 overview exhibit?</p> <p>10 BY MR. STANOCH:</p> <p>11 Q. Yes.</p> <p>12 A. Yes, I see this lift of hold dated July 6,</p> <p>13 2018.</p> <p>14 Q. Very good. So this document appears to be</p> <p>15 a Teva memo dated July 6, 2018, about lifting hold</p> <p>16 status for certain valsartan products, correct?</p> <p>17 A. Yes.</p> <p>18 Q. And so sometime prior to this Teva, as we</p> <p>19 talked about, instituted a hold on all of its</p> <p>20 valsartan products, right?</p> <p>21 A. Yes.</p> <p>22 Q. Right. And then as of July 6, 2018, Teva,</p> <p>23 it appears, lifted its hold on valsartan</p> <p>24 finished-dose products that used non-ZHP valsartan</p> <p>25 API, correct?</p>

Page 166

1 A. Yes, I agree.
 2 Q. Uh-huh. And it looks like Teva had been
 3 using valsartan API from Jubilant as well, correct?
 4 A. I would --
 5 MS. LOCKARD: Objection. Speculation.
 6 Foundation.
 7 BY MR. STANOCH:
 8 Q. You can look at the document, Doctor.
 9 A. I see the document. I wasn't aware that
 10 the Teva valsartan products used Jubilant drug
 11 substance.
 12 Q. Oh, I see. You also see that Teva lifted
 13 the hold on valsartan products as of July 6, 2018,
 14 that contained API from Mylan, correct?
 15 A. Yes, I do see that.
 16 Q. Okay. I think you alluded to that a few
 17 questions ago, that you understood that Teva had
 18 used Mylan API for some valsartan products sold in
 19 the U.S., right?
 20 A. Yes, particularly the -- I'm trying to
 21 think. These were the ones made in the Jerusalem
 22 facility.
 23 Q. I would agree with that, sir, yes. I
 24 think we're on the same page.
 25 Are you aware of any testing that Teva did

Page 167

1 of its own finished dose that -- just let me start
 2 over.
 3 Are you aware of any testing that Teva did
 4 of its own finished dose that contained API from
 5 Mylan prior to its lifting the hold?
 6 MS. LOCKARD: Objection. Vague.
 7 THE WITNESS: I am not.
 8 BY MR. STANOCH:
 9 Q. Are you aware of whether Mylan tested
 10 valsartan API that it was selling to Teva prior to
 11 Teva's lifting its hold?
 12 A. You know, I have a feeling that there may
 13 be some documentation in the materials considered,
 14 but I'm not aware of it and I didn't cite it in my
 15 report.
 16 Q. Did Teva ever test its own valsartan
 17 finished dose that contained API from Mylan prior to
 18 Teva's recalling that product later in 2018?
 19 MS. LOCKARD: Objection. Vague.
 20 THE WITNESS: I just can't say. I didn't
 21 cite it in my report, so I don't know.
 22 BY MR. STANOCH:
 23 Q. Do you know when, if at all, Mylan tested
 24 valsartan API it was selling to Teva for
 25 nitrosamines after this July 6, 2018, hold memo?

Page 168

1 A. Well, my understanding of the sequence of
 2 events is Mylan was saying it couldn't be in their
 3 drug substance for valsartan, but Swissmedic did
 4 some testing, and that's when Teva became aware that
 5 there could be NDEA in the Mylan drug substance.
 6 And that went to Teva's recall in November of 2018.
 7 Q. Uh-huh. Was it appropriate for Teva to
 8 lift its hold on products without testing it?
 9 MS. LOCKARD: Objection. Outside the
 10 scope of his class-certification report.
 11 THE WITNESS: Well, I don't know that they
 12 didn't test it, so I can't respond to that question.
 13 BY MR. STANOCH:
 14 Q. Uh-huh. Are you aware of whether tests
 15 had been developed after June 2018 to detect
 16 nitrosamines?
 17 A. Well, the FDA was working on tests, and I
 18 think Teva was as well. And I think Teva's test
 19 didn't come along -- online until later, but I don't
 20 have those facts readily available now.
 21 Q. Right. Right. Are you aware that, at the
 22 very least, the FDA announced in the summer of 2018
 23 that it had found NDEA in a different manufacturer,
 24 Torrent's valsartan products?
 25 A. I am actually not aware of that.

Page 169

1 Q. Uh-huh. And I can certainly pull up the
 2 notice, but the FDA said that Torrent products were
 3 included in the company's recall in August 23rd,
 4 2018. Were you aware of that?
 5 A. I'm sure I looked at it, but I'm not
 6 specifically aware of it until you mention it now,
 7 Mr. Stanoch.
 8 Q. Uh-huh. You would agree, then, that if
 9 the FDA was testing and finding NDEA in a different
 10 manufacturer's product, there were testing methods
 11 available to determine NDEA by August 2018, correct?
 12 MS. LOCKARD: Objection. Speculation.
 13 Vague. And outside the scope of his report.
 14 THE WITNESS: Yeah, I just don't have
 15 information to answer the question.
 16 BY MR. STANOCH:
 17 Q. Uh-huh. Can you say one way or the other
 18 whether Teva ever tested any of its own product for
 19 NDEA prior to its November 2018 recalls?
 20 A. I am sure that information exists, but I
 21 don't have it -- I didn't cite it in my report and I
 22 didn't comment, and so I can't answer.
 23 Q. Okay. That's outside the scope of this
 24 report; is that fair?
 25 A. But I would be guessing just because I

<p style="text-align: right;">Page 170</p> <p>1 don't have the information readily available.</p> <p>2 Q. That's a little different. One is if you</p> <p>3 want the information, you can look at it in your</p> <p>4 report; but if you are not opining on it at this</p> <p>5 time, then you have no opinion at this time, sir.</p> <p>6 So which is it?</p> <p>7 A. I think the way you said it second. I</p> <p>8 have no opinion at this time is a good way to state</p> <p>9 it.</p> <p>10 Q. Very well, sir. We don't need to belabor</p> <p>11 it. Thank you.</p> <p>12 Now, is it appropriate for a drug</p> <p>13 manufacturer to not test its drug for nitrosamines</p> <p>14 after being asked to do so by regulators?</p> <p>15 MS. LOCKARD: Objection. That's a</p> <p>16 liability question, and it's outside the scope of</p> <p>17 his class-certification report. Also incomplete</p> <p>18 hypothetical, vague.</p> <p>19 THE WITNESS: Do I answer?</p> <p>20 MS. LOCKARD: If you are able to.</p> <p>21 THE WITNESS: You know, I would generally</p> <p>22 say the answer to your question is no, it's not</p> <p>23 appropriate.</p> <p>24 BY MR. STANOCH:</p> <p>25 Q. Are you aware of whether Teva ever tested</p>	<p style="text-align: right;">Page 172</p> <p>1 need to have reason to believe you may need to test</p> <p>2 your product for NDEA?</p> <p>3 A. Well, I think in the particular example,</p> <p>4 Mylan was saying they had reason to believe that</p> <p>5 there was no possibility of NDEA being in their drug</p> <p>6 substance.</p> <p>7 Q. Uh-huh.</p> <p>8 A. And Teva could look at the other</p> <p>9 ingredients in the manufacturing process and</p> <p>10 conclude that there was no reason to test --</p> <p>11 Q. Uh-huh.</p> <p>12 A. -- and that it could be in the market.</p> <p>13 And I think that's what this memo speaks to.</p> <p>14 Q. Okay. Did Teva, to your knowledge, in</p> <p>15 fact, look at the Mylan manufacturing process to</p> <p>16 determine whether or not NDEA could arise?</p> <p>17 MS. LOCKARD: Objection. Vague. Outside</p> <p>18 the scope.</p> <p>19 THE WITNESS: I can't say I can speak to</p> <p>20 that, Mr. Stanoch. My belief is they did. They</p> <p>21 were working with Mylan to get the needed</p> <p>22 information. But I don't have specific documents to</p> <p>23 support that view.</p> <p>24 BY MR. STANOCH:</p> <p>25 Q. Uh-huh. If we go back to the exhibit we</p>
<p style="text-align: right;">Page 171</p> <p>1 its valsartan product for any nitrosamines after</p> <p>2 receiving a request from any regulator to do so?</p> <p>3 A. Well, I know they did test their</p> <p>4 nitrosamine -- I'm sorry, their valsartan-containing</p> <p>5 drug products at FDA's request, and they provided</p> <p>6 FDA with that information.</p> <p>7 Q. And that was for NDMA, those tests, I</p> <p>8 think, right?</p> <p>9 A. I agree, it was for NDMA, and I can't say</p> <p>10 whether it was for NDEA.</p> <p>11 Q. Okay. If a finished-dose customer asked</p> <p>12 Teva, do your products contain NDEA, would it be</p> <p>13 appropriate for Teva to conduct that testing and see</p> <p>14 if NDEA is in the products?</p> <p>15 MS. LOCKARD: Objection. Confusing.</p> <p>16 Vague.</p> <p>17 THE WITNESS: Well, I would say if Teva</p> <p>18 had reason to believe that there was no NDEA in</p> <p>19 their valsartan products, Teva would refuse. I</p> <p>20 mean, it might be a very big deal to do that kind of</p> <p>21 testing.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Uh-huh.</p> <p>24 A. So I would say it's not appropriate.</p> <p>25 Q. Uh-huh. And what information would you</p>	<p style="text-align: right;">Page 173</p> <p>1 were looking at a moment ago, the lift hold status</p> <p>2 memo; do you have that still, sir?</p> <p>3 A. Yes, I'm looking at it. July 6, 2018?</p> <p>4 Q. Uh-huh. Right. And it states that,</p> <p>5 "Mylan confirmed via e-mail to not have received any</p> <p>6 intermediates from Huahai." Do you see that?</p> <p>7 A. I do see that.</p> <p>8 Q. And further, so that -- strike that.</p> <p>9 So that was one basis for Teva's lifting</p> <p>10 the hold of the Mylan API product, right?</p> <p>11 A. Yes. And you can see in the last bullet</p> <p>12 on the thing where Teva's concluding possibility for</p> <p>13 NDMA impurity is negligible. I don't think the</p> <p>14 focus was on NDEA just yet.</p> <p>15 Q. Uh-huh. Right. At the time Teva lifted</p> <p>16 its hold, it wasn't even discussing, at least in</p> <p>17 this memo, anything about NDEA, right?</p> <p>18 A. Right. And I think that was the case for</p> <p>19 FDA. The concern about NDEA came later, after NDMA.</p> <p>20 Q. Uh-huh. And what is your understanding of</p> <p>21 the route of how nitrosamines came to be in Mylan's</p> <p>22 valsartan API?</p> <p>23 A. I have seen a description of it, and I</p> <p>24 think I have even seen statements from Mylan saying</p> <p>25 that the process was such that nitrosamines couldn't</p>

<p style="text-align: right;">Page 174</p> <p>1 be formed. But beyond that, I don't have any 2 specific information now. 3 Q. I mean, do you understand that it was an 4 issue relating to the residual solvents that Mylan 5 was using in the valsartan API manufacturing 6 process? 7 A. Yes, I do understand that, and that 8 relates to FDA's inspection of Lantech and a warning 9 letter to Lantech about failure to look for the 10 nitrosamine impurity. 11 Q. You are aware that Lantech was the vendor 12 that was managing the solvent recovery process for 13 Mylan when Mylan was making valsartan API for Teva, 14 right? 15 A. Yes, I am aware of that. 16 Q. Uh-huh. And you understand that Lantech 17 was faulted by the FDA for the manner in which it 18 managed the solvent recovery process for Mylan, 19 right? 20 A. Yes, I had that general understanding. 21 Q. And that was the root cause for the NDEA 22 contamination of Mylan's valsartan API, right? 23 A. That's my understanding as well. 24 Q. Did Teva know that Mylan was using a 25 solvent-recovery vendor in the manufacture of</p>	<p style="text-align: right;">Page 176</p> <p>1 not its API supplier was using recycled solvents in 2 the valsartan API manufacturing process? 3 MS. LOCKARD: Objection. Lacks 4 foundation. Outside the scope of his report. 5 THE WITNESS: You know, well, one of the 6 ways I might answer that question is that the DMF 7 system might preclude Teva from knowing because the 8 processes of the DMF may be secret between Mylan and 9 Teva. 10 BY MR. STANOCH: 11 Q. Well, do you see anything suggesting that 12 Teva ever asked Mylan about whether it was using 13 recycled solvents? 14 A. I don't recall seeing any information to 15 that point. 16 Q. Do you recall looking at anything 17 suggesting that Teva ever asked to see Mylan's DMF 18 for valsartan API? 19 MS. LOCKARD: Objection. Asked and 20 answered. It's outside the scope. 21 THE WITNESS: No, it wasn't a focus of my 22 report, and I don't recall seeing it. 23 BY MR. STANOCH: 24 Q. Do you agree that the "Residual Solvents" 25 chapter of the USP would be part of the chapters and</p>
<p style="text-align: right;">Page 175</p> <p>1 valsartan API? 2 A. I don't know that. I couldn't answer that 3 question. 4 Q. All right. Sitting here today, can you 5 recall anything you saw suggesting that Teva ever 6 asked Mylan if Mylan was using a vendor for the 7 solvent recovery process in the manufacture of 8 valsartan API? 9 A. I can't answer that. I don't have that 10 information. 11 Q. Uh-huh. Did Teva know that Mylan was 12 using recycled solvents at all in the manufacture of 13 valsartan API? 14 A. I can't say what Teva knew or didn't know. 15 Q. Sitting here today, can you tell me 16 anything you saw suggesting, even, that Teva knew 17 that Mylan was using recycled solvents in the 18 manufacture of valsartan API? 19 A. I think there is information about it, but 20 I don't have it and I can't comment. 21 Q. Uh-huh. Right. You can't elaborate any 22 more on that, can you? 23 A. No. 24 Q. Right. Shouldn't Teva, as the 25 finished-dose manufacturer, understand whether or</p>	<p style="text-align: right;">Page 177</p> <p>1 notices which manufacturers should take into account 2 when they are manufacturing their own finished-dose 3 valsartan? 4 MS. LOCKARD: Objection. Vague. 5 THE WITNESS: I think "Residual Solvents" 6 is an ICH document that is important to 7 manufacturers as a recommendation, so I think I 8 would answer that yes. 9 BY MR. STANOCH: 10 Q. Uh-huh. Do you know whether Teva adhered 11 to the USP "Residual Solvents" Chapter 467 in 12 assessing the valsartan API it purchased from Mylan? 13 A. I think my understanding would be that in 14 the certificate of analysis for valsartan, there may 15 be a test for residual solvents. And we could 16 certainly look at that. 17 Q. Well, you looked at a number of 18 certificates, I believe, listed in your materials 19 considered, right? 20 A. No. That doesn't mean I looked at them. 21 They are listed in my materials considered, but they 22 weren't important to my report and I didn't cite 23 them. 24 Q. Fair enough. Can you say sitting here 25 today whether you saw any mention of the use of</p>

<p style="text-align: right;">Page 178</p> <p>1 recycled solvents by Mylan in the manufacture of 2 valsartan API? 3 A. No, I didn't see anything about recycled 4 solvents. 5 Q. And a moment ago you were talking about 6 the potential confidentiality of DMFs. Do you 7 remember that? 8 A. I do. 9 Q. Is the mere existence of a third-party 10 vendor secret? 11 MS. LOCKARD: Objection. Foundation. 12 Speculation. 13 THE WITNESS: I don't quite understand. 14 Secret from whom? 15 BY MR. STANOCH: 16 Q. Does the fact that Mylan was using a 17 third-party vendor, Lantech, to manage the solvent 18 recovery process for valsartan API -- strike that. 19 You were suggesting, were you not, that 20 some of Mylan's DMF might have been confidential and 21 not shareable with Teva, right? 22 A. Right, right. 23 Q. Right. So is it your position, sir, that 24 the mere fact that Mylan was using a third-party 25 vendor at all for the solvent recovery process was</p>	<p style="text-align: right;">Page 180</p> <p>1 These are sellers of a drug substance that Teva 2 purchased. 3 BY MR. STANOCH: 4 Q. Uh-huh. So it's your position that -- oh, 5 strike that. 6 Would it surprise you to know that Mylan 7 was contracting with a third-party vendor in India 8 who had never been inspected by the FDA? 9 A. No, it wouldn't surprise me. 10 Q. And do you think Teva would have any issue 11 if it learned that Mylan was contracting with a 12 third-party vendor in India who had never been 13 inspected by the FDA? 14 MS. LOCKARD: Objection -- 15 MR. STOY: Frank Stoy for Mylan. I am 16 just going to object to the form of the question. 17 (Reporter clarification.) 18 MR. STOY: Yes, I just stated an objection 19 to the form of the question. Thank you. 20 MS. LOCKARD: I objected as well as vague. 21 And calls for speculation. 22 THE WITNESS: But I feel like I'm losing 23 Mr. Stanoch. 24 BY MR. STANOCH: 25 Q. Can you hear me, sir?</p>
<p style="text-align: right;">Page 179</p> <p>1 something that would be confidential and not 2 shareable with Teva? 3 A. Well, it could be. I just don't know what 4 Mylan wanted to keep confidential in the DMF. 5 Q. Uh-huh. And if -- oh. 6 A. And again, remember, typically what you 7 see in the DMF for the purchaser, in this case, 8 Teva, is the certificate of analysis, the 9 specification for the drug substance. 10 Q. And again, those certificates and 11 analysis, to the extent you recall sitting here 12 today, made no mention of the use of recycled 13 solvents? 14 A. It may have a specification for residual 15 solvents. We would have to look at one to see. But 16 I don't think that necessarily would tell anything 17 about whether the solvents were recycled or not. 18 Q. Uh-huh. And one way Teva could have had 19 additional information about Lantech would be if it 20 had a quality agreement in place with Mylan, 21 correct? 22 MS. LOCKARD: Objection. Speculation. 23 THE WITNESS: You know, quality agreements 24 may relate to contract manufacturers, but for both 25 ZHP and Mylan, these are not contract manufacturers.</p>	<p style="text-align: right;">Page 181</p> <p>1 A. Yeah, now I can hear you clearly. 2 Q. I will repeat the -- 3 A. Can you repeat -- 4 Q. I would love to because of the 5 interference -- I don't mean that pejoratively -- 6 from defense counsel. 7 Sir, do you think Teva would have an issue 8 if it learned that Mylan was using a third-party 9 vendor in India who had never been inspected by the 10 FDA to manage the solvent recovery process? 11 MS. LOCKARD: Same objection. 12 THE WITNESS: I can't really speculate 13 what Teva would think about it. It doesn't seem to 14 me a big issue whether there is or is not an FDA 15 inspection. 16 BY MR. STANOCH: 17 Q. It's not a big issue if Teva was buying 18 valsartan API from Mylan where Mylan was using a 19 third-party vendor not disclosed to Teva who had 20 never been inspected by the FDA; is that your 21 testimony? 22 A. I'm not really an expert on solvent 23 recovery processes, but my understanding is that 24 many companies use them. It's not unusual. And to 25 me it might be part of the DMF that Mylan would want</p>

<p style="text-align: right;">Page 182</p> <p>1 to keep confidential.</p> <p>2 And then the issue of an FDA inspection</p> <p>3 is -- to tell you the truth, Mr. Stanoch, when I saw</p> <p>4 that FDA had inspected Lantech, this was the first</p> <p>5 time I had ever heard of FDA inspecting a</p> <p>6 solvent-recovery manufacturer.</p> <p>7 Q. Uh-huh. And that happened after news of</p> <p>8 the nitrosamines broke in 2018, though, right?</p> <p>9 A. Yes, that's when the inspection occurred</p> <p>10 for Lantech.</p> <p>11 Q. Right. And Teva never inspected Lantech</p> <p>12 prior to 2018, did it?</p> <p>13 A. I don't know that.</p> <p>14 Q. Right. And did you see anything in any of</p> <p>15 the documents you reviewed suggesting that Teva ever</p> <p>16 inspected Lantech prior to 2018?</p> <p>17 A. No, I didn't see anything like that.</p> <p>18 Q. And you never saw anything even suggesting</p> <p>19 Teva knew who Lantech was prior to 2018, correct?</p> <p>20 A. I never saw anything to that point.</p> <p>21 Q. Would it surprise you to know that Mylan</p> <p>22 was also using Lantech to do second-crop harvesting</p> <p>23 of valsartan API?</p> <p>24 MS. LOCKARD: Objection. Foundation.</p> <p>25 Speculation. Outside the scope of his report.</p>	<p style="text-align: right;">Page 184</p> <p>1 support an answer.</p> <p>2 BY MR. STANOCH:</p> <p>3 Q. Okay. Wouldn't a contract between Mylan</p> <p>4 and Teva allow those two firms to exchange</p> <p>5 confidential information?</p> <p>6 MS. LOCKARD: Objection. Speculation.</p> <p>7 Outside the scope.</p> <p>8 THE WITNESS: I could imagine a contract</p> <p>9 that would support that kind of exchange of</p> <p>10 information.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. Right.</p> <p>13 A. But it can occur without a contract.</p> <p>14 Q. It certainly could, but that exchange did</p> <p>15 not occur here between Teva and Mylan about the</p> <p>16 recycled solvents and Lantech, did it?</p> <p>17 A. I just have no information to that point,</p> <p>18 but if that's what you say, I certainly wouldn't</p> <p>19 debate you.</p> <p>20 Q. And you would agree, though, that Teva</p> <p>21 could have contractually required Mylan to disclose</p> <p>22 information about the solvent recovery process,</p> <p>23 correct?</p> <p>24 MS. LOCKARD: Objection. Speculation.</p> <p>25 Outside the scope.</p>
<p style="text-align: right;">Page 183</p> <p>1 THE WITNESS: I don't understand the</p> <p>2 question and I have no information to answer it.</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. Uh-huh. Teva could not make its</p> <p>5 assessment about the recycled-solvent process</p> <p>6 without knowing anything about it, correct?</p> <p>7 MS. LOCKARD: Objection. Vague.</p> <p>8 THE WITNESS: That seems like a generally</p> <p>9 true statement, so I can agree.</p> <p>10 BY MR. STANOCH:</p> <p>11 Q. Uh-huh. And absent a contractual</p> <p>12 arrangement that would obligate Mylan to disclose</p> <p>13 that information, Mylan didn't have to disclose it</p> <p>14 to Teva; is that your statement?</p> <p>15 A. No, I'm not making that statement.</p> <p>16 Q. Uh-huh. If there was a contract between</p> <p>17 Mylan and Teva that governed disclosure of the</p> <p>18 processes and entities involved in the valsartan API</p> <p>19 manufacturing process, Teva could have learned about</p> <p>20 Lantech prior to all the recalls in 2018, right?</p> <p>21 MS. LOCKARD: Objection. Speculation.</p> <p>22 Foundation. Outside the scope of his</p> <p>23 class-certification opinions.</p> <p>24 THE WITNESS: Yeah, I would have to</p> <p>25 speculate on that. I just have no information to</p>	<p style="text-align: right;">Page 185</p> <p>1 THE WITNESS: Yeah, again, everything you</p> <p>2 are asking me, I would be required to speculate</p> <p>3 because I just don't have the information.</p> <p>4 BY MR. STANOCH:</p> <p>5 Q. Do you know whether Teva ever performed a</p> <p>6 residual solvent analysis with respect to Mylan</p> <p>7 valsartan API?</p> <p>8 A. I do not.</p> <p>9 Q. Do you know whether Mylan itself ever</p> <p>10 conducted a residual solvent analysis for the</p> <p>11 valsartan API it made?</p> <p>12 A. I do not know that.</p> <p>13 Q. Uh-huh. Did Teva ever ask to audit</p> <p>14 Lantech?</p> <p>15 A. Not that I'm aware of.</p> <p>16 Q. Right. Teva didn't even know who Lantech</p> <p>17 was, right?</p> <p>18 A. I don't know that.</p> <p>19 Q. Do you have any information suggesting</p> <p>20 that Teva knew about Lantech and its role in the</p> <p>21 Mylan valsartan API manufacturing process prior to</p> <p>22 the recalls?</p> <p>23 MS. LOCKARD: Objection. Speculation.</p> <p>24 Foundation. Outside the scope.</p> <p>25 THE WITNESS: I just don't know, and it</p>

<p style="text-align: right;">Page 186</p> <p>1 wasn't pertinent to my report.</p> <p>2 BY MR. STANOCH:</p> <p>3 Q. Uh-huh. Are you aware of any evidence</p> <p>4 that Teva ever reviewed ZHP's route of synthesis for</p> <p>5 valsartan API prior to the 2018 recalls?</p> <p>6 MS. LOCKARD: Outside the scope.</p> <p>7 Objection.</p> <p>8 THE WITNESS: Well, I think if we look at</p> <p>9 the Watson CBE-30s -- Watson, of course, is a</p> <p>10 predecessor company to Teva -- there was information</p> <p>11 about the route of synthesis and the synthesis</p> <p>12 change.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. You are talking about the ZHP process</p> <p>15 change, correct?</p> <p>16 A. Yes.</p> <p>17 Q. Right. And regarding that, ZHP was</p> <p>18 changing its manufacturing process for valsartan API</p> <p>19 that it was selling to, at the time, Actavis,</p> <p>20 correct?</p> <p>21 A. I would say Watson, but they were all</p> <p>22 predecessor companies to Teva.</p> <p>23 Q. That's fine. We can agree that Watson was</p> <p>24 a predecessor to Actavis and then Actavis was a</p> <p>25 predecessor to current Teva, right?</p>	<p style="text-align: right;">Page 188</p> <p>1 Q. So the fact that Watson characterized the</p> <p>2 ZHP process change as minor to moderate meant that</p> <p>3 it could implement its change immediately if it</p> <p>4 wanted, correct?</p> <p>5 A. Well, I would say the letter was the</p> <p>6 CBE-30, so they would wait to hear from FDA and then</p> <p>7 they could implement after 30 days.</p> <p>8 Q. Uh-huh. And in that context of that</p> <p>9 submission, did Watson, to your knowledge, review</p> <p>10 ZHP's entire DMF?</p> <p>11 A. As far as I know, they did not.</p> <p>12 Q. All right. Did Watson, Actavis, or Teva,</p> <p>13 to your knowledge, ever ask ZHP for a copy of ZHP's</p> <p>14 DMF for valsartan API?</p> <p>15 A. As far as I know, they did not.</p> <p>16 Q. Nothing stopped any of them from</p> <p>17 requesting that, correct?</p> <p>18 A. Well, I think it would be counter to the</p> <p>19 way a DMF works, that it's a separate filing to the</p> <p>20 agency. So I would say Teva would not ask for it.</p> <p>21 Q. Well, that wasn't quite my question, sir.</p> <p>22 The question was that nothing stopped Teva or its</p> <p>23 predecessor entities from asking ZHP for a copy of</p> <p>24 the DMF for valsartan API, correct?</p> <p>25 A. I think you are correct. I mean, the two</p>
<p style="text-align: right;">Page 187</p> <p>1 A. Yes, that sounds right.</p> <p>2 Q. Great. So we can use -- we can understand</p> <p>3 that as we go through. So ZHP changed it</p> <p>4 manufacturing process for the valsartan API it was</p> <p>5 selling to Watson, right?</p> <p>6 A. Yes, that's correct.</p> <p>7 Q. And ZHP characterized that as a minor to</p> <p>8 moderate change, correct?</p> <p>9 A. I would have to see the letters from</p> <p>10 Watson to FDA, but I think you are correct.</p> <p>11 Q. And a minor to moderate process change</p> <p>12 does not require preapproval from the FDA, does it?</p> <p>13 A. Well, I couldn't agree with that, because</p> <p>14 Watson was asking for FDA approval, but they</p> <p>15 submitted it as a CBE-30.</p> <p>16 Q. Right. And a CBE-30, Change Being</p> <p>17 Effected, does not technically require preapproval</p> <p>18 by the FDA, correct?</p> <p>19 A. The way I would say it is FDA will always</p> <p>20 come in and review it, but the change can be</p> <p>21 implemented if FDA doesn't respond within 30 days.</p> <p>22 Q. Right. A major process change requires a</p> <p>23 different level of review by the FDA, correct?</p> <p>24 A. That would be called the postapproval</p> <p>25 supplement.</p>	<p style="text-align: right;">Page 189</p> <p>1 companies could agree to completely share the</p> <p>2 contents of the DMF.</p> <p>3 Q. Right.</p> <p>4 A. But typically a DMF is not shared with the</p> <p>5 purchaser, such as Teva.</p> <p>6 Q. Uh-huh. And the DMF was not shared in</p> <p>7 this instance, as far as you know, with Teva or its</p> <p>8 predecessor entities?</p> <p>9 MS. LOCKARD: Objection. Asked and</p> <p>10 answered.</p> <p>11 THE WITNESS: I have to say I just don't</p> <p>12 know. If I had to guess, I would say not.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. Uh-huh. To your knowledge, did Teva ever</p> <p>15 ask ZHP to confirm that ZHP's valsartan API did not</p> <p>16 contain any genotoxic substances?</p> <p>17 A. As far as I know, it was not an issue or a</p> <p>18 basis for communication until the summer of 2018.</p> <p>19 Q. Nothing's prevented Teva from ever asking</p> <p>20 ZHP to confirm that ZHP's valsartan API did not</p> <p>21 contain any genotoxic substances, correct?</p> <p>22 A. Are you saying nothing prevented them?</p> <p>23 Q. Yes. I'll restate it. Nothing prevented</p> <p>24 Teva from ever asking ZHP to confirm that ZHP's</p> <p>25 valsartan API did not contain any genotoxic</p>

<p style="text-align: right;">Page 190</p> <p>1 substances, correct?</p> <p>2 A. Well, if it was expected, I suppose Teva</p> <p>3 could certainly have asked, but it was unexpected.</p> <p>4 Q. Well, it was unexpected because ZHP said</p> <p>5 so; isn't that right?</p> <p>6 MS. LOCKARD: Objection to form.</p> <p>7 THE WITNESS: No, the reason I say it was</p> <p>8 unexpected, because FDA said so.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. Well, FDA said it's unexpected because</p> <p>11 that's how ZHP characterized it originally when it</p> <p>12 was forced to break all this news in June 2018;</p> <p>13 isn't that right?</p> <p>14 MS. LOCKARD: Objection to form.</p> <p>15 MS. HILL: Objection. Argument.</p> <p>16 THE WITNESS: I just don't know that,</p> <p>17 Mr. Stanoch. If you know that, it's news to me.</p> <p>18 BY MR. STANOCH:</p> <p>19 Q. Uh-huh. Uh-huh. Do you have any</p> <p>20 information as to where FDA may have gotten the term</p> <p>21 "unexpected" as to the nitrosamines found in</p> <p>22 valsartan products?</p> <p>23 A. I don't.</p> <p>24 Q. And would it surprise you if it came</p> <p>25 originally from ZHP?</p>	<p style="text-align: right;">Page 192</p> <p>1 API from ZHP?</p> <p>2 A. I think now they have resolved their</p> <p>3 issues with FDA, as I understand it, that arose and</p> <p>4 were summarized in the warning letter, and</p> <p>5 everything is fine between FDA and the company.</p> <p>6 Q. Uh-huh. So you would?</p> <p>7 A. Yes.</p> <p>8 Q. Uh-huh. How about before 2018?</p> <p>9 MS. LOCKARD: Objection. Vague.</p> <p>10 THE WITNESS: Well, I would say yes. My</p> <p>11 understanding is they had good FDA inspections, and</p> <p>12 many companies get warning letters where things can</p> <p>13 be resolved, and that's what happened for ZHP.</p> <p>14 BY MR. STANOCH:</p> <p>15 Q. Uh-huh. And it's important, then, to know</p> <p>16 if your API supplier is receiving any adverse</p> <p>17 inspections from the FDA, correct?</p> <p>18 A. That's a separate topic. And -- is that a</p> <p>19 question? I'm sorry.</p> <p>20 Q. It's important to know if your API</p> <p>21 supplier is receiving any adverse inspection</p> <p>22 findings from the FDA, correct?</p> <p>23 A. I think it could be important, yes.</p> <p>24 Q. Okay. Yes. And a reasonable</p> <p>25 pharmaceutical manufacturer would want to know if</p>
<p style="text-align: right;">Page 191</p> <p>1 MS. LOCKARD: Objection. Speculation.</p> <p>2 Foundation.</p> <p>3 THE WITNESS: Yeah, I just can't answer.</p> <p>4 I don't know where it came from.</p> <p>5 BY MR. STANOCH:</p> <p>6 Q. Uh-huh. If ZHP told the world this</p> <p>7 nitrosamine impurity was unexpected, but it had</p> <p>8 information suggesting it knew a year earlier, would</p> <p>9 that be important?</p> <p>10 MS. LOCKARD: Objection to form.</p> <p>11 THE WITNESS: I just have to speculate. I</p> <p>12 don't know when ZHP had its information. It seemed</p> <p>13 to me it was closer to the summer of 2018 time</p> <p>14 frame.</p> <p>15 BY MR. STANOCH:</p> <p>16 Q. Uh-huh. Did you evaluate whether ZHP had</p> <p>17 any information suggesting there may be nitrosamines</p> <p>18 in its valsartan API prior to June 2018?</p> <p>19 A. I did not see any information to that</p> <p>20 point.</p> <p>21 Q. Was that even part of your analysis for</p> <p>22 purposes of your class-certification report?</p> <p>23 A. No.</p> <p>24 Q. Uh-huh. In the context of your consulting</p> <p>25 work, sir, would you advise a company to purchase</p>	<p style="text-align: right;">Page 193</p> <p>1 its API supplier is receiving adverse inspections</p> <p>2 and findings from the FDA, correct?</p> <p>3 MS. LOCKARD: Objection. Outside the</p> <p>4 scope. That's clearly a liability question.</p> <p>5 THE WITNESS: And I -- you know, there are</p> <p>6 so many variables underlying your question. I mean,</p> <p>7 FDA may inspect and make a few observations that are</p> <p>8 quickly resolved. I'm not sure that needs to be</p> <p>9 communicated to buyers.</p> <p>10 BY MR. STANOCH:</p> <p>11 Q. Uh-huh. If a manufacturer of</p> <p>12 finished-dose product learns about an FDA inspection</p> <p>13 and requests information about it from its API</p> <p>14 supplier, would it be your expectation that the API</p> <p>15 supplier would provide the information?</p> <p>16 MS. LOCKARD: Objection. Speculation.</p> <p>17 Foundation. Incomplete hypothetical.</p> <p>18 THE WITNESS: Yes, and I just don't have</p> <p>19 any basis to have an answer to that question.</p> <p>20 BY MR. STANOCH:</p> <p>21 Q. Well, you consult pharmaceutical</p> <p>22 manufacturers, don't you, sir?</p> <p>23 A. I would say now I am doing primarily</p> <p>24 litigation, and I have never consulted on the type</p> <p>25 of questions you are raising now.</p>

<p style="text-align: right;">Page 194</p> <p>1 Q. Right, uh-huh. Have you ever advised a 2 company that it's prudent for them to have all 3 available information about regulatory inspections 4 of their API supplier? 5 A. I have not. 6 Q. Uh-huh. Are there ways for pharmaceutical 7 manufacturers to independently check on whether 8 their API suppliers have had adverse regulatory 9 findings? 10 A. Well, certainly a warning letter is 11 public, so that could come to light independent of a 12 drug-substance manufacturer. 13 Q. Uh-huh. Are you aware of any processes 14 Teva had in place prior to June 2018 to monitor 15 whether its API suppliers were receiving adverse 16 findings from regulators? 17 A. I am not. 18 Q. Uh-huh. And back to ZHP and Teva. To 19 your knowledge, Teva never asked ZHP to confirm that 20 ZHP's valsartan API did not contain any genotoxic 21 substances, correct? 22 MS. LOCKARD: Objection. Asked and 23 answered. 24 THE WITNESS: Yes, I am not aware of any 25 communication like that.</p>	<p style="text-align: right;">Page 196</p> <p>1 MR. STANOCH: Counsel, I'm not debating 2 you now on the record. I'm going to keep asking my 3 questions. You are lodging your objections. I'm 4 asking questions on the facts on which he is opining 5 about. It's within the scope of his report. 6 He says a number of factual -- 7 MS. LOCKARD: I just want to -- 8 MR. STANOCH: Excuse me. He makes a 9 number of statements about facts. I'm entitled to 10 probe the facts as they relate to the opinions in 11 this report. 12 MS. LOCKARD: You are not asking about 13 facts, though. You are asking about his opinion as 14 to whether something is reasonable, prudent, 15 appropriate, and those are the questions that I'm 16 objecting to. Now, I understand -- 17 MR. STANOCH: You have stated your 18 objections. 19 MS. LOCKARD: -- you are going to keep 20 asking, but we're going to move to strike all this 21 testimony and you are not going to be able to come 22 back and ask him or anyone else these questions. 23 MR. STANOCH: Well, I disagree with that. 24 I'm asking him questions relating to the facts and 25 the opinions in this report. And we will keep</p>
<p style="text-align: right;">Page 195</p> <p>1 BY MR. STANOCH: 2 Q. Uh-huh. Wouldn't it have been prudent for 3 Teva to request such a statement from ZHP regarding 4 the valsartan API? 5 MS. LOCKARD: Objection. Outside the 6 scope of his report. It's liability opinion. 7 You are just -- I'm sorry, Mr. Stanoch, 8 but you have just completely disregarded any sort of 9 line, bright or not, between liability opinion and 10 his class-certification opinion. I'm honestly at a 11 loss as to whether we need to suspend and call a 12 judge or meet and confer on this. 13 But, I mean, I hate to just keep objecting 14 to every question, but every question is, you know, 15 what would a prudent manufacturer do? What would be 16 reasonable? You know, what should they do? Would 17 it be appropriate? These are all liability 18 opinions. 19 MR. STANOCH: Are you done, Counsel? 20 MS. LOCKARD: No, because I'm having a 21 problem here. 22 MR. STANOCH: Are you done, Counsel? 23 MS. LOCKARD: No. Do you want to go off 24 the record or you want to discuss it on the record? 25 What is your response?</p>	<p style="text-align: right;">Page 197</p> <p>1 going. 2 MS. LOCKARD: Well, this will be taken up 3 with Judge Vanaskie, so -- 4 MR. STANOCH: I don't appreciate the 5 threat, Counsel. 6 MS. LOCKARD: It is not a threat -- a 7 statement. But go ahead. 8 MR. STANOCH: For the record, Counsel, 9 I'll state that in his own report, Dr. Williams 10 opines on reasonableness a number of times in terms 11 of methods, in terms of what one would do, in terms 12 of risk assessments, et cetera, so it's in the 13 report. We can look at it later. 14 Q. So, Doctor -- 15 MS. LOCKARD: I disagree with your 16 assessment. 17 (Reporter clarification.) 18 MS. LOCKARD: I said I disagree with the 19 assessment, but go ahead. 20 BY MR. STANOCH: 21 Q. Uh-huh. Dr. Williams, you state in 22 Paragraph 84 of your report that there is no issue 23 with the FDA inspection of ZHP in 2017 because an 24 EIR was provided; is that right? 25 A. Wait a minute, if I could get to where you</p>

<p>Page 198</p> <p>1 are now. Which paragraph?</p> <p>2 Q. 84.</p> <p>3 A. And what page? Yeah.</p> <p>4 Q. I don't have a printed copy of the report</p> <p>5 you produced this morning, so I can't tell you the</p> <p>6 exact page, sir. Sorry. It's Paragraph 84.</p> <p>7 A. Page 28. Yes. And, of course, others</p> <p>8 will comment on ZHP's inspectional history, but this</p> <p>9 is an example of an inspection that ZHP got in 2017,</p> <p>10 an FDA 483 with a small number of observations, and</p> <p>11 as FDA does, they provided an EIR, indicating that</p> <p>12 the inspection was closed.</p> <p>13 Q. Are you suggesting here that because the</p> <p>14 FDA did not continue the inspection, there were no</p> <p>15 problems with ZHP's valsartan API?</p> <p>16 A. Well, that's a difficult question to give</p> <p>17 a conjecture about. What I would say is I can't say</p> <p>18 more than what the facts state, that ZHP responded</p> <p>19 to the observations, FDA found them satisfactory and</p> <p>20 issued an EIR.</p> <p>21 Q. Was Teva ever made aware of the FDA</p> <p>22 inspection of ZHP's facility in 2017? Did it learn</p> <p>23 of that in the year 2017?</p> <p>24 A. I don't know that.</p> <p>25 Q. Right. Do you know when, if at all, Teva</p>	<p>Page 200</p> <p>1 was reviewing the DMF and was certainly likely to</p> <p>2 imagine that FDA would inspect ZHP, so it would be</p> <p>3 hard to imagine that Teva didn't have some</p> <p>4 understanding of those possibilities. But in terms</p> <p>5 of the discrete facts of those possibilities, I have</p> <p>6 no information.</p> <p>7 Q. Uh-huh. Is there only a potential cGMP</p> <p>8 problem with an API supplier if the FDA catches it</p> <p>9 first?</p> <p>10 A. No. I don't think that is a fair</p> <p>11 statement. I would say the essence of GMPs is the</p> <p>12 manufacturer is supposed to create their own</p> <p>13 approach to GMPs that then is suitable for an FDA</p> <p>14 inspection, but the FDA inspection may occur</p> <p>15 infrequently.</p> <p>16 Q. Uh-huh. Right. It's incumbent on a</p> <p>17 manufacturer sourcing API to conduct its own due</p> <p>18 diligence of the API manufacturer, correct?</p> <p>19 A. Are you talking about the purchaser?</p> <p>20 Q. Yes. It's incumbent on the finished-dose</p> <p>21 manufacturer purchasing API to conduct its own due</p> <p>22 diligence of the API supplier, correct?</p> <p>23 A. I think that's a reasonable statement,</p> <p>24 yes.</p> <p>25 Q. Uh-huh. And further down in your report,</p>
<p>Page 199</p> <p>1 learned that FDA inspected ZHP's API facility in</p> <p>2 2017?</p> <p>3 A. I'm not aware of what FDA knew about ZHP</p> <p>4 inspectional history. Of course they knew about the</p> <p>5 warning letter because that was public.</p> <p>6 Q. Well, the warning letter was from 2018,</p> <p>7 after the recalls, right?</p> <p>8 A. Yes.</p> <p>9 Q. Right. So I'm asking -- a different</p> <p>10 question is: What is your understanding of when</p> <p>11 Teva knew about the FDA inspection of ZHP that</p> <p>12 occurred in 2017?</p> <p>13 A. I have no information about that.</p> <p>14 Q. Right. So you don't know one way or the</p> <p>15 other when Teva might have learned that the FDA</p> <p>16 inspected ZHP's API facility in 2017?</p> <p>17 A. Yes, I don't know that.</p> <p>18 Q. Do you know when if at all ZHP revealed</p> <p>19 the observations from the 2017 FDA inspection to</p> <p>20 Teva?</p> <p>21 A. I don't know that they revealed it to</p> <p>22 Teva.</p> <p>23 Q. Was Teva ever relying on the FDA to</p> <p>24 determine the acceptability of ZHP's valsartan API?</p> <p>25 A. Well, I think Teva would be aware that FDA</p>	<p>Page 201</p> <p>1 beginning Section F, do you see this? It's "FDA</p> <p>2 Inspections of Teva Drug Product Manufacturing</p> <p>3 Facilities"; do you see that, sir?</p> <p>4 A. I do.</p> <p>5 Q. Okay. And here you talk about FDA</p> <p>6 inspections of Teva's own finished-dose facilities</p> <p>7 that had been manufacturing valsartan prior to the</p> <p>8 recalls; is that fair?</p> <p>9 A. Yes, FDA inspections.</p> <p>10 Q. Right. And are you suggesting that just</p> <p>11 because the FDA didn't find a problem relating to</p> <p>12 valsartan, that there was no issue with the</p> <p>13 valsartan API that the Malta and Jerusalem</p> <p>14 facilities were sourcing from ZHP and Mylan?</p> <p>15 A. I don't know that. I couldn't comment.</p> <p>16 Q. And are you suggesting here that because</p> <p>17 the FDA did not find any adulteration during the</p> <p>18 inspections you list in your report here, that</p> <p>19 Teva's product could not be adulterated with</p> <p>20 nitrosamines during these same time periods?</p> <p>21 A. I'm saying that Teva in my report had</p> <p>22 recalled all its valsartan products from the market</p> <p>23 before FDA made any determinations related to</p> <p>24 adulteration.</p> <p>25 Q. Well, Teva's products had API with</p>

<p style="text-align: right;">Page 202</p> <p>1 nitrosamines in it prior to the recalls, right?</p> <p>2 A. Yes, I think that was the basis for the</p> <p>3 recall.</p> <p>4 Q. Right. So are you telling me that a</p> <p>5 valsartan product made by Teva the day before the</p> <p>6 recalls with nitrosamines is not adulterated, but</p> <p>7 then once the recall is issued the next day, now</p> <p>8 that product is adulterated?</p> <p>9 A. No, I'm saying the adulteration label, if</p> <p>10 somebody wanted to say, when did it occur, it</p> <p>11 occurred with the warning letters that went to ZHP</p> <p>12 and Mylan, and it also occurred after FDA set limits</p> <p>13 for the nitrosamine impurities in December 2018.</p> <p>14 But before that, Teva had recalled all product from</p> <p>15 the U.S. market.</p> <p>16 Q. Uh-huh.</p> <p>17 A. Both made in Jerusalem and Malta.</p> <p>18 Q. Uh-huh. Are you saying that valsartan</p> <p>19 sold by Teva prior to the FDA's issuance of warning</p> <p>20 letters to ZHP and Mylan could not be considered</p> <p>21 adulterated?</p> <p>22 A. Yes.</p> <p>23 Q. So a Teva valsartan product on a certain</p> <p>24 day that had nitrosamines in it is not adulterated</p> <p>25 until the FDA issues a warning letter to ZHP or</p>	<p style="text-align: right;">Page 204</p> <p>1 A. Yes, yes, go ahead.</p> <p>2 Q. Number two would be when FDA issued a</p> <p>3 warning letter to Mylan, right? Right?</p> <p>4 A. Yes, uh-huh.</p> <p>5 Q. Number three would be when FDA set interim</p> <p>6 limits, which you say occurred in December of 2018,</p> <p>7 correct?</p> <p>8 A. Yes, I think that's -- I'm looking at my</p> <p>9 report to see if those opinions are clearly stated.</p> <p>10 Let me check. But that corresponds to my opinion.</p> <p>11 Q. So let's say the FDA never set interim</p> <p>12 limits and let's say the FDA never issued warning</p> <p>13 letters to ZHP or Mylan. In that case, Teva's</p> <p>14 finished-dose valsartan could never be considered</p> <p>15 adulterated, according to you?</p> <p>16 A. Yes, I think the issue of adulteration</p> <p>17 arose and was determined, to the extent it was</p> <p>18 determined at all, after Teva had recalled all</p> <p>19 product from the market.</p> <p>20 Q. So then the answer is that Teva's</p> <p>21 valsartan products would never be considered</p> <p>22 adulterated in a world where the FDA did not issue</p> <p>23 warning letters to ZHP and Mylan and the FDA set no</p> <p>24 interim limits?</p> <p>25 A. Yeah, I don't think FDA -- yeah, if we</p>
<p style="text-align: right;">Page 203</p> <p>1 Mylan, and then once that happens, then it's</p> <p>2 adulterated?</p> <p>3 A. That's when a formal regulatory definition</p> <p>4 of adulteration could be stated to have occurred.</p> <p>5 And it could also have been stated to have occurred</p> <p>6 when FDA set limits for nitrosamine in December of</p> <p>7 2018.</p> <p>8 Q. So going back to our examples we had</p> <p>9 talked about before a couple breaks, if there is a</p> <p>10 product that is containing anthrax, it's not</p> <p>11 adulterated until the FDA issues a Form 483?</p> <p>12 A. No, no, no. I would say a 483 is not a</p> <p>13 FDA determination of adulteration. A regulatory</p> <p>14 determination of adulteration by FDA is a very</p> <p>15 serious matter and, you know, it's carefully</p> <p>16 considered by FDA, and I am suggesting that it could</p> <p>17 have been determined to have occurred on those three</p> <p>18 points that I just stated.</p> <p>19 But Teva had recalled all of its product</p> <p>20 before FDA made any kind of statement that could be</p> <p>21 deemed an interpretation of adulteration.</p> <p>22 Q. So it sounds like the only three points</p> <p>23 that you say adulteration could be found is when,</p> <p>24 number one, FDA issued a warning letter to ZHP,</p> <p>25 right?</p>	<p style="text-align: right;">Page 205</p> <p>1 say, was the Mylan product adulterated, I would say</p> <p>2 it couldn't -- FDA had not made a decision in that</p> <p>3 regard at least until those three prongs, if you</p> <p>4 will, had been met.</p> <p>5 Q. Say a warning letter finds a product</p> <p>6 adulterated on January 1, 2022. Does that mean that</p> <p>7 on December 31, 2021, that same product was not</p> <p>8 adulterated?</p> <p>9 A. Yeah, I think the issue of adulteration</p> <p>10 is -- and I'm looking at page 8 in my opinion, under</p> <p>11 B, and my opinion is clear. "My opinion that Teva's</p> <p>12 valsartan products were, at all times prior to</p> <p>13 Teva's voluntary recalls, AB-rated to their branded</p> <p>14 counterparts and were not adulterated or</p> <p>15 misbranded." That's what I'm saying.</p> <p>16 Now, if somebody wants to raise an issue</p> <p>17 of when adulteration occurred, I would say it was</p> <p>18 when the warning letters went to ZHP and Mylan or</p> <p>19 when FDA set limits on the nitrosamine impurities in</p> <p>20 December 2018. I think that's a very clear</p> <p>21 conclusion on my report.</p> <p>22 Q. Well, how does the FDA take action for</p> <p>23 adulterated product, then, for product that had</p> <p>24 already been sold if nothing is adulterated until</p> <p>25 they issue a warning letter?</p>

<p>Page 206</p> <p>1 A. FDA can ask for recalls of products that 2 are objectionable for various reasons. You 3 mentioned examples yourself. But it doesn't mean 4 that FDA is making an adulteration charge. That's a 5 separate issue. 6 Q. So according to you, adulteration can only 7 exist if the FDA issues a warning letter? 8 A. I would say an adulteration charge is a 9 regulatory determination by FDA that is very 10 carefully considered. Even a warning letter doesn't 11 necessarily mean, you know, an adulteration charge. 12 It's really a signal to a company that they need to 13 focus a little bit more on improving their GMPs. 14 All I'm saying is that Teva products were 15 not adulterated at the time of the recall, so Teva 16 never had adulterated product in the U.S. market. 17 Q. Because you are saying the warning letters 18 were not issued to ZHP or Mylan until after Teva's 19 recalls? 20 A. Yes. If somebody wants to make an 21 adulteration claim here, it seems to me it would 22 occur then, or when FDA set limits and a product was 23 above those limits. The FDA -- oh. 24 Q. So all the -- 25 A. FDA could have set limits that would have</p> <p>Page 207</p> <p>1 let the Teva product be okay. It was just an 2 uncertainty there. But because FDA thought the 3 limits were unacceptably high, without a limit being 4 set, Teva and FDA agreed that these products should 5 come off the market, first ZHP-containing product 6 and then the Mylan product. 7 Q. Uh-huh. 8 A. And then Teva decided not to reenter the 9 market at all. 10 So Teva never had an adulterated product 11 for any of its four valsartan-containing products in 12 the U.S. market. 13 Q. Uh-huh. So from 2012 on, assume all of 14 Teva's products had nitrosamines in it leading up to 15 the recall. You are saying all of that product 16 cannot be considered adulterated? 17 A. It was not adulterated -- 18 Q. Uh-huh. 19 A. -- according to an FDA regulatory 20 determination. 21 Q. Uh-huh. The FDA found that the API that 22 Teva was using that entire time was adulterated, 23 though, correct? 24 A. When do you say that occurred? 25 Q. Well, you tell me. It's in the 483s that</p>	<p>Page 208</p> <p>1 you cite in your report, sir. 2 A. Is it? I don't recall FDA making an 3 adulteration claim in the 483s. Can you show me 4 that? 5 Q. In the warning letters, I apologize. In 6 the warning letters the FDA said that Mylan and 7 ZHP's API was adulterated, correct? 8 A. Yes. I mean, you are reiterating my 9 claim. That's a point at which FDA could be said to 10 have determined a charge of adulteration. 11 Q. Uh-huh. So -- 12 A. And that is a very carefully considered 13 charge. 14 Q. All right. So if I am selling a product 15 starting today, and it contains rat poison, I can 16 keep selling that and keep selling it until the FDA 17 issues me a warning letter, correct? 18 A. No. I think your hypothetical, it needs 19 to be refined for this particular case. There is an 20 impurity, an impurity that we have already talked 21 about is undesirable. It's part of that cohort of 22 concern. 23 But it can have a limit set on it such 24 that the product is safe and effective and of good 25 quality. FDA did not do that until December 2018.</p> <p>Page 209</p> <p>1 But FDA still had the concern that the levels were 2 too high, so they worked with Teva to recall all 3 product. 4 This is separate from a determination of 5 adulteration. The only time I have ever seen 6 adulteration raised in this matter is when FDA sent 7 those warning letters, as you say, to ZHP and Mylan. 8 Q. If not adulterated, what would you call 9 all of Teva's products prior to the FDA's issuance 10 of warning letters to ZHP and Mylan? 11 A. I would call them AB-rated and of good 12 value to the consumer. 13 Q. Even if they contained genotoxic 14 impurities above any limit that was ever set to the 15 present? 16 A. Well, you are getting to the core issue in 17 this matter. 18 First of all, my claim is, and I state it 19 in my report, they were AB-rated. They were 20 pharmaceutically equivalent. They were 21 bioequivalent. They were not misbranded. They had 22 the appropriate labeling relative to the Novartis 23 reference listed drug. 24 Now, if you have an impurity that comes to 25 light, it's a very low-level impurity, it was</p>
--	---

<p style="text-align: right;">Page 210</p> <p>1 unexpected, there are not analytical procedures to 2 adequately measure it, it all of a sudden comes to 3 life, does that make the product worthless? No. It 4 makes the product really fine until FDA and the 5 companies sort through what the appropriate limits 6 should be. 7 Teva didn't do anything wrong. They were 8 making good product at their Malta and Jerusalem 9 facilities. And then FDA comes up with a limit. So 10 then you can say, okay, well, products in the 11 marketplace shouldn't have nitrosamine impurities 12 above that limit. And before all that occurred, 13 Teva had removed all product from the market. 14 Q. Uh-huh. Are you familiar with the FDA's 15 actions against Ranbaxy concerning generic Lipitor? 16 MS. LOCKARD: Outside the scope. 17 THE WITNESS: You know, I could probably 18 be reminded of it, and please do if you think it 19 would be helpful -- if you think it would be 20 helpful, please remind me of that. 21 BY MR. STANOCH: 22 Q. Sure. I'll mark Exhibit 12. 23 (Whereupon, Exhibit 12 was marked for 24 identification.) 25</p>	<p style="text-align: right;">Page 212</p> <p>1 MS. LOCKARD: It is 12:45 here. I don't 2 know, how long have been we been on the record, 3 Ms. Videographer, can you say? 4 MR. HARKINS: Two hours since the last 5 break. 6 MS. LOCKARD: Two hours since the last 7 break, so let's ask the questions about this, and 8 then -- 9 THE VIDEOGRAPHER: An hour 35 since the 10 last break. 11 MS. LOCKARD: You need a new watch. 12 BY MR. STANOCH: 13 Q. Let me know when you can see this exhibit, 14 sir. I'm trying to screen-share now, if that helps 15 as well. 16 A. Okay. I see the screen share. 17 Q. All right. And you see this is a 18 Department of Justice announcement, May 13, 2013? 19 A. Yes, I do see this, and I'm familiar with 20 this fine. 21 Q. Right. And you are familiar that the DOJ 22 fined Ranbaxy, a generic drug manufacturer, 500 23 million relating to cGMP violations and false 24 statements? 25 A. Yes, I do see that.</p>
<p style="text-align: right;">Page 211</p> <p>1 BY MR. STANOCH: 2 Q. Unfortunately, I don't think it's in your 3 binder, but it's relatively short. Let me know when 4 you can see it. 5 A. I think it's coming to me; is that right? 6 MS. LOCKARD: It's not in the binder, so 7 it's only on video screen. 8 THE WITNESS: And I don't see it on the 9 video screen yet. 10 (Whereupon, a brief discussion off the 11 record.) 12 MR. STANOCH: What are you whispering to 13 your counsel about, Doctor? 14 MS. LOCKARD: He asked me to remind him of 15 your name, and I said Stanoch. 16 THE WITNESS: I'm sorry. I had a senior 17 moment. 18 MR. STANOCH: Oh, it's okay, Doctor. I 19 wasn't going to call you out before, and I apologize 20 I did now. It's a long day. 21 MS. LOCKARD: You are right. I should not 22 be whispering. I should have done it louder. 23 MR. STANOCH: It's a -- 24 THE WITNESS: Well, I apologize, too. I 25 may be getting hypoglycemic.</p>	<p style="text-align: right;">Page 213</p> <p>1 Q. Right. And can you still see it? 2 A. I do see it, yes, thank you. 3 Q. Oh, good. I just wanted to make sure you 4 were able to look at it. And you can look at this 5 document all you want, sir, but the issue here is 6 Ranbaxy, I think, was making generic Lipitor, and it 7 was found to contain pieces of glass, right? 8 A. I would have to read more closely to see 9 the pieces of glass, but I'll take your word for it. 10 Go ahead. 11 Q. Okay. And so would you call generic 12 Lipitor that contained pieces of glass AB-rated? 13 A. Well, we're getting into what causes the 14 FDA to remove an AB rating. An AB rating relates to 15 the review process. So, yes, I would say it's 16 AB-rated. 17 Now, after it's in the market and you find 18 something objectionable or it fails a specification 19 or it's not in conformance with GMPs, it needs to be 20 withdrawn from the market. 21 Q. So would you -- 22 A. And that's what happened here. 23 Q. So would you consider Ranbaxy's generic 24 Lipitor that contained pieces of glass adulterated 25 prior to the date of its guilty plea?</p>

<p style="text-align: right;">Page 214</p> <p>1 A. It's not my decision. It's an agency 2 decision. Did the agency make a judgment of 3 adulteration? 4 Q. Well, that's what I'm asking you, sir. 5 A. I don't see it here. If you can point it 6 out to me, I would be glad to offer an opinion. 7 Q. Uh-huh. It says right there -- 8 A. And I don't -- 9 Q. -- in the first paragraph about the 10 "distribution of certain adulterated drugs." 11 A. Yes, adulterated drugs, okay. So there 12 the agency is making a decision that the drugs were 13 adulterated. 14 Q. Right. And if you look on, you know, the 15 next page here, "Ranbaxy USA admitted to introducing 16 into interstate commerce certain batches of 17 adulterated drugs that were produced at Paonta Sahib 18 in 2005 and 2006." You see that? 19 A. Wait a minute. I'm trying to catch up 20 with where you are reading. What paragraph are you 21 in? 22 Q. Second full paragraph of the second page. 23 A. Oh. Yes, I see that. And your question, 24 I'm sorry, is? 25 Q. Right. So you see here, right, that</p>	<p style="text-align: right;">Page 216</p> <p>1 questions. 2 Q. Right. The FDA said at a later point that 3 the drugs you had been selling since 2005 were 4 adulterated, right? 5 A. FDA can make a certain decision in time. 6 But in this case, FDA made the decision when it 7 issued the warning letters for ZHP and Mylan. 8 Q. Right. And it said in that decision that 9 the valsartan API that you have been making up until 10 this point is adulterated, correct? 11 A. No, I'm not agreeing with that. 12 Q. So -- 13 A. I'm saying FDA had -- I'm saying Teva had 14 recalled all product before the agency determination 15 of adulteration. 16 Q. So the fact that Teva was selling product 17 that the FDA later said contained adulterated API, 18 you are saying that has no effect on whether or not 19 Teva was selling adulterated products? 20 A. You know, I think we're confusing a lot of 21 issues here. First of all, we have to look at the 22 warning letters to ZHP and Mylan. And I'm glad to 23 discuss those if you want to give them to me as 24 exhibits. 25 But FDA made the general statement that</p>
<p style="text-align: right;">Page 215</p> <p>1 Ranbaxy admitted that it was selling batches of 2 adulterated drugs produced at a facility in 2005 and 3 2006, right? 4 A. Yes. 5 Q. And that is, what, seven or eight years 6 prior to its guilty plea per this notice of 7 May 13th, 2013, right? 8 A. I'm trying to stay up with your dates. 9 Okay. Yes, I see the dates you are emphasizing. 10 Q. Right. So Ranbaxy was pleading guilty 11 that it was selling adulterated products for nearly 12 ten years prior to the institution of regulatory 13 action against it, right? 14 A. Yes. I see that. 15 Q. But it sounds like you are telling me that 16 you would not consider any of that Ranbaxy product 17 adulterated up and until the point where the FDA 18 actually issued a warning letter; is that right? 19 A. No, the way I read this, I think Ranbaxy 20 stated their drugs were adulterated in 2005, 2006, 21 and that's an agency determination. 22 Q. Right. They retrospectively made that 23 determination? 24 A. Well, I don't know if it is retrospective 25 or not, but -- go on. I'll try to answer your</p>	<p style="text-align: right;">Page 217</p> <p>1 products -- or drug substances produced at ZHP were 2 adulterated within the meaning of the act because of 3 GMP violations. I would have to see it. I'm not 4 even sure it mentions nitrosamines -- 5 Q. Uh-huh. Okay. 6 A. -- or the fact that the products 7 containing nitrosamines were adulterated. 8 Q. Okay. Let's take out nitrosamines. So 9 Teva selling valsartan that contained API that the 10 FDA eventually said was adulterated because of cGMP 11 violations has no impact on whether Teva's product 12 was adulterated? 13 A. Well, I would -- is it possible to look at 14 the ZHP warning letter? 15 Q. If you have a copy there, sir, go ahead. 16 I don't know if I have it. 17 A. It's not in your exhibits? 18 MS. LOCKARD: We have a copy of it. 19 THE WITNESS: I don't think I cited it in 20 my report. I don't think it's in a -- 21 MS. LOCKARD: There is no question 22 pending, so you don't have to answer. 23 BY MR. STANOCH: 24 Q. Uh-huh. Did you cite the ZHP warning 25 letter from the FDA in your report, sir?</p>

<p style="text-align: right;">Page 218</p> <p>1 A. I don't think it's in my materials cited. 2 I don't recall seeing it there. And that's true 3 also for Mylan. So -- 4 Q. Okay. Well, we will figure that out. 5 Let's put all this aside for now, and we can come 6 back to it, but we want to go -- 7 (Whereupon, a brief discussion off the 8 record.) 9 THE VIDEOGRAPHER: Okay. We are going off 10 the record. The time is 12:51. 11 (Whereupon, a brief recess was taken.) 12 THE VIDEOGRAPHER: Okay. We are coming 13 back on the record. The time on the video monitor 14 is 1:34. Please begin. 15 BY MR. STANOCH: 16 Q. Welcome back, Dr. Williams. 17 A. Thank you, Mr. Stanoch. 18 Q. During our lunch break did you speak with 19 anyone besides your counsel there with you in San 20 Francisco? 21 A. No, I didn't. 22 Q. Did you text or e-mail anybody about your 23 testimony today? 24 A. No, not at all. 25 Q. And did you review any documents?</p>	<p style="text-align: right;">Page 220</p> <p>1 trying to market in the U.S. a new generic 2 combination product that includes valsartan? 3 MS. LOCKARD: Objection. Foundation. 4 THE WITNESS: Was that a question, 5 Mr. Stanoch? 6 BY MR. STANOCH: 7 Q. Yes. Did your opinions in any way relate 8 to the fact that Teva is trying to market in the 9 U.S. a new generic combination product that includes 10 valsartan? 11 A. No, not at all. 12 Q. Uh-huh. Uh-huh. Do you think it would be 13 pertinent to your opinions in this case if you were 14 to eventually evaluate the testing and other 15 parameters that Teva is applying for its new generic 16 combination product that includes valsartan that it 17 may introduce in the U.S.? 18 MS. LOCKARD: Objection. Confusing. 19 THE WITNESS: No, I can't see how that 20 would have any impact on my report -- 21 BY MR. STANOCH: 22 Q. Uh-huh. 23 A. -- and it certainly wouldn't change my 24 opinions. 25 Q. Well, would you like to know what testing</p>
<p style="text-align: right;">Page 219</p> <p>1 A. We did not. 2 Q. Okay. Thank you. 3 Could you describe for me what it means 4 that your expert report is only for class 5 certification and not for liability? 6 A. My understanding is the liability 7 litigation will occur later, and right now we're 8 looking at class certification that relates to 9 economic loss for individual plaintiffs and also 10 large payors. 11 Q. Uh-huh. Right. And prior to the break we 12 were talking a little bit about the Teva recalls, 13 and I think you said that Teva had recalled all of 14 its valsartan product from the market and has not 15 reintroduced it, correct? 16 A. Yes, that's true, Mr. Stanoch. 17 Q. Okay. Are you aware of whether Teva has 18 been undertaking to introduce a new generic 19 combination product that includes valsartan? 20 A. You know, I believe in the course of some 21 of my research or discussions with counsel, I did 22 hear that. But I know very little about what they 23 are doing, and it's certainly not in my report. 24 Q. Okay. I was going to say, do your 25 opinions in any way relate to the fact that Teva is</p>	<p style="text-align: right;">Page 221</p> <p>1 Teva is doing of this new product under development 2 for nitrosamines? 3 A. I would always be interested in what Teva 4 is doing because of their sophistication as a 5 pharmaceutical company, but it doesn't relate to my 6 report and it doesn't impact my opinions. 7 Q. Uh-huh. But if Teva is testing for 8 nitrosamines now for a new product in ways that were 9 available to it prior to 2018, that would be 10 pertinent, would it not? 11 MS. LOCKARD: Objection. Speculation. 12 Foundation. 13 THE WITNESS: Well, the way I would try to 14 couch it in terms of my report is Teva should be 15 following the 2021 guidance on nitrosamine 16 impurities, and how they deal with those 17 recommendations from FDA, as I say, would be of 18 scientific interest to me, but not pertinent to my 19 report. 20 BY MR. STANOCH: 21 Q. That's fair. Do you know whether Teva is 22 following the FDA 2021 guidance on nitrosamine 23 impurities regarding its development of a new 24 valsartan combination product for the U.S. market? 25 A. Do I know what about that? I'm sorry.</p>

<p style="text-align: right;">Page 222</p> <p>1 Q. Do you know whether Teva -- or strike 2 that. 3 Do you know how, if at all, Teva is 4 following the FDA 2021 guidance on nitrosamine 5 impurities regarding Teva's development of a new 6 valsartan combination product for the U.S. market? 7 A. No, I have no idea, and I'm sure Teva 8 might regard that as confidential information. 9 Q. Uh-huh. You reference throughout your 10 report, and we can look at particular paragraphs, 11 pharmaceutically equivalent and bioequivalent; is 12 that right? 13 A. Yes, I do speak to those points, 14 Mr. Stanoch. 15 Q. Okay. And we can look -- you can look at 16 any paragraph you like, but you can look at, say, 17 Paragraph 60, where you mention both these terms, if 18 that's helpful. 19 A. Okay. Thank you. I'll go to Paragraph 20 60. Okay. And that's on page 19? 21 Q. Yes. Are you there? 22 A. Yes, I am, sir. 23 Q. Okay. Now, what do you mean by 24 "bioequivalent," as you use the term in your report? 25 A. Well, it's a requirement for a generic</p>	<p style="text-align: right;">Page 224</p> <p>1 equivalence means both pharmaceutically equivalent 2 and bioequivalent. 3 Q. Uh-huh. Isn't it true, Doctor, that 4 therapeutic equivalence includes pharmaceutical 5 equivalence, bioequivalence, as well as having the 6 same clinical effect and safety profile? 7 A. No, I wouldn't add that, Mr. Stanoch. I 8 think the purpose of the bioequivalence study is to 9 say the bioequivalence study substitutes for 10 assessment of clinical safety and efficacy. 11 Q. Okay. Let's look at the next exhibit. 12 Stand by. 13 This will be Exhibit 13. It's Tab 10 in 14 your binder, sir. 15 (Whereupon, Exhibit 13 was marked for 16 identification.) 17 BY MR. STANOCH: 18 Q. Let me know when you are there. 19 A. Okay. I'm looking at the Orange Book 20 preface. 21 Q. Right. This is a copy of the Orange Book 22 preface, correct? 23 A. Yes. 24 Q. And you are certainly familiar with the 25 Orange Book, I take it, right?</p>
<p style="text-align: right;">Page 223</p> <p>1 manufacturer to show bioequivalence between their 2 proposed product and the reference listed drug. And 3 it's expressed in law and regulations as an absence 4 of difference in terms of the rate and extent of the 5 generic product compared to the reference listed 6 drug. 7 Q. What do you mean by the term 8 "pharmaceutically equivalent" as used in your 9 report? 10 A. Well, if you, again, look at the law and 11 regulations, "pharmaceutical equivalence" means the 12 same active ingredient; different impurities, 13 possibly; the same dose form; the same strength; and 14 the same route of administration. 15 So the two terms together, if they are met 16 by a generic manufacturer, allow the agency to 17 declare that the products are therapeutically 18 equivalent, and if those requirements are satisfied, 19 among other things, then FDA can give an AB rating 20 in the Orange Book. 21 Q. And then I think in this paragraph, the 22 second sentence, you explain what you mean by 23 therapeutic equivalence; is that right? 24 A. Yes, and I may have gotten a little bit 25 ahead of your questioning, but therapeutic</p>	<p style="text-align: right;">Page 225</p> <p>1 A. Yes. 2 Q. And what is the Orange Book? 3 A. It's an FDA publication entitled Approved 4 Drug Products with Therapeutic Equivalence 5 Evaluations. And then after that, we always say, 6 "commonly referred to as the Orange Book." And the 7 reason for that, it is an orange book. 8 I even know how it came to have the color 9 orange. It was actually created around the time of 10 Halloween, so that's why it's colored orange. 11 But it lists the FDA-approved products 12 approved under the NDA/ANDA system. 13 I'll stop there, Mr. Stanoch. 14 Q. Okay. I appreciate that answer, including 15 the color commentary on the Orange Book, Doctor. 16 If you can turn to the section 1.2, 17 "Therapeutic Equivalence-Related Terms." 18 A. Yeah, I'm getting there. 1.1. 19 Okay. I'm there. 20 Q. And this section talks about certain 21 terms. Do you see that? 22 A. I do. 23 Q. And one of those terms is "therapeutic 24 equivalents," correct? 25 A. Yes. Under 1.2.</p>

<p>Page 226</p> <p>1 Q. Yes. And could you just read us that 2 first paragraph there for "Therapeutic Equivalents," 3 where it says, "Approved drug products are"? 4 A. "Are drug products in identical dosage 5 forms and route(s) of administration" and "contain 6 identical amounts" -- 7 Q. Oh, oh. Oh, oh, oh, oh, Doctor. I'm 8 sorry to stop you. I was trying to direct you to 9 the paragraph that is there for "Therapeutic 10 Equivalents." Do you see that a little down? 11 A. Oh, sure. Down below? 12 Q. Yes. And just that -- it's three lines, 13 the first paragraph. Do you see that? 14 A. Yeah, where it says, "Approved drug 15 products"? 16 Q. Yes, sir. Could you just read that 17 paragraph? 18 A. Sure. "Approved drug products are 19 considered to be therapeutic equivalents if they are 20 pharmaceutical equivalents for which bioequivalence 21 has been demonstrated, and they can be expected to 22 have the same clinical effect and safety profile 23 when administered to patients under the conditions 24 specified in the labeling." 25 Q. Right. And that second clause there that</p>	<p>Page 228</p> <p>1 look through it, that you don't mention anything 2 about a therapeutic equivalent having the same 3 clinical effect and safety profile. 4 A. Well -- 5 Q. Why did you leave that part out? 6 A. You know, Mr. Stanoch, I have to say, it's 7 an unimportant question. I think everybody knows 8 that if you show pharmaceutical equivalence and 9 bioequivalence, you then are allowed to have the 10 same labeling as the reference listed drug, 11 substantively, and this means you will have the same 12 clinical effect and safety. 13 I don't know why you are questioning my 14 words in my report, so perhaps you can explain that 15 at the right time. 16 Q. Well, we can agree that your Paragraph 60 17 does not include the words "same clinical effect and 18 safety profile," right? 19 A. No, and it's certainly understood, and I 20 think any reasonable person would understand, what I 21 meant when I talked about pharmaceutical equivalence 22 and bioequivalence. 23 Q. So show me in Paragraph 60 where those 24 words appear then, Doctor. 25 A. Which words?</p>
<p>Page 227</p> <p>1 you read, that is something that is absent from your 2 characterization of therapeutic equivalence in 3 Paragraph 60 of your report, correct? 4 A. Yes. I think -- my hope -- everything is 5 aligned and in agreement, but that is what I mean 6 when I made those statements in Paragraph 60. 7 Q. And earlier I think you said that same 8 clinical effect and safety is not part of 9 therapeutic equivalence. Are you changing your 10 testimony that you agree that a therapeutic 11 equivalent can be expected to have the same clinical 12 effect and safety profile when administered to 13 patients under the conditions specified in the 14 label? 15 A. Well, I think, without quibbling with you, 16 Mr. Stanoch, what I was trying to say is in terms of 17 the application process, the demonstration is the 18 end of the sentence. And if those two types of 19 equivalence are demonstrated, then, as you want to 20 go on and say, they can be expected to have the same 21 clinical effect and safety. But in terms of the 22 concept of therapeutic equivalence, it stops with 23 demonstration. 24 Q. Well, because I don't see anywhere in your 25 report, doing a word search, and you can certainly</p>	<p>Page 229</p> <p>1 Q. "Same clinical effect and safety profile." 2 A. I don't say that. That's what therapeutic 3 equivalence means. 4 Q. Uh-huh. 5 A. "Therapeutic equivalence" are the same 6 words as "same clinical effect and safety profile." 7 Q. Uh-huh. Right. And those words do not 8 appear anywhere in your report, though? 9 A. "Therapeutic equivalence" appears there, 10 and it means the same thing as identical safety and 11 efficacy outcomes. That's what it means to have the 12 same labeling as the reference listed drug. 13 Q. Well, Doctor, I want to make sure we're 14 not talking past each other. I'm looking at your 15 Paragraph 60, and it says, "Therapeutic equivalence 16 means that the drug is pharmaceutically equivalent 17 and bioequivalent for the same use," period; is that 18 right? 19 A. Mr. Stanoch, I just really am not 20 following your line of questioning. Can you be more 21 clear? 22 Q. Oh, absolutely, Doctor. I'm looking at 23 the words you wrote. 24 A. I think I'm -- 25 Q. So let's look at Paragraph -- go ahead.</p>

<p>Page 230</p> <p>1 A. Mr. Stanoch, let me finish my answer. 2 Q. Please. 3 A. I think I am perfectly clear here. 4 Anybody would understand what I'm saying who 5 understands generic substitution. Now, what is it 6 about my statement or my words that you are not 7 getting? 8 Q. I'm getting it about the words that are 9 not there, Doctor, that's my first step. I'm 10 looking at Paragraph 60. Can we agree -- 11 A. Well -- 12 Q. Let me finish my question, Doctor, I let 13 you finish your answer, please. 14 Your Paragraph 60, when you're defining 15 therapeutic equivalence, you say, "Therapeutic 16 equivalence means that the drug is pharmaceutically 17 equivalent and bioequivalent for the same use," 18 period, correct? 19 A. I don't think you are reading my words 20 correctly. 21 Q. Well, you turn to Paragraph 60, 22 Dr. Williams. 23 A. Would you please try to read my words 24 correctly? 25 Q. Why don't you read Paragraph 60 to me,</p> <p>Page 231</p> <p>1 Dr. Williams? 2 A. All right. I'll be glad to. "Generic 3 drugs that are pharmaceutically equivalent and 4 bioequivalent to the" reference listed drug and "are 5 deemed therapeutically equivalent and are 6 interchangeable with the" reference listed drug. 7 Now, what part of that don't you understand? 8 Q. Please keep reading, Doctor. 9 A. "Therapeutic equivalence means" "the drug 10 is pharmaceutically equivalent and bioequivalent for 11 the same use." We're talking about the labeling. 12 In other words, if you're pharmaceutically 13 equivalent and bioequivalent, you get to use the 14 same labeling as the referenced listed drug. If you 15 have the same labeling, you will necessarily have 16 the same clinical effect and safety profile. 17 I think these words are almost 18 self-evident, and I really wonder why I haven't been 19 clear about it with you. 20 Q. Doctor, I'm asking you to tell us where in 21 Paragraph 60 you write that therapeutic equivalence 22 can be expected to have the same clinical effect and 23 safety profile? 24 A. I don't write it. I never said I did. 25 Q. And you don't write it anywhere in your</p>	<p>Page 232</p> <p>1 report, correct? 2 A. I don't need to write it in my report. 3 It's not pertinent. It's unnecessary. 4 Q. Uh-huh. And does valsartan containing 5 nitrosamine impurities have the same safety profile 6 as valsartan that do not have nitrosamine 7 impurities? 8 A. Impurities are not a determinant of either 9 pharmaceutical equivalence or bioequivalence, and 10 that would include nitrosamine impurities. 11 Q. We're talking therapeutic equivalence now, 12 aren't we? 13 A. I don't know. Is that your question? 14 Q. That's what we have been talking about, 15 Dr. Williams. Let me ask it again. 16 Do you believe valsartan containing 17 nitrosamines have the same safety profile as 18 valsartan that does not contain any nitrosamines? 19 A. Okay. 20 MS. LOCKARD: Objection. Form of the 21 question. Vague. 22 THE WITNESS: That is a different 23 question. And I would say, with appropriate limits, 24 yes, the answer to your question is yes. 25</p> <p>Page 233</p> <p>1 BY MR. STANOCH: 2 Q. Well, what do you mean by "appropriate 3 limits"? 4 A. Well, for example, the interim limits that 5 FDA set in December 2018 for -- 6 Q. In absence of those limits, do you believe 7 valsartan containing nitrosamines has the same 8 safety profile as valsartan that does not contain 9 any nitrosamines? 10 A. Are you asking my personal opinion? Or 11 are you asking me as part of my report? 12 Q. You are the one opining on therapeutic 13 equivalence, Doctor, so I'm asking you, both in your 14 opinions and in your personal knowledge. 15 A. I would say it would have the same 16 therapeutic outcome in terms of safety and efficacy. 17 If somebody wants to give data that suggests 18 otherwise, the FDA could look at that data. 19 Q. Uh-huh. You are talking about therapeutic 20 outcomes, you are referring to whether the drug 21 works for its intended purpose, right? 22 A. I would say when we look at these words, 23 yes, we are talking about the valsartan molecule. 24 Q. Right. And still the issue we're trying 25 to get at here, Doctor, is: In the absence of</p>
---	---

<p style="text-align: right;">Page 234</p> <p>1 interim limits, do you believe valsartan containing 2 nitrosamines, which you have agreed is part of the 3 cohort of concern, has the same safety profile as 4 valsartan that does not contain nitrosamines? 5 A. Well, let's back up a little bit. First 6 of all, we understand that the impurity profile can 7 be different in the drug substance of the generic 8 compared to the reference listed drug. And there 9 could be many, many impurities in those two drug 10 substances with unknown pharmacologic effects. 11 When you see a particular impurity of 12 concern, you would like to put a limit on it, 13 including whether it's a genotoxic impurity or not. 14 That's the whole idea behind reporting, 15 identification, and qualification. 16 I think nitrosamine impurities here are 17 part of the general approach to impurity handling. 18 So I would say if nitrosamine impurities are handled 19 the way other impurities are handed in the world of 20 generic substitution, yes, you would get the same 21 safety and efficacy outcomes. 22 Q. What if they are not handled in the way 23 other impurities are handled? 24 A. Well, if I don't -- can you be more 25 specific in your question in terms of how they would</p>	<p style="text-align: right;">Page 236</p> <p>1 commonly found in foodstuffs and they can be allowed 2 in chemically synthesized drugs at certain levels. 3 And the goal here of this whole effort really has 4 been to identify them and make sure they do not 5 exceed those levels. 6 BY MR. STANOCH: 7 Q. Would you advise patients to keep taking 8 recalled valsartan products? 9 MS. LOCKARD: Objection. Speculation. 10 Outside the scope. 11 THE WITNESS: Well, that seems a very odd 12 question since they were recalled. Is that a 13 hypothetical? 14 BY MR. STANOCH: 15 Q. Well, we are just trying to say what you 16 would do with a patient, Doctor. And by the way, 17 you are a doctor, correct? 18 A. That's right. 19 Q. You have an active medical license, 20 correct? 21 A. I do not. 22 Q. You do not. When was your medical license 23 last active? 24 A. In 1990. I stopped treating patients 25 clinically when I went to FDA in 1990.</p>
<p style="text-align: right;">Page 235</p> <p>1 be handled differently? 2 Q. Sure. Prior to June 2018, assume there is 3 valsartan that contains nitrosamines and valsartan 4 that does not contain nitrosamines. Do they have 5 the same safety profile? 6 A. We just don't know that. 7 Q. So then how -- 8 A. I mean, for all I know, the valsartan drug 9 substances that contain nitrosamine may have been at 10 perfectly safe levels. I just don't know that. 11 Q. Uh-huh. 12 A. FDA finally decided they need to be below 13 certain interim limits. But even there, I think FDA 14 would say the risk was very low and that their 15 limits were very conservative. So you are asking a 16 question that would be very difficult to answer. 17 Q. Uh-huh. Well, in the real world, Doctor, 18 right, if you go to a patient and you say to the 19 patient, do you want this valsartan that contains 20 nitrosamines or do you want this valsartan that does 21 not contain nitrosamines, what do you advise your 22 patient? 23 MS. LOCKARD: Objection. Outside the 24 scope of his expertise. 25 THE WITNESS: I would say nitrosamines are</p>	<p style="text-align: right;">Page 237</p> <p>1 Q. Uh-huh. Uh-huh. And would you advise a 2 patient, if given the choice, to take valsartan that 3 contained nitrosamines or valsartan that did not 4 contain nitrosamines? 5 MS. LOCKARD: Objection. Outside the 6 scope of his expert report and opinions. 7 THE WITNESS: You know, it's a 8 hypothetical. I'm going to give you an answer that 9 may not seem appropriate. 10 But I worked once with a very 11 sophisticated chemist at FDA who said you get more 12 impurities in the back of a Washington, D.C., bus 13 than you will ever get from your medicines. 14 So, you know, it's a question of risk, 15 relative risk, severity of risk, and I just don't 16 think I can answer your question. 17 BY MR. STANOCH: 18 Q. You have a -- oh, sorry. Go ahead. 19 A. I would say to patients, FDA will control 20 impurities within the -- nitrosamine impurities 21 within your medical products appropriately in 22 accordance with the new guidance. 23 Q. Uh-huh. Prior to the FDA guidance in 24 December 2018, right, would you advise a patient to 25 take valsartan with nitrosamines or the valsartan</p>

<p style="text-align: right;">Page 238</p> <p>1 without nitrosamines?</p> <p>2 A. Well, let me point out that FDA told</p> <p>3 people to keep on taking their valsartan products</p> <p>4 before the interim limits were set.</p> <p>5 Q. And that was so they don't drop dead of a</p> <p>6 heart attack, correct?</p> <p>7 MS. LOCKARD: Objection. Speculation.</p> <p>8 THE WITNESS: I would not say that it way.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. Right. Because they did not want to go</p> <p>11 off your medication for hypertension abruptly until</p> <p>12 you had a substitute; isn't that right, Doctor?</p> <p>13 A. Well, they did not want people to abruptly</p> <p>14 stop their medicines containing valsartan.</p> <p>15 Q. Absolutely correct. But don't you think</p> <p>16 the idea there was: Don't abruptly stop, but you</p> <p>17 should probably get a different valsartan product or</p> <p>18 other substitute as soon as you can?</p> <p>19 MS. LOCKARD: Objection. Speculation.</p> <p>20 Outside the scope of his expert testimony and this</p> <p>21 report.</p> <p>22 THE WITNESS: I'll just stand by what FDA</p> <p>23 said. They said, don't -- you know, the risk here</p> <p>24 is very low. The recall classification risk was</p> <p>25 low. And they were saying, don't stop your</p>	<p style="text-align: right;">Page 240</p> <p>1 Can you imagine how many patients you</p> <p>2 would have to study to see a difference even if it</p> <p>3 existed?</p> <p>4 Q. Let's talk about today, right. The FDA</p> <p>5 limits for nitrosamines exist today, right?</p> <p>6 A. Yes.</p> <p>7 Q. Does a valsartan drug that contains</p> <p>8 nitrosamines above those limits have the same safety</p> <p>9 profile as a valsartan drug with nitrosamines below</p> <p>10 those limits?</p> <p>11 A. Far as I know, they have the same safety</p> <p>12 and efficacy outcomes.</p> <p>13 Q. So then what is the point of the interim</p> <p>14 limits, then, which say, if you have more than this,</p> <p>15 you can't sell it?</p> <p>16 A. You have to set some kind of limits.</p> <p>17 That's what an impurity is. An impurity needs a</p> <p>18 limit.</p> <p>19 Q. But you just said, Doctor, that a</p> <p>20 valsartan product with nitrosamines above the limits</p> <p>21 as they exist today is just as safe as one that has</p> <p>22 nitrosamines below the limit, didn't you?</p> <p>23 A. I have no understanding that it has a</p> <p>24 different safety profile in terms of any kind of</p> <p>25 risk.</p>
<p style="text-align: right;">Page 239</p> <p>1 valsartan medicines abruptly under these</p> <p>2 circumstances.</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. Uh-huh. All right. So let's go back to</p> <p>5 the safety profile one more time, Doctor. You are</p> <p>6 not going to tell us whether you think a valsartan</p> <p>7 with nitrosamines might have a different safety</p> <p>8 profile than a valsartan without nitrosamines?</p> <p>9 A. I absolutely don't know, and to answer</p> <p>10 that question would be a very difficult comparative</p> <p>11 clinical trial.</p> <p>12 Q. Uh-huh. Well, let's say right now with --</p> <p>13 let's say today --</p> <p>14 MS. LOCKARD: Wait. Hold on a minute.</p> <p>15 Let him --</p> <p>16 BY MR. STANOCH:</p> <p>17 Q. Oh, go ahead, Doctor.</p> <p>18 A. And if you think about what it would take</p> <p>19 to answer that question, imagine a comparative</p> <p>20 clinical trial where you have patients randomized</p> <p>21 between two valsartan-containing products, one with</p> <p>22 one limit set by FDA and one with no limits before</p> <p>23 FDA set limits. Imagine the outcome of that</p> <p>24 clinical trial. I think it would be very hard to</p> <p>25 see a difference.</p>	<p style="text-align: right;">Page 241</p> <p>1 Q. If not for safety, Doctor, then why is the</p> <p>2 FDA setting limits for nitrosamines in the first</p> <p>3 place?</p> <p>4 A. They need to set a limit for the impurity,</p> <p>5 and they base it on that M7 guidance in terms of how</p> <p>6 you set limits for genotoxic impurities.</p> <p>7 Q. Which is --</p> <p>8 A. Remember, it's a very difficult decision</p> <p>9 because nitrosamine impurities are present in food</p> <p>10 and foodstuffs and in the environment, in the water.</p> <p>11 And you saw it in the M7 guidance. How do you set</p> <p>12 limits when that kind of impurity is present all</p> <p>13 around us, if you will?</p> <p>14 FDA has to do something. They do it out</p> <p>15 of an abundance of caution. But it doesn't mean</p> <p>16 that something above the limit was therefore toxic.</p> <p>17 Q. You can't sell a product today that is</p> <p>18 above the nitrosamine limits, correct?</p> <p>19 A. Well, I'll generally agree with you, but I</p> <p>20 will also say that in the guidance they say you can</p> <p>21 be above limits under certain circumstances with FDA</p> <p>22 approval.</p> <p>23 Q. Are you aware of any manufacturer who has</p> <p>24 sought FDA approval to sell a product with</p> <p>25 nitrosamines above the now-current limits?</p>

<p style="text-align: right;">Page 242</p> <p>1 A. No, I am not.</p> <p>2 Q. Uh-huh. And you are telling me that the</p> <p>3 FDA limits on nitrosamines have nothing to do with</p> <p>4 the safety of the drug; is that your testimony</p> <p>5 today, sir?</p> <p>6 A. I think they have to do with reducing</p> <p>7 risk, and that is how FDA would state it in terms of</p> <p>8 the M7 guidance and also the nitrosamine guidance.</p> <p>9 Q. Risk of what?</p> <p>10 A. But that risk is very difficult to</p> <p>11 quantify.</p> <p>12 Q. Risk of what?</p> <p>13 A. Risk of whatever a nitrosamine impurity</p> <p>14 might do.</p> <p>15 Q. Uh-huh. What might it do?</p> <p>16 MS. LOCKARD: Objection. Speculation.</p> <p>17 Outside the scope of his opinions.</p> <p>18 THE WITNESS: I'm sorry. Was that a</p> <p>19 question, Mr. Stanoch? I didn't hear it.</p> <p>20 BY MR. STANOCH:</p> <p>21 Q. Yes, sir. What might it do, the risk?</p> <p>22 A. Well, you can see it in the M7 guidance,</p> <p>23 that it has the propensity in certain settings to</p> <p>24 cause cancer.</p> <p>25 Q. Right. Right. The purpose of the FDA's</p>	<p style="text-align: right;">Page 244</p> <p>1 with nitrosamines below the limit or quantified at</p> <p>2 zero?</p> <p>3 MS. LOCKARD: Objection. Outside the</p> <p>4 scope of his opinions.</p> <p>5 THE WITNESS: I'm saying that</p> <p>6 hypothetically that could easily be possible.</p> <p>7 BY MR. STANOCH:</p> <p>8 Q. Uh-huh. Okay. Let's look at the exhibit</p> <p>9 some more. The next paragraph, do you see where it</p> <p>10 reads, "FDA classifies as therapeutically</p> <p>11 equivalent"? Do you see that?</p> <p>12 A. Yes.</p> <p>13 Q. And then it lists a number of criteria</p> <p>14 which the Orange Book says the FDA classifies for</p> <p>15 purposes of therapeutic equivalence, right?</p> <p>16 A. Yes. Are you reading that final paragraph</p> <p>17 on this page?</p> <p>18 Q. Yes, sir. The sentence reads, "FDA</p> <p>19 classifies as therapeutically equivalent those drug</p> <p>20 products that meet the following general criteria";</p> <p>21 do you see that?</p> <p>22 A. Yes, I do, and then it goes one, two,</p> <p>23 three -- I guess the last one is four -- five. It</p> <p>24 continues on, and I think it ends with five.</p> <p>25 Q. Yes, sir. I agree with that.</p>
<p style="text-align: right;">Page 243</p> <p>1 limits currently is because there is a risk, however</p> <p>2 quantified, to a patient if they take a pill that</p> <p>3 has nitrosamines above the limit, right?</p> <p>4 MS. LOCKARD: Objection. That's far</p> <p>5 outside the scope of his opinions. He's not giving</p> <p>6 a causation opinion.</p> <p>7 THE WITNESS: Yeah, I am not definitely</p> <p>8 not getting into causation.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. I'm not asking you either that, Doctor.</p> <p>11 What we're trying to understand here now is the</p> <p>12 safety profile of a drug that has nitrosamines above</p> <p>13 the limit. And you were telling me, correct me if</p> <p>14 I'm wrong, that it has nothing to do with safety,</p> <p>15 correct?</p> <p>16 A. No, I'm saying I don't know if there is a</p> <p>17 difference between the safety profile of the two</p> <p>18 products.</p> <p>19 Q. So --</p> <p>20 A. It may be exactly the same, and to prove</p> <p>21 that it's different would take a lot of work.</p> <p>22 That's my point.</p> <p>23 Q. Uh-huh. So you are saying that a</p> <p>24 valsartan drug with nitrosamines above the current</p> <p>25 limits may be just as safe as a valsartan product</p>	<p style="text-align: right;">Page 245</p> <p>1 And these are criteria that the Orange</p> <p>2 Book reports that the FDA uses for classifying drug</p> <p>3 products as therapeutically equivalent, correct?</p> <p>4 A. Yes.</p> <p>5 Q. All right. And one of those is Number 5,</p> <p>6 is whether the drug product is "manufactured in</p> <p>7 compliance with Current Good Manufacturing Practice</p> <p>8 regulations," correct?</p> <p>9 A. Yes, I see that.</p> <p>10 Q. And another one is 2(b), which is that the</p> <p>11 drug products "meet compendial or other applicable</p> <p>12 standards of strength, quality, purity, and</p> <p>13 identity"; did I read that correctly?</p> <p>14 A. Yes, you did.</p> <p>15 Q. Right. So for therapeutic equivalence,</p> <p>16 meaning compendial standards alone may not be</p> <p>17 sufficient per the Orange Book's guidance, correct?</p> <p>18 A. That's quite true, because sometimes there</p> <p>19 isn't a compendial standard, so in that case there</p> <p>20 would be a private, FDA-agreed standard.</p> <p>21 Q. Uh-huh. And there may be other examples</p> <p>22 as well, correct?</p> <p>23 A. Well, I don't know what you mean by that.</p> <p>24 I'm thinking of the case where there is no</p> <p>25 compendial standard.</p>

<p style="text-align: right;">Page 246</p> <p>1 Q. Uh-huh. And there may be standards 2 reflected in ICH or other industry guidance, 3 correct? 4 A. No, I wouldn't go there. I'm trying to 5 think of a simple case, that many times FDA doesn't 6 have a monograph for a drug substance or a drug 7 product -- 8 Q. Uh-huh. 9 A. -- in which case, the quality would be 10 controlled with a private specification agreed to 11 with FDA as part of the review process. 12 Q. Uh-huh. This criteria 2(b) does not say 13 anything about the absence of a compendial standard, 14 correct? 15 A. Well, I think it does. It says, "meet 16 compendial or other applicable standards." 17 Q. Uh-huh. 18 A. The other applicable standards would be 19 the private specification agreed to with FDA. 20 Q. Uh-huh. And I think you testified about 21 this earlier, that a manufacturer can agree to 22 different specifications or standards for a drug in 23 consultation with the regulator, right? 24 A. Yeah, I think that's generally part of 25 what I'm saying here.</p>	<p style="text-align: right;">Page 248</p> <p>1 found to be adulterated or otherwise improperly 2 marketed, right? 3 A. Yeah. I think what we're getting at here, 4 too, is the idea that there can be recalls if a 5 product fails its specifications, and that happens 6 all the time, as I stated in my report. That 7 doesn't mean it will be taken out of the Orange Book 8 or its AB rating will be changed. I think that's 9 what we're talking about here. 10 Q. You can put that aside for now. 11 (Whereupon, a brief discussion off the 12 record.) 13 BY MR. STANOCH: 14 Q. Are you aware of whether Teva has a master 15 drug file for valsartan? 16 A. If I understand your question, 17 Mr. Stanoch, are you saying Teva makes its own 18 valsartan? 19 Q. Right. Do you understand Teva to have a 20 drug master file for valsartan? 21 A. Yes, thank you. 22 No, I am not aware of that. I would think 23 it would be possible. 24 Q. Would seeing documents related to Teva's 25 own valsartan DMF be pertinent to you in terms of</p>
<p style="text-align: right;">Page 247</p> <p>1 Q. Then let's flip a few more pages. 2 Unfortunately it's not numbered, Doctor. This is 3 the section that has 1.7, "Therapeutic Equivalence 4 Evaluation Codes." Tell me when you are there. 5 A. Okay. I'm there. 6 Q. And if you look at the first paragraph of 7 that page, it begins in bold, "Every product in the 8 Orange Book is subject at all times to regulatory 9 action." Do you see that? 10 A. Yes, I do, at the very top of the page. 11 Q. And you can read that full paragraph if 12 you like, but I want to direct your attention to the 13 penultimate sentence that begins, "FDA believes that 14 retention"; do you see that? 15 A. Yes, I do see that. 16 Q. Could you just read that sentence, just 17 that sentence, sir? 18 A. "FDA believes that retention of a 19 violative product in the Orange Book will not have 20 any significant adverse health consequences, because 21 other legal mechanisms are available to the Agency 22 to prevent the product's actual marketing." 23 Q. Thank you. And that means, does it not, 24 that just because a drug is listed in the Orange 25 Book, does not mean that it's immune from being</p>	<p style="text-align: right;">Page 249</p> <p>1 whether Teva could have known about nitrosamines 2 forming as part of the API manufacturing process for 3 valsartan? 4 MS. LOCKARD: Objection. Lacks 5 foundation. 6 THE WITNESS: I wouldn't rule it out, but 7 I don't think -- I didn't see any documents like 8 that. 9 BY MR. STANOCH: 10 Q. Uh-huh. Stand by. 11 Could you turn in your report, sir -- it's 12 beginning around Paragraph 120, the first Paragraph 13 120. I think it's around page 41. I don't have the 14 exact copy you have in front of you. 15 A. 120? 16 Q. Yes, sir. 17 A. On page 41? 18 Q. Yes. 19 A. "Doctor Panagos asserts"? 20 Q. Yes. Are you there? 21 A. Yes, I am. 22 Q. Great. And in this subsection, you're 23 rebutting, if you will, opinions offered by 24 Dr. Panagos, correct? 25 A. Yes, I agree.</p>

<p>Page 250</p> <p>1 Q. Right. And why don't you read the first 2 couple sentences for us there in Paragraph 120? 3 A. "Dr. Panagos asserts that the safety and 4 efficacy of a medication must be proven by the 5 manufacturer to the FDA so that the medication may 6 receive approval." I think it's a she. She 7 "further states that this information serves as a 8 warranty for the medication ensuring that it meets 9 the quality standards outlined by" "FDA." 10 Should I stop? 11 Q. You can stop now. 12 A. Okay. 13 Q. And you picked up on part of it. You 14 understand, you know, Dr. Panagos is a female, 15 correct? 16 A. Yes, I see that now. 17 Q. Okay. If you can scroll down, sir, to 18 Paragraph 123. Tell me when you are there. 19 A. Yes, I see that statement. 20 Q. Right. And it begins, "Dr. Panagos 21 describes TPPs as payors at risk for purchases of 22 affected valsartan containing drugs products." 23 A. Yes. 24 Q. And what are TPPs, as you refer to it 25 there?</p> <p>Page 251</p> <p>1 A. I think Dr. Panagos uses that abbreviation 2 for third-party payors. 3 Q. What is your understanding of a 4 third-party payor in this case? 5 A. It might be an insurance company or -- you 6 know, I'm trying to think of a term. You know, a 7 medical care organization that pays for medicinal 8 products. 9 Q. Uh-huh. Right. And then in the next 10 sentence you talk about risk about stopping your 11 antihypertensive treatment? 12 A. Yes. 13 Q. Right. You are talking about two 14 different types of risk here in this paragraph, 15 aren't you? 16 A. Well, I'm not sure I understand your 17 question. Perhaps you could continue. 18 Q. Sure. So in the first sentence you are 19 referring to TPPs as payors at risk, right? 20 A. Okay. 21 Q. Right. And then later you talk about, you 22 know, risks of stopping antihypertensive treatment, 23 right? 24 A. Yes. 25 Q. Right. So what I'm clarifying is: You</p>	<p>Page 252</p> <p>1 are not saying that TPPs were at any sort of 2 physical risk involving valsartan, right? 3 A. No, as I understand Dr. Panagos, she was 4 referring to financial risk. 5 Q. Right. I would agree with that. You 6 understand that TPPs are at financial risk for 7 purchases of their, say, insureds, right? 8 A. Yes. And now I see your point. It is two 9 different kinds of risks. 10 Q. Well, I appreciate your clarification. I 11 think we're on the same page. 12 And then in the next paragraph, in the 13 second sentence, you mention, "Both the TPPs and 14 patients got value for these products up to the 15 point they were recalled from the market." Do you 16 see that? 17 A. Yes. 18 Q. What do you mean by "value" there? 19 A. Well, I think it gets to my general 20 opinion that these were useful products. They were 21 pharmaceutical equivalent. They were bioequivalent. 22 They were AB-rated. And practitioners and patients 23 used them successfully for the indications such as 24 hypertension. 25 Q. Right. So are you opining on whether or</p> <p>Page 253</p> <p>1 not patients or TPPs received value for the 2 valsartan they purchased prior to the recalls? 3 A. I think if you look at my concluding 4 opinions, we have to pay attention to that. 5 Q. Of course. 6 A. My opinions are they were not adulterated. 7 They were pharmaceutically equivalent and 8 bioequivalent, and they were AB-rated. They were 9 not misbranded. 10 Q. Right. I'm -- 11 A. So I think I'm answering your question and 12 speaking specifically to my opinions. 13 Q. Right. I'm looking at your conclusions, 14 Doctor, at the very last page of your report, and I 15 don't see anything about opinions on who might have 16 received what value for valsartan products, so 17 that's what I'm trying to understand here. 18 A. I guess if I wanted to extend my 19 conclusions, my opinions to this particular 20 paragraph, I would say third-party payors got value. 21 Q. Uh-huh. And again, you define the value 22 that the third-party payors got as what? 23 A. In terms of getting a safe and effective 24 product that could be used to treat patients in 25 accordance with labeled indications.</p>
--	--

<p style="text-align: right;">Page 254</p> <p>1 Q. And you are including in your definition 2 of a safe and effective drug products that have 3 nitrosamines in them, right? 4 A. Yes. And we know the products can have 5 nitrosamines in them. 6 Q. Including products that had nitrosamines 7 above the FDA's eventual limits, correct? 8 A. Well, that's the debatable point, and I'm 9 saying I just don't know if they had any different 10 safety and efficacy compared to the products below 11 that limit. 12 Q. Got it. You are not a -- you don't know 13 one way or the other whether a valsartan drug that 14 contains nitrosamines above the now-current FDA 15 limits had a different safety profile than valsartan 16 with nitrosamines below the now-current limits? 17 A. I think you are stating that correctly, 18 Mr. Stanoch. 19 Q. Uh-huh. Do patients have a choice when it 20 comes to the drugs that they are prescribed? 21 MS. LOCKARD: Objection. Speculation. 22 Outside the scope. 23 THE WITNESS: Well, they can certainly 24 talk to their doctors, and FDA encourages that, of 25 course. I would encourage it if I were at FDA. And</p>	<p style="text-align: right;">Page 256</p> <p>1 by, Doctor. 2 (Whereupon, Exhibit 14 was marked for 3 identification.) 4 BY MR. STANOCH: 5 Q. This is Exhibit 14. It should be Tab 32 6 in your binder. Tell me when you are there, sir. 7 A. Yes, I see this. Begins, "Expert: 8 Nitrosamines 'Can Slip Through.'" 9 Q. Correct. It's an article in Pharmacy 10 Times from June 29, 2021. Do you see that? 11 A. Yes, I do see it. 12 Q. And it says it includes a discussion with 13 "Edwin Gump, Ph.D., vice president of the Small 14 Modules Department at U.S. Pharmacopeia (USP)." Do 15 you see that? 16 A. Yes, I do see that. 17 Q. Are you familiar with Dr. Gump? 18 A. No, I'm not. 19 Q. Are you familiar with the Small Molecules 20 Department at USP? 21 A. Yes, I think I would -- I am familiar with 22 that. 23 Q. Uh-huh. And then if you want to -- if you 24 would flip to the third page of this document, sir. 25 Tell me when you are there.</p>
<p style="text-align: right;">Page 255</p> <p>1 I would say, yes, they do have a choice. 2 BY MR. STANOCH: 3 Q. But they would have no way of knowing, 4 would they, about whether the valsartan they 5 received prior to the recalls contained nitrosamines 6 or not, right? 7 A. Well, I'll make the general statement that 8 I don't think any label for a new drug approved by 9 the NDA or ANDA process has information about 10 impurities on the label. 11 Q. Uh-huh. So then based on the -- 12 valsartan's labeling part of the recalls, there is 13 no way a consumer would be able to make a decision 14 as to whether they wanted a valsartan product that 15 did or did not contain nitrosamines? 16 A. The only way they would know in this 17 particular instance is to read the FDA press 18 releases and talk to their physicians and 19 pharmacists. 20 Q. Right. And prior to those FDA press 21 releases, there was no way for them to know based on 22 the labeling alone? 23 A. Well, I think that's generally true, but 24 I'm not sure entirely. 25 Q. Okay. Let's mark another exhibit. Stand</p>	<p style="text-align: right;">Page 257</p> <p>1 MS. LOCKARD: You can -- to review it if 2 you need to. 3 THE WITNESS: Yeah, I'm looking at the 4 whole document just a second. It appears to be an 5 interview between a reporter, Alana, and Dr. Gump in 6 a publication for Pharmacy Times. So you want me to 7 go to the third page? One, two, three? 8 BY MR. STANOCH: 9 Q. Yes. Yep. 10 A. At the top it starts with, "class"? 11 Q. Yes, sir. If you could -- 12 A. Okay. Got it. 13 Q. Great. If you can go on that page down, 14 do you see the bolded name of the reporter, "Alana"; 15 you see that? 16 A. I do see that. 17 Q. Uh-huh. And she asks, "Right. Why are 18 nitrosamines of such particular concern?" You see 19 that? 20 A. Yes, yes. 21 Q. And why don't you read Dr. Gump's response 22 to that question, that first paragraph there, 23 beginning, "So"? 24 A. "So, I'm not a toxicologist, but 25 nitrosamines, from my reading, these are compounds</p>

<p style="text-align: right;">Page 258</p> <p>1 that have been studied for a number of years. 2 There's at least a number of compounds in this class 3 that are known mutagenic carcinogens. So, they're 4 basically fairly nasty cancer-causing actives." 5 Should I stop there? 6 Q. Yes. That's fine. I can ask questions on 7 that. 8 So do you agree with Dr. Gump that 9 nitrosamines are fairly nasty cancer-causing 10 actives? 11 MS. LOCKARD: Objection. Outside the 12 scope of his expert opinion in the 13 class-certification phase. You are asking him 14 causation opinions. 15 THE WITNESS: Well, I guess what I would 16 agree with is Dr. Gump says he is not a 17 toxicologist, and neither am I, so I agree with him 18 there. 19 BY MR. STANOCH: 20 Q. So would you agree with him that 21 nitrosamines are fairly nasty cancer-causing 22 actives? 23 MS. LOCKARD: Objection. Outside the 24 scope of his testimony. Asked and answered. 25 THE WITNESS: You know, I don't agree with</p>	<p style="text-align: right;">Page 260</p> <p>1 I mean, these are very general statements, but I 2 don't have a particular opinion about them, and they 3 don't relate to my report. 4 Q. Well, respectfully, sir, you are opining 5 on the value received from the drugs that are at 6 issue here. And I'm asking you, then, here if you 7 agree with Dr. Gump from the USP Small Molecule 8 Department about whether people don't really have a 9 choice when it comes to their drugs as opposed to 10 different foodstuffs and other things. 11 A. Is it -- 12 MS. LOCKARD: There is not a question 13 pending. 14 THE WITNESS: I just don't understand the 15 question. I mean, was there a question? Could you 16 rephrase it, perhaps, Mr. Stanoch? 17 BY MR. STANOCH: 18 Q. Do you agree that people can choose not to 19 eat their grilled burger, but people shouldn't have 20 to make a choice or have concerns about the quality 21 of their medicines? 22 MS. LOCKARD: Objection. Vague. Outside 23 the scope of his testimony for class certification. 24 THE WITNESS: And, you know, just 25 continuing on, you know, we can certainly</p>
<p style="text-align: right;">Page 259</p> <p>1 him there. That seems to be a fairly off-the-cuff 2 comment that would take a very sophisticated expert 3 to speak about the clinical impact of a particular 4 nitrosamine impurity. 5 BY MR. STANOCH: 6 Q. Uh-huh. Then would you agree with 7 Dr. Gump that nitrosamines are compounds that have 8 been studied for a number of years? 9 A. Yes, I think that's true. I would agree 10 with that. 11 Q. Uh-huh. Okay. Then why don't you move to 12 the last paragraph of that same page? It reads, 13 "But the one place." 14 A. "But the one place that people don't 15 really have a choice -- you can choose not to eat 16 that grilled burger -- but people shouldn't have to 17 make a choice" to "have concerns about the quality 18 of their medicines." 19 Q. Right. Do you agree with that statement 20 from Dr. Gump? 21 A. Well, again, these seem kind of very 22 general, unscientific statements. I mean, people 23 shouldn't have to make a -- can choose not to drink 24 your water that has nitrosamines. Does he want to 25 say that, that people should not drink their water?</p>	<p style="text-align: right;">Page 261</p> <p>1 cherry-pick statements out of this, but on the next 2 page it says, "The U.S. medicines supply is probably 3 the safest, or safe as any in the world, and we want 4 to make sure that the public really feels confident" 5 about "when they need to take a medicine that they 6 can do so and not have other things they have to 7 concern themselves about like nitrosamines." 8 I can certainly agree with that. 9 BY MR. STANOCH: 10 Q. You are agreeing to a different statement 11 that I didn't ask you about; is that what you just 12 did, Doctor? 13 A. Well, you are asking me to read at the 14 bottom of -- maybe I misread where you asked me to 15 read. If so, I apologize. 16 Q. Well, we have been at the same page, 17 Doctor. 18 A. Well, maybe I skipped over a page. Yes, 19 you had me read at the bottom of page 3; is that 20 correct, Mr. Stanoch? 21 Q. Yes, sir. 22 A. Yes, okay. I'm sorry. I jumped ahead. 23 Q. Again, do you agree with Dr. Gump's 24 statement in that paragraph, "But the one place that 25 people don't really have a choice -- you can choose</p>

<p>Page 262</p> <p>1 not to eat that grilled burger -- but people 2 shouldn't have to make a choice or have concerns 3 about the quality of their medicines"? 4 MS. LOCKARD: Objection. Vague. Outside 5 the scope of the expert witness report on class 6 certification. 7 THE WITNESS: If you are asking me if I 8 agree with Dr. Gump, I have to say I don't because, 9 you know, the presence of nitrosamine in food and 10 water and foodstuff is very uncertain, and it's 11 certainly not anything I talked about in my report. 12 But I'm not sure people can choose their foods and 13 their water so that they avoid nitrosamines. I just 14 don't know that. 15 Maybe he could make that point with regard 16 to a grilled burger, but what about all the other 17 grilled products and all the other foods that have 18 nitrosamines? It's a very general, if I may say, 19 uninformed statement, so that's why I am hesitating 20 to agree with it. 21 BY MR. STANOCH: 22 Q. So you don't agree? 23 A. I certainly agree that we need to control 24 nitrosamines in our medicines, and that's what this 25 entire effort, which began in 2018, is all about.</p> <p>Page 263</p> <p>1 Q. Are you aware of any efforts to control 2 nitrosamines in drug products prior to 2018? 3 A. I am not aware of that, Mr. Stanoch. 4 Q. Uh-huh. Would that be pertinent to the 5 opinions you are offering currently in this case? 6 A. I think it is generally in the sense that 7 science marches on, FDA marches on, drug regulation 8 gets better. We have many, many examples of that in 9 the United States. 10 And is it perfect? Are drugs perfect now? 11 No. But we can hope that in 10 or 20 years they 12 will be better than they are now. And what we see 13 happening here is an example of that happening with 14 regard to valsartan and nitrosamines. 15 Q. So you agree, then, that if information 16 was made known to a API manufacturer prior to the 17 2018 recalls about the potential for nitrosamine 18 impurities, that that should have been something 19 that was dealt with at that time, correct? 20 MS. LOCKARD: Objection. Vague. 21 THE WITNESS: I can't agree with it. It 22 does seem very vague. Perhaps you can restate the 23 question. 24 BY MR. STANOCH: 25 Q. Well, it sounds like you are saying nobody</p>	<p>Page 264</p> <p>1 knew about nitrosamines until the summer of 2018, 2 right? 3 A. That's what FDA says. I'm not saying 4 that. 5 Q. Uh-huh. Well, you are opining that 6 allegedly the FDA said it was unexpected and nobody 7 knew about it until summer of 2018, right? 8 A. Yes, FDA made a series of statements along 9 those lines. 10 Q. Right. 11 A. And it's definitely a part of my report. 12 Q. It certainly is. I can agree with that. 13 And then once the information came to 14 light about the nitrosamine impurities in valsartan, 15 the regulators in the industry took action, right? 16 A. Well, there was a series of events that 17 now have extended over the past four years and 18 extends to all the chemically synthesized drugs in 19 the country. So I guess you could say it's a very 20 comprehensive set of activities. 21 Q. And if that series of events -- oh, strike 22 that. 23 And if the information about nitrosamine 24 impurities in valsartan came to light earlier, that 25 series of events would have started earlier,</p> <p>Page 265</p> <p>1 correct? 2 MS. LOCKARD: Objection. Vague. 3 THE WITNESS: I suppose you could make 4 that hypothetical, and I wouldn't debate you. 5 BY MR. STANOCH: 6 Q. Let's flip to the fourth page of the 7 article in front of you, Doctor. 8 A. One, two, three, four. Okay. Is this the 9 page that starts at the top, "ones that" "need"? 10 Q. Correct, sir. If you can go down to the 11 paragraph where Mr. Gump's name is bolded again, and 12 it begins, "That's a great question." Do you see 13 that? 14 A. Yes, Dr. Gump, "That's a great question." 15 Q. Right. And then can you read the next 16 sentence? 17 A. "So, I think I mentioned that 18 manufacturers have a responsibility to evaluate 19 their processes and their products and look for 20 chance where they could have a risk of 21 nitrosamines." 22 Q. Do you agree with that statement? 23 A. Well, certainly, because Dr. Gump is 24 echoing the FDA guidance that came out well before 25 this interview --</p>
--	---

Page 266

1 Q. Uh-huh.
 2 A. -- particularly in February 2021, and this
 3 is the end of June 2021.
 4 Q. Uh-huh.
 5 A. Dr. Gump, if I may say so, is on very safe
 6 ground.
 7 Q. And would --
 8 (Reporter clarification.)
 9 THE WITNESS: Safe ground, S-A-F-E.
 10 BY MR. STANOCH:
 11 Q. Would you agree that prior to summer of
 12 2018 manufacturers had a responsibility to evaluate
 13 their processes and their products to look for the
 14 chances of genotoxic impurities?
 15 MS. LOCKARD: Objection. Outside the
 16 scope.
 17 THE WITNESS: Yes, I think that is what
 18 the guidance that we looked at before speaks to, and
 19 that had a date -- I guess it was a final date of
 20 2018.
 21 BY MR. STANOCH:
 22 Q. You are referring to the ICH guidance,
 23 correct?
 24 A. Yes, the M7.
 25 Q. Right. And then there were prior

Page 267

1 iterations of that same guidance, right?
 2 A. Yes. And other guidances, too, an ICH
 3 guidance and, I believe, an EMA guidance.
 4 Q. Uh-huh. And manufacturers would have
 5 responsibilities to evaluate their processes and
 6 products for genotoxic impurities under the prior
 7 iterations of the ICH and EMA guidance, whatever
 8 they may be at that period of time, right?
 9 A. Yes, and there are certainly other
 10 statements in Dr. Gump's interview that we could
 11 look to. But I'll wait for your questions,
 12 Mr. Stanoch.
 13 Q. Okay. Very good. So why don't we
 14 actually put that aside for now, Doctor.
 15 Some other questions about your
 16 professional experience, sir.
 17 A. Yes, please.
 18 Q. You are not a Pharm.D., correct?
 19 A. I am not.
 20 Q. Have you ever dispensed a drug?
 21 A. I have not.
 22 Q. Have you ever prescribed any valsartan or
 23 Diovan?
 24 A. I have not.
 25 Q. Have you prescribed any drug since 1990?

Page 268

1 A. You know, actually, I haven't. I don't
 2 write prescriptions.
 3 Q. Do you know what a pharmacy and
 4 therapeutics committee is?
 5 A. I do.
 6 Q. Okay. And what is that?
 7 A. Well, I would say it's a group of experts
 8 that build a formulary for a defined benefit offered
 9 to a community. So, for example, a hospital, a big
 10 hospital in an inner city may have a P&T committee
 11 that builds a formulary that the physicians and
 12 pharmacists in that community can use to write and
 13 dispense drugs -- write prescriptions and dispense
 14 drugs.
 15 Q. We can call that pharmacy and therapeutics
 16 committee a P&T committee, right?
 17 A. Yes, sir.
 18 Q. Have you ever served on a P&T committee?
 19 A. No.
 20 Q. Have you ever consulted with any P&T
 21 committee?
 22 A. Well, I remember during my days at USP I
 23 met with the Kaiser P&T committee to discuss how
 24 they work, but I wouldn't call that a consultation.
 25 Q. Okay. The --

Page 269

1 A. They weren't asking my opinion. It was
 2 more an exchange of information.
 3 Q. Fair enough. And roughly when was that?
 4 A. Oh, gee. 2010.
 5 Q. 2010. Have you ever been asked by any
 6 third-party payor to consult on their formulary
 7 designs?
 8 A. No. But I should mention perhaps at this
 9 point that USP was asked to consider model
 10 guidelines for formularies as part of the Medicare
 11 Part D benefit. And that was a large effort for the
 12 organization when I was there, and as far as I know,
 13 it's still continuing.
 14 Q. Were you part of that effort while you
 15 were working at USP?
 16 A. Yes, as a matter of fact, I chaired an
 17 expert committee which created the first model
 18 guidelines, and that was a very interesting effort.
 19 Q. Uh-huh. And what are the name of the
 20 guidelines?
 21 A. I would call them the USP model guidelines
 22 for the Part D -- to assess Part D formulary plans.
 23 Q. Uh-huh. You are not opining here, Doctor,
 24 about what information a P&T committee relies on
 25 when making decisions about reimbursements for drug

Page 270

1 products, correct?
 2 A. No, I am not.
 3 Q. All right. Have you ever worked for a
 4 third-party payor?
 5 A. I have not.
 6 Q. Do you know what a PBM is?
 7 A. It's a pharmacy benefit manager.
 8 Q. Have you ever worked for a PBM?
 9 A. No, I have not.
 10 Q. Have you ever consulted with a PBM
 11 professionally?
 12 A. No, I haven't.
 13 Q. Right. You are not here to opine on
 14 anything a PBM might rely on when it's making any
 15 determinations regarding a pharmacy benefit,
 16 correct?
 17 A. No. No. I don't believe that's any part
 18 of my opinions.
 19 Q. Okay. Let's mark another exhibit. Stand
 20 by.
 21 (Whereupon, Exhibit 15 was marked for
 22 identification.)
 23 BY MR. STANOCH:
 24 Q. This is Exhibit 15. It should be Tab 31
 25 in your binder, sir. Just let me know when you are

Page 271

1 there.
 2 A. I think it's coming toward me.
 3 Okay. I see something called ProPharma
 4 Group.
 5 Q. Right. And you can look through these
 6 pages, but this is all of the invoices that were
 7 produced to us for your work in this case. And if
 8 you can just look through them and confirm that this
 9 is the totality of the invoices for your work thus
 10 far in this case.
 11 A. ProPharma. I'm a little confused about
 12 ProPharma Group. Oh, maybe I shouldn't be confused
 13 about that group. Okay, yes, I see these are my
 14 invoices, and these invoices should be concurrent
 15 until the end of January of this year. Okay.
 16 Q. Right. I mean, the first few pages, I see
 17 the ProPharma Group, dated 11/30/21. Do you see
 18 that?
 19 A. 11/30/2021, yes, I do see that.
 20 Q. Right. And then the next few pages is for
 21 work from an invoice dated 12/31/21, right?
 22 A. Yes, I submit my hours monthly.
 23 Q. And then the next page after that is an
 24 invoice for your work through January 31, 2022,
 25 right?

Page 272

1 A. Well, wait a minute. I see a third page
 2 that looked like July 2021. Yes, that could be
 3 true.
 4 Q. Right. Well, I guess there is a couple
 5 things here. First is: Why do some of your
 6 invoices say ProPharma Group and the other one at
 7 the end says NDA Partners?
 8 A. My consulting group, NDA Partners, was
 9 sold in 2021 to a larger company called Planet
 10 Pharma, and then Planet Pharma in turn merged with
 11 ProPharma, so the overarching organization for my
 12 consulting group, which still exists as NDA
 13 Partners, is ProPharma Group.
 14 Q. Got it.
 15 A. And they do the billing.
 16 Q. Did anyone at NDA Partners or ProPharma
 17 Group assist you in the preparation of your report
 18 that you submitted in this case?
 19 A. No, not at all.
 20 Q. Okay. You and you alone wrote your
 21 report?
 22 A. Yes, I think that's quite true. I wrote
 23 this report.
 24 Q. And the invoice at the end that is on the
 25 NDA Partners letterhead, it's dated 7/31/2021?

Page 273

1 A. Yeah, I think we may be looking at the
 2 transition from NDA Partners to ProPharma --
 3 Q. Uh-huh.
 4 A. -- so that's an interesting observation.
 5 Q. And it looks like your first billed work
 6 in this matter was 7/1/2021, right?
 7 A. That's when I was first contacted by
 8 counsel, and then there was a hiatus. I really
 9 didn't begin substantive work on this report until
 10 November. You can see that in the invoices.
 11 And the reason I didn't do any detailed
 12 work in July until November was because I was not
 13 involved in the causation discussions.
 14 Q. Then if you look on the ProPharma Group
 15 invoice dated 1/31/2022, the first entry is for work
 16 on January 3rd, 2022, correct?
 17 A. Wait a minute. I'm having trouble
 18 catching up with you. But I'm setting aside the
 19 July one. Now there is one -- I see a July invoice.
 20 If that's what you are talking about, yes, I see
 21 that invoice.
 22 Q. And just to go through this, a few things.
 23 You say, "Review 82 documents in triplicate." Do
 24 you see that?
 25 A. Yes, I do.

<p style="text-align: right;">Page 274</p> <p>1 Q. What do you mean by "in triplicate"?</p> <p>2 A. Well, I'm laughing a little bit because I</p> <p>3 think I got the same folder three times. I had to</p> <p>4 check with counsel many times to make sure that they</p> <p>5 were the same documents in the three folders. So</p> <p>6 that's what that was all about, and I did have a</p> <p>7 good review with counsel about the materials I</p> <p>8 received and where it was all filed.</p> <p>9 Q. Uh-huh. And then further down here, you</p> <p>10 have some entries for, "Read DB deposition," "Read</p> <p>11 EG deposition"; do you see those?</p> <p>12 A. Yes, those refer -- for example, "EG"</p> <p>13 refers to Elizabeth Gray. The "DB" refers, I</p> <p>14 believe, to Daniel Barreto.</p> <p>15 Q. Uh-huh.</p> <p>16 A. And then you can see Panagos expert</p> <p>17 reports.</p> <p>18 Q. Uh-huh. And then that last entry, should</p> <p>19 that be DB deposition as well?</p> <p>20 A. Well, I'm not sure about that. No, I</p> <p>21 think it may be a Binsol deposition.</p> <p>22 Q. Uh-huh. So sometimes you listed the</p> <p>23 specific deposition you read, and sometimes you</p> <p>24 didn't, it looks like; is that right?</p> <p>25 A. I could agree that the way I fill out my</p>	<p style="text-align: right;">Page 276</p> <p>1 A. How can I assist?</p> <p>2 Q. When you say, "Write CBE-30," are you</p> <p>3 referring to sections of your report?</p> <p>4 A. Yes.</p> <p>5 Q. Okay. You weren't writing a CBE-30</p> <p>6 separately outside of your work, right?</p> <p>7 A. Not at all. Oh, no, no, that would not be</p> <p>8 true.</p> <p>9 Q. Uh-huh. And when you say, "Attempt to</p> <p>10 review ANDA files," what does that mean?</p> <p>11 A. Well, ANDA, as you know, the ANDA files</p> <p>12 were very broad and deep and complex. So I would</p> <p>13 say I could review them from a high level, but I</p> <p>14 would not claim that -- I certainly wouldn't claim</p> <p>15 to counsel that I was reviewing the ANDAs in detail.</p> <p>16 Q. Got it. And it looks that throughout all</p> <p>17 of your invoice work, your rate was the same, the</p> <p>18 \$695 an hour?</p> <p>19 A. Yes. And remember, that is what goes to</p> <p>20 the company. That's not what comes to me.</p> <p>21 Q. Uh-huh. What portion do you get?</p> <p>22 A. It's 80 percent.</p> <p>23 Q. Okay. And you don't need a calculator,</p> <p>24 Doctor, unless you want it, but ballpark it looks</p> <p>25 like the invoices for your work to date for this</p>
<p style="text-align: right;">Page 275</p> <p>1 hours might not be entirely consistent.</p> <p>2 Q. And I'm not going to take issue with that,</p> <p>3 Doctor. I just want to make sure, though, that even</p> <p>4 if you call out specific deposition transcripts here</p> <p>5 in your invoices, is it your position that you did</p> <p>6 review all the deposition transcripts that were in</p> <p>7 your materials considered?</p> <p>8 A. No, I didn't look at all the depositions.</p> <p>9 I selected certain depositions that seemed</p> <p>10 particularly important.</p> <p>11 Q. Which ones, then, did you review?</p> <p>12 A. Well, we can see from this, I would say</p> <p>13 Daniel Barreto, Elizabeth Gray and Mr. Binsol.</p> <p>14 There may have been others, but I might have left</p> <p>15 them out of my invoice.</p> <p>16 Q. Uh-huh. And if you flip back to the -- I</p> <p>17 guess the second page.</p> <p>18 A. I'm trying to stay with you on page</p> <p>19 numbers.</p> <p>20 Q. Well, I guess it -- yeah, I guess it would</p> <p>21 be page 1 of 2.</p> <p>22 A. Is this December?</p> <p>23 Q. Yes. December 31, 2021.</p> <p>24 A. Yes, I'm looking at all that.</p> <p>25 Q. Uh-huh.</p>	<p style="text-align: right;">Page 277</p> <p>1 matter is approximately \$90,000 or so?</p> <p>2 A. Yes. Let's say 80 percent of that would</p> <p>3 come to me, if we're calculating it that way.</p> <p>4 Q. Understood. All right. You can put those</p> <p>5 aside for now. Thank you.</p> <p>6 Can you pull up your -- I guess it would</p> <p>7 be Exhibit A to your report, sir. I'm looking at</p> <p>8 page 28 of 29 of Exhibit A. It's your prior</p> <p>9 deposition testimony.</p> <p>10 A. Yes, I think it's coming to me. Just a</p> <p>11 second.</p> <p>12 Q. Sure. Let me know when you are there.</p> <p>13 A. Wait a minute. I have it in my CV here.</p> <p>14 (Whereupon, a brief discussion off the</p> <p>15 record.)</p> <p>16 THE WITNESS: I should have it in front of</p> <p>17 me. Hold on just a sec.</p> <p>18 MS. LOCKARD: Here you go.</p> <p>19 THE WITNESS: Oh.</p> <p>20 Okay. I'm with you, Mr. Stanoch. Please</p> <p>21 proceed.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Great. And here you have listed, it looks</p> <p>24 like, 14 matters in the last four years, right?</p> <p>25 A. I'm counting 20, with the most recent</p>

<p style="text-align: right;">Page 278</p> <p>1 being the trial testimony in November 17th. Are you 2 cutting off some because they are not in the last 3 four years? 4 Q. Oh, no, I'm sorry. The one I'm looking 5 at -- maybe I have an older version in front of 6 me -- only had 14 numbered entries. Let me look at 7 something else. 8 A. It got cut off, but I see 20 in my CV in 9 the final pages. But you may be right if we are 10 just counting the last four years. 11 Q. Well, how many numbered matters do you 12 have in the version that you are looking at, Doctor, 13 20? 14 A. I have 20, yes. 15 Q. Okay. And starting from the top of that, 16 could you -- I just want to know what party you were 17 retained by and in whose behalf you were offering 18 opinions. 19 A. Oh, the first one I actually can't 20 remember. I'd have to look it up to tell you. 21 The second one was sort of a -- it was 22 a -- I could say it this way. It was a squabble 23 between a lot of people. It really didn't have 24 much -- it didn't have anything to do with FDA, 25 really. And it was an individual where some people</p>	<p style="text-align: right;">Page 280</p> <p>1 Restasis was antitrust. 2 Biogen was -- versus Acorda was related to 3 an FDA guidance where I offered testimony. 4 Stewart, Sandoz was failure to warn. 5 Glumetza was antitrust, and that's still 6 active. 7 Braeburn versus Camurus, that was a 8 company squabble where I was on the side of 9 Braeburn. 10 And then Ranbaxy is still -- I'm sorry. 11 The Glumetza, I think, settled, and the Ranbaxy is 12 still in progress, but it's antitrust. I'm on the 13 side of the plaintiffs. 14 Genentech versus InterMune was patent. I 15 was on the side of InterMune, the pioneer. 16 Mallinckrodt versus debtors, that was a 17 squabble between third-party payors, if you will, 18 and Mallinckrodt, and I was on the Mallinckrodt 19 side. 20 Is that helpful, Mr. Stanoch? 21 Q. No, it is. I appreciate you going through 22 that. 23 And, Doctor, for the prior cases you have 24 offered expert opinions in, for those that are class 25 actions, is it fair to say you have always been</p>
<p style="text-align: right;">Page 279</p> <p>1 were complaining that he had taken intellectual 2 property from a firm. 3 Supernus versus Actavis I think was a 4 patent issue, and I was on the Supernus side. 5 The fourth one I think was antitrust. 6 The fifth one was a debate about a generic 7 company versus Shire, and I was on the Shire side. 8 Solodyn was antitrust. I was on the part 9 of plaintiffs. 10 Loestrin I think was antitrust, and that 11 was on the part of plaintiffs. 12 Arbor versus ANI was sort of a company 13 squabble, and I was on the ANI side. 14 Fresenius Kabi and Par was an argument 15 about -- I'm summarizing very briefly, but I think 16 it was restraint of trade, and I was on the Par 17 side. They were the defendants, as I recall. 18 Galderma versus Teva was patent, and I was 19 on the Teva side as the -- I'm struggling with what 20 they were. Yeah, they got sued, so they were the 21 defendant. 22 Belcher versus Hospira. I don't remember 23 that one. I'd have to look it up. I apologize. 24 Continuing, Vision versus Sunrise, that 25 was a sort of company squabble over GMPs.</p>	<p style="text-align: right;">Page 281</p> <p>1 retained by a defendant in those actions? 2 A. You know, I'm not sure that I would 3 identify any of those as class actions. I have to 4 say I'm a little uncertain about just what a class 5 action is, and so I couldn't say I was on one side 6 or the other. 7 If you say an antitrust is a class action, 8 I think I would agree with you that I'm usually on 9 the side of plaintiffs, but I have one now where I 10 believe it's antitrust and I'm on the side of the 11 pioneer -- 12 Q. But you just said -- 13 A. -- so I don't think I can agree with you 14 that I'm always on one side versus another. 15 Q. Uh-huh. But you are on the side of the 16 defendants now in this case, right? 17 A. Yes. 18 Q. All right. And, the extent you remember, 19 just go through and tell me where you think you were 20 on the side of the defendants in your list of cases. 21 A. Oh, dear. Well, I'll give some examples. 22 I think Mallinckrodt was the defendant. They were 23 getting -- in Genentech I was on the side of the 24 plaintiff. 25 Ranbaxy, I was on the side of plaintiff.</p>

<p style="text-align: right;">Page 282</p> <p>1 Braeburn, I think they were the 2 defendants. 3 At Stewart, I was on the side of Sandoz. 4 That was the defendants. 5 Can't remember Biogen. 6 Restasis I was on the side of the payors, 7 so they would be the plaintiffs. 8 I better stop there because I'm a little 9 uncertain about my answers. 10 Q. Okay. If you are uncertain, that's okay, 11 Doctor. I don't need you to guess. That's quite 12 all right. 13 Stand by. 14 MS. LOCKARD: We have been going over an 15 hour, so if you get to a good breaking point, that 16 would be helpful. 17 BY MR. STANOCH: 18 Q. All right. Doctor, I just want -- 19 MR. STANOCH: Yeah, we'll take a break 20 soon, Counsel. 21 Q. Doctor, I just want to go back to your -- 22 oh, what was it, Tab -- I think it was Exhibit 2. 23 It was Exhibit 2, sir. It was the Roger Williams 24 list of materials considered, 2/17/2022. 25 A. Yes, I have that before me, Mr. Stanoch.</p>	<p style="text-align: right;">Page 284</p> <p>1 A. No. 2 Q. Okay. All right. I'm going to mark, 3 Doctor, a copy of the CV and your prior testimony in 4 cases which was provided to me by Teva's counsel 5 during the break that will be marked as Exhibit 16. 6 (Whereupon, Exhibit 16 was marked for 7 identification.) 8 MR. STANOCH: So that should be available 9 to everyone. 10 I will also mark at this time, as 11 Exhibit 17, the video webinar from which the USP 12 excerpt stills were taken. 13 (Whereupon, Exhibit 17 was marked for 14 identification.) 15 MR. STANOCH: And I have no further 16 questions at this time. I'll reserve my time 17 pending counsel's questions. Thank you, 18 Dr. Williams. 19 THE WITNESS: Thank you, Mr. Stanoch. 20 (Whereupon, a brief discussion off the 21 record.) 22 EXAMINATION 23 BY MS. LOCKARD: 24 Q. Okay. Dr. Williams, a copy of your CV was 25 just marked as Exhibit No. 16.</p>
<p style="text-align: right;">Page 283</p> <p>1 Q. And I want to make sure I understood this. 2 So the materials listed here, you may or may not 3 have looked at some of these things, but you are 4 only relying on them for purposes of your report if 5 they are cited in the body or footnotes of your 6 report, right? 7 A. Yes, I think that's a fair summary. 8 Q. Fine. 9 MR. STANOCH: Let's take a break, then. 10 THE VIDEOGRAPHER: Okay. We are going off 11 the record. The time is 3:00 p.m. 12 (Whereupon, a brief recess was taken.) 13 THE VIDEOGRAPHER: Okay. We are coming 14 back on the record. The time on the video monitor 15 is 3:35. Please begin. 16 BY MR. STANOCH: 17 Q. Okay. Welcome back, Doctor. During that 18 lengthy break, did you talk to anyone besides your 19 counsel? 20 A. No, not at all. 21 Q. Did you communicate with anyone besides 22 the counsel in the room with you about your 23 testimony? 24 A. No, not at all. 25 Q. Did you review any documents?</p>	<p style="text-align: right;">Page 285</p> <p>1 Do you have a copy of that in front of 2 you? 3 (Whereupon, a brief discussion off the 4 record.) 5 THE WITNESS: Yes, I do. 6 BY MS. LOCKARD: 7 Q. All right. For the benefit of the jury 8 and counsel, can you please give us the benefit of 9 your educational background? 10 MR. STANOCH: Objection to form. Beyond 11 the scope. 12 BY MS. LOCKARD: 13 Q. You can continue. 14 A. My undergraduate degree was a premed 15 degree, and then after I completed my undergraduate 16 studies, I went to medical school at the University 17 of Chicago. I stayed on after my medical degree and 18 obtained an internship and residency in internal 19 medicine at the University of Chicago. And I 20 received honors, both in undergraduate, Phi Beta 21 Kappa, as well as medical school, called AOA, which 22 is the equivalent of Phi Beta Kappa. 23 Then I entered the U.S. Army, and that was 24 a deferred draft, where I stayed for three years. I 25 actually did research on malaria at Walter Reed</p>

<p style="text-align: right;">Page 286</p> <p>1 during the latter half of my service. In the first 2 half I was stationed in Seoul, Korea. 3 When I finished that service, I entered a 4 clinical pharmacology fellowship at the University 5 of California, San Francisco. That lasted three 6 years. And based on my training, I was able to 7 obtain Board certification in both internal medicine 8 and clinical pharmacology. 9 Q. Were you an officer in the Army? 10 A. Yes, I was a major. 11 Q. What licenses have you held? 12 A. I was licensed to practice medicine in 13 California, but I didn't continue that or my Board 14 certifications when I came to FDA in 1990 because it 15 was a full-time job at FDA and I was not practicing 16 clinical medicine. 17 Q. Have you held any licenses in 18 pharmacology? 19 A. Clinical pharmacology. There is no 20 licensure, but I was Board-certified in clinical 21 pharmacology. 22 Q. What did you do when you left private 23 practice or -- as a medical doctor? 24 MR. STANOCH: Objection to form. 25 Go ahead.</p>	<p style="text-align: right;">Page 288</p> <p>1 the level of the center, where I held multiple 2 positions, but I ended my career and the last 3 several years of my time at FDA working as a deputy 4 director for the center director, who was Dr. Janet 5 Woodcock at the time. Dr. Woodcock is now the 6 commissioner of FDA on an acting basis. 7 And in my role as deputy center director, 8 I had a lot of responsibilities, but I was 9 principally the director of the Office of 10 Pharmaceutical Science. That office is now the 11 Office of Pharmaceutical Quality at FDA. And I had 12 oversight for the Office of Generic Drugs, the 13 Office of Clinical Pharmacology and Biopharmaceutics 14 and the Office of Testing and Research and also the 15 Office of Chemistry. So I had a terrific experience 16 overseeing about four or five of the disciplines 17 that contribute to the review of an NDA, as well as 18 oversight for the Office of Generic Drugs and many 19 other responsibilities. 20 I then left FDA in 2000. I became chief 21 executive officer and chair of the Council of 22 Experts. And I would say over my 14-year period 23 there was a rapid expansion of USP, a globalization 24 of our activities, a focus on the science of 25 metrology, which I think is the undergirding science</p>
<p style="text-align: right;">Page 287</p> <p>1 THE WITNESS: I would say I was never in 2 private practice. I worked at the University of 3 California, San Francisco, doing clinical 4 investigations for NDA and ANDA sponsors. And it 5 was there that I built a focus on bioavailability 6 and bioequivalence that I think has continued 7 throughout my career. 8 I spent a year after my service at UCSF in 9 a small company in South San Francisco that was 10 studying an HIV medicine. 11 And then Dr. Carl Peck, who has been a 12 very good mentor and friend, brought me to FDA in 13 1990 to head up the Office of Generic Drugs. And 14 for those who may remember, that was a difficult 15 time for both the generic industry and FDA. It had 16 to do with something that briefly is called the 17 generic drug scandal. 18 But I was very pleased to work in the 19 Office of Generic Drugs. We worked with Congress 20 and with industry to sort of straighten it all out. 21 And I think we did get it straightened out. We sort 22 of put it back on a solid footing. And the office 23 has zoomed, if you will, ever since then over the 24 ensuing decades. 25 In 1993, Dr. Peck left, so I came up to</p>	<p style="text-align: right;">Page 289</p> <p>1 for what USP does, and the addition of a lot of 2 compendia. 3 USP started out, when I was there, with 4 USP-NF. Those are official compendia of the United 5 States. But we added Food Chemical Codex, a Dietary 6 Supplement Compendium. We even experimented with a 7 novel compendium that we called the Medicines 8 Compendium. 9 And overall it was a very remarkable 10 experience, and I am forever grateful for having 11 that experience. 12 Q. What -- 13 A. After leaving USP, I became a consultant 14 at the invitation of Dr. Peck again. Dr. Peck has 15 been a great mentor, and he was the center director 16 who brought me to FDA. And I have continued doing 17 consulting in his consulting group, called NDA 18 Partners, as we have discussed, and over the last 19 several years I've focused primarily on litigation. 20 Q. How many years were you at the FDA, 21 Dr. Williams? 22 MR. STANOCH: Objection to the form. 23 THE WITNESS: Ten. 24 BY MS. LOCKARD: 25 Q. How many years were you at the United</p>

<p>Page 290</p> <p>1 States Pharmacopeial Convention, the USP?</p> <p>2 A. Fourteen.</p> <p>3 MR. STANOCH: Same objection.</p> <p>4 BY MS. LOCKARD:</p> <p>5 Q. What year did you leave the USP?</p> <p>6 A. It was the beginning of 2014.</p> <p>7 Q. And your CV that was marked as Exhibit 16,</p> <p>8 I was following along, but it has the dates and</p> <p>9 specific responsibilities and titles for your</p> <p>10 positions at FDA, USP and otherwise. Is that still</p> <p>11 accurate?</p> <p>12 A. Yes, no changes.</p> <p>13 Q. There are a number of honors and awards</p> <p>14 listed here in your CV. Are those still active?</p> <p>15 MR. STANOCH: Objection.</p> <p>16 THE WITNESS: Yes, no changes.</p> <p>17 (Reporter clarification.)</p> <p>18 THE WITNESS: No changes in those honors</p> <p>19 and awards.</p> <p>20 BY MS. LOCKARD:</p> <p>21 Q. Have there been any changes in your board</p> <p>22 memberships or research awards listed on your CV?</p> <p>23 A. No, none. And I would say in my quasi</p> <p>24 retirement that's all been -- it's been replaced, if</p> <p>25 you will, by the litigation efforts.</p> <p>Page 291</p> <p>1 Q. Have you done any teaching work?</p> <p>2 MR. STANOCH: Objection.</p> <p>3 THE WITNESS: Yes, I would say at UCSF I</p> <p>4 taught pharmacy and medical students and also worked</p> <p>5 with graduate students on their Ph.D.s.</p> <p>6 BY MS. LOCKARD:</p> <p>7 Q. Have you served on any editorial boards?</p> <p>8 MR. STANOCH: Objection.</p> <p>9 THE WITNESS: I have been a reviewer for</p> <p>10 multiple journals and --</p> <p>11 BY MS. LOCKARD:</p> <p>12 Q. Any that would be relevant to this</p> <p>13 litigation?</p> <p>14 MR. STANOCH: Uh-huh. A standing</p> <p>15 objection to background.</p> <p>16 Go ahead.</p> <p>17 THE WITNESS: Well, yes, I think all of my</p> <p>18 writings and research in one way or another relate</p> <p>19 to what we're talking about here in this, the</p> <p>20 quality of medicines, therapeutic equivalence,</p> <p>21 substitution, metrology, measurements. I feel</p> <p>22 everything in my wheelhouse, if you will, is related</p> <p>23 to this litigation.</p> <p>24 BY MS. LOCKARD:</p> <p>25 Q. Do you have any estimates in terms of how</p>	<p>Page 292</p> <p>1 many journal articles you have contributed to?</p> <p>2 A. Well, if you add all my publications,</p> <p>3 including the USP publications, I think we're well</p> <p>4 over 200.</p> <p>5 Q. Have you participated in writing any books</p> <p>6 or book chapters?</p> <p>7 A. Yes, I have done that.</p> <p>8 Q. How many of those?</p> <p>9 A. I think you would have to look at the CV,</p> <p>10 but I'm sure we're in the scores, maybe, or between</p> <p>11 10 and 20.</p> <p>12 Q. And are those journal articles and book</p> <p>13 chapters all listed on your CV, Dr. Williams?</p> <p>14 A. Yes, I think the CV is complete.</p> <p>15 Q. Oh, I would like to attach as Exhibit 18 a</p> <p>16 complete copy of your set of materials that we sent</p> <p>17 for your consideration. And we have been handed a</p> <p>18 thumb drive of that which we can get to the court</p> <p>19 reporter.</p> <p>20 (Whereupon, Exhibit 18 was marked for</p> <p>21 identification.)</p> <p>22 MS. LOCKARD: Exhibit 18, for the record,</p> <p>23 is going to be Dr. Williams' file.</p> <p>24 MR. STANOCH: Counsel, this is everything</p> <p>25 listed in the -- what do you call it, the materials</p> <p>Page 293</p> <p>1 considered, Exhibit 2?</p> <p>2 MS. LOCKARD: That's correct.</p> <p>3 MR. HARKINS: Yes, yeah.</p> <p>4 MS. LOCKARD: Yes.</p> <p>5 MR. STANOCH: Okay.</p> <p>6 MR. HARKINS: Also including the copy of</p> <p>7 the revised list of materials considered that was</p> <p>8 submitted with the production of those materials two</p> <p>9 days ago.</p> <p>10 (Whereupon, a brief discussion off the</p> <p>11 record.)</p> <p>12 BY MS. LOCKARD:</p> <p>13 Q. All right. Dr. Williams, you were asked</p> <p>14 about a document we reviewed earlier today on a</p> <p>15 break that was identified as Exhibit 3, and it was</p> <p>16 the GNTM e-mail. Do you recall being asked about</p> <p>17 that?</p> <p>18 A. I do recall.</p> <p>19 Q. And did that document refresh your</p> <p>20 recollection about how Teva learned of the</p> <p>21 nitrosamine issue initially?</p> <p>22 MR. STANOCH: Objection to form.</p> <p>23 THE WITNESS: Yes.</p> <p>24 MR. STANOCH: Asked and answered.</p> <p>25 Go ahead.</p>
---	---

<p style="text-align: right;">Page 294</p> <p>1 THE WITNESS: Yes. This is definitely a 2 document I cited. It was very important to my 3 opinions. 4 And it has a huge distribution list, GNTM, 5 global notice to management, where Teva is 6 communicating to its scores of sites across the 7 globe. 8 And it starts -- it's an incident 9 category, foreign matter, and it says, "On 10 June 20th, 2018, vendor" ZHP "notified Teva that 11 they came to be aware of a previously unknown 12 impurity that may have genotoxic potential." 13 BY MS. LOCKARD: 14 Q. But let me stop you there and ask: So 15 does that clarify for you how Teva learned of the 16 potential -- 17 A. Yes. 18 Q. -- impurity? 19 A. Yes. 20 MR. STANOCH: Objection. 21 THE WITNESS: And then it -- 22 BY MS. LOCKARD: 23 Q. Okay. And the next question is: On that 24 date of the initial notification, is there anything 25 there that indicates what the potential impurity</p>	<p style="text-align: right;">Page 296</p> <p>1 THE WITNESS: No, I would say it is not. 2 BY MS. LOCKARD: 3 Q. You were asked some questions about 4 Novartis and testing they allegedly did on some of 5 their products. Do you recall that? 6 A. I do. 7 Q. Do you have any information about 8 Novartis' testing of their Diovan or any other 9 products with respect to nitrosamines? 10 A. No, I don't recall seeing any information, 11 and it was not pertinent to my report. 12 Q. Do you know why Novartis was testing or 13 what they were testing, if at all? 14 A. No, I really don't. I have no information 15 about it that I remember. 16 Q. -- Novartis testing relevant to any of the 17 opinions you have given to date in this case? 18 MR. STANOCH: Objection. 19 THE WITNESS: It is not. 20 BY MS. LOCKARD: 21 Q. You were asked some questions about the 22 limits of the nitrosamine, either interim limits or 23 permanent limits, by FDA. Are you offering any 24 opinions about whether those limits were 25 appropriate?</p>
<p style="text-align: right;">Page 295</p> <p>1 was? 2 A. I don't see that here. I may be missing 3 it, but I don't see that it states the impurity. 4 Q. You can put that aside for the moment. 5 Are 483s a final agency determination? 6 A. No. I would say they are a set of 7 observations from an Office of Regulatory inspector, 8 typically, who is visiting a manufacturing site and 9 writing observations over a several-day period, 10 either in the United States or overseas. 11 Q. Are warning letters a final agency 12 determination? 13 A. The way I would say it is the warning 14 letter is an escalation of FDA's concern. I 15 sometimes say it's kind of a shot across the bow of 16 a company, that they better pay closer attention to 17 what FDA is saying and do something. 18 But even there, the company is allowed to 19 respond, allowed to resolve issues and ultimately 20 allowed to have their manufacturing site cleared of 21 the issues and the inspection closed out by FDA 22 satisfactorily. 23 Q. So then is a warning letter necessarily a 24 final determination by FDA? 25 MR. STANOCH: Objection to form.</p>	<p style="text-align: right;">Page 297</p> <p>1 A. No, I am not. 2 Q. Have you endeavored to render any opinions 3 about the testing methodology employed to detect 4 limits of nitrosamines? 5 A. No, it's not part of my opinion, although 6 I mention it in my report. 7 Q. Do you have any opinions in this case 8 about whether nitrosamines are or are not 9 carcinogenic? 10 MR. STANOCH: Objection to form. 11 THE WITNESS: No, I'm not offering any 12 opinion that speaks to pharmacology/toxicology of 13 the nitrosamines. 14 BY MS. LOCKARD: 15 Q. Do you intend to offer any opinions about 16 whether nitrosamines in the Teva products were a 17 potential human carcinogen? 18 MR. STANOCH: Objection to form. 19 THE WITNESS: No, I don't offer that 20 either. 21 BY MS. LOCKARD: 22 Q. Counsel made the point earlier today that 23 even if the USP does not provide for testing of 24 nitrosamines, that a manufacturer can still 25 institute its own testing for nitrosamine.</p>

<p style="text-align: right;">Page 298</p> <p>1 MR. STANOCH: Objection. There's no 2 question. 3 THE WITNESS: That's absolutely true. A 4 manufacturer can build additional testing into its 5 private specification working with FDA. 6 BY MS. LOCKARD: 7 Q. Well, in order for a company to initiate 8 testing of a genotoxic impurity, what do they need 9 to know? 10 A. Well, that relates to something FDA said 11 in some of their public announcements. You have to 12 suspect that it's there. You wouldn't test for it 13 if you didn't think it was there, so you first have 14 to have a suspicion that it's there. And then I 15 would say you would have to see some identifiable 16 peak on a chromatogram that raises your concern, and 17 that would lead into an understanding of looking at 18 the impurity and assessing its genotoxic potential. 19 Q. Did you in this case endeavor to do an 20 independent assessment, at this stage of the case, 21 whether Teva violated any cGMPs? 22 MR. STANOCH: Objection to form. 23 THE WITNESS: The only thing I did was 24 look at FDA's record of inspections of Teva's GMPs 25 at its Malta and Jerusalem sites, but I didn't do</p>	<p style="text-align: right;">Page 300</p> <p>1 BY MS. LOCKARD: 2 Q. Do you understand that at some point we 3 may ask you to review additional materials and 4 render liability opinions? 5 A. Yes, I understand that may come later on, 6 but it is not happening now. 7 Q. Are you willing to do that if so asked? 8 A. Yes. 9 Q. Are you qualified to do so at certain 10 elements if so asked? 11 MR. STANOCH: Objection. Form. 12 THE WITNESS: I believe so. 13 BY MS. LOCKARD: 14 Q. You were asked some questions about what 15 do plaintiffs or patients expect; do you remember 16 that? 17 A. I do remember that. 18 Q. Do you intend to offer any opinions about 19 plaintiffs' expectations in this case? 20 MR. STANOCH: Objection to form. 21 THE WITNESS: No, I mean, I tried to 22 answer those questions as best I could, but they 23 were not part of my report and not part of my 24 opinions. 25</p>
<p style="text-align: right;">Page 299</p> <p>1 any independent evaluation of Teva's GMP adherence. 2 BY MS. LOCKARD: 3 Q. Have you endeavored to do any independent 4 assessment of Teva's compliance with any of its 5 policies or procedures? 6 A. No, not at all. That was not part of my 7 report, and then I didn't cite to any documents to 8 that point. 9 Q. Now, you were asked about the purpose of 10 your report, and you have heard a lot of objections 11 today about the class-certification opinions that 12 you rendered in your report. Do you have an 13 understanding that you have not been asked by me or 14 my firm to provide any liability opinions at this 15 point in time? 16 MR. STANOCH: Objection to form. 17 THE WITNESS: I do understand that. 18 BY MS. LOCKARD: 19 Q. Have you intended to give liability 20 opinions today? 21 A. No. 22 MR. STANOCH: Objection. Form. 23 THE WITNESS: I have tried not to give 24 liability opinions. 25</p>	<p style="text-align: right;">Page 301</p> <p>1 BY MS. LOCKARD: 2 Q. Do you intend to offer any opinions about 3 various choices available to plaintiffs who were 4 prescribed hypertension medications; is that what -- 5 MR. STANOCH: Objection to form. 6 BY MS. LOCKARD: 7 Q. -- hired to do? 8 MR. STANOCH: Sorry. Sorry, Counsel. 9 Objection to form. 10 THE WITNESS: No, I -- 11 (Reporter clarification.) 12 MR. STANOCH: I apologize. I was just 13 objecting. I'm sorry, Victoria. 14 THE REPORTER: Okay. So sorry. 15 BY MS. LOCKARD: 16 Q. I think I said, is that what you were 17 hired to do? 18 A. No. 19 Q. And recognizing you have a medical degree, 20 but do you prescribe, consult, discuss with patients 21 hypertension medications? 22 A. No, not at all. I am not a practicing 23 clinical doctor. 24 Q. You were also asked to discuss some issues 25 with respect to recycled solvents in the API that</p>

<p style="text-align: right;">Page 302</p> <p>1 Teva was supplied. Do you recall that?</p> <p>2 A. I do.</p> <p>3 Q. And are you familiar with recycled</p> <p>4 solvents being used in pharmaceutical manufacturing?</p> <p>5 A. You know, actually I'm not. The first</p> <p>6 time I read about it was when I started reading</p> <p>7 materials for this report.</p> <p>8 Q. Is it something that you would ordinarily</p> <p>9 be involved in, in terms of your role at USP or FDA,</p> <p>10 to investigate recycled solvents?</p> <p>11 MR. STANOCH: Objection to form.</p> <p>12 THE WITNESS: No. No, really not. To me</p> <p>13 it seems more like a GMP issue, and I don't speak as</p> <p>14 a GMP expert.</p> <p>15 (Whereupon, a brief discussion off the</p> <p>16 record.)</p> <p>17 BY MS. LOCKARD:</p> <p>18 Q. So you don't -- bless you.</p> <p>19 You don't intend to offer any opinions in</p> <p>20 this case criticizing the use of recycled solvents,</p> <p>21 do you?</p> <p>22 MR. STANOCH: Objection.</p> <p>23 THE WITNESS: No. As far as I can</p> <p>24 remember from my report, I don't speak at all to</p> <p>25 recycled solvents, although FDA speaks about that in</p>	<p style="text-align: right;">Page 304</p> <p>1 A. No. And my understanding is that a</p> <p>2 quality agreement is not pertinent to the purchase</p> <p>3 of a drug substance from a manufacturer by a</p> <p>4 drug-product manufacturer.</p> <p>5 Q. You were asked about Teva's submission of</p> <p>6 their CBE-30 --</p> <p>7 A. Yes.</p> <p>8 Q. -- for the change in ZHP supply of API; do</p> <p>9 you recall that?</p> <p>10 A. I do recall that.</p> <p>11 Q. Based on your experience, do you have any</p> <p>12 concerns with the use of the CBE-30 to convey those</p> <p>13 changes to FDA by Teva?</p> <p>14 MR. STANOCH: Objection.</p> <p>15 THE WITNESS: No, I think Teva, Watson at</p> <p>16 the time, was following FDA guidance, and if FDA had</p> <p>17 any concerns, they could certainly have communicated</p> <p>18 that to Teva right away. And they could have asked</p> <p>19 Teva to wait and they could have converted it to a</p> <p>20 postapproval supplement.</p> <p>21 BY MS. LOCKARD:</p> <p>22 Q. Did they do that?</p> <p>23 A. They did not. In fact, in both instances,</p> <p>24 they approved very rapidly the CBE-30, within days</p> <p>25 of its submission.</p>
<p style="text-align: right;">Page 303</p> <p>1 their guidance as a source of nitrosamine</p> <p>2 impurities.</p> <p>3 BY MS. LOCKARD:</p> <p>4 Q. Which guidance are you referring to?</p> <p>5 A. The 2021 nitrosamine impurities guidance.</p> <p>6 Q. You aren't aware of any FDA guidance in</p> <p>7 2018 or prior that identified recycled solvents as a</p> <p>8 source of impurities, are you?</p> <p>9 A. No. And to me --</p> <p>10 MR. STANOCH: Objection.</p> <p>11 THE WITNESS: Oh, I'm sorry.</p> <p>12 To me it's an example of how FDA and</p> <p>13 industry learned a great deal from this experience</p> <p>14 beginning in 2018.</p> <p>15 BY MS. LOCKARD:</p> <p>16 Q. Ultimately, is it important to your review</p> <p>17 and opinions whether Mylan was using recycled</p> <p>18 solvents or not in the API it supplied Teva?</p> <p>19 MR. STANOCH: Objection.</p> <p>20 THE WITNESS: No, to me it doesn't impact</p> <p>21 my report one way or the other.</p> <p>22 BY MS. LOCKARD:</p> <p>23 Q. Does the presence or absence of a quality</p> <p>24 agreement with Mylan and Teva impact your opinions</p> <p>25 in your report in any way?</p>	<p style="text-align: right;">Page 305</p> <p>1 Q. You were shown a press release about</p> <p>2 Ranbaxy and a negotiated guilty plea they entered</p> <p>3 with respect to their products; do you remember</p> <p>4 that?</p> <p>5 A. I do see it. As a matter of fact, it's</p> <p>6 still on my screen. I'm looking at it to my right.</p> <p>7 Q. And you have read through this document,</p> <p>8 or to some extent; is that correct?</p> <p>9 A. I have an understanding of what it's</p> <p>10 saying.</p> <p>11 Q. And to the extent that the document itself</p> <p>12 and the negotiated plea deal suggests that there was</p> <p>13 some retrospective determination that Ranbaxy</p> <p>14 products were determined to be adulterated, is that</p> <p>15 analogous in any way to the situation with Teva's</p> <p>16 products?</p> <p>17 MR. STANOCH: Objection to form.</p> <p>18 THE WITNESS: This entire matter with</p> <p>19 Ranbaxy, to me, it is a completely different set of</p> <p>20 circumstances.</p> <p>21 First of all, it involves the Department</p> <p>22 of Justice. It has a huge civil penalty. It</p> <p>23 involves fraud and false statements to the agency.</p> <p>24 It certainly involves GMP violations.</p> <p>25 And what happens when you see an</p>

<p style="text-align: right;">Page 306</p> <p>1 announcement like this, you are seeing the result of 2 years of effort on the part of FDA and the 3 Department of Justice to have Ranbaxy agree to a set 4 of statements, including the statement about 5 adulteration in the prior years. 6 So I would say it has no relationship at 7 all to my current report or my opinions. 8 BY MS. LOCKARD: 9 Q. So in the Ranbaxy situation, was the 10 language that was referenced about adulteration, to 11 your knowledge, was that the product of negotiation 12 between Ranbaxy -- 13 MR. STANOCH: Objection to the -- 14 (Reporter clarification.) 15 BY MS. LOCKARD: 16 Q. Government? 17 THE REPORTER: Thank you. 18 MR. STANOCH: Objection. Objection. 19 THE WITNESS: Well, to the extent I know 20 what happened here, and I know it was a very 21 detailed effort on the part of the agency, yes, it 22 was a negotiated settlement where Ranbaxy and FDA 23 and the Department of Justice are agreeing to the 24 statement that appears on my screen. 25</p>	<p style="text-align: right;">Page 308</p> <p>1 BY MS. LOCKARD: 2 Q. The confidentiality of DMFs was discussed 3 earlier today. Do you remember that? 4 A. I do. 5 Q. Is there any part of the DMF that FDA 6 actually considers to be open? 7 A. If we look at some of the documents I 8 cited, you will see that FDA considers the DMF 9 entirely confidential. In Europe sometimes they 10 talk about an open part or a closed part, but FDA 11 thinks of it as all closed, all confidential. 12 Q. You had said that theoretically you 13 suppose companies could decide on their own to 14 share, but are you familiar with that happening in 15 this case? 16 MR. STANOCH: Objection. 17 THE WITNESS: I'm not, and it seems 18 unusual. It seems to undercut the purpose of the 19 DMF, which is to keep some parts of it confidential. 20 What the buyer, in this case the ANDA 21 holder, would see is the certificate of analysis, 22 which is the specification you use to test the drug 23 substance, and that's all they would see. 24 BY MS. LOCKARD: 25 Q. And in this situation, would you expect</p>
<p style="text-align: right;">Page 307</p> <p>1 BY MS. LOCKARD: 2 Q. To your knowledge, has Teva been involved 3 in any DOJ investigation, criminal proceeding, FDA 4 fines, like that described in the Ranbaxy press 5 release with respect to its -- 6 A. No, I have not -- 7 (Whereupon, a brief discussion off the 8 record.) 9 BY MS. LOCKARD: 10 Q. Okay. My question to you, Dr. Williams, 11 was: To your knowledge, has Teva been involved in 12 any DOJ investigation, criminal proceeding, FDA 13 fines or fraud with respect to its valsartan like 14 that that was described in this Ranbaxy press 15 release that you were provided today? 16 MR. STANOCH: Objection. 17 THE WITNESS: Not at all. 18 BY MS. LOCKARD: 19 Q. Does this Ranbaxy press release and the 20 findings in any way undercut your opinions that you 21 have rendered in this case about Teva's valsartan 22 not being adulterated? 23 MR. STANOCH: Objection. 24 THE WITNESS: No, not at all. 25</p>	<p style="text-align: right;">Page 309</p> <p>1 Teva and its API suppliers to share the DMF or 2 supply Teva with anything other than the certificate 3 of analyses? 4 MR. STANOCH: Objection to form. 5 THE WITNESS: I didn't see any documents 6 otherwise, so my belief is that the two 7 drug-substance manufacturers were keeping their DMF 8 confidential, as is typical of the way DMFs are 9 handled. 10 BY MS. LOCKARD: 11 Q. Right. So is it surprising to you if you 12 learn that the companies in this case didn't -- did 13 not share the DMF portion? 14 A. That would not be surprising. 15 MR. STANOCH: Objection. 16 THE WITNESS: That would not be 17 surprising. That would be typical. 18 BY MS. LOCKARD: 19 Q. Now, you were asked a line of questions 20 referencing back to your report, and it was under 21 "The FDA Drug Approval Process" section in your 22 report. You were asked about a line that said, "A 23 recall is a voluntary action taken by a company to 24 remove a defective drug product from the market." 25 Do you recall that?</p>

<p style="text-align: right;">Page 310</p> <p>1 MR. STANOCH: Objection.</p> <p>2 THE WITNESS: I do recall that.</p> <p>3 BY MS. LOCKARD:</p> <p>4 Q. And had you taken that as a quote from an</p> <p>5 FDA general statement about drug recalls?</p> <p>6 MR. STANOCH: Objection.</p> <p>7 THE WITNESS: I think if we look at the</p> <p>8 FDA website and see what it says about recalls, that</p> <p>9 is what it says. That's the terminology they use.</p> <p>10 BY MS. LOCKARD:</p> <p>11 Q. Can a recall occur for reasons other than</p> <p>12 a defective product?</p> <p>13 MR. STANOCH: Objection.</p> <p>14 THE WITNESS: Well, I would say this is an</p> <p>15 interesting example, because at the time Teva and</p> <p>16 FDA agreed to recall their valsartan products, there</p> <p>17 was no understanding the products were defective.</p> <p>18 They were not defective. FDA had not set limits on</p> <p>19 nitrosamine impurities. But still FDA and Teva</p> <p>20 agreed that they should come off the market because</p> <p>21 of the presence of the nitrosamine impurities.</p> <p>22 Later on, when FDA set limits, you could</p> <p>23 say, well, they might have been considered</p> <p>24 adulterated, but in the summer of 2018, with regard</p> <p>25 to the ZHP drug substance, I do not see them as</p>	<p style="text-align: right;">Page 312</p> <p>1 Q. Let's see, actually.</p> <p>2 A. Oh.</p> <p>3 Q. Pull that out of my --</p> <p>4 A. Oh.</p> <p>5 Q. It's there.</p> <p>6 A. Yes. I see it, thank you.</p> <p>7 Q. Are you familiar with the Pharmacy Times?</p> <p>8 A. Yes, somewhat.</p> <p>9 Q. Have you ever seen this article before</p> <p>10 today?</p> <p>11 A. No, I have not.</p> <p>12 Q. Do you see what the date on this article</p> <p>13 was?</p> <p>14 A. June 29th, 2021.</p> <p>15 Q. Are you familiar with Edwin Gump?</p> <p>16 A. I actually am not.</p> <p>17 Q. Are you familiar with the Small Molecules</p> <p>18 Department at U.S. Pharmacopeia, USP?</p> <p>19 A. Yes.</p> <p>20 MR. STANOCH: Objection. Form.</p> <p>21 THE WITNESS: I would say I helped create</p> <p>22 that department when I first came to USP in 2000.</p> <p>23 BY MS. LOCKARD:</p> <p>24 Q. There is also a reference on the second</p> <p>25 page to the USP Nitrosamines Joint Subcommittee.</p>
<p style="text-align: right;">Page 311</p> <p>1 being defective products.</p> <p>2 BY MS. LOCKARD:</p> <p>3 Q. So just to be clear, do you hold any</p> <p>4 opinion that the valsartan products that were sold</p> <p>5 to customers by Teva were sold in a defective state?</p> <p>6 MR. STANOCH: Objection to form.</p> <p>7 THE WITNESS: I wouldn't use those words,</p> <p>8 and that is not part of my opinion.</p> <p>9 BY MS. LOCKARD:</p> <p>10 Q. Does the presence -- does the sheer</p> <p>11 presence of any nitrosamine render a product</p> <p>12 defective?</p> <p>13 MR. STANOCH: Objection to form.</p> <p>14 THE WITNESS: No. I would say,</p> <p>15 particularly if we look at the nitrosamine guidance,</p> <p>16 FDA will allow nitrosamine impurities in ingredients</p> <p>17 and products as long as they stay within acceptable</p> <p>18 intake limits.</p> <p>19 BY MS. LOCKARD:</p> <p>20 Q. So is it your opinion that if a drug</p> <p>21 product is sold -- well, strike that.</p> <p>22 You were asked about Exhibit 14. See if</p> <p>23 we can get a copy of that for you. It was an</p> <p>24 interview in the Pharmacy Times.</p> <p>25 A. I don't think I have that.</p>	<p style="text-align: right;">Page 313</p> <p>1 Was that a subcommittee in effect at FDA when you</p> <p>2 were there?</p> <p>3 A. No, it was not.</p> <p>4 Q. When was that formed, if you know?</p> <p>5 A. I actually don't know, and I'm not sure I</p> <p>6 see where you are reading. Could you help me,</p> <p>7 Ms. Lockard?</p> <p>8 Q. If you are looking at the bottom of what</p> <p>9 is page 2. Are you with me there?</p> <p>10 A. Actually, I am still not. There is</p> <p>11 something where it speaks to a subcommittee of an</p> <p>12 expert committee?</p> <p>13 Q. Yeah, it is the very end of page 2, where</p> <p>14 it says "Alana Hippensteele," she says, "That's</p> <p>15 fascinating."</p> <p>16 A. Oh.</p> <p>17 Q. "What is the USP Nitrosamines Joint</p> <p>18 Subcommittee" --</p> <p>19 A. Yes, I see.</p> <p>20 Q. -- "and why was it established?" Do you</p> <p>21 see that?</p> <p>22 A. Yes, I can, you know, understand, I think,</p> <p>23 what that subcommittee was doing and how it was</p> <p>24 formed.</p> <p>25 Q. Okay. Can you explain briefly your</p>

<p style="text-align: right;">Page 314</p> <p>1 understanding of what it was doing and how it was 2 formed? 3 A. Well, USP has the Council of Experts, 4 which has many expert committees. But the expert 5 committees have the possibility of forming 6 subcommittees, drawing on expertise from different 7 committees. So I see a subcommittee being formed 8 jointly from several expert committees to consider 9 particularly the topic of nitrosamines in 10 small-molecule medicines. 11 Q. To your knowledge, did the USP 12 Nitrosamines Joint Subcommittee exist before 2018? 13 A. I don't know that. As far as I know, it 14 didn't exist. 15 Q. All right. So if you turn to page 4, I 16 believe you were asked to read some of the text on 17 this page, and you were asked if you agreed with it. 18 Do you remember that? 19 A. Page 4. Is this the one down at the 20 bottom where he's talking about the grilled burger? 21 Q. Let me see. I know the pages aren't 22 numbered, which makes it difficult, but I'm just 23 counting three, four. 24 A. Oh, okay. All right. Thank you. 25 Q. Okay. So the very last paragraph on</p>	<p style="text-align: right;">Page 316</p> <p>1 Q. And if you skip down, midway on the page 2 Edwin Gump is speaking. 3 A. He is. 4 Q. He says, "It's a good question. So, one 5 of the things that I think the pharmaceutical 6 industry has generally for the most part done very 7 well is look at impurities." Do you agree with 8 that? 9 A. I do. 10 Q. He goes on to say, "I think nitrosamines, 11 for the reasons I just described, are kind of a 12 unique case where they can sort of crop up." Do you 13 agree with that? 14 A. I do agree with that. 15 Q. He goes on, "They aren't necessarily 16 readily identified as part of the components during 17 the manufacturing process, and so they sort of slip 18 through." Is that your understanding as well? 19 A. I think I could agree with that. 20 Q. "Whereas, other types of impurities, I 21 think, manufacturers have a" "better handle on how 22 to control those." 23 A. Yes, I think he is speaking to what I was 24 trying to comment on as well, that there are sort of 25 general ways of dealing with impurities, but the</p>
<p style="text-align: right;">Page 315</p> <p>1 page 4, that begins, "So, and again"; do you see 2 that? 3 A. Yes, I do see that. 4 Q. Oh, good. Can you read that paragraph as 5 well? 6 A. "So, and again, I think I mentioned, we're 7 talking about really ultratrace levels, parts per 8 million, part per billion. So, these are not easy 9 analyses to perform. They require highly complex 10 analytical equipment, and with any test, you need to 11 kind of have what's the control to that test." 12 Q. So do you agree with that statement? 13 A. I certainly do. 14 Q. And if you look at the following page, 15 first paragraph. 16 A. Yes, and I can read it, but I think what 17 USP is doing is talking about its reference 18 materials, and they are talking about reference 19 materials for nitrosamine impurities. 20 Q. And in Paragraph 2 it says, "So, having 21 the reference standards is a really important tool 22 for manufacturers." 23 A. Yeah. 24 Q. Did I read that correctly? 25 A. Yes, that's quite true.</p>	<p style="text-align: right;">Page 317</p> <p>1 nitrosamine impurities are -- as FDA said, are very 2 unusual, unexpected. You have to think that they 3 may be there, and then even when you think that, 4 they are at very low levels and require very special 5 techniques to measure. 6 Q. So towards the bottom of the page, 7 finally, Mr. Gump is saying, "It really is, I think, 8 a lot better than people think. You tend to hear 9 about the few problems that occur, but you don't 10 hear about the millions or billions of pills that 11 get distributed every year and help people deal with 12 their health conditions." Do you agree with that 13 sentiment? 14 A. I can certainly attest to that. 15 Q. So, Dr. Williams, you know, just to be 16 clear for the record, you weren't really asked much 17 about your report and your opinions in it. But have 18 you heard anything today that causes you to change 19 your opinions as stated in your expert report? 20 MR. STANOCH: Objection to form. 21 THE WITNESS: No, nothing at all. 22 BY MS. LOCKARD: 23 Q. Have you been shown any documents today or 24 testimony that changes your opinion in any way? 25 A. No.</p>

<p>Page 318</p> <p>1 Q. So in terms of, really, if we can get to 2 the heart of your opinions, what are your core 3 opinions in this case? 4 MR. STANOCH: Objection. 5 THE WITNESS: You know, the way I would 6 summarize those, I think they appear in the last 7 page or two of my report, and I'll try to say it 8 this way. 9 Teva's products, all four 10 valsartan-containing drug products were always 11 pharmaceutically equivalent and bioequivalent to the 12 Diovan reference listed drugs made by Novartis. 13 While they were in the market, they were always 14 AB-rated by FDA. They were not misbranded because 15 FDA required them to have substantively the same 16 label as Diovan. 17 And they were not adulterated in my view 18 until -- and you could even debate it after that 19 point, but they certainly were not adulterated or 20 defective until FDA issued warning letters to ZHP 21 and Mylan or when FDA set limits in December of 22 2019. 23 So what you have -- and I said it in the 24 report, it's a very unusual situation, where we all 25 know nitrosamine impurities can be genotoxic. We</p>	<p>Page 320</p> <p>1 that Teva did anything wrong and everything right. 2 MS. LOCKARD: I don't have any more 3 questions for you at this time. I imagine there may 4 be more questions. Thank you, Dr. Williams. And I 5 may follow up. 6 EXAMINATION 7 BY MR. STANOCH: 8 Q. Dr. Williams, prior to your 9 question-and-answer session with Ms. Lockard, you 10 spoke with her during the lengthy 35-minute break, 11 didn't you? 12 MS. LOCKARD: Object to form. 13 Argumentative. 14 THE WITNESS: I would say I sat there and 15 listened to her talk out how she was going to 16 question me, but I really didn't engage in that 17 discussion in any substantive way. 18 MR. STANOCH: Stand by. 19 Nothing further, Doctor. 20 MS. LOCKARD: Any other questions from 21 others? 22 MR. STANOCH: And, Counsel, I'll just ask 23 on the record that the binder of potential exhibits 24 be destroyed or returned to me without looking at 25 it, please.</p>
<p>Page 319</p> <p>1 know they are very low level. They are hard to 2 measure. They can creep into a product, as Dr. Gump 3 said. 4 And FDA and Teva in the summer of '22 5 (verbatim) were faced with this issue. Well, we 6 have got them there. What are we going to do? And 7 FDA and Teva working together decided to recall, 8 first, all the ZHP products from the market before 9 there was any possibility of a decision about 10 adulteration, and then subsequently, after the 11 Swissmedic report, all the Mylan product from the 12 market, again, before there was any possibility of a 13 decision about adulteration. 14 As I said in the report, this is not a 15 failure. This is a success story where a 16 responsible company is making a huge effort to 17 protect consumers, to protect patients, and FDA is 18 working very hard to find out what is going on. 19 It spills over into other products. It 20 keeps spilling over into other products. And now 21 FDA is asking that essentially all chemical 22 medicines in the market or being developed for the 23 market be assessed for nitrosamine impurities. 24 I'm gratified with the effort. This is 25 how drug regulation advances. And I just don't see</p>	<p>Page 321</p> <p>1 MS. LOCKARD: All right. I did take the 2 exhibits you used out of the binder. 3 MR. STANOCH: That's fair. I understand. 4 Thank you. 5 MS. LOCKARD: I'll put them back. But I 6 didn't remove the ones that you haven't used and I 7 haven't looked at all of those, so -- 8 MR. STANOCH: I appreciate that. Thank 9 you, Counsel. 10 THE VIDEOGRAPHER: Anything further on the 11 record? 12 Okay. Well, this concludes today's 13 deposition of Dr. Roger Williams. We are going off 14 the record at 4:24. 15 (Whereupon, the deposition was concluded 16 at 4:24 p.m.) 17 18 19 20 21 22 23 24 25</p>

<p style="text-align: right;">Page 322</p> <p style="text-align: center;">INSTRUCTIONS TO WITNESS</p> <p>Please read your deposition over carefully and make any necessary corrections. You should state the reason in the appropriate space on the errata sheet for any corrections that are made.</p> <p>After doing so, please sign the errata sheet and date it.</p> <p>You are signing same subject to the changes you have noted on the errata sheet, which will be attached to your deposition.</p> <p>It is imperative that you return the original errata sheet to the deposing attorney within thirty (30) days of receipt of the deposition transcript by you. If you fail to do so, the deposition transcript may be deemed to be accurate and may be used in court.</p>	<p style="text-align: right;">Page 324</p> <p style="text-align: center;">ACKNOWLEDGMENT OF DEPONENT</p> <p>I, _____, do hereby certify that I have read the foregoing pages, and that the same is a correct transcription of the answers given by me to the questions therein propounded, except for the corrections or changes in form or substance, if any, noted in the attached Errata Sheet.</p> <p>_____ ROGER WILLIAMS, M.D. DATE</p>
